This will be more apparent when we attend to the difference between two classes of negative notions. The first class includes those whose negative brings something positive; thus, not hot, brings before us a positive experience, namely, cold; not white, according to what is intended, turns up either black or all other colours, which are to us as much a positive, or real, conception as white. Unjust, or not just, is the name for a distinct class of really existing actions, in contrast to the class named just actions. All notions, such as these, which have for opposites really existing things, are real and genuine notions of the mind; they are conceivable by us to the full extent that we are capable of conceiving anything whatsoever. In fact, the highest test of genuineness, reality, and conceivability, is the existence of a negative, which is also real and positive. Body or matter is a real conception by being opposed to space; the one resists our movements, and the other permits them. Body and space together make the extended universe, the world of externality, or objective existence; which has a distinct meaning by contrast to the inextended mind, or the subject universe. But *existence*, as a whole, is not a real conception, because we have nothing to oppose it to; non-existence is not a real opposite, like space to body, or mind to extension; it is only a formal or verbal opposite, made up by using the word for negation to a case that does not admit of the operation. Non-existence is total annihilation, which, of course, we cannot conceive, as we do cold or black, in their opposition to hot and white. This being so, we have nothing to affirm respecting existence as expressing the absolute totality of things. See **EXTENSION**.

Now, to which class of notions does infinite belong? Is it a real opposite to the finite, like cold to heat, or a verbal and formal opposite, like non-existence? Finite means what has a boundary or termination, and applies strictly to body, which is always conceived by us as bounded and terminating in space. The bounded is, in fact, body (or some analogy of body, as when we fancy an enclosure which we do not actually construct); the absence of bounds is free space, which is a real conception. It means scope for movement, freedom from obstruction, and its opposite is some inert matter, standing in our way, to prevent further movement. The unbounded is thus another name for *space*; and when we arrive at a space with no further prospect of obstruction, we may call that a boundless space, but the only meaning we have thereby is a space which no longer contains material obstruction. And we can conceive of no other end of space. Our whole experience furnishes no other contrast except these two, space and body, and where the one ends, the mind must conceive the other. We may conceive the not-extended, it is true, by passing to the subject mind, with its feelings and volitions; but within the sphere of the extended, we have no choice but between space and body. We cannot conceive the end of space otherwise than by the beginning of resistance; anything else (not being the subject mind) would be non-existence, or annihilation.

The infinite may thus be the name for an abbreviation in mathematics, but as a real notion of the mind, it merely expresses our inability to pass beyond the region of our experience of matter and space.

INFINITE/SIMAL CALCULUS. See **CALCULUS**.

INFINITIVE. See **VERE**.

INFLAMMATION is the most important of all the morbid processes that fall under the notice

of the physician or surgeon. The most obvious symptoms or phenomena of inflammation, when it attacks an external or visible part, are pain, redness, heat, and swelling, or, in the words of Celsus, 'rubor et tumor cum calore et dolore.' The general characters of the process will be best understood by an assumed case. If a healthy man gets a splinter of wood or any other foreign body imbedded in any fleshy part, he begins to experience pain at the part, and this is soon succeeded by redness of the skin, a firm and extremely tender swelling at and around the spot, and a sense of abnormal heat. These purely local symptoms are succeeded, if the inflammation reach a certain degree of intensity, by a general derangement of the vascular and nervous systems, to which various names, such as constitutional disturbance, symptomatic or inflammatory fever, pyrexia, &c., have been applied. If the foreign body is extracted, the probability is that all these symptoms will gradually abate until the part at length regains its natural appearance and sensations. In this case, the inflammation is said to terminate by *resolution*, and this is the most favourable mode of termination. If, however, the cause of irritation is not removed, or if the intensity of the morbid process exceed a certain point, the following phenomena occur: the swelling assumes a more projecting or pointed form, the part becomes softer, and the skin at its centre, which is usually the most projecting part, becomes whiter. There is a sensation of throbbing pain, and if the skin be not divided by the knife, it finally breaks, and a yellow, cream-like fluid, known as Pus (q. v.), escapes, after which the symptoms rapidly abate. This termination is known as *suppuration*.

If the original injury was very severe, and the inflammation intense, there may be actual death of the part affected. In that case, the red colour of the skin becomes purple or greenish black, the pain ceases, and the part becomes dead and putrid. This is *mortification*. Under favourable circumstances, this dead part, which is called a *slough*, spontaneously separates from the adjacent living parts by a vital process known as *Ulceration* (q. v.), and the cavity which is thus formed gradually fills up and heals.

The *pain* may vary from mere discomfort to intense agony. There is usually most pain in those parts in which the tension produced by the swelling is the greatest, as in bone, serous and fibrous membranes, &c. The pain occurring in inflammation is always aggravated by pressure, and by this means the physician can often distinguish between inflammatory and non-inflammatory disorders. The *heat* is seldom so much increased as the sensations of the patient would lead him to believe; it does not rise above the maximum heat of the blood in the interior of the body. This increase of heat depends upon the increased flow of arterial (or highly oxidised) blood to the part. The *redness* depends upon there being more blood than usual in those vessels in the affected part which usually carry red blood; upon the blood containing an increased number of red corpuscles; and upon red blood entering into vessels which, in the normal state, convey colourless fluids only, or which naturally admit so few red corpuscles that they cannot usually be observed. The *swelling* depends in part upon the distension of the blood-vessels, but mainly upon the effusion of various fluids, such as blood, serum, coagulable lymph (or fibrine), and pus into the tissue of the affected part. These fluids are termed the *products* of inflammation. This coagulable lymph frequently becomes organised, and many changes, some of a reparative nature (to which a reference will be presently made),

and others of a morbid nature, depend upon its effusion.

Numerous observers have attempted to trace the exact phenomena of inflammation, by microscopic examination of the transparent parts of animals in which the process has been artificially excited. From observation made on the web of the frog's foot and other transparent parts of animals by Wharton Jones, Paget, and others, the following general conclusions may be drawn.

1. The primary effect of a slight stimulus applied to the blood-vessels is a slight and gradual contraction, with a retardation of the current through them.

2. During this contraction, the blood is impeded, or altogether stops. But the vessels soon dilate to a size larger than they originally possessed, and the blood now moves through them more rapidly than in the normal state. The slight stimulus that previously caused the vessels to contract, has now, if re-applied, little or no effect; but on applying a more powerful irritant, such as a minute drop of tincture of capsicum, the phenomena of active congestion or determination of blood become almost instantaneously developed. The vessels become lengthened, dilated, and tortuous, and are distended with blood which contains a great excess of red corpuscles, and is circulated with far more than the normal velocity.

3. But if the injury be still more severe—if, for example, a red-hot needle be inserted—then, in addition to the active congestion described in the preceding paragraph, there is a retardation, and finally a complete stagnation of the blood in the capillaries of the injured spot, while around it the blood moves rapidly through turgid but less full vessels.

The blood obtained by bleeding a patient suffering from inflammation of any important organ, usually presents a peculiar appearance after coagulation. In healthy blood, the clot consists of a uniform admixture of blood corpuscles and coagulated fibrine, and is of a deep red colour; but in inflammation, the upper part of the clot consists of a layer of a yellowish or whitish colour, to which the term *buffy coat* is applied. This buffy coat is often concave, or hollowed out into a cup-like form, in which case the blood is said to be both buffed and cupped. The cause of this buffy coat is still to some extent an open question; but the phenomenon is clearly due to a subsidence of the blood corpuscles, by which a layer of fibrine, forming the buffy coat, is left at the surface. Another and a more important change in the blood in inflammation is the augmentation of the fibrine, which often rises to two, three, or more times its normal quantity.

Reference has already been made to coagulable lymph or fibrine as one of the products of inflammation. This effusion of coagulable lymph is so important a process both for good and for evil, that a few lines must be devoted to its special consideration.

When coagulable lymph is effused between membranes that are normally in contact (or nearly so) with one another, it often causes them to cohere. In this way we often have adhesions of the adjacent surfaces of serous membranes, such as the pleuræ, the pericardium, and the peritoneum, which materially interfere with the natural free motion of the parts, and occasion various persistent morbid symptoms. In inflammation of the iris, the pupil may be rendered irregular or immovable, or may even be closed up by the effusion of coagulable lymph. In endocarditis, or inflammation of the lining membrane of the heart, coagulable lymph may be deposited in wart-like masses on the valves, and may thus

occasion some of the worst forms of cardiac disease. On the other hand, in many cases, the effusion of coagulable lymph has a reparative and conservative influence. It is by the organisation of this fluid that the lips of recent wounds are glued together, and that parts recently severed from the body may be sometimes replaced and still live. The success of the Talicottian operation, by which a new nose is engrafted in the position of that which had been lost—of the operation of injecting a stimulating fluid into cystic tumours, &c., with the view of setting up adhesive inflammation—and of various other surgical operations, essentially depends upon the property of organisation possessed by this fluid. It is thus, too, that ulcers are gradually filled up till the breach of texture is repaired.

The inflammatory diseases of the most important organs are described under their specific names, and, as a general rule, the termination *-itis* is employed to indicate an inflammation. Thus, pleuritis signifies inflammation of the pleura; peritonitis, inflammation of the peritoneum; iritis, inflammation of the iris; &c. Inflammation of the lungs, however, is usually known as pneumonia instead of pneumonitis.

It is unnecessary to enter into the consideration of the treatment of inflammation further than to remark (1) that if possible we must remove its exciting cause, which can seldom be done except when the inflammation is external; and (2) that the patient should be placed on a strictly antiphlogistic regimen (which implies a total abstinence from solid animal food and stimulating drinks, due attention to ventilation, temperature, &c.). Of the direct remedies, the most important (except in persons of weak or broken-down constitutions) is blood-letting, although at present it is somewhat out of fashion. The medicines chiefly employed are purgatives, preparations of mercury, tartar emetic, and opium; while, as external applications, hot fomentations (occasionally cold lotions), and counter-irritation by means of blisters, sinapisms, setons, &c., are often of service.

INFLECTION is a general name used by grammarians for all those changes that words undergo when placed in relation to one another in a sentence. See DECLENSION, CONJUGATION, GENITIVE. Most of these changes occur in the end syllable or syllables of the word; and with regard to these at least, there is every reason to believe that they were originally separate words joined on to the root-words (see LANGUAGE), and that through the natural processes of phonetic change and decay, the compounds thus formed gradually assumed the forms now known in grammar as cases, numbers, persons, tenses, &c. In some instances, the original suffix can be readily recognised, and, by the help of Comparative Grammar, much has been done in recent times in tracing the more disguised inflections to their source; so that the greater part may be considered as satisfactorily established. Confining our remarks to the Indo-European languages, we may safely assert, that the syllables used in forming the cases of nouns and the terminations of verbs are of pronominal origin. Thus, *mi*, *si*, *ti*, as the endings of the three persons of the present singular of the verb, are evidently connected with the personal pronouns *ma*, *tva* (*sva*), *ta*; and the plurals *mas*, *tas*, *nti*, contain the same with an indication of the plural number. The nominative singular of masculines and feminines, ending in *s* (*equus*, *ἵππος*, *finis*, *πῖσις*), contains the personal pronoun of the third person, *ta* (*re*, nom. *sa*, *i*); the plural, *piscēs*, *ῥίπασσες*, is probably only a corruption of the same pronoun put twice (*pisci-sa-sa*—i.e. fish that and

that), the doubling of the pronominal element expressing symbolically a plurality of the same thing. In the oblique cases, we meet with other pronominal elements, which indicate that a certain thing is placed with regard to the predicate in the three fundamental directions of motion—those of *whither*, *where*, and *whence*. The accusative is the exponent of the direction of an action *towards* some object, and its termination *m*, in the plural *ns* (i.e. *m* with the plural termination *s*), is connected with the pronomen *ama*, *yon*. I (comp. Lat. *i-s*, *i-d*, *i-bi*) is the pronominal syllable employed for signifying that an action has arrived at a certain goal, and is continuing there, giving the dative and locative cases; while the starting from a certain point is indicated by the pronoun of the third person, *ta*, and its equivalent *sa* (that), corrupted to *t* and *s*, the termination of the ablative and genitive cases. The dative and genitive of the plural express the same relations as the singular, though they are less clear as to their origin. If, notwithstanding the identity of terminations, the aggregate of nouns must, by a manifest analogy, be classified into several distinct declensions, this, in most cases, is to be accounted for by the difference of the formation of stems or bases previous to their coming in contact with the affixes. It is natural that the so-called crude forms should undergo a different process of contraction according to the nature of their final vowel. The dative *lupo*, from the crude form *lupō*, is as much a contraction of *lupo-i*, as is the dative *fini* from *fini-i*. Consonantic bases, or of the vocalic, those which end in *u* (*v*), a vowel of a decided consonantic quality, are most apt to preserve the inflections in their unaltered form, being less liable to change on the conflict of congruous or incompatible elements. Accordingly, we find that the third Greek, and the third and fourth Latin declensions, present a much more normal aspect of the original inflections than the others. This does not preclude the possibility of a peculiar inflection being preserved in one or other declension; for nothing is more certain than that language, at a certain stage of its development, created and applied a great variety of means to the same purpose, and that these became limited only when the rising intellect of the human tribes, and their distribution into larger or smaller political bodies, taught and compelled them to economise their ways of expression.

In the formation of certain tenses of the verb, we find a process different from the combination of a nominal or verbal base with a pronominal syllable. The Latin subjunctive of the first conjugation, the future in *bo*, the Greek optative and future, the Latin imperfect, and the perfect ending in *avi*, *ui*, *ivi*, consist of the verbal root with an already inflected form of the verbs *i*, to go, *as* and *fu*, to be. However strange this may appear at first sight, it is nevertheless a fact that, e.g., *ἔμν*, I would be (for *ἔμν-μν*, Scr. *s-yām*, Lat. *s-iem*), originally meant, I go (if I mistake not) in being, I am in doubt of the act of being; that *πνῖ-νς*, thou wilt do, is literally translated, 'thou mayst be doing.' The Latin *i-bat* for *i-fuat*, or *i-vit* for *i-fuit*, is still more clearly, 'he was in the act of going.' That auxiliary verbs sometimes assume the function of inflections, is proved by the French future, where forms like *trouverai*, *finirai*, are easily recognised as compositions of the infinitive with the verb *avoir* (*finir-ai*, I have to finish).

The inflections hitherto described affect the end of words, and possess the character of a composition of a significative word or root with a syllable of local import, or an inflected form of a verb. But language also employs other means of a symbolical nature, either in the middle or the beginning of

verbs, with the object of representing the various aspects in which an action can appear. We find that the present tenses generally have longer forms than those of the past. The additions commonly used are long vowels or diphthongs, inserted nasals and semi-vowels, or, lastly, reduplication. It seems that the weight given to the verbal root by these appliances is intended to exhibit the continuance of an action in the present tenses, in contrast with the fleeting or momentary operation of the past. In a similar manner, the long vowels peculiar to the subjunctive in Greek (τύπτετον-τύπτητον, τύπτομεν-τύπτομεν) convey the idea of doubt or uncertainty, by means of the longer interval required for the pronunciation of the intermediate long vowel, thus expressing the hesitation of the speaker with regard to the reality of his judgment. The reduplication in the perfect, being originally a repetition of the root (*tu-tudi*), is not so much the sign of a past time, as the symbol for an action having passed from the stage of incipience into that of completion.

The wear and tear of time exercises its influence as well on the radical part of words as on their inflections. Grammatical terminations of a totally different formation by corruption become obscured, and identical in shape with others of heterogeneous purport. The Latin *Romæ* takes on itself the functions of *Româ-i-s* (gen.), of *Româ-t* (dat.), *Româ-i* (locat.), and *Româ-i-es* (nom. pl.); or *populo* those of *populô-t* (dat.), *populo-d* (abl.), and at a very early age that of *populo-m*. The absence of written standard works of such a national importance as to penetrate into the masses of a people, and to check their inclination towards misapplying or neglecting inflections which in progress of time have lost their inherent meaning, and therefore appear cumbersome, accelerate the change of the inflective system into the analytical. The demand for a precise and, so to speak, material expression of those manifold relations appropriated to inflections in ancient languages, is felt more keenly with the waning distinctness of the latter; and sudden political revolutions, such as the invasion of Italy by Teutonic tribes, or the conquest of England by the Normans, interrupting the influence of the privileged classes of a nation, bring the struggle to an issue, and give the ascendancy to the popular movement. Articles, prepositions, pronouns, auxiliary verbs, take in modern languages the place of inflections; and notwithstanding that these are not entirely destroyed, they have a precarious existence, and are in danger of being finally supplanted by the tendency to represent every distinct relation of words to each other by a distinct expression. The application of the *s* as a mark of the possessive case becomes more and more limited in modern English, and the mistaken effort to supersede this relic of Saxon inflection by the substitution of the pronoun *his*, has only been defeated because it proceeded from learned pedants, and not from the people. The termination *nt* as a sign of the plural in French verbs (*aiment*, *aimaient*), may be called almost a dead letter, only traditionally preserved in spelling. The loss of inflections has deprived modern languages of the wonderful simplicity and power of the ancient tongues, and the periphrastic mode of expression they have adopted prevents them from arranging all the parts of a sentence with the same degree of liberty. On the other hand, they have gained in perspicuity. After all, they have only reversed the process of the combination of pronominal and auxiliary words with others; but by placing them in front, the attention of the hearer or reader is called at once to the particular modification of every possible shade of a given thought.

INFLECTION, in Optics, see DIFFRACTION.

INFLORE/SCENCE (Lat. *in*, and *floresco*, to begin to flower), in Botany, a term employed to designate the flowers of a plant considered collectively and with reference to the manner in which they are arranged and the succession in which they are developed. The flower-bud being a modified leaf-bud, and the parts of the flower modified leaves, it might be expected that the inflorescence should exhibit a close correspondence with the ramification of the plant, but the modification in the parts immediately concerned in the production of flowers is so great, that this is far from being the case. A most important classification of kinds of inflorescence is into CENTRIFUGAL and CENTRIPETAL (q. v.). When the flowering axis produces only a single terminal flower, the inflorescence must be regarded as of the centrifugal kind. The terms used to designate more specifically the different kinds of inflorescence are numerous. The principal of them are explained under separate heads, as CATKIN, CONE, CORYMB, CYME, PANICLE, RACEME, SPIKE, UMBEL, &c. But it is to be regretted that such terms are still used somewhat vaguely or carelessly, even by very eminent botanists, or in such various senses, that the inflorescence of the same plant is often described by one term in one botanical work, and by another term in another. And hence arise confusion and difficulty, not entirely to be ascribed to the endless variety which is exhibited in nature.

INFLUEN/ZA, one of the class of diseases to which the term *Zymotic* (q. v.) is now applied, has been long recognised by medical writers, although its name, borrowed from the Italian, is comparatively modern in this country. Cullen called it *catarrhus e contagio*, but although, in most cases, it closely resembles ordinary catarrh, it presents certain points of difference from that disease. In addition to the ordinary symptoms of catarrh, there is a sudden, early, and very striking debility and depression of spirits. This early debility is one of the most marked and characteristic signs of influenza. The mucous membranes (especially the pulmonary membrane) are much affected. The tongue is white and creamy, the sense of taste is lost, there is no appetite, the pulse is soft and weak, the skin, although at first hot and dry, soon becomes moist, and the patient complains of pains and soreness in various parts of the body.

In simple, uncomplicated cases, convalescence supervenes in the course of a week or sooner, but influenza is very frequently conjoined with bronchitis or pneumonia, in which case it is much more persistent and dangerous.

Influenza affords an excellent example of an epidemic disease, a whole community being often attacked in the course of a few hours. From this it may be inferred that the occurrence of this disease is connected with some particular condition of the atmosphere, but what that condition is, is not known. Not unfrequently, influenza follows close upon a sudden thaw; sometimes it is preceded by thick, ill-smelling fogs. One hypothesis refers the complaint to some change in the electrical state of the air; and one of the latest and most probable conjectures regarding its exciting cause is that of Schönbein, who refers it to the presence of an excess of Ozone (q. v.) in the atmosphere. Like cholera, influenza generally follows a westerly direction, or one from the south-east towards the north-west, and its course seems to be altogether independent of currents of air, as it frequently travels against the prevailing wind.

The most important point in the treatment of influenza is *not* to bleed the patient, or in any way

to depress his vital powers. He should be kept in bed; his bowels should be gently opened; his skin slightly acted upon, if dry; and, if the cough be troublesome, a mustard-poultice should be applied to the chest, and an expectorant mixture prescribed. In persons of weak or broken-down constitutions, ammonia, beef-tea, and wine and water, must be given from the outset. The debility that often remains for a considerable period after the establishment of convalescence, is best met by the preparations of iron and quinine.

Few diseases increase the death-rate to such an extent as influenza, more, however, in consequence of the great number of persons who are attacked in a severe epidemic, than in consequence of its danger in individual cases.

IN FORMA PAUPERIS, a term used when a person is allowed to sue as a pauper—i. e., by getting leave to dispense with paying the fees of court and other costs.

INFORMATION, in English law, is used in several senses. In criminal law, an information filed by the attorney-general or master of the crown office is a substitute for an ordinary indictment, and is resorted to only in cases of such misdemeanours as tend to disturb the peace or the government—for example, as libels on judges, magistrates, or public officers, bribery at elections, &c. This information is usually called a criminal or an *ex officio* information, and the defendant is put on his trial in the same way as under an indictment. There are other informations, such as those called *quo warranto*, to test the validity of an election or appointment to a public office, &c. An information by the attorney-general in Chancery is a suit on behalf of the crown or government as to any misapplication of a public charity, or on behalf of an idiot's or lunatic's property. The term is also commonly used to denote the written statement often but not invariably made on oath before a justice of the peace, previous to the issuing of a summons or complaint against a person charged either with a crime or an offence punishable summarily. There are also informations in the Court of Exchequer to recover penalties for breach of the revenue laws. The term is not now used technically in Scotland, except in cases of difficulty, when the Court of Justiciary orders informations—i. e., written arguments—on both sides.

INFORMER, in English law, the person who sues for a penalty under some statute. In many statutes which define offences—not criminal but savouring of criminality—encouragement is often given to strangers to come forward and prosecute the offence, by giving them power to sue for the penalty for their own benefit in whole or in part. This practice has been much resorted to in modern statutes on most subjects. In England, when the informer sues in such an action, it is called a penal or *qui tam* action; but, in general, the penalty is now recoverable before justices of the peace in a summary way. In suits in Chancery, which require to proceed in the name of the attorney-general, the informer is called a relator. In Scotland, an informer is the party who sets the Lord Advocate in motion in criminal prosecutions, and the Lord Advocate is bound to give up the name of the informer, who is liable in case of malicious prosecutions. See **QUEEN'S EVIDENCE**.

INFUSIONS, or **INFUSA**. These terms are applied in pharmacy to aqueous solutions of vegetable substances obtained without the aid of boiling. They are usually prepared by digesting in soft water (which may be either hot or cold, according to circumstances) the sliced or powdered

substance in an earthenware vessel fitted with a cover. Cold water is preferable when the active principle is very volatile, or when it is expedient to avoid the solution of some ingredient in the vegetable which is soluble in hot, but not in cold water. For example, in preparing the infusion of calumba, cold water is preferable, because it takes up the bitter principle (which is the essential ingredient), and leaves the starch-matter undissolved. In most cases, however, boiling water is employed. Infusions are preferred to decoctions when the active principle volatilises at a boiling heat, as in the case of essential oils; or when ebullition readily induces some chemical change, as in the case of Senna (q. v.).

Infusions may also be prepared by Percolation (q. v.), a process which is extensively employed in the preparation of tinctures. When thus prepared, they are less liable to decay than when prepared on the old system.

INFUSORIA, a class of the sub-kingdom of animals called **PROTOZOA** (q. v.). The term originally almost synonymous with **Animalcules** (q. v.), but now very much restricted in its signification. It was first used by Otto Friederich Müller, and was adopted by Cuvier, who made the I. the last class of **Radiata** (q. v.). But their radiated structure is by no means established. No distinct trace of nervous matter has been found.—After Müller (1773—1786), the next to devote himself to the special study of the I. was Ehrenberg, the publication of whose work on them (1837) was the commencement of a new era in the history of this branch of zoology, which has since been prosecuted with great industry by Dujardin, Stein, Lachmann and Claparède, Cohn, Lieberkühn, Rymer Jones, and others. Many of the organisms included by Ehrenberg, as by previous naturalists, among I., are now generally regarded as vegetable (see **DESMIIDÆ** and **DIATOMACEÆ**); whilst others, as the *Cercariæ* (q. v.), have been discovered to be immature states of Entozoa. The *Rotifera* (q. v.) are now also, by very general consent, widely separated from the *Polygastrica* of Ehrenberg, for which alone the term I., although not unobjectionable (see **ANIMALCULE**), is retained; the term *Polygastrica* (Gr. many-stomached) being rejected, because it expresses a view of the structure of these creatures which is generally deemed erroneous. Agassiz has gone the length of proclaiming an opinion, not received by other naturalists, that the I. are all immature or larval worms. But of the forms at present known, it is at all events probable that many are those of immature creatures; it is certain that some species assume very different forms at different stages of their existence; and the whole life-history of no one species is fully known.

Some of the I. are large enough to be individually visible to the naked eye, but most of them are altogether microscopic. Their bodies are composed of *sarcode*, a glutinous diaphanous substance, of which the outer layer sometimes forms a more or less resisting integument. The body has some well-defined form, of which the varieties are very great in different species. Many are furnished with *cilia*, the motion of which carries them with great rapidity through the fluid in which they live, and by means of which also currents are created in the fluid to bring food to the mouth. The mouth is very generally surrounded or largely provided with *cilia*. Whether these organs are under the control of will, or maintain their motion without will or even consciousness on the part of the creature, like the *cilia* of the epithelium in higher animals, is not determined. There is an analogy in favour of the latter opinion, and many appearances—which,

however, the phenomena of zoospores, &c., teach us to regard as possibly deceptive—in favour of the latter. Some I., instead of cilia, have a few slender filaments, which they agitate with an undulatory movement; others move by contractions and extensions of their bodies. Some have stiff bristle-like organs, which they use as feet for crawling on the surfaces of other bodies; and some have hooks, by which they attach themselves to foreign bodies.

All I. have a distinct mouth, and many have also an anal opening, sometimes near the mouth, sometimes at the opposite extremity of the body. Between these, Ehrenberg imagined that he could trace an intestine, straight in some, variously bent in others, with which along its course many small stomachs are connected; whilst in the I., having only one aperture, he supposed all the stomachs to open immediately from it. But other observers have failed to find the canal and stomachs, although Ehrenberg's experiments, by means of fluids coloured with indigo and carmine, have been often repeated. And it seems probable that the food taken into the mouth is simply conveyed into the midst of the soft gelatinous substance of the body, being formed into pellets as it passes from the mouth through a kind of gullet in the firmer integument. The food of I. consists of organic particles of various kinds, and different species have been remarked to shew a preference, like those of higher animals, for particular kinds of food. Many of them feed on microscopic plants and on other infusoria. Their great use in the economy of nature is probably to consume organic particles, the decomposition of which would otherwise be baneful to all life, and the return of which by decomposition to their primitive elements would diminish the fertility and wealth of the world. The numbers of the I. are prodigious. They are found in all parts of the world, and both in fresh and salt water, in stagnant ponds and ditches, in mineral and hot springs, and in moist situations. Any infusion or other liquid containing vegetable or animal matter, if left exposed to the atmosphere, is sure to be full of them. Their multitudes are so great that leagues of the ocean are sometimes tinged by them. Some, which, instead of swimming freely, like most of their class, become surrounded with a gelatinous substance, are found adhering together in masses sometimes four or five inches in diameter, although the individual animals are so small that a cubic inch of the mass may contain 8,000,000 of them. The I. contained in a single cup of putrid water may exceed in number the whole human population of the globe!

The organisation of the I. is still very imperfectly known. There appears in many of them a cavity not far from the mouth, the *contractile space*—variously regarded as a cavity without proper walls, or as a vesicle—from which branches sometimes radiate through the substance of the body, and which, being capable of contraction and expansion, is regarded by some as the centre of a kind of vascular system. It is with considerable probability regarded as furnished with proper walls. There is also, probably in all the I., another organ, evidently of great importance, although its use is still uncertain, called the *nucleus*, which is usually roundish or a little elongated, sometimes much elongated and band-like. It is enveloped in a membrane, and is more compact than the surrounding substance. In the multiplication of these animals by spontaneous division, a fission of the nucleus always takes place. Each of the halves becomes furnished with a complete mouth, set of cilia, and other organs. The division, in the same species, is sometimes longitudinal, sometimes transverse, perhaps alternately longitudinal and

transverse. The multiplication of the I. in this way is extremely rapid. A *Paramecium*, well supplied with food, has been observed to undergo division every 24 hours, from which would result 16,384 individuals in a fortnight, or 268,435,456 in four weeks. Reproduction also takes place by gemmation; buds or gemmules forming on the outer surface of the body, and gradually assuming the shape of the parent animal, although they do not attain to their full size till after separation. More extraordinary is another mode of reproduction by *encysting* or *encapsulation*. The animal contracts, closes its mouth, becomes surrounded by a viscid secretion, and finally by a membrane, becomes attenuated, and dissolves, all but the nucleus, into a mere liquid containing granules, which afterwards form within the cyst a new infusorium, different in form and appearance from that by which the cyst was produced. The metamorphoses of the I. have been traced to a certain extent in some kinds, but not fully in any. Whether any truly sexual propagation takes place, has not been perfectly ascertained, although the observations of Balbiani have made it extremely probable as to some of them. A reproduction, different from all that has yet been mentioned, has been observed to take place in some, by the formation of internal germs, to which this character has been ascribed, but the subject is still involved in doubt; nor is it improbable that there may be amongst these minute creatures a production of real eggs, which has hitherto eluded observation.

In the integument of some I., very minute fusiform bodies are thickly imbedded, called *trichocysts*, which are capable of throwing out long filaments. Their use is unknown, although they are supposed to be urticating organs. The filaments are thrown out when the animal is subjected to annoyance by the drying up of the liquid in which it lives, or by the application of some irritating liquid.

INFUSORIA, FOSSIL. See DIATOMACEÆ.

INGEMANN, BERNHARD SEVERIN, one of the most distinguished poets and novelists of Denmark, was born May 28, 1789, in the island of Falster. His literary career may be divided into three distinct periods. The first of these, extending from 1811 to 1814, embraces his best lyrical productions, viz., the collection of poems entitled *Procne* (1812), and the allegorical epic of *De Sorte Riddere* (1814); while the second, or dramatic, ending in 1822, was marked by the appearance of numerous tragedies, which have maintained their place on the national stage, and among which the best are his *Masaniello*, *Blanca, Røsten i Oerken* (1815); *Hyrden af Tolosa*, *Reinald*, *Underbarnet*, *Loveridderen* (1816); and *Tasso's Befriede* (1819). Since this period, I.'s writings have been characterised either by a leaning to historical disquisition, or a strongly religious bias. His admirable epic poem of *Valdemar den Store og Hans Mænd* (1824) was the prelude to the various historical novels, in which, taking Walter Scott for his model, he endeavoured to portray the social life and habits of his own country in the middle ages. *Valdemar Seier*, the first of the series (1826), and *Erik Menved's Barndom* (1828), which are generally regarded as the best of these productions, may compete favourably with some of the most successful efforts of his great model; while even the less popular of his historical novels, *Kong Erik og de Fredløse* (1833), and *Prinds Otto og Hans Samtid* (1835), may justly entitle him to rank among the first novelists of the day. The poems of *Dronning Margrete* (1836) and *Holger Danske* (1837), which are based, like his novels, on incidents of Danish national history and tradition,

rank among I.'s most successful efforts. The religious element in this writer's mind has found expression in various productions of considerable merit—as, for instance, in his collection of anthems and psalms, *Højmessepsalmer* (1825), in his rendering of some of the symbolical or traditional legends of the church in his *Blade af Jerusalem's Skomager's Lommebog* (1833); *Salomon's Ring* (1839); and in his allegorical poem, *Guldoeblet* (1856). I. held the chair of *Æsthetics* and Danish Literature at the Royal Academy of Sorø, near Copenhagen. His collective works have been published in 38 vols., 1857, Copenhagen, and the greater number of his prose works and many of his poems have been translated into various languages. He died 1862.

INGERSOLL, CHARLES J., an American statesman, was born in Philadelphia, October 3, 1782. His father, Jared Ingersoll, was an active partisan in the American revolution, and a member of the convention which adopted the Federal constitution. Charles J. I. received a liberal education, which was completed by European travel. In 1801, he produced the tragedy of *Edwy and Elgiva*, and in 1808, a strong political pamphlet in defence of the democratic policy of Mr Jefferson, and a satirical review of American politics, entitled *Inchiquin's Letters* (1810). He was elected to Congress in 1812; and in 1814, he advocated the principle that 'free ships make free goods,' in a powerful speech. He was for fourteen years United States' district attorney for Pennsylvania, and in Congress from 1839 to 1849. He has published two series of *Historical Sketches of the War of 1812*, in 1845 and 1852. A speech in opposition to the Lincoln administration caused his arrest in 1862; but his popularity made it advisable to release him, after a brief detention.

INGOLSTADT, or **INGOLDESTADT** (anciently *Aureatum*, and by the Latin writers of the 16th c. called *Auripolis* and *Chrysopolis*—i. e., 'the golden city'), a town and fortress of Upper Bavaria, is situated in a fertile district, on the left bank of the Danube, which is here crossed by a stone bridge, 46 miles north-north-west of Munich. It contains nine churches, a hospital, and a castle. Cloth, playing-cards, and leather are manufactured; and breweries and a trade in corn are carried on. Pop. 15,052.

I. is an ancient, melancholy-looking town, too large for the number of its inhabitants. A university was founded here in 1472, which reckoned Reuchlin, Aventin, and other eminent scholars among its professors; it was removed, however, to Landshut in 1800, and to Munich about six years after. At this university, in the 16th c., Urb. Rhegius the poet, known by the name of Dr Faustus, studied. I. was the first German town at which the Jesuits were permitted to establish themselves, and to teach publicly from the university chairs. Loyola gave it the fond title of 'his little Benjamin.' After the suppression of the order in 1773, Adam Weiss-haupt established here the order of the Illuminati (q. v.). In 1827, the fortifications of I., which had been destroyed by the French in 1800, were restored upon a large scale, the two forts on the left bank of the river being especially distinguished for their elegance and strength.

INGRAILED. See **ENGRAILED**.

INGRES, JEAN DOMINIQUE AUGUSTE, an eminent French painter, was born at Montauban, 15th September 1781, studied under David (q. v.), and subsequently went to Rome. Here he resided for fifteen years, after which he spent four years in Florence, by which time his fame was so well established,

that he was called to the School of Fine Arts in Paris as the successor of Denon. In 1829, he succeeded Horace Vernet as Director of the Academy at Rome; and in 1845, he was made Commander of the Legion of Honour. His merits as a painter have been very keenly canvassed, and unanimity of opinion is yet far from having been attained. I. occupies a sort of middle place between the classic and romantic schools, but rather inclines to the former. His admirers praise him for correct design, ideal composition, and sober painting. Among his numerous pieces may be mentioned 'Raphael et la Fornarina,' 'Romulus, Vainqueur d'Acron,' 'Virgile lisant son *Enéide* à Auguste et à Octavie,' 'La Mort de Léonard de Vinci,' 'Le Vœu de Louis XIII.,' 'L'Apothéose d'Homère,' 'Stratonice,' 'Jésus au Milieu des Docteurs,' 'Molière dans son Cabinet,' and 'L'Apothéose de Napoléon I.,' with a motto flattering enough to the present Emperor of the French, *In nepote redivivus*. At the Paris Exhibition of 1855, I. had a whole salon to himself.

INGRIA. See **ST PETERSBURG, GOVERNMENT OF**.

INGROSSING, or **ENGROSSING**, a deed means, in Law, the writing it out in full and regular form on parchment or paper for signature. The person who engrosses is usually a law-stationer or clerk. In Scotland, the corresponding term is 'extending a deed,' and the name of the person who does so must be named in the testing clause, which is not necessary in England.

INGULPH, Abbot of Croyland, long considered the author of the *Historia Monasterii Croylandensis* (History of the Monastery of Croyland or Crowland, in Lincolnshire), is supposed to have been born in London about 1030 A.D. According to the account of his life in his History, he studied oratory and philosophy at Oxford; became a favourite of Edgitha, the wife of Edward the Confessor; visited Duke William of Normandy at his own court in 1051; and, after a disastrous pilgrimage to the Holy Land, entered a Norman monastery. Here he remained till 1076, when he was invited to England by the Conqueror, and made Abbot of Croyland, where he died December 17, 1109. The *Historia Monasterii Croylandensis* was printed by Savile at London in 1596, and in a more complete edition by Gale at Oxford in 1684. It has been translated into English for Bohn's Antiquarian Library by Riley. Some writers even of the last century questioned the entire genuineness of the book; but their scepticism did not proceed further than the hypothesis of interpolations by a later writer; but in 1826, the late Sir Francis Palgrave, in an article in the *Quarterly Review*, endeavoured to prove that the whole so-called History was little better than a novel, and was probably the composition of a monk in the 13th or 14th century. His conclusions have been, on the whole, almost universally adopted.

INHERITANCE. See **HEIRS, TESTACY, WILL, SUCCESSION**.

INHIBITION, in Scotch Law, is a writ which is issued in order to prohibit a person from alienating his heritable estate until the debt of the creditor is paid.

INIA (*Inia Boliviensis*), a cetaceous animal, of the family *Delphinidae*, in form resembling a dolphin, with a long and slender snout. It is the only known species of its genus, and is one of the few cetacea which inhabit fresh water. It is found in some of the upper tributaries of the Amazons, and in the lakes near the Cordilleras. It is from seven to twelve or fourteen feet long. The I. feeds chiefly

on fish. It is pursued for the sake of the oil which it yields. It is generally found in little troops of

Inia (Boliviensis).

three or four. The females shew great affection for their young.

INITIALS. Though in general it is usual and regular in all legal deeds and writings for a party to write his full Christian name and surname, yet in many cases, especially in documents of a mercantile nature, signature by initials will bind equally with the full signature.

INJECTIONS. This term is applied in medicine to fluids thrown into the passages or cavities of the body by means of a syringe or elastic bag. The fluids thus injected into the *rectum* or lower bowel are termed *Clysters* (q.v.). The injection of a dilute solution of salt into the veins has been found to be of great service in even advanced cases of Asiatic cholera. The injection of blood into the veins is described in the article **TRANSFUSION OF BLOOD**.

INJUNCTION, a writ in English law, by which the Court of Chancery stops or prevents some inequitable or illegal act being done. The writ is peculiar, in general, to the Court of Chancery, though to a limited extent it is now introduced into common law. If the party disobeys the injunction, he may be attached for contempt of court, and imprisoned till he obeys. If he obeys it, he may apply to have the injunction dissolved. In Scotland, a remedy of a similar kind is called an *Interdict* (q.v.).

INK. The most important kinds of ink may be included in the two following heads—*Writing Ink* and *Printing Ink*.

1. *Writing Ink*.—The composition of the ink used by the ancients is not well understood; it is, however, certain that their ink exceeded ours in blackness and durability. Mr Underwood (who read a paper upon the subject of ink before the Society of Arts in 1857) thinks that some old ink was merely a carbon pigment, like the Indian ink of the present day, while other kinds were veritable dyes of iron and acids (true chemical compounds), with the addition of a good deal of carbon.

The essential constituents of ordinary black ink are galls, sulphate of iron (popularly known as green vitriol or green copperas), and gum; and the most important point is the regulation of the proportion of the sulphate of iron to the galls. If the former is in excess, the ink, although black at first, soon becomes brown and yellow. The gum is added to retain the colouring matter in suspension, and to prevent the mixture from being too fluid. The following prescription by Professor Brande yields a very good ink: 'Boil six ounces of finely bruised Aleppo galls in six pints of water, then add four ounces of clean and well crystallised sulphate of iron, and four ounces of gum-arabic. Keep the whole in a wooden or glass vessel, occasionally shaken. In two months, strain, and pour off the ink into glass bottles.' The addition of a little

creasote is useful as a check to the formation of mould. Stephens's ink—a blue liquid, which in a few hours after its deposition on paper becomes of an intense black—is one of the most popular of our writing fluids. It consists essentially of gallo-tannate of iron, dissolved in sulphate of indigo, while in ordinary ink the colouring matter is merely suspended by means of the gum. Runge, a German chemist, has discovered a simple and cheap black writing fluid, prepared from chromate of potash and a solution of logwood, which possesses the properties of forming no deposit, of adhering strongly to the paper, of being unaffected by exposure to water or acids, and of neither acting on, nor being acted on by steel pens.

Various receipts for *indelible inks* have at different times been published. Dr Normandy asserts that the ink obtained by the following combination cannot be obliterated or defaced by any known chemical agent: Twenty-four pounds of Frankfurt black (which is supposed to be a charcoal obtained from grape and vine lees, peach kernels, and bone-shavings) must be ground with mucilage, formed by adding twenty pounds of gum-arabic to sixty gallons of water, and the mixture strained through a coarse flannel; four pounds of oxalic acid are then added, together with as much decoction of cochineal or sulphate of indigo as will give the required shade.

Red Inks are of two kinds, one variety consisting essentially of the tinctorial matter of Brazil-wood, and the other being prepared from cochineal or carmine. Stephens's red ink, which is one of the best of these preparations, is obtained as follows: 'Add to a quantity of common carbonate of potash, soda, or ammonia, twice its weight of crude argol in powder. When the effervescence has ceased, decant or filter the solution from the insoluble matter. To this fluid add by measure half its quantity of oxalate of alumina, prepared by dissolving damp, newly precipitated alumina in as small a quantity as possible of a concentrated solution of oxalic acid. The mixture thus prepared is next coloured, when cold, with bruised or powdered cochineal, and after standing for forty-eight hours, is strained, when it is fit for use.' (Muspratt's *Chemistry*, vol. ii. p. 378.)

Blue Inks are now chiefly made either directly or indirectly from Prussian blue. Stephens's unchangeable blue ink is formed by dissolving this salt (which should be first well washed in a dilute mineral acid) in an aqueous solution of oxalic acid. Ink of which Prussian blue is the basis, is unaffected by any of the numerous physical causes which operate injuriously on black ink, unless it be exposed to a strong light, when the iron (which exists as a sesquioxide in Prussian blue) becomes deoxidised, and causes the colour of this ink to fade; but on removing the writing from the influence of light, the colour is restored.

Purple, green, and yellow inks have been formed by various chemists, but they are not of sufficient importance to claim a notice in this article.

Sympathetic Inks leave no trace of colour upon the paper, but when exposed to heat or chemical action of some kind, become more or less distinctly apparent. The following are a few of the principal kinds of this class of compounds. On writing with a solution of sugar (acetate) of lead or of ternitrate of bismuth, and washing the paper with a solution of hydrosulphuric acid (sulphuretted hydrogen), the letters come out *black*. On writing with a solution of nitrate of cobalt, and washing the paper with a solution of oxalic acid, the letters come out *blue*. On writing with a solution of subacetate of lead, and washing the paper with a solution of iodide of potassium, the letters come out *yellow*; or on writing

with a dilute solution of chloride of copper, and gently heating the paper, the letters which were previously invisible assume a beautiful yellow tint, which disappears on cooling. On writing with a solution of arsenite of potash, and washing the paper with a solution of nitrate of copper, the letters come out green.

2. *Printing Ink* is a soft glossy compound, altogether different in its composition from the inks which have been already described. The following are, according to Mr Underwood (in the paper already referred to), the necessary conditions of a good printing ink: 1. It must distribute freely; 2. It must have much greater affinity for the paper than for the type; 3. It must dry almost immediately on the paper, but not dry at all on the type or rollers; this is a great desideratum, especially for newspapers; 4. It should be literally proof against the effects of time and chemical reagents, and should never change colour. It is prepared by boiling the best linseed oil in an iron pot, kindling and allowing it to burn for a short time; by this operation the oil acquires the necessary drying quality. After being again boiled, resin is dissolved in it, in order to communicate body to the fluid, which now somewhat resembles Canadian balsam. The colouring matter—which is lampblack for black ink; carmine, lake, vermilion, &c., for red ink; indigo or Prussian blue for blue ink; lemon and orange chrome (chromate and bichromate of lead), or gamboge, for yellow ink, &c.—is then added to the hot mixture, and the whole is drawn off, and finally ground into a smooth uniform paste.

In Lithography, a *writing* and a *printing ink* are employed, both of which differ altogether from the compounds already described. The writing ink is composed, according to Muspratt, of the following materials: shell-lac, soap, white wax, and tallow in certain proportions, to which is added a strong solution of gum-sandarach, and it is coloured with lampblack; while the printing ink, which is employed to take impressions on paper from engraved plates, with a view to their transference to the stone, is composed of tallow, wax, soap, shell-lac, gum-mastic, black pitch, and lampblack.

INKERMANN, a small Tartar village in the Crimea, is situated near the eastern extremity of the harbour of Sevastopol. It is memorable for the battle which took place there, during the Russian war, between an army of Russians 60,000 strong, and detachments of allied forces, consisting of about 14,000 troops actually engaged. At about six o'clock on the morning of the 5th November 1854, the Russians, who had marched westward from Sevastopol, along the southern shore of the harbour, and whose movements were concealed by the darkness and a thick, drizzling rain, appeared crowding up the slopes of the plateau to the south, on which the allies were posted. Here a handful of men, about 1400 strong, a portion of the 'Household Guards,' made a most heroic stand for six consecutive hours against a body of Russians that was probably ten times as numerous. Reinforcements, both English and French, coming up to the rescue, the Russians were finally driven from the field.

INLAND BILL of Exchange means a bill of exchange drawn by and upon persons living in the same country. The rules applicable to foreign bills differ in some respects from those applicable to inland bills. By a recent statute, all bills drawn by persons in England on persons in Scotland or Ireland, and *vice versa*, are to be treated as inland bills.

INLA'YING is the art of decorating flat surfaces by the insertion of similar or different materials; thus, wood of one colour is decorated by inlaying

with others of different colours: to this kind of inlaying the French term *marqueterie* is now generally applied. Metal of one kind is inlaid with other kinds, and often very beautiful effects are produced. When steel is inlaid with gold or brass, it is usually called Damascene work. One variety produced in India is called Kufi-gori—in this, the inlaid metal, usually gold, occupies more of the surface than the metal forming the ground. Another beautiful variety of Indian inlaying is called Tutenague or Bedery-work, which consists in making the article to be inlaid, most frequently a hookah bowl, of an alloy consisting of copper one part to pewter four parts. This is hard, but is easily cut; the pattern is then engraved, and little pieces of thin silver cut to the desired forms are dexterously hammered into the spaces thus cut out to receive them. Ivory, pearl, shell, bone, tortoise-shell, are favourite substances for inlaying wood; and stone or marble is inlaid with an immense variety of coloured stones. In the art of stone-inlaying, the Florentines have long held the palm; their favourite work is black marble, with inlaid figures of brilliant-coloured stones; this work is called *pietra dura*, or Florentine work. Very beautiful work of this kind, excelling the Florentine, is now made in the Imperial works at St Petersburg, where the art has of late been sedulously cultivated by the Russian government. This art was always a favourite one in Delhi and Agra, where some of the most exquisite work is still produced. Usually, in the Indian work, white marble forms the groundwork, and the figures are formed of carnelian, jasper, agate, jade, lapis-lazuli, and other costly hard stones. No stone-inlaying has ever rivalled the inlaid marble walls of the celebrated Taj Mahal, the tomb of the sultana of Shah Jehan, at Agra. The designs are very artistic, the execution almost marvellous, and the harmony of colour produced by the different stones employed is most beautiful. Many other materials than those mentioned are used for inlaying; and there is a style of inlaid-work in which small squares of coloured stone, glass, or pottery are made to form pictorial and artistic decorations; this is called Mosaic-work (q. v.).

INLET, an arm of the sea open only on one side, and stretching into the land, is distinguished from a Bay (q. v.) only by its smaller size, as a haven is, again, by still smaller dimensions, distinguished from an inlet. Examples of inlets are seen in the indentations of the west coast of Norway; as of bays in the deeper and wider indentations of the coast of Italy.

INN (ancient *Ænus*), a river of Germany, the most important Alpine affluent of the Danube, rises in the south of the Swiss canton of Grisons, at a height of 4293 feet above sea-level, and flowing north-east through that canton forms the valley of the Engadine. It maintains generally a north-east course to its junction with the Danube. Leaving Switzerland, it enters the Austrian dominions at the village of Finstermünz, flows through the crown-land of Tyrol, and crosses the south-east angle of Bavaria, after which, forming the boundary between Bavaria and Upper Austria, it enters the Danube at Passau, after a course of 285 miles. Its principal affluent is the Salza from the south. It is regularly navigable from the town of Hall, eight miles below Innsbruck. At its junction with the Danube, the Inn is broader than the Danube itself.

INN AND INNKEEPER (see HOTEL). In point of law, an inn is merely a house of entertainment for travellers, which any person may set up without licence like any other trade. It is when excisable

liquors are sold that a licence is required. Public-houses and ale-houses are, however, synonymous terms with inns, for the innkeeper almost invariably finds it expedient to obtain the necessary licence to sell spirits and beer. As to these licences, see **BEER ACTS** and **PUBLIC-HOUSES**. The rights and duties of innkeepers irrespective of the licence will here be noticed. It may be observed, in the first place, that though public-houses are always inns, yet beer-houses are not so, the latter being merely shops for selling beer and a few other liquors; the distinguishing characteristic of the public-house being, that refreshment as well as lodging may be had on the premises by all comers. Taverns are chiefly places for the sale of wines and liquors; victualling-houses, for the sale of victuals; coffee-houses and hotels are also varieties, all of which may or may not be inns, according as they do or do not hold themselves out to give meat, drink, and lodgings to all travellers; and it is not at all necessary that any sign-board be put up to distinguish the inn.

One of the incidents of an innkeeper is, that he is bound to open his house to all travellers without distinction, and has no option to refuse such refreshment, shelter, and accommodation as he possesses, provided the person who applies is of the description of a traveller, and able and ready to pay the customary hire, and is not drunk or disorderly, or tainted with infectious disease. He is, of course, bound only to give such accommodation as he has. If the traveller has a horse and luggage, the innkeeper is bound to receive these also, if he has accommodation, provided the traveller himself intends to lodge there as a guest. But the traveller is not entitled to select whatever room he pleases, and if he will not accept such reasonable accommodation as is offered, the innkeeper can order him to leave the house. As some compensation for this compulsory hospitality, the innkeeper is allowed certain privileges; thus, he has a lien on the horse and carriage or goods of the guest for that part of the bill or reckoning applicable to each respectively—i. e., he can keep these until he is paid for the keep, even though they are not the property of the guest. But he cannot detain the person of his guest until payment is made, for if so, a man might be imprisoned for life without any legal process or adjudication. While, however, an innkeeper has this remedy for his score, he is also liable to great responsibility for the safety of his guests and their goods. By the Roman law, under the edict *nautæ, carpiones, stabularii*, he was bound to restore safely whatever goods of his guests were intrusted to him, unless some *damnum fatale*, or some act of God, prevented his doing so. This rule has been adopted by the law of England. Hence, if the guest be robbed of his goods at the inn, the innkeeper is liable, unless the robbery was caused by the guest's servant or companion, or by his own gross negligence, as, for example, by leaving a box containing money in the commercial-room, after exposing its contents to the bystanders. So the innkeeper will be excused if the guest took upon himself the charge of his own goods, yet the guest does not take that charge by merely accepting from the landlord the key of the room, though that may be an element in the question. A guest who takes all reasonable precaution—as, for example, locking his room-door—and is yet robbed, has therefore a good claim on the landlord for indemnity; and the landlord will not escape liability by putting up a notice in his rooms, that he will not be answerable for such losses, otherwise guests would have no protection, for they are very much at the mercy of the keepers of such houses.

It has been attempted to extend the common-law liability of innkeepers for the safety of the goods of their guests to ordinary lodging-house keepers, but the courts have held that an ordinary boarding-house keeper or lodging-house keeper is only responsible for ordinary care, i. e., such care as he takes of his own goods. He must, it is true, be careful in selecting his servants, but he is not bound absolutely to return the goods safe merely because they were in his house along with the lodger.

In Scotland, the Roman rule of law as to the responsibility of innkeepers for the safety of the guest's goods has been also adopted, and the other heads of law are substantially the same as in England, except that no indictment would lie in Scotland against an innkeeper for refusing a guest. But the substantial remedies are the same.

INNATE IDEAS. See **COMMON SENSE**.

INNER HOUSE, the name given in Scotland to the higher divisions of the Court of Session (q. v.).

INNER TEMPLE, one of the four Inns of Court in London having the exclusive privilege of calling persons to the English bar. See **INNS OF COURT**.

INNISCAT'TERY. See **SCATTERY ISLAND**.

INNISHERKIN, a small island on the south coast of Ireland, belonging to the county of Cork, from the shore of which it is separated by a channel a quarter of a mile in width, is about one mile north-east of Clear Island. It is well cultivated, and contains some good and extensively worked slate-quarries. Pop. upwards of 1000.

INNOCENT, the name of 13 popes, the most remarkable of whom are the following.—**INNOCENT I.**, a native of Albano, was elected Bishop of Rome in 402. Next to the pontificate of Leo the Great, that of Innocent I forms the most important epoch in the history of the relations of the see of Rome with the other churches, both of the East and of the West. Under him, according to Protestant historians, the system of naming legates to act in the name of the Roman bishop in different portions of the church originated; while Catholics at least admit that it received a fuller organisation and development. He was earnest and vigorous in enforcing the celibacy of the clergy. He maintained, with a firm hand, the right of the Bishop of Rome to receive and to judge appeals from other churches, and his letters abound with assertions of universal jurisdiction, to which Catholics appeal as evidence of the early exercise of the Roman primacy, and from which Dean Milman infers that there had already 'dawned upon his mind the conception of Rome's universal ecclesiastical supremacy, dim as yet and shadowy, yet full and comprehensive in its outline' (*Latin Christianity*, i. p. 87). Innocent I. died in 417.

INNOCENT III. (**LOTHARIO CONTI**), by far the greatest pope of this name, was born at Anagni in 1161. After a course of much distinction at Paris, Bologna, and Rome, he was made cardinal; and eventually, in 1198, was elected, at the unprecedentedly early age of 37, a successor of Pope Celestine III. His pontificate is justly regarded as the culminating point of the temporal, as well as the spiritual supremacy of the Roman see; and it is freely avowed by the learned historian of Latin Christianity, that if ever the great idea of a Christian republic, with a pope at its head, was to be realised, 'none could bring more lofty or more various qualifications for its accomplishment than Innocent III.' (iv. p. 9.) Accordingly, under the impulse of his ardent but disinterested zeal for the glory of the church, almost every state and kingdom was brought into subjection. In Italy, during the minority of Frederick II. (son of the Emperor Henry VI., king

of Italy), who was a ward of I.'s, the authority of the pope within his own states was fully consolidated, and his influence among the other states of Italy was confirmed and extended. In Germany, he adjudicated with authority upon the rival claims of Otho and Philip; and a second time he interposed effectually in behalf of his ward, Frederick II. In France, espousing the cause of the injured Ingerburga, he compelled her unworthy husband, Philip Augustus, to dismiss Agnes de Meranie, whom he had unlawfully married, and to take back Ingerburga. In Spain, he exercised a similar authority over the king of Leon, who had married within the prohibited degrees. The history of his conflict with the weak and unprincipled John of England would carry us beyond the space at our disposal. If it exhibits I.'s character for consistent adherence to principle, and his lofty indifference to the suggestions of expediency, in a less favourable point of view than his other similar contests, it at the same time displays in a stronger light the extent of his pretensions and the completeness of his supremacy. In Norway, he exercised the same authority in reference to the usurper Swero. In Aragon, he received the fealty of the king Alfonso. Even the king of Armenia, Leo, received his legates, and accepted from them the investiture of his kingdom. And, as if in order that nothing might be wanting to the completeness of his authority throughout the then known world, the Latin conquest of Constantinople, and the establishment of the Latin kingdom of Jerusalem, put an end, at least during his pontificate, to the shadowy pretensions of the eastern rivals of his power, spiritual as well as temporal. Pursuing consistently the great idea which inspired his entire career, his views of the absoluteness of the authority of the church within her own dominion were no less unbending than his notion of the universality of its extent. To him, every offence against religion was a crime against society, and, in his ideal Christian republic, every heresy was a rebellion which it was the duty of the rulers to resist and repress. It was at his call, therefore, that the crusade against the Albigenses was organised and undertaken; and although he can hardly be held responsible for the fearful excesses into which it ran, and although at its close he used all his endeavours to procure the restitution of the lands of the young Count of Toulouse, yet it is clear from his letters that he regarded the undertaking itself not merely as lawful, but as a glorious enterprise of religion and piety. As an ecclesiastical administrator, I. holds a high place in his order. He was a vigorous guardian of public and private morality, a steady protector of the weak, zealous in the repression of simony and other abuses of the time. He prohibited the arbitrary multiplication of religious orders by private authority, but he lent all the force of his power and influence to the remarkable spiritual movement in which the two great orders, the Franciscan and the Dominican (q. v.), had their origin. It was under him that the celebrated fourth Lateran Council was held in 1215. In the following year, he was seized with his fatal illness, and died in July at Perugia, at the early age of 56. His works, consisting principally of letters and sermons, and of a remarkable treatise *On the Misery of the Condition of Man*, were published in two vols. folio (Paris, 1682). It is from these letters and decretals alone that the character of the age, and the true significance of the church-policy of this extraordinary man, can be fully understood; and it is only from a careful study of them, that the nature of his views and objects can be realised in their integrity. However earnestly men may dissent from these views, no student of mediæval history will refuse to accept Dean Milman's

verdict on the career of Innocent III., that 'his high and blameless, and, in some respects, wise and gentle character, seems to approach more nearly than any one of the whole succession of Roman bishops to the ideal light of a supreme pontiff;' and that 'in him, if ever, may seem to be realised the churchman's highest conception of a vicar of Christ' (*Latin Christianity*, iv. 277).

INNOCENT XI. (BENEDETTO ODESCALCHI), elected in 1676, was one of the most distinguished among the popes of the 17th century. He was a vigorous and judicious reformer, and his administration is entirely free from the stain of nepotism, which had sullied the fame of many of his predecessors. But his historical celebrity is mainly owing to his contest with Louis XIV., which illustrates as well the personal character of the pontiff, as the peculiar spirit of the age. The dispute began from an attempt on the part of the pope to put an end to the abuse of the king's keeping sees vacant, in virtue of what was called the *Droit de Regale*, and appropriating their revenues. The resistance to this attempt drew forth the celebrated declarations of the French clergy as to the Gallican Liberties. See GALRICAN CHURCH. But the actual conflict regarded the immunities enjoyed by the foreign ambassadors residing in Rome, and especially the right of asylum, which they claimed not only for their own residences, but also for a certain adjoining district of the city. These districts had gradually become so many foci of crime, and of frauds upon the revenue; and the pope, resolving to put an end to so flagrant an abuse, gave notice that, while he would respect the rights of the existing ambassadors, he would not thereafter receive the credentials of any new ambassador who should not renounce these abusive claims for himself and his successors. The great powers murmured at this threat, but it was with France that the crisis occurred, on the death of the Maréchal d'Estrées. The pope renewed his notice in May 1687. Louis XIV., on the other hand, instructed his new ambassador to maintain the dignity of France, and sent a large body of military and naval officers to support his pretensions. I. persisted in refusing to grant an audience to the ambassador. Louis, in reprisal, seized on the papal territory of Avignon, and threatened to send a fleet to the coast of the Papal States, but I. was immovable; and in the end, the ambassador was compelled to return with his credentials unopened, nor was the dispute adjusted till the following pontificate. I. died in 1689.

INNOCENTS, HOLY, FEAST OF, one of the Christmas festivals, held in the Western Church on December 28, and in the Eastern on the 29th, under a title similar to that of the Latin festival. It is intended to commemorate the massacre of the children 'from two years old and upward' at Bethlehem. See HEROD. These children are referred to as martyrs by St Cyprian, and still more explicitly by St Augustine; and it is to them that the exquisite hymn of Prudentius, *Salvete Flores Martyrum*, is addressed. The concurrence of the East and West in celebrating the festival is an evidence of its antiquity. In the modern church, this feast is celebrated as a special holiday by the young, and many curious customs connected with it prevail in Catholic countries. One of these is, that in private families the children are on this day privileged to wear the clothes of the elders, and in some sort to exercise authority over the household in their stead. So also, in communities of nuns, the youngest sister becomes for this day superiress of the house, and exercises a sort of sportive authority even over the real superiors.

INNOMINATE ARTERY (*Arteria innominata*) is the first large branch given off from the arch of the aorta. It varies from an inch and a half to two inches in length, and divides into the right carotid and the right subclavian arteries. See **CIRCULATION, ORGANS OF**. This artery, through which all the blood to the right side of the head and neck, and to the right arm, flows, has been tied by several surgeons for aneurism of the right subclavian, but the operation has never been successful. An important fact has, however, been established, viz., that the circulation of the blood in the parts supplied by this large vessel, is re-established by Anastomosis (q.v.) after the operation.

INNOMINATE BONE. See **PELVIS**.

INNOVATION, or NOVATION, a name sometimes given in the law of Scotland to the exchange or substitution of one obligation for another. It is in effect taking a fresh security.

INNS OF COURT, the name given in England to certain voluntary societies which have the exclusive right of calling persons to the English bar. There are four such societies in London, viz., the Inner Temple, the Middle Temple, Lincoln's Inn, and Gray's Inn. Each of those inns possesses certain smaller inns, which are mere collections of houses or chambers, as Clifford's Inn, New Inn, Furnival's Inn, &c. The four inns are each governed by a committee or board, called the benchers, who are generally Queen's counsel or senior counsel, self-chosen, i. e., each new bencher is chosen by the existing benchers. Each inn has also a local habitation, consisting of a large tract of houses or chambers, which are in general occupied exclusively by barristers, and sometimes by attorneys, and are a source of great wealth. Each inn is self-governing, and quite distinct from the others, all, however, possessing equal privileges; but latterly, they have joined in imposing certain educational tests for the admission of students. It is entirely in the discretion of an inn of court to admit any particular person as a member, for no member of the public has an absolute right to be called to the bar, there being no mode of compelling the inn to state its reasons for refusal. But, practically, no objection is ever made to the admission of any person of good character. Each inn has also the power of disbarring its members, that is, of withdrawing from them the right of practising as counsel. This right has been rarely exercised, but of late years there have been examples of persons abusing their profession, and indulging in dishonest practices; in such cases, the inn has its own mode of inquiring into the facts affecting the character of a member, and is not bound to make the investigation public. By this high controlling power over its members, a higher character is supposed to be given to the bar as a body, than if each individual was left to his own devices, unchecked, except by the law. See **BARRISTER**.

INNSBRUCK, capital of the Tyrol, is charmingly situated on the Inn, at its junction with the Sill, at the height of 1900 feet above sea-level, in the midst of a valley, surrounded by mountains ranging from 6000 to 9200 feet high. It lies on the right bank of the Inn, and is connected with the suburb of St Nicolaus, on the left bank, by a wooden bridge, from which the name of the town (*Inn's Brücke*, Ger. the Inn's Bridge) is derived. The Inn is also crossed by a chain bridge a little below the town. The Franciscan church, or Hofkirche, architecturally uninteresting, is remarkable for its elaborate monument to the Emperor Maximilian I., which, though constructed at the request of Maximilian, and intended for his burial-place, does not contain his remains. The

monument consists of a marble sarcophagus supporting the emperor's effigy in bronze, in a kneeling posture; while on both sides of the aisle are rows of monumental bronze figures, 28 in number, representing a variety of distinguished personages, male and female. In this church, on 3d November 1651, Christina (q.v.) of Sweden was solemnly received into the Roman Catholic Church. The other chief buildings are the Ferdinandeum, a museum containing a collection of the productions of the Tyrol in art, literature, and natural history; and the university (founded in 1672, and, after several vicissitudes, organised anew in 1825), with faculties of law and philosophy, and which, in 1857, had 211 students and 18 professors. I. carries on important manufactures of woollen cloth, silk, gloves, ribbons, and carved work, as well as a flourishing transit trade. It is connected with Munich by railway, and a railroad is also in progress across the Brenner Pass, to unite I. with Botzen and Verona. Pop. 14,000.

INNUE'NDO, a part of a pleading in cases of libel and slander, pointing out what and who was meant by the libellous matter or description.

INOCARPUS (*I. edulis*), the *Mape* or *Rata* of the South Sea Islands, is a tree important to their inhabitants for its fruit, a nut covered with a thin fibrous husk, which supplies a considerable part of their food, and is sometimes called the South Sea Island chesnut. The fruit is pulled in a green state, and roasted. The tree is a very beautiful one, of stately growth and fine foliage; the leaves oblong, six or eight inches long, evergreen, but of delicate texture. It is one of those which, as they advance in age, instead of increasing uniformly in thickness, throw out buttresses to support the trunk. Small projections first appear, extending in nearly straight lines from the root to the branches, which finally become like so many planks covered with bark. The central stem continues for many years perhaps only six or seven inches in diameter, whilst the buttresses, two or three inches thick, extend from it at the bottom two, three, or four feet. These natural planks are used for paddles of canoes and other purposes.

INOCULATION. If the matter of a variolous (or small-pox) pustule, taken after the commencement of the eighth day, be inserted in or beneath the skin of a person who has not previously suffered from small-pox, the following phenomena are induced: 1. Local inflammation is set up; 2. At the end of six days there is fever similar to that of small-pox; and 3. After the lapse of three more days, there is a more or less abundant eruption of pustules. This process is termed inoculation, and the disease thus produced is denominated inoculated small-pox. The disease produced in this artificial manner is much simpler and less dangerous than ordinary small-pox; and as it was an almost certain means of preventing a subsequent attack of the ordinary disease, inoculation was much practised till the discovery (about 1796*) of the antivariolous power of vaccination.

The importance of inoculation was recognised in the East at a very early period. According to Dr Collinson (*Small-pox and Vaccination Historically and Medically Considered*, p. 14), the Chinese had practised this process from the 6th c., and the Brahmans from a very remote antiquity. In

* This was the year in which Jenner inoculated his first case (the boy Phipps) with matter taken from the hand of a girl who had been directly infected by the cow. He was aware of the protective efficiency of cow-pox as early as 1770, and mentioned the circumstance in that year to his master, John Hunter.

Persia, Armenia, and Georgia it was in use, and it is even said to have been employed in Scotland and Wales. It was not, however, till Lady Mary Wortley Montagu wrote her celebrated letter from Adrianople in 1717, that the operation became generally known in this country. In that letter she writes: 'The small-pox, so fatal and so general amongst us, is here entirely harmless, by the invention of *engrafting*, which is the term they give it. Every year, thousands undergo the operation. There is no example of any one who has died of it, and you may believe that I am well satisfied of the safety of this experiment, since I intend to try it on my dear little son.' Four years afterwards, she had her daughter publicly inoculated in this country; the experiment was then performed successfully on six condemned criminals at Newgate, and on the strength of these successful cases, 'the critical course was taken of inoculating two children of Caroline, Princess of Wales, which gave a sanction to the practice.'—Collinson, *op. cit.* p. 15.

Inoculation was not, however, thoroughly established for more than a quarter of a century after its introduction. It met with virulent opposition both from the medical profession and the clergy. A sermon is extant which was preached in 1722, by the Rev. Edward Massey, in which it is asserted that 'Job's distemper was confluent small-pox, and that he had been inoculated by the devil.' The great drawback to inoculation turned out, however, to be this: while it was invaluable to him who underwent the operation, and completely guarded him from the natural disease in its severe form, its effect upon the community at large was extremely pernicious, in keeping alive the natural disease, and increasing its spread amongst those who were not protected by inoculation. While one in five or six of those who took the natural disease died, the average number of deaths at the Inoculation Hospital was only 3 in 1000; and yet, according to the authority of Heberden, in every thousand deaths within the bills of mortality in the first 30 years of the 18th c. (before inoculation was at all general), only 74 were due to small-pox. The deaths from this disease amounted to 95 in 1000 during the last 30 years of the century; so that, notwithstanding the preservative effects of inoculation on almost all who were operated on, the total number of deaths from this disease increased in 100 years in the ratio of about 5 to 4. Moore (*The History of Small-pox*, 1815) states that, at the beginning of the 18th c., about one-fourteenth of the population died of small-pox; whereas, at the latter end of the same century, the number (notwithstanding, or perhaps rather in consequence of inoculation) had increased to one-tenth; and this immense consumption of human lives was not the total evil, for many survivors were left with the partial or entire loss of sight and with destroyed constitutions. From these remarks, it will be seen that the benefits which were expected from inoculation were far from being realised, and small-pox would doubtless have gone on increasing in its destructive power, if it had not been checked by Jenner's invaluable discovery of *VACCINATION* (q. v.).

INOFFICIOUS TESTAMENT, a will made whereby near relatives have not been provided for by the testator.

INOWRA'CLAW (called also **JUNG BRESLAU**, 'Young Breslau'), a small town of Prussia, in the government of Posen, is situated on an eminence, in a fruitful plain, 26 miles south-south-east of Bromberg. It is an ill-built town; contains many religious edifices; carries on a considerable trade, especially in brewing, distilling, and the manufacture of saltpetre; and has a population of 6000.

IN PARTIBUS INFIDELIUM (Lat., 'in the regions of the unbelievers'). Titular bishops in the Church of Rome have been styled bishops *in partibus infidelium* since the 13th century. They are actual bishops, who have no diocese, and take their titles from places where there is now no bishop's see, but where there once was. This practice originated after the Greek schism, and became general in the time of the Crusades. The places conquered by the crusaders in the East were furnished with Roman Catholic bishops; but when these conquests were again lost, the popes continued to appoint and consecrate the bishops, as a continual protest against the power which had prevailed over their alleged right, and to signify their hope of restitution. The same policy has been pursued with regard to Protestant countries. But in Britain, the assumption of territorial titles being illegal and dangerous, the Roman Catholic bishops actually resident have usually borne titles derived from distant places. Thus, the present bishop in Edinburgh is styled Bishop of Limyra. The Roman Catholic bishops in England were similarly designated from places abroad until 1850, when their assumption of titles from their actual sees gave prodigious offence to the Church of England, and led to the passing of the *Ecclesiastical Titles Bill*, which, however, has been permitted to remain a dead letter.

INQUEST. See **CORONER**.

INQUISITION, in English Law, is the return or report made by a sheriff or coroner as to the finding of a jury on matters inquired into.

INQUISITION, **THE**, called also the **HOLY OFFICE**, a tribunal in the Roman Catholic Church for the discovery, repression, and punishment of heresy, unbelief, and other offences against religion. From the very first establishment of Christianity as the religion of the Roman Empire, laws, more or less severe, existed as in most of the ancient religions, for the repression and punishment of dissent from the national creed; and the emperors Theodosius and Justinian appointed officials called 'inquisitors,' whose special duty it was to discover and to prosecute before the civil tribunals offences of this class. The ecclesiastical cognizance of heresy, and its punishment by spiritual censures, belonged to the bishop or the episcopal synod; but no special machinery for the purpose was devised until the spread, in the 11th and 12th centuries, of certain sects reputed dangerous alike to the state and to the church—the Cathari, Waldenses, and Albigenses—excited the alarm of the civil as well as of the ecclesiastical authorities. In the then condition of the public mind, however differently it is now constituted, heresy was regarded as a crime against the state, no less than against the church. An extraordinary commission was sent by Pope Innocent III. into the south of France, to aid the local authorities in checking the spread of the Albigensian heresy. The fourth Lateran Council (1215) earnestly impressed, both on bishops and magistrates, the necessity of increased vigilance against heresy; and a council held at Toulouse directed that in each parish the priest, and two or three laymen of good repute, should be appointed to examine and report to the bishop all such offences discovered within the district.

So far, however, there was no *permanent* court distinct from those of the bishops; but under Innocent IV., in 1248, a special tribunal for the purpose was instituted, the chief direction of which was vested in the then recently established Dominican Order. The inquisition thus constituted became a general, instead of, as previously, a local tribunal; and it was introduced in succession into

Italy, Spain, Germany, and the southern provinces of France. So long, moreover, as this constitution remained, it must be regarded as a strictly papal tribunal. Accordingly, over the French and German inquisition of the following century the popes exercised full authority, receiving appeals against the rigour of local tribunals (Fleury, v. 266), and censuring, 'or even depriving,' the inquisitor for undue severity (*ibid.* 303). In France, the inquisition was discontinued under Philip the Handsome; and though an attempt was made under Henry II. to revive it against the Huguenots, the effort was unsuccessful. In Germany, on the appearance of the Beghards (see BEGUNES), in the beginning of the 14th c., the inquisition came into active operation, and inquisitors for Germany were named at intervals by various popes, as Urban V., Gregory XI., Boniface IX., Innocent VIII., down to the Reformation, when it fell into disuse. In England, it was never received, all the proceedings against heresy being reserved to the ordinary tribunals. In Poland, though established in 1327, it had but a brief existence. The history of the times of its introduction and of its discontinuance in the various states of Italy, would carry us beyond the limits at our command.

It is the history of the inquisition as it existed in Spain, Portugal, and their dependencies, that has absorbed almost entirely the real interest of this painful subject. As an ordinary tribunal similar to those of other countries, it had existed in Spain from an early period. Its functions, however, in these times were little more than nominal; but early in the reign of Ferdinand and Isabella, in consequence of the alarms created by the alleged discovery of a plot among the Jews and the Jewish converts—who had been required either to emigrate or to conform to Christianity—to overthrow the government, an application was made to the pope, Sixtus IV., to permit its reorganisation (1478); but in reviving the tribunal, the crown assumed to itself the right of appointing the inquisitors, and, in truth, of controlling the entire action of the tribunal. From this date forwards, Catholic writers regard the Spanish inquisition as a state tribunal, a character which is recognised by Ranke, Guizot, Leo, and even the great anti-papal authority, Llorente; and in dissociating the church generally, and the Roman see itself, from that state tribunal, Catholics refer to the bulls of the pope, Sixtus IV., protesting against it. Notwithstanding this protest, however, the Spanish crown maintained its assumption. Inquisitors were appointed, and in 1483, the tribunal commenced its terrible career, under Thomas de Torquemada. The popes, feeling their protest unsuccessful, were compelled, from considerations of prudence, to tolerate what they were powerless to suppress; but several papal enactments are enumerated by Catholics, the object of which was to control the arbitrary action of the tribunal, and to mitigate the rigour and injustice of its proceedings. Unhappily, these measures were ineffective to control the fanatical activity of the local judges. The number of victims, as stated by Llorente, the popular historian of the inquisition, is positively appalling. He affirms that during the sixteen years of Torquemada's tenure of office, nearly 9000 were condemned to the flames. The second head of the inquisition, Diego Deza, in eight years, according to the same writer, put above 1600 to a similar death; and so for the other successive inquisitors-general. But Catholics loudly protest against the credibility of these fearful allegations. It is impossible not to see that Llorente was a violent partisan; and it is alleged that in his work on the Basque Provinces,

he had already proved himself a venal and unscrupulous fabricator. Although, therefore, he has made it impossible to disprove his accuracy by appealing to the original papers, which he himself destroyed, yet his Catholic critics—as Hefele in his *Life of Cardinal Ximenes*—have produced from his own work many examples of contradictory and exaggerated statements; Prescott, in his *Ferdinand and Isabella* (iii. 467–470), has pointed out many similar instances; Ranke does not hesitate (*Fürsten und Völker der Süd. Europas*, i. 242) to impeach his honesty; and Prescott pronounces his 'computations greatly exaggerated,' and his 'estimates most improbable' (iii. 468). Still, with all the deductions which it is possible to make, the working of the inquisition in Spain and in its dependencies even in the New World, involves an amount of cruelty which it is impossible to contemplate without horror. When it was attempted to introduce it into Naples, Pope Paul III., in 1546, exhorted the Neapolitans to resist its introduction, 'because it was excessively severe, and refused to moderate its rigour by the example of the Roman tribunal' (Llorente, ii. 147). Pius IV., in 1563, addressed a similar exhortation on the same ground to the Milanese (*ibid.* ii. 237); and even the most bigoted Catholics unanimously confess and repudiate the barbarities which dishonoured religion by assuming its semblance and its name.

The procedure of the inquisition deserves a brief notice. The party, if suspected of heresy, or denounced as guilty, was liable to be arrested and detained in prison, only to be brought to trial when it might seem fit to his judges. The proceedings were conducted secretly. He was not confronted with his accusers, nor were their names even then made known to him. The evidence of an accomplice was admissible, and the accused himself was liable to be put to the torture, in order to extort a confession of his guilt. The punishments to which, if found guilty, he was liable, were death by fire, as exemplified in the terrible *Auto da Fé* (q. v.), or on the scaffold, imprisonment in the galleys for life or for a limited period, forfeiture of property, civil infamy, and in minor cases, retraction and public penance. This form of procedure is strangely at variance with modern ideas; but it is fair to recollect that some of the usages were but the ordinary procedures in all the courts of the age, whether civil or ecclesiastical.

The rigour of the Spanish inquisition abated in the latter part of the 17th century. In the reign of Charles III., it was forbidden to punish capitally without the royal warrant; and in 1770, the royal authority was required as a condition even for an arrest. From 1808, under King Joseph Bonaparte, the inquisition was suppressed until the Restoration: it was again suppressed on the establishment of the constitution in 1820; but it was partially restored in 1825; nor was it till 1834 and 1835 that it was finally abolished in Spain, its property being applied to the liquidation of the national debt.

The inquisition was established in Portugal in 1557, and its jurisdiction was extended to the Portuguese colonies in India. The rigour of its processes, however, was much mitigated in the 18th c., and under John VI. it fell altogether into disuse.

The inquisition in Rome and the Papal States never ceased, from the time of its establishment, to exercise a severe and watchful control over heresy, or the suspicion of heresy, which offence was punished by imprisonment and civil disabilities; but of capital sentences for heresy, the history of the Roman inquisition presents few

instances, and, according to Balmez (*On Civilisation*, p. 156), that tribunal 'has never been known to order the execution of a capital sentence for the crime of heresy. The tribunal still exists under the direction of a congregation, but its action is confined to the examination of books and the trial of ecclesiastical offences, and questions of church law, as in the recent case of the boy Mortara; and its most remarkable prisoner in recent times was an Oriental impostor, who, by means of forged credentials, succeeded in obtaining his ordination as a bishop.—See Llorente's *Historia Crítica de la Inquisición*; Prescott's *Ferdinand and Isabella*; Hefele's *Der Cardinal Ximenes*; eine *Biographie*; Balmez, *Catholicism and Protestantism compared in Relation to Civilisation*.

INSANITY means all unhealthiness of mind. This consists, according to one opinion, in such disorganisation or degeneration of the nervous structure as to render the exercise of reason impossible; according to another, it consists in disorder of the reason itself; and according to a third, in perversion or destruction of the soul, or the moral part of our nature. The prevailing view of physiologists is, that insanity is a symptom or expression, manifested through the functions of the nervous system, of physical disease. The legal term, lunacy, represents only those deviations from that standard of mental soundness which is universally recognised, although difficult of definition, in which the person, the property, or the civil rights may be interfered with. These deviations are, briefly, where the incapacity, or violence, or irregularities of the individual are such as to threaten danger to himself or others, and to unfit him for his ordinary business and duties. Insanity is more comprehensive, and includes all states of the feelings and passions, as well as of the understanding, which are inconsistent with the original and ordinary character and habits of the individual, and with his relations to the family or community of which he is a member. It has been stated broadly, that if a man be deprived of the enjoyment of his religious rights by exclusion from membership of the church to which he belongs; of his civil rights in giving evidence in a court of justice or on oath; and of his personal rights in the management of his property and affairs, he may be regarded as insane; but more correct views of the human mind have led to the belief, that many degrees of feebleness of the faculties, many forms of eccentricity and extravagance, and many defects in the will and moral sentiments, which were formerly regarded as crime and wickedness, but which do not involve such deprivation, may be classed under the same designation. Very recently, the interpretation of insanity has been greatly widened, and now includes various degrees of moral perversion, morbid habits, and sudden impulses, such as dipsomania and homicidal mania. The great divisions of this class of diseases into mania, melancholia, and imbecility, remain popularly very much the same as they were 2000 years ago. While this fact may indicate that such a classification has a foundation in nature, it has, unfortunately, tended to render the treatment, or rather the maltreatment, of the insane as stationary as the view of the diseases under which they labour. The following arrangement may serve to explain what insanity is, as well as what it appears to be.

AFFECTIONS OF THE INTELLECTUAL POWERS.—*Idiocy*, the non-development of one or more faculties. *Imbecility*, the imperfect development of one or more faculties. *Fatuity*, or *Dementia*, the deprivation by disease, or age, or otherwise, of powers which have been developed. *Mania*, with delusion, excitement, and irregular action of all, but especially

of the intellectual powers; accompanied also by errors connected with the special senses.

AFFECTIONS OF THE SENTIMENTS.—*Melancholia*, exaltation of grief, penitence, and anxiety. *Monomania of Fear*, exaltation of cautiousness. *Monomania of Pride*, exaltation of self-esteem. *Monomania of Superstition*, exaltation of the sense of devotion and the marvellous. *Monomania of Suspicion*, exaltation of jealousy, envy, want of confidence. *Monomania of Vanity*, exaltation of craving for applause, grandeur, of feeling of ambition.

AFFECTIONS OF PROPENSITIES.—*Dipsomania*, uncontrollable craving for stimulants. *Homicidal Mania*, impulsive desire to destroy life. *Kleptomania*, uncontrollable desire to acquire.

This catalogue is not intended to be exhaustive. The departures from health will correspond not merely with the primitive mental powers and instincts, but with every possible combination of these, and with such complications as may result from hereditary predispositions, innate peculiarities, education, and habit.—Dr Combe *On Derangement*, Copland's *Dictionary*, art. 'Insanity.'

For the disposal and treatment of the insane, see **LUNATIC ASYLUM**.

INSCRIPTIONS, a term applied to all writings engraved or written on objects or monuments not of the class of books, principally on hard materials, such as metals, stones, and other substances. They are a class of documents of the highest interest and importance to history and philology, and a consideration of them embraces the whole scope of history, language, and art. The oldest (excepting those of China) are probably the Egyptian inscriptions found in the Pyramids (see **PYRAMIDS**), of about 2000 B.C.; to which succeed those of Assyria and Babylonia, reaching nearly as high an antiquity (see **CUNEIFORM CHARACTERS**); which are succeeded by the Persian and Median, 525 B.C., and along with which prevailed the Phœnician, probably about 700 B.C. (see **PHœNICIA**); which were in their turn succeeded by the Greek, between 500 and 600 B.C., or even earlier; which were succeeded by the Etruscan and Roman, in 400—300 B.C., and continued through the middle ages in Europe to the present day. See **PALEOGRAPHY**. In the East, the oldest inscriptions are those of China, which ascend to 2278 B.C.; those of India not being older than 315 B.C., or the age of Sandracottus; while the antiquity of the hieroglyphical inscriptions of Central America cannot be determined. Of many ancient nations, the history and language are found in inscriptions only, as in the case of Lycia and Etruria, and all official inscriptions have a certain authority, from their contemporaneous nature, and the care with which they were executed.

Before the invention of paper or other light substances for the record of events, public acts, devotions, and other documents were inscribed on *bronze*, as the early treaties and dedications of the Greeks, or even lead, as certain small rolls of imprecation and others found in Greece; gold plates were inscribed and placed in foundations under the temples, as that of Canopus shew; the *exequaturs* of consuls among the Greeks, and the discharges of the Roman soldiery, were inscribed on bronze tables; while charms, amulets, and other formulæ were occasionally inscribed on metals. The numerous inscriptions known, probably amounting to half a million, have been classed under public or official acts, tables of magistrates, military titles, lists of magistrates, those relating to the gymnasia or games, honours rendered to emperors or men, donations, rites, private and sepulchral, comprising epitaphs, some in elegiac and heroic verse, and numerous minor inscriptions on gems, vases, and

other objects of ancient art, on wax tablets or *pugillaria*, and the scrawls discovered on the walls of public and private edifices, as at Pompeii and elsewhere. The study of the letters and their form will be seen under ALPHABET; that of the different languages and the mode of deciphering, under their respective heads. Those found upon coins will be mentioned in NUMISMATICS. The most remarkable inscriptions are the trilingual inscription of Rosetta, that of Shalmanazer on the obelisk of Nimrud, and the cylinder of Sennacherib; the trilingual inscription of Darius I. on the rock at Behistun; the Greek inscription of the soldiers of Psammetichus at Ibsamboul, and of the bronze helmet dedicated by Hiero I. to the Olympian Jupiter; the inscription on the coffin of the Cyprian king Asmumazer; the Etruscan inscription called the Eugubine Tables; that of Mummius, the conqueror of Corinth, at Rome, and the will of Augustus at Ancyra; the inscription of the Ethiopian monarch Silco; the old monument of Yu, and the inscription of Se-gan-fu, recording the arrival of Christianity in China (631 A. D.); the inscriptions of Chandra-gupta and Asoka in India. The study of inscriptions is so difficult, that it has formed a special branch of scholarship, such as decipherment for those of which the language has been lost, or epigraphy for the dead languages. Special collections of the inscriptions of different localities, and general ones, have been made of those in the same languages as Assyrian, Greek, Etruscan, Oscean, and Latin, by Gruter, Muratori, Böckh, Franz, Orellius, Mommsen, Letronne, Lebas, and others. Inscriptions have also engaged the scholarship and attention of the most accomplished philologists with various success, from the end of the 17th century. They have been forged by Fourmont and others.—Gruter, *Thesaurus Inscr.* (fo. 1603–1663); Muratori, *Novus Thesaurus* (4to, 1739); Kellerman, *Spec. Epigraph.* (1841); Mommsen, *Inscript. Neapol.* (1852); Böckh and Franz, *Corpus Inscript. Græc.* (fo. 1828–1851); Osann, *Sylloge* (1822); Lepsius, *Inscr. Umbr. et Osc.* (1841); Gesenius, *Script. Ling. Phœn.* (1837); Garucci, *Graffiti* (1856).

INSECTIVORA (Lat. insect-eating), in Cuvier's system of zoology, one of the divisions of the mammalian order *Carnaria* (q. v.). None of the I. are of large size; most of them are small timid creatures, generally nocturnal in their habits, and useful in the economy of nature chiefly in preventing the undue increase of worm and insect tribes. Although many of them are not exclusively insectivorous, all of them have the summits of the molar teeth beset with small conical tubercles, as for the purpose of breaking up the hard coverings of insect prey. Their dentition is otherwise very different in the different families. Their legs are short. They all place the whole sole of the foot on the ground. The snout is generally elongated. The families of *Talpidae* (Moles, &c.), *Soricidae* (Shrews, &c.), *Erinaceidae* (Hedgehogs, &c.), and *Tupaiidae* (Banzirings) are referred to insectivora. The I., although in some respects very different from the *Cheiroptera*, exhibit an affinity to them in others.

INSECTS (*Insecta*), one of the classes of *Articulata* (q. v.), or Articulated Animals, of the division having articulated members. All the *Articulata* having articulated members were included by Linnaeus in the class of I.; but the *Crustacea* and *Arachnida* were soon separated from it, and afterwards the *Myriapoda*. See these heads. This restricted application of the term I. corresponds more nearly with its popular use, and so well accords with its derivation, that it may be regarded as one of the most appropriate names employed in natural

history. It is from a Latin word, signifying *cut into*; a derivation exactly answering to that of the Greek *entoma*, from which the science having insects for its subject receives the name of Entomology. Insects, a natural and extremely well defined class of organised beings, are remarkable, in their mature or perfect state, for the division of their bodies into three very distinct portions—the *head*, *thorax*, and *abdomen*; the divisions being often so deep, that the slenderness to which the body is there reduced cannot be contemplated without admiration.

The body of an insect, as of all the other *Articulata*, is composed of a certain number of rings. One of these forms the head; or, if the head ought to be regarded as really composed of several rings, modified and condensed together, as the skull of vertebrate animals is formed of modified vertebrae, yet no distinction of rings appears. The eyes, the antennae, and the organs of the mouth, are the most conspicuous organs connected with the head.

The thorax is formed of three rings, closely combined, but easily distinguishable. The first is the *prothorax*; the second, the *mesothorax*; the third, the *metathorax* (Gr. *pro*, before; *mesos*, middle; and *meta*, after). Of these rings, one or another is often remarkably developed. The legs and wings are attached to the thorax. Insects have six legs, and generally four or two wings, never any other number; but some are wingless, and this is the case not only in all the insects of certain groups, but also in particular species of groups ordinarily winged, and is sometimes even a distinction of sex, as in the glowworm. The first pair of legs are attached to the prothorax; the second, to the mesothorax; and the third, to the metathorax. The first pair of wings are attached to the mesothorax; the second, to the metathorax. In dipterous (two-winged) insects, the place of the second pair of wings is occupied by two small organs—little threads, terminated by a knob—called balancers (*halteres*), the use of which is not well known.

The abdomen consists of nine rings, or of fewer; as some are often obliterated, or modified, to form various appendages. It contains the principal viscera. In it, the sexual organs are situated. The rings of the abdomen are much more separate and movable than those of the thorax. The terminal rings of the females of some groups form an oviduct or ovipositor, which is sometimes capable of being employed as a borer, to make a place for the eggs in the animal or vegetable organism destined to receive them, and which in wasps and bees is replaced by a sting.

The nervous system of I., in all their stages of existence, exhibits the general characters noticed as belonging to the *Articulata* (q. v.). There is a *brain*, or ganglion of the head, from which arise the nerves of the eyes, antennae, and mouth.

The rings of which the body of an insect is composed appear most distinctly in the external covering. This is in most parts hard, but more or less flexible, of a horn-like substance, chiefly composed of *Chitin* (q. v.). The external covering of insects is the principal framework of their bodies, and to it the muscles are attached. The external covering of each ring is more or less distinctly divided into two parts—a dorsal and a ventral—the connection at the sides being effected by a softer and more flexible membrane, a still softer membrane connecting the rings of the abdomen, so as to allow considerable freedom of motion; whilst between the rings are minute pores called *stigmata* or *spiracles*, by which air is admitted to the *tracheae* or air-tubes (q. v.), the organs of respiration.

Insects respire neither by means of lungs nor of

gills, and the blood is not brought to a particular part of the body for aëration, as by circulation in vertebrate and many invertebrate animals, but the air which enters by the breathing-pores is conveyed by tubes to all parts of the body, and even through the delicate structure of the wings, so that the whole frame is rendered more light by the very means employed to maintain and increase muscular energy. Respiration is extremely active in insects; they consume a great quantity of oxygen in proportion to their size, and they display, in general, an extraordinary degree of activity and muscular energy. The flight of very many kinds is far more rapid in proportion to their size than that of birds; others display a similar superiority of powers in running, swimming, or digging and burrowing; whilst the leaping of many, as fleas and grasshoppers, and the springing of others, as cheese-hoppers, prodigiously exceeds anything of which any vertebrate animal is capable. The respiration of aquatic insects takes place in the same manner as that of other insects, and they come to the surface of the water for fresh supplies of air.

The blood of I. is thin and colourless. It is not everywhere enclosed in vessels, but is freely diffused in interstices between the muscles and other organs, and in the visceral cavity. It contains globules or corpuscles of determinate shape. How far the dorsal vessel (see ARTICULATA) should be regarded as a heart, is not fully determined; but by its contractions and dilatations, a constant motion of the blood is maintained.

The members of I. have generally a structure analogous to that of the trunk, in being composed of articulations, the hard and solid part of which is the external covering. This appears very perfectly in the legs, the antennæ, and the palpi, but not in the wings.

The legs of I. consist of two principal parts, the thigh (*femur*) and shank (*tibia*), with two

terminated by a pair of hooks or little claws; and many dipterous insects, as the House-fly (q.v.), have discs and suckers for taking hold of smooth surfaces.

The wings of I. are often very large in proportion to the size of the body, and the rings of the thorax are soldered together, and supported by supplementary pieces, to give firm support to them, and to the powerful muscles necessary for their action. The hard covering of the body of an insect consists, like the skin of vertebrate animals, of three layers, and the membranes of the wings are filmy expansions of the outermost of these, the epidermis. The ribs or nervures in the wings of I. are tubes, of which one of the uses is the conveying of air even to the extremities of the wings. The forms of the wings are very various; some of the more important diversities being characteristic of different orders. The bodies of I. are often very much covered with hairs, which are often very long and thick in proportion to the size of the animal, and on the wings of butterflies and other *Lepidoptera* are flattened and expanded so as to form scales (see BUTTERFLY), often richly coloured, and also, by reason of very fine parallel striae, with which they are marked, displaying an admirable iridescence or reflection of evanescent prismatic colours in changing light. The first pair of wings in coleopterous I. or beetles is represented by a pair of hard chitinous *elytra* (Gr. coverings), or wing-covers. *Orthopterous* I. have softer leathery or parchment-like *elytra*.

Insects feed on very different kinds of food; some prey on other I., some devour animal, and some vegetable substances, some suck the juices of animals, some the juices of plants or the honey of their flowers. The structure of the mouth varies accordingly, and the digestive organs also vary. The mouth is either adapted for gnawing, cutting, and tearing, or merely for sucking, or it is adapted partially for both of these purposes. The parts of a mandibulate mouth are figured in the article COLEOPTERA, and are an upper lip (*labrum*) and an under lip (*labium*), moving vertically; and an upper pair of jaws or mandibles (*mandibulæ*) and a lower pair of jaws (*maxillæ*), moving horizontally. The upper and under lip meet when the mouth is shut. Both are as hard as the jaws. The lower lip is sometimes regarded as consisting of two parts, called the chin (*mentum*), and the tongue (*lingua*), which is more membranous and fleshy, and reposes on the inside of the chin. The upper jaws or mandibles are usually powerful, and often strongly toothed and hooked, sometimes furnished with cutting edges like sharp scissors, and sometimes adapted for bruising and grinding. They are also the instruments which bees and other I. use for their wonderful operations of cutting, tearing, building, plastering, &c. The lower jaws or maxillæ are generally less powerful. In some I., in which the mandibles are enlarged into great organs of prehension, the maxillæ alone serve for the ordinary use of jaws in eating. To the maxillæ and the lower lip are attached organs called *palpi* or feelers, consisting of a number of minute articulations, supposed to be delicate organs of touch connected with the purposes of the mouth, and distinguished as *maxillary palpi* and *labial palpi*.

The mouths of mandibulate I. are sometimes called *perfect*, and those which exhibit a different character, *imperfect*. The terms, however, are improper—each kind is perfect, according to the purposes for which it is to be used. Yet a correspondence of structure may be traced, so that the parts of the mandibulate mouth may be recognised under various and very remarkable modifications

Various Forms of Insects' Feet, shewing the adhesive Discs or Suckers (highly magnified).

(Copied from Rymer Jones's *Animal Kingdom*.)

A, one of the middle pair of legs of Water-beetle; B, foot of *Bibio febrilis*; C, foot of House-fly; D, leg and foot of *Cymex lutea*; E, tarsus of Abyssinian Grasshopper, shewing hooks or leaping appendages; F, one of the anterior legs of Water-beetle.

smaller articulations, the *coxa* and *trochanter*, interposed between the body and the thigh, and at the extremity of the shank, a set of three, four, or five small articulations, called the *tarsus*. The last segment of the tarsus in terrestrial insects is generally

in the mouths of I. which live by suction. Thus the filaments which form the proboscis of butterflies are the maxillæ excessively lengthened, and the cutting parts of the mouth of the flea are the mandibles and maxillæ. The proboscis of flies represents the lower lip.

The alimentary canal of I. is usually more or less convoluted. Between the mouth and the proper digestive stomach, it sometimes exhibits a *crop* (honey-bag of bees) in I. which live by suction, and this is either a dilatation of the lower part of the gullet or a lateral vesicle; sometimes a *gizzard*, with muscular walls, often armed with horny pieces, for trituration of food. The stomach is of a very elongated form. The liver is represented by long slender bile-tubes, four or more in number, which wind around the intestine, and pour their secretion into it, where it originates from the stomach. The salivary glands are generally similar tubes.

Section of the Eye of a Cockchafer (highly magnified) :

A, section: a, optic ganglion, into which the optic nerve swells; b, nerves arising from its surface, and proceeding to the general retina; c, general retina; d, layer of pigment, in front of the general retina; e, optic nerves of the individual eyes which form the compound eye. B, a group of these, much magnified: f, bulb of optic nerve; g, layer of pigment; h, vitreous humour; i, cornea.

The eyes of I. are of two kinds—*simple* or *stem-matic*, and *compound* or *composite*. See EYE. Some I. have only simple eyes (*ocelli*), some have only compound eyes; but the greater number have two large compound eyes on the sides of the head, and three small simple eyes between them. Compound eyes occur in I. only in their mature or perfect state; the eyes of larvæ are simple.

The Antennæ (q.v.) are generally regarded as organs of touch. They are attached to the head, in front of the eyes, and are always present, and always two in number. They exhibit a vast variety of different forms, some of which are figured in the following cut. I. make much use of their antennæ to investigate surrounding objects by contact, although, if this is their sole use, it is not very easy to assign any probable reason for some of their forms; but there is not much plausibility in the conjectures which assign to them a part in the exercise of the senses of hearing and smell, although these senses and taste are evidently enjoyed by I., or at least by many I. in great perfection, and their particular seat and organs are not well ascertained. The sense of smell appears to be of great importance to I. in guiding them to their food. The sexes are distinct in all I., and very remarkable differences are often exhibited by the males and females of the same species, in size, colour, and the form and structure of parts that have no immediate connection with the reproductive system. What are called *neuters* in some tribes are imperfectly developed females. The connection of the sexes takes place only once in the lives of I., and

a remarkable provision is made in the female for the consequent fertilisation of eggs, that in some,

Various Forms of Antennæ.
(Copied from Roget's *Animal Physiology*.)

as bees, continue for a long time afterwards to be successively developed.

Insects are generally oviparous; a few are ovoviviparous. The *Aphides* afford an instance of what has been called the Alternation of Generations. The greater number of I. take no care of their eggs after depositing them, and many themselves pass out of existence before the eggs are hatched; the chief part of the lives of I. being generally spent in their immature states, and their brief existence in a perfect state serving mainly for the propagation of their species. Thus many insect tribes disappear entirely on the approach of winter, their eggs awaiting the warmth of spring or summer to be hatched. The case is very different, however, with bees, ants, earwigs, and some others, which carefully tend and rear their young.—The number of eggs laid by I. is very various, but often very great. The flea, indeed, only lays about twelve, and many dipterous and coleopterous insects about fifty; but the silkworm produces from 500 to 2000; a single queen bee is supposed to lay 40,000 or 50,000 in a season; and the female termite or white ant, laying about sixty eggs in a minute, and for a period of very considerable though unknown duration, exceeds as to the number of her eggs any other known animal in the world.

The eggs of I. are generally white, yellow, or green; they are of very various shapes—round, cylindrical, conical, lenticular, &c.; they are sometimes smooth, sometimes beautifully sculptured.

The stage of development at which I. come forth from the egg is very different in different tribes: in some, they appear as footless worms; in others, they have rudimentary feet, but still with very little power of locomotion; in others, besides little claws representing the six feet of the perfect insect, there are on the abdominal segments of the worm-like body fleshy tubercles serving as feet; in others still, the legs are well developed, and the insect, on issuing from the egg, differs little from the perfect insect, except in the want of wings; whilst, finally, in a comparatively small number (lice, &c.), there is no obvious difference except in size. Similar differences of the degree of development appear in the mouth, eyes, and other organs. Hence the subsequent changes by which the mature state is reached are very different in degree; and I. being primarily divided into those which undergo

and those which do not undergo metamorphosis, some of the former are commonly spoken of as undergoing *complete*, and others *incomplete* metamorphosis. In the first state of insect life, the insect is called a *Larva* (q. v.). Grubs, caterpillars, and maggots are the larvæ of different orders of insects. From this state it passes into that of a *Pupa* (q. v.), or nymph—a *chrysalis* or *aurelia* is the *pupa* of a lepidopterous insect—and finally it becomes an *imago*, or perfect insect.

The metamorphoses or transformations of I. have always been regarded with great admiration. A worm, inhabiting a muddy pool, becomes a winged creature that sports in the air. A crawling caterpillar, that ravenously devours some kind of herbage with its horny jaws, eating vastly more in proportion to its size than an ox, is converted into a splendid butterfly, flitting from flower to flower, and feeding only on nectareous juices. The intermediate or pupa state only adds to the wonder. The caterpillar, after several *moultings*, or changes of skin, and when it has attained its utmost size, ceases from eating, perhaps fixes itself under a leaf, becomes incased in a horny covering, as in a second egg, and from this it finally breaks forth a moth or a butterfly. Many larvæ, also, when about to change into the pupa state, spin cocoons (q. v.), in which they envelop themselves, by means of *spinnerets* on the under lip, through which a viscid secretion passes in fine threads which harden into silk. But whilst the pupæ of many I. are motionless, or nearly so, and eat no food whatever, the pupæ of other I., as dragon-flies, are active and voracious. The intermediate or pupa state often differs little from the larva state, except in the possession of wings, or from the perfect state, except in the wings being merely rudimentary and still unfit for flight.

An opinion at one time prevailed, that the successive envelopes of the larva were all contained from the beginning within the first, within them the covering of the pupa, and within it the perfect insect. This extraordinary fancy has given place to the belief, established on sufficient observation, that the envelopes which the growing larva successively casts off, are merely a hard, thick, extra-vascular and unextensible epidermis; that the jaws, claws, &c., of the larva, with which it parts when it becomes a pupa, in the case of I. undergoing complete metamorphosis, are connected with the epidermis; and that the covering of the pupa is a new secretion. Discoveries, however, do not render less marvellous, but only more admirable, the changes which take place. Of these, some of the most important are in the organs of the mouth, the digestive organs, and the nervous system.

It is not certain that any insect has a voice or cry, although the origin of the sounds produced by some of them, as the plaintive, squeaking note of the death's-head moth, is not known. The sounds of which we do know the origin are not produced by the mouth or throat. See GRASSHOPPER, DEATH-WATCH, and CICADA.—The *humming* or *buzzing* of I. during flight has been commonly ascribed to the extremely rapid vibrations of their wings. Burmeister, however, supposes it to be produced by vibratory laminae in the respiratory spiracles of the thorax, acted upon by the forcible emission of air during the violent muscular action necessary for flight.

Insects are all animals of small size, and many of them are minute. The largest species are tropical, and I. of all sizes abound in warm far more than in cold climates. The I. of the polar regions are comparatively few, and are to be seen only during summer; those of them whose whole

existence is not comprised within a single year spending the winter, as very many I. of temperate climates also do, in a state of torpidity. All I. are very fond of heat, and many which do not become completely torpid in cold weather, become partially so. It is only in warm weather that I. display their greatest activity. As to their geographical distribution, I. are found in all countries, to the utmost alpine and polar limits of vegetable life. Many kinds are peculiar to particular climates and countries. The I. of the Malayan Archipelago and of Australia, like their other natural productions, are generally very different from those of other parts of the world. The I. of elevated mountainous regions within the tropics generally resemble those of the temperate and frigid zones, but are seldom the same. The multitude of species of I. is very great. The species of coleopterous I. alone, or beetles, are more numerous than all those of vertebrated animals together.

A few I. are important for their usefulness to man, and a greater number for the injuries which they inflict. Of the former, bees and silkworms deserve to be first named; and after them the cochineal insect and cantharides or blistering-flies. There are a few others to which we are indebted for substances useful in medicine and the arts, as kermes, lac, galls, &c. Of the injuries inflicted by I., the most serious are those caused by the destruction of herbage and crops, as by the ravages of locusts, of some kinds of caterpillars, and of numerous tribes of coleopterous and dipterous insects. See CORN-FLY, TURNIP-FLY, &c.

The primary division of I. into those which do not and those which do undergo metamorphosis (*Ametabolia* and *Metabolia* of Leach), has been already noticed. The former are divided into the orders *Thysanura* (q. v.) and *Parasita* (q. v.) or *Anoplura*, and are all included in the order *Aptera* (see APTEROUS I.) or wingless I. of Linnaeus. The insects undergoing metamorphosis, which are far more numerous, are divided into two great groups, *Mandibulata* and *Haustellata*, the former having the mouth fitted for mastication, the latter for suction. The *Mandibulata* form the universally recognised orders *Coleoptera*, *Orthoptera*, including *Dermoptera* of some entomologists, *Neuroptera*, and *Hymenoptera*; the *Haustellata* form the orders *Hemiptera*, including *Homoptera* of some, *Lepidoptera*, *Strepsiptera*, *Diptera*, and *Suctoria* (*Aphaniptera* of some). See these heads.

Fossil Insects.—Several causes conspire to make the remains of I. in the stratified rocks comparatively rare, such as their possession of the power of flight, their soft and speedily decomposing bodies, and the extent to which they are preyed upon by other animals. That they were abundant during some periods is, however, very evident. In the Lower Lias, several bands of limestone occur, which, from the abundance of insect remains contained in them, have been called 'insect limestone.' They are crowded with the wing-cases of several genera of *Coleoptera*, and I., almost entire, are frequently found. The strongly nerved wings of some *Neuroptera* are beautifully perfect. In the Eocene strata, at Auvergne, a considerable thickness of limestone is formed entirely of the indusia or cases of the aquatic larva of a neuropterous insect. Amber from Tertiary strata often abounds in I., captured and enclosed while this petrified gum was in its primitive fluid condition, and now made permanent in the transparent stone, with every minute detail of structure beautifully preserved.

The oldest strata in which insect remains have been observed belong to the Carboniferous period.

The remains consist of fragments of Neuroptera, Orthoptera, and Coleoptera.

The Lower Lias I. belong to various orders; they are generally of a small size, apparently indicating a temperate climate. In the Upper Lias, they are not infrequent; a few specimens have been found in the Oolite proper; and in the Wealden, both land and water forms occur. None have been noticed as yet in the deep sea rocks of the Cretaceous period, but in the newer Tertiary strata they are common, especially in the amber from the lignite beds of Germany, and in the cavern deposits. It is worthy of remark that no new forms have been observed; all are either referred to living genera, or placed in new yet nearly allied genera.

INSESSORES (Lat. perchers), or **PERCHING BIRDS**, an order of Birds called *Passerine* (sparrow-like) *Birds* by Cuvier. In respect of the number of species which it contains, it is by far the largest order of the whole class of Birds. Cuvier says: 'Its character seems at first sight purely negative, for it embraces all those birds which are neither swimmers, waders, climbers, rapacious, nor gallinaceous. Nevertheless, by comparing them, a very great mutual resemblance of structure becomes perceptible.' A principal characteristic is found in the structure of the feet, which are particularly adapted for perching on the branches of trees, and have three toes before and one behind, the hind toe on the same level with the others. The legs are neither very long nor very strong; nor are the claws in general very long or very sharp. The wings are often long, and the power of flight very considerable, but this is not always the case. The neck is not long. The bill exhibits many varieties in length, thickness, &c., being very short and thick in some, very slender in others, but never exhibits the characteristic peculiarities of the accipitrine beak, although there is an approach to them in the shrikes, which are a connecting link between the two orders. The I. with short strong beaks are principally granivorous, those with slender beaks insectivorous; but very many adapt themselves almost indifferently to both kinds of food. Some feed on pulpy fruits; some on vegetable juices; some chiefly on carrion. The stomach is a muscular gizzard. To the order I. belong the singing-birds, and throughout the whole order a variously complicated structure of the lower larynx prevails. The I. pair, but the attachment of the sexes in most of them seems to endure only for a single season. They generally build interwoven nests, and lay numerous eggs. The young are always naked and blind on coming forth from the egg.—The I. are divided into four great tribes or sections, *Dentirostres*, *Conirostres*, *Tenuirostres*, and *Fissirostres*. See these heads.

INSOLVENCY, or **BANKRUPTCY**, is the state of a person declared to be unable to pay his debts. Insolvency is a term which in England has long been confined to the case of a non-trader who was unable to pay his debts. All who were *traders* (a term which was not always easily defined) were said, in the same circumstances, to be, not insolvent, but bankrupt. Different courts, called the Bankrupt and Insolvent Courts, were applicable respectively to these two great divisions of mankind, traders and non-traders, and the chief points of difference in the procedure were these. In the case of traders, the Court of Bankruptcy was the court to which they or their creditors applied for its summary intervention. That court, whenever a man who was a trader was unable to pay his debts—certain tests of which inability, called acts of bankruptcy, were assumed as infallible symptoms—on the application of a creditor, took forcible possession of his property

or his assets of every kind and denomination, converted these into money, and distributed the produce impartially among the creditors, according to certain rules, at the joint expense of the creditors. In the course of doing this, the court required the bankrupt to state all the property he had, where it was, and to give explanations as to what had been lately lost; and it was a crime for him to conceal or make away with any part of his property to the prejudice of this impartial distribution. The creditors also came in and proved their debts against his estate, thereby shewing their title to share in it. In this way the debtor was entirely stripped of everything (with a few trifling exceptions) which he had, and which was saleable; and, on the other hand, he received a certificate which entirely cleared him of the incumbrance of his past debts for ever—freed him not only from imprisonment, but even from the liability to pay more in future, should he afterwards become rich; and he could thus begin the world anew.

On the other hand, the non-traders, who consisted of country gentlemen, professional men, gentlemen at large, and nondescripts of every degree who were not traders, fell under the care of the Insolvent Court. These non-traders petitioned the court voluntarily, instead of their creditors doing so, as was the case in the Bankrupt Court, and they of course put off this application till the last, when they were in prison, though they might also petition before any creditor put them in prison. The sole condition on which the Insolvent Court granted them its protection, and discharged them from prison, was, that they should not only give up all their property, but state fully all the debts and liabilities they had incurred. If they did this satisfactorily, the court relieved them from imprisonment, which was the most obnoxious of their terrors, but did not entirely free them from the debt they had incurred. On the contrary, they were still liable for their debts; and if ever they should in future become rich enough to pay twenty shillings in the pound, they were still held liable to make up that amount. This contingency, however, seldom happened, and, moreover, when it did happen, considerable leniency was shewn to the debtor, so that practically, both in bankruptcy and insolvency, the debtor was more or less whitewashed, and was at least saved from imprisonment.

Recent changes have been made in the English law on this subject, and more are impending. It was originally intended to abolish entirely the distinction between traders and non-traders, to fuse the enactments together, and make all insolvent persons, whether they were traders or non-traders, subject to the same law, as is the case in Scotland, and as has been the case in America since 1841. This intention has not yet, however (1862), been entirely carried into effect in England, though a great deal has been done towards that consummation. The distinction is, therefore, still kept up for several purposes, and it must be admitted that there is a difference in the nature of things between the two cases.

The bankruptcy laws date from the time of Henry VIII., and the insolvency laws from the time of Elizabeth, the distinction as above explained having always been kept up between them till the late statute 24 and 25 Vict. c. 134, passed in 1861. By that statute, the Insolvent Court was abolished. The court now administering this branch of the law is called the Court of Bankruptcy, which, as far as the London district is concerned, sits in Basinghall Street, City. The London district includes all the counties near Middlesex within an area of about 100 miles. The rest of England is divided into

separate districts, such as Birmingham, Leeds, Manchester, Liverpool, Bristol, Exeter, Newcastle-upon-Tyne. The judges are called Commissioners, and have salaries of £2000 and £1800. The county court judges, except in the metropolis, also have all the powers of commissioners. The other chief officers are registrars, with salaries of £1000, £1200, £1400—a taxing-master with a salary of £1400, and an accountant in bankruptcy with a salary of £1500. The official assignees are officers with salaries of £1200, £1000, £800, in whom the estate of the bankrupt immediately vests, and who therefore, with the creditors' assignees, manage the bankrupt estate, and convert it into money. The messengers of bankruptcy are a sort of bailiffs, who take manual possession of the bankrupt's premises and goods. Their profits from fees, &c., before the recent act passed, were enormous, but their salaries are now reduced to £500 and £400.

The tests of bankruptcy, or rather the acts done by a trader which make him liable to be proceeded against as a bankrupt, are technically called acts of bankruptcy. These are: departing the realm—remaining abroad—absenting himself from his dwelling-house—keeping (himself prisoner in his) house—suffering himself to be arrested or taken to prison for debt—or allowing his goods to be taken in execution for debt—executing a fraudulent grant, gift, or conveyance of his lands or goods. If a trader execute a conveyance of his whole property to a trustee for the benefit of his creditors, this will be treated as an act of bankruptcy, if any creditor petition within three months thereafter to make him a bankrupt. So, after a petition has been presented, the paying or giving security to any one creditor, so that he shall receive more than the other creditors, is an act of bankruptcy. If any creditor make an affidavit of debt, and give notice to the trader requiring immediate payment, the Court of Bankruptcy may order this to be filed, and call on the trader, if he do not *bonâ fide* dispute the debt, to enter into a bond with sureties to pay it in a given time, and refusal or neglect to attend or to pay this, is an act of bankruptcy. With regard to a non-trader, the acts of bankruptcy are these: if, with intent to defeat or delay his creditors, he depart the realm, or remain abroad, or make a fraudulent gift, conveyance, or transfer of his real or personal estate; but in these cases the court will not declare him bankrupt until it is shewn that he has, whether abroad or not, been personally served with notice of the intended application, or at least that every reasonable effort has been made to effect such personal service; that is to say, to put into his hands written notice and full information of what is intended against him. Other acts of bankruptcy, which are applicable to both trader and non-trader alike, are the lying in prison for debt—suffering his goods to be taken for debt—filing a declaration in the Court of Bankruptcy that he is unable to meet his engagements, provided a petition for adjudication of bankruptcy be filed against him within two months thereafter. It thus appears that a person may be made bankrupt either on his own petition or on the petition of any creditor, after one or other of these acts of bankruptcy has been committed.

The mode in which an adjudication in bankruptcy is conducted in England is as follows: The act of bankruptcy, as already explained, must have occurred within twelve months before the proceeding is commenced. The first step is a petition to the court. This may be presented either by the debtor or a creditor. If, as is most usual, it is presented by a creditor, then such creditor must have a claim of debt amounting to not less than £50; or if the debt

of two creditors amount to £70, they may jointly petition; or if the debt of three creditors amount to £100, they may jointly petition. Such debts may be due under mortgages, securities, or liens, and the costs and interest previously due in respect of such debts count as part of the whole debt. If a person in prison for debt is too poor to pay the fees, he will be allowed to present the petition against himself *in formâ pauperis*; and as a monthly return of all debtors must be forwarded to the Bankruptcy Court, if prisoners remain beyond a limited time—viz., if traders beyond a fortnight, and if non-traders beyond two months—without voluntarily petitioning, the court will compulsorily make them bankrupts, and deal with them accordingly, including the power of releasing them from prison. On the petition for adjudication of bankruptcy being presented, together with an affidavit of the debt, it is filed in court, and on proof of the trading and act of bankruptcy, the court adjudicates the debtor a bankrupt. The court then appoints an official assignee to take possession of the property and premises. Before the adjudication is advertised in the *Gazette*, the debtor is to have notice personally, or by service, at his premises, and a certain number of days, from seven to fourteen, are allowed to him to shew cause why the adjudication should not be deemed valid. The bankrupt is then to deliver up all his books and papers on oath to the official assignee. He is bound to give information to the official assignee and the court, and to attend from time to time for that purpose, and he is allowed remuneration for that purpose. A small sum is also allowed for his and his family's maintenance during the proceedings. In general, the bankrupt from this time to the end of the proceedings is free from being arrested by individual creditors, and receives a protection from the court. The petitioning creditor, at his own costs, prosecutes the petition up to the stage when the creditors choose their assignees, when these costs are repaid to him. Soon after adjudication of bankruptcy, a ten days' notice is given in the *Gazette* to the creditors to meet and appoint assignees. On this occasion, the creditors must first prove their debts, which they do by their affidavit or oath, together with production of any security or document verifying the debt. All creditors having thus proved whose debt exceeds £10, have power to choose one or more persons as creditors' assignees; but the court has power to reject such choice, if unfit. The creditors may be represented on such occasion by an agent or deputy, whose authority needs no stamp. Creditors may determine whether such assignee shall give security. The court declares the appointment final. From the moment of their appointment, the whole of the bankrupt's real and personal property of every kind vests in them. They can sell it, and in general do everything which the bankrupt himself could have done. They are accountable to the creditors, and must render quarterly accounts to the official assignee, which accounts must be printed and sent to every creditor. They manage and realise the estate and collect the debts, except those under £10, which the official assignee collects. The court can summon the bankrupt, his wife, and all persons for examination. A sitting is appointed for the last examination of the bankrupt, when he must prepare a statement of the accounts for the satisfaction of the creditors. Meanwhile all creditors who have debts must complete the proof. Every creditor may prove his debt by delivering, or sending through the general post, to the official assignee—or, if the creditors' assignee has been appointed, then to the latter—a statement of such debt, and of the account of any, and a declaration signed by such creditor appended thereto that such

statement is a full, true, and complete statement of account, and that the debt is justly due. If the debt is undefined, and consists of unliquidated damages, then the court orders a jury to be empanelled, either before itself or a court of law, to fix the sum. Debts which have been incurred, but are payable at a future time, may also be proved, and so may contingent debts and liabilities. When wages are due to clerks and servants at the time of the bankruptcy, the court may order a sum not exceeding three months' wages, and not exceeding £30, to be paid in cash; and for any surplus that may be due, the clerk or servant must prove and share with the other creditors. If the other creditors oppose a particular debt, and shew it is unfounded, the court will expunge it. When all the examinations necessary of the bankrupt have been gone through, a day is appointed for considering his discharge. The court allows creditors to oppose this step; and if it appear he had traded with fictitious capital, or had no reasonable expectation of being able to pay the debts he contracted, or if his insolvency was caused by rash and hazardous speculation, or unjustifiable extravagance in living, or if he vexatiously put his creditors to expense, the court may either refuse or suspend for a time the discharge, or may grant an order of discharge subject to any condition as to salary, pay, emoluments, profits, wages, earnings that may afterwards become due, and touching after-acquired property, or may sentence the bankrupt to be imprisoned for any period not exceeding one year. If the discharge is granted, no classification of certificates is awarded, as formerly; but in case of a suspension or sentence to imprisonment, the discharge shall simply state such facts and the reasons. The effect of the discharge is to free the bankrupt entirely from all debts capable of being proved under the bankruptcy. The creditors have it in their power to determine whether any and what allowance should be made to the bankrupt up to and upon his discharge.

If, after an adjudication of bankruptcy has issued against a debtor, three-fourths of the creditors at their first meeting resolve that the estate ought to be wound up under a deed of arrangement, composition, or otherwise, the court, if it appear such course will be beneficial to the creditors, is bound to confirm such resolution, and stay the proceedings. So if the debtor enter into a deed with his creditors for winding up his business, it shall be valid and binding on all the creditors if executed by three-fourths in value of the creditors above £10, and if the debtor's solicitor attested the same. Such deed is to be registered in the Court of Bankruptcy, and the court has jurisdiction in most respects as regards the carrying out of the deed.

The criminal offences committed by a bankrupt are such as not surrendering himself to the jurisdiction of the court at the time appointed; not making a full discovery of all his property and his dealings with it; concealing or embezzling part of his property above £10; not informing his assignee of any false debt proved under his bankruptcy; falsifying his books; fraudulently accounting for his property by fictitious losses; pawning, or *mala fide* disposing of property within three months before the bankruptcy.

In Ireland, bankruptcy is substantially the same process in all its features as in England.

Scotch Bankruptcy, or Sequestration, is substantially the same process as that which prevails in England and Ireland; but there are some differences of no small importance, besides the different names given to the steps of the process. Certain acts and conduct of the bankrupt are held to be symptoms

of notour bankruptcy, corresponding to what are called in England acts of bankruptcy. The first step is a petition for sequestration, which may be presented by creditors whose debt must be of the same amount as in England. There is no separate court of bankruptcy, but the sheriff of the county, or the Court of Session, has jurisdiction to award sequestration, and the court then appoints a judicial factor, if necessary, until the creditors elect a trustee, in whom the property vests. The creditors also appoint commissioners to advise with the trustee as to the management of the estate. The duties of the trustee and commissioners are nearly identical with those of the assignees in England. The creditors prove their debts in a similar way. There are also powers of winding up the estate under a deed of arrangement. The whole procedure in the sequestration is conducted much more at the discretion of the creditors than in England. The commissioners of the creditors fix the trustee's remuneration. The trustee examines the grounds of claim of creditors, there being an appeal to the Lord Ordinary or sheriff, and he examines the bankrupt on oath, if necessary. On a report from the trustee as to the conduct of the bankrupt, which is not demandable by the bankrupt till five months after the sequestration, the bankrupt petitions for his discharge, and if the creditors all concur, he is entitled to his discharge at once; at later dates, if he has the concurrence of a certain number of his creditors, he is also entitled to a discharge; but if the creditors oppose, the court has a discretionary power to grant or suspend the discharge with or without conditions. In Scotland, there is no distinction, as there was, and still is, for some purposes in England, between traders and non-traders. Another peculiarity of a Scotch sequestration is, that the process is applicable not only in the case of debtors who are alive, but in case of persons who have died in insolvent circumstances; whereas in England, the only remedy is an administration suit in the Court of Chancery. In Scotland, there is a process called *cessio bonorum*, which resembles the process called insolvency in England, the principle of which is, that the debtor is only relieved from imprisonment, but not from the debt; and where the debtor has trifling assets, it is in the power of the creditors to resolve that their debtor shall not have a discharge under the sequestration, but only a decree in a *Cessio Bonorum* (q. v.).

With regard to the effect of a discharge under a bankruptcy in either of the three kingdoms, the rule is, that whether the bankruptcy is awarded in England, Ireland, or Scotland, all the property of the bankrupt vests in the assignee or trustee, wherever it is situated; and when the bankrupt is discharged, the discharge is thereafter complete and given effect to in all parts of the United Kingdom. Of late years, owing to the belief that it was much easier to be made a bankrupt, and obtain a discharge from debt, in Scotland than in England, various English debtors resorted to Scotland for forty days, to live there, in order that they might be made bankrupt, no doubt thinking that creditors would be less likely to oppose their discharge at that distance; and after their discharge, they returned to England, and pleaded this Scotch bankruptcy, as an answer to all their debtors. But a recent statute has given power to the Scotch courts, in such cases, to refuse the remedy of sequestration to debtors whose debts were chiefly contracted in England, and to remit them to their own country.

INSPECTOR, INSPECTOR-GENERAL, terms in military affairs, having a somewhat vague signification. There are inspectors-general of cavalry,

infantry, artillery, engineers, militia, and volunteers, whose duties are really those which their names infer—viz., the periodical inspection of the several corps of their respective arms, and the pointing out of deficiencies, the corps being under the command, however, of its own officers, and not of the inspector-general. The inspectors-general of musketry and gunnery instruction are charged with the direct superintendence and ordering of such instruction throughout the army. In the medical department, the inspectors-general of hospitals constitute the highest grade of surgeons, under the director-general of the whole department; an officer of this rank has charge of the entire medical arrangements of an army or of a large command.

Inspectors are employed in many capacities. Inspectors of volunteers are staff officers charged with the administration, battalioning, and organising into *corps d'armée* of the detached corps of volunteers in their several districts. Inspectors of musketry superintend the instruction in musketry, as imparted by the regimental instructors, &c.

INSPECTORS OF SCHOOLS. See NATIONAL EDUCATION.

INSPECTORSHIP DEED is a deed executed between an insolvent person and his creditors, whereby they accept a part payment, and allow the insolvent debtor to carry on the business under their supervision, with a view to further payments.

INSPIRA'TION (literally, *breathing into*) is applied in theology to denote the action of the divine mind upon the human mind, whereby the latter is both supernaturally informed and qualified to communicate the information received. The term *revelation* is used more distinctively to express the first part of this action, and *inspiration* to express the second part. But, in truth, all inspiration, as the word itself bears, implies revelation. There is a necessity for supernatural qualification in the utterance of truth, only where the truth is such as has not been reached by the ordinary exercise of the human faculties, but in some degree at least supernaturally communicated. The prophet or apostle is inspired only as the utterer of knowledge beyond the ordinary reach of human intelligence.

The *inspiration of the Scriptures* signifies a supernatural qualification or special divine authority in the books of Scripture as depositories of truth. When the theologian asserts any book of the Bible to be inspired, he means that it possesses an authority different from any other book, that it contains truth not merely as any ordinary book may do, but by a special divine impress. It is different from ordinary books, as conveying in a more immediate and direct, and therefore authoritative, manner divine truth. All orthodox theologians may be said to agree in ascribing this special divine character to Holy Scripture; but further there is no agreement. The mode of inspiration, the degree and extent of it, are all subjects of dispute. On one side, there are the advocates of *plenary* inspiration, as it is called; then there are those who advocate various subordinate or partial degrees of inspiration. The advocates of plenary inspiration contend that the whole letter of Scripture is inspired, that its words were immediately dictated by the Holy Spirit, and are literally the words of God, and not of man. The several writers of Scripture were nothing more than the penmen of the Divine Spirit, under whose control they vibrated as the strings of a harp in the hands of an artist. They were as a piece of mechanism touched by God himself. Those who maintain this theory, speak, indeed, of the individuality and diverse characteristics of the writers

of the Scriptures, but only as one would speak of the different tones which the same artist would produce from one and the same musical instrument. The differences are not so much in the moral or intellectual individuality of the writers themselves, as in the diverse aims and uses with which the Holy Spirit employs them; for, according to this theory, the Divine is *all* in Scripture, and the human intelligence its mere vehicle or passive instrument. The words of Scripture are no less the words of God than if He were heard to utter them from heaven. It follows from the same theory, that inspiration is essentially intermitting. It is not a higher quality of any soul, but a divine afflatus, seizing the soul at certain moments, and abandoning it at others. While the canonical epistles of St Paul and St Peter are to be held inspired, the words of these apostles at other times may not have possessed any special authority. The authority of the Scripture which they have delivered, however, is absolute. The inspired or theopneustic document is throughout faultless, as the sole work of the Divine Spirit, faultless equally in its form and in its essence, in its spirit and its letter. It admits of no gradation; all is equally divine, and therefore equally accurate, whether it relate to some ordinary fact, or to some great truth of the supernatural life, whether it treat of a dogma or of the details of a narrative. As one of its recent supporters writes: 'Every verse of the Bible, every word of it, every syllable of it, every letter of it, is the direct utterance of the Most High.' It follows no less that what God has thus miraculously written, He must have miraculously preserved. A providential canon is the plain sequence of a plenary inspired Bible.

In opposition to this theory are various others, all of which impose certain limits upon the perfection of Scripture. Some confine inspiration to all that is directly religious in the Bible, to all that is directly of the character of revelation, leaving out of the question all that belongs to the sphere of science or ordinary history. Others exempt the form or letter of Scripture, and attribute inspiration only to its spirit, ideas, or doctrines. Others go still further, and comprise in the fallible form the mode of argument and expository details. Each of these theories supposes inspiration to be connected primarily with the authors rather than with the books of Scripture, sometimes with the extraordinary gifts accompanying the first preachers of the Word of God, sometimes with the peculiar privileges of prophets or apostles, and sometimes with their special position as immediate witnesses of the facts of revelation and their singular religious aptitude. Whatever differences may characterise the advocates of these respective views, it is plain that they, one and all, have abandoned the ground of the absolute infallibility of the letter of Scripture.

In a matter of controversy like the present, it is not our function to determine in favour of any particular view, but simply to indicate what the more important opinions are, and the grounds on which they are held. Those who claim for the letter of the Bible a freedom from all error or imperfection, do so on the *a priori* ground of necessity; such infallibility is held to be implied in the very idea of a revelation of the divine will; while those passages which seem inconsistent with the facts of science or of history, or with other parts of the Bible itself, admit, it is maintained, of satisfactory explanation. For such reconciliations of apparent discrepancies our readers are referred to the current Commentaries and Harmonies. Those theologians, again, who deny the necessity of infallibility, and hold that the inconsistencies referred to never have and never can

be satisfactorily explained away (and their number has been for some time on the increase), argue in the following way: It is plain, first of all, and especially, that the question is not one to be settled according to any preconception, but according to the evidence of the facts given us in Scripture. The only right idea of inspiration is, as one has said, 'that which we form from our knowledge of the Bible itself. It is a question to be solved not by speculating what the Bible ought to be, but by examining what it actually is.' All *à priori* arguments are evidently at once inapplicable and dangerous on such a subject. The partisans of plenary inspiration maintain that it is necessary to the preservation of faith to hold, that God has not only revealed the truth to man, but that He has deposited that truth in an infallible record. Not only so; but the infallibility of the canon is no less indispensable; for all would be lost if any doubt was allowed to rest upon any portion of the Word of God. But if an infallible text and an infallible canon be necessary, why not also an infallible interpretation? Without the latter, the two former may be of no use. All may be lost by a false or defective commentary of the sacred text. It is plain that the idea of verbal inspiration cannot stop short of the conclusion of an infallible interpretation; and even such a conclusion, which upsets Protestantism, by denying the right of free inquiry, would not save it; for an infallible commentary would not necessarily insure infallible instruction—all might still be lost by the weakness, ignorance, or defect of the recipient mind. No infallibility of text, of canon, or even of interpretation, could insure the infallible reception of the truth, thus trebly guarded. If we would not be caught, then, in this absurd chain of assumption, we must break its first link, and ask, not what the Bible must be or should be, but what it is. This view is strongly argued in a recent treatise on inspiration by M. de Pressense, one of the most distinguished of the French Protestant divines belonging to the evangelical school of theology. According to this writer, who may be taken as the representative of a large class of theological thinkers, the Bible is a mass of documents of varying age and varying authenticity; its text has undergone the usual changes attending the transmission of historical documents; it is marked by the usual inequalities and varieties of style that we meet with in any other collection of ancient literature; it presents in many cases peculiar difficulties, differences and even contradictions of detail, scientific and historical errors. All who have studied the Gospels minutely, and especially the quotations in the Gospels and the Epistles of St Paul from the Old Testament, know that there are various inaccuracies and misapplications of facts throughout them. The same microscope of criticism that reveals to us the depths of the inner meaning of the divine message in all its manifold fulness, reveals to us also the imperfections, and even the contradictions, of the human messenger. The following are only a few of the instances in which such 'imperfections and contradictions' shew themselves.

1. The recital of the temptation in St Matthew and St Luke. In the former (Matt. iv. 6—8), the vision from the pinnacle of the temple is placed first; in the latter (Luke, iv. 1—10), that from a lofty mountain takes precedence.

2. In Matt. x. 10, Jesus commands his apostles to take for their missionary journey neither 'scrip, neither two coats, neither shoes, nor yet staves.' In Mark, vi. 8, he commands them to 'take nothing for their journey, save a staff only.'

3. In the narrative of the Passion, as in that of

the Resurrection, there are numerous contradictions of detail resting on a fundamental and striking unity. According to Mark, xiv. 72, the cock is represented as crowing on each of the first and second occasions on which Peter denies his Lord. In the accounts given by the other evangelists, the cock only crows upon the third denial (Matt. xxvi. 74; Luke, xxii. 60). The statement of the death of Judas differs materially in Matthew and in the Acts of the Apostles. According to the former, Judas casts down the pieces of silver, and departs and hangs himself; and the chief priests afterwards purchase with the price of his guilt the potter's field for the burial of strangers, hence called the field of blood. According to the Acts of the Apostles, i. 18, Judas himself is represented as having purchased the field 'with the reward of iniquity;' then as having in some way (not explicitly stated in the narrative) met there a bloody death, from which circumstance the field took its name. In the narratives of the Resurrection, it is well known there are numerous variations; and numerous palpable errors of memory as to historical facts occur, such as may be seen by comparing Mark, ii. 26 with 1 Sam. xxi. 2—6, and 1 Cor. x. 8 with Numb. xxv. 9.

4. As to the citations of the Old Testament in the New, they are almost entirely taken from the Septuagint, and evidently in many cases quoted from memory, with little regard to their exact sense in the original. Thus, St Matthew (ii. 6), in applying to the Messiah the prophecy of Micah (v. 2), says of Bethlehem precisely the reverse of the Septuagint. 'Thou art too little to be reckoned among the thousands of Juda,' he translates: 'Thou art not the least among the princes of Juda.' In many cases, the New Testament writers, while repeating the inaccuracies of the Septuagint translation, turn them to admirable account; this is especially remarkable in the gospel of St Matthew and the Epistles of St Paul. Thus (iii. 3), St Matthew translates with the Septuagint: 'The voice of one crying in the wilderness;' while the Hebrew is: 'A voice cries, Make plain in the wilderness the ways of the Lord' (Isaiah, xl. 3). Compare also Matt. xii. 21 and Isaiah, xlii. 4, also Matt. xv. 8 and Isaiah, xxix. 13.

None of these errors, it is maintained, are of any material consequence so far as the substantial veracity of Scripture is concerned. The very fact that a microscopic criticism can detect no more serious inconsistencies in the Scriptural writers, is rightly held to be one of the most striking testimonies that could be given to their truthfulness. Such slight inaccuracies are the mere freedoms which writers, thoroughly honest, and animated with a high interest which overlooks trifles, permit themselves. But however unimportant in themselves, they are considered by many theologians to be altogether inconsistent with a theory of verbal inspiration. However minute, they are recognised as real *discrepancies*—human imperfections in the sacred record—and as consequently proving that the mere text or letter of Scripture is not infallible, that it cannot be regarded as a 'direct utterance of the Most High.'

Inspiration, therefore, according to these theologians, does not imply the infallibility of the Scriptural text; it is something consistent with scientific, historical, exegetical, and even argumentative errors (witness, to quote no other example, St Paul's allegorical argument about the sons of Abraham, Gal. iv. 22, 25). There is nothing valid, no divine authoritative element, it may be said, that can survive such deductions. If there are such errors in Scripture, why may it not all be

imperfect or erroneous? The sufficient answer is, that it is not so—that, judged by the very same critical tests which detect such errors, the Bible remains an entirely *unique* book. Every Christian mind recognises in it a higher divine knowledge and authority than in aught else. The divine spirit in Scripture makes itself felt, shines forth in every page of it; and this is inspiration in the highest sense, the mind of God meeting our minds in Scripture, enlightening, guiding, elevating, purifying them. There is nothing more in reality to be got from any theory than this. An inspired letter, or word, or message is nothing to any one *in itself*; the meaning is everything. We must understand the word or message. There is no degree of objective authority that can supersede this subjective process of apprehension on our part. There cannot, therefore, be immunity from error, let the symbol or the text be as perfect as possible. It is only to us what *we* see it to mean; and this meaning, in the case of Scripture, shines with a divine power and lustre such as invest no other book. It bears its own divine witness. In such an idea of inspiration, criticism finds nothing inconsistent, nothing impossible, and no higher idea can be well formed of it.

INSTALLATION, in Church Law, means the ceremonial act or process by which a person presented and legally confirmed in a benefice is formally put into possession of his office, and by which he is fully empowered not alone to exercise its functions, but to enjoy its honours and emoluments. The ceremonial form, as well as the name, differs according to the office which is conferred, as 'enthronisation' for a bishop, 'induction' for a rector, &c. 'Installation' properly regards the office of a canon or prebendary. The word is also used generally for a formal introduction to any office.

INSTERBURG, a town of Prussia, in the province of East Prussia, is pleasantly situated on the left bank of the Angerap, 15 miles west-north-west of Gumbinnen. It contains a castle, and several educational institutions. Cloth-weaving, tanning, brewing, and distilling, with a trade in corn and linseed, are here carried on. Pop. 11,814. I. had its origin in a castle of the Teutonic Order of Knights, built here at an early period. At the close of the 16th c., it had attained the rank of a town, which increased considerably after the 17th c., about which time a number of Scottish families settled at I. on account of its trade.

INSTINCT. It has been common to describe the actions of the lower animals as guided by principles different from what obtains in the human constitution. The power of self-preservation is considered as reason in man, and as instinct in the brutes; but this contrast does not contain a real opposition. There is much that is common in the impulses of men and animals. When an animal, having found a morsel agreeable to its taste, masticates and swallows it, and takes up another of the same, the mental operation is not essentially different from what a human being would go through in the like circumstances. In both instances, we have an example of the exercise of Will, or volition, which operates to promote the pleasures and ward off the pains of the sentient being.

The most important meaning connected with the term Instinct is what contrasts with experience, education, and acquired knowledge. The original or innate tendencies and powers of the mind are to be distinguished from the powers that grow up in the course of the animal's experience of the world, and its companionship with other living creatures.

There has been a disposition to under-rate the acquired aptitudes of the inferior animals, and to refer their capability of self-preservation purely to their natural or primitive endowments. But in point of fact, men and animals alike possess both instincts and acquisitions; for although in man the preponderance is greatly in favour of the acquired, he, too, must start from something primordial, the basis of the other. To ascertain what is really primitive in the human mind, is an interesting problem both on its own account, and also as throwing light on the still more difficult subject of animal instinct.

In the first place, there are certain actions of importance to the safety and well-being of the individual that are termed Reflex, or Automatic. They seem to be almost out of the sphere of mind proper, as they are performed even unconsciously. Among these are the propulsion of the food along the alimentary canal, sneezing, respiration, &c. In all these, we have important activities, which are inherent in the constitution, and are performed as effectually at the beginning of life as at the full maturity of the being.

In the second place, there is a certain original provision for Rhythmical and Combined Movements among the active organs, more especially those concerned in Locomotion. Thus, there is a natural tendency to alternate the limbs, although the human infant cannot turn this to account at once for the ends of walking, as some of the quadrupeds can. From this alternation, the two eyes and the two sides of the face are specially exempted, and brought under another arrangement equally primitive—namely, concurrence; for it may be noticed that the eyes always move together, and cannot by any effort be prevented from so doing. The conjunction of the two sides of the face is less rigorous; we may acquire the power of opening one eye, and of contorting the features, by making one side act without the other. But all these cases alike illustrate the presence of an original mechanism of the frame, by which the movements are grouped up to a certain point.

In the third place, it may be safely maintained that there is an inborn tendency in all animals to *act somehow*, or to put forth the energies that they possess, without waiting for the stimulus of their sensations. This Spontaneous Activity is shewn more or less in every creature after rest and nutrition. The dog and the horse take the field without any special aim, in the first instance; they are simply urged on by an inward battery of undischarged power. They soon learn to bring this power into the service of their wants, or to direct it for their preservation and pleasure; but it shews itself at once, and before its effects are known or calculated. Some animals have this tendency in a very high degree. Destitute of any special direction at the outset, it yet prompts to a great many experiments or trials upon things, in the course of which the animal discriminates the suitable from the unsuitable by means of its sensations, and thereby learns to follow up the one and eschew the other. This is a most vital consideration in tracing the acquirements of animals, for it enables us to surmise that some of their aptitudes that manifest themselves so early as to appear instinctive, may be, after all, nothing more than very rapid acquisitions, the result of that experimentation prompted by the inborn or spontaneous activity.

Fourthly, in connection with our Emotions, there are certain primitive links of mental state with bodily manifestation, which constitute a natural language of the feelings understood by the whole human race. The meaning of the smile, the frown,

the sob, the contortion of pain, is uniform, and therefore instinctive. See EMOTION.

Fifthly, the power of will or volition, although it can be shewn to be a *growth*, must have some primitive and instinctive elements in the constitution to start from. See WILL.

Sixthly, there must be certain primordial powers of the human Intellect. What these are, has been much disputed. Every one must concede the existence of some intellectual forces or faculties, as, for example, Discrimination, the basis of all knowledge; Retentiveness, the faculty of acquiring everything that is acquired; and agreement, or Similarity (see INTELLECT); but it is contended by one school that we possess not merely powers of receiving knowledge by our contact with the world, and our consciousness of our minds, but *actual notions or ideas* that cannot be traced to our experience of the material or mental phenomena that we encounter. This is the doctrine of innate ideas, intuitive conceptions, *à priori* cognitions and judgments, first truths, &c., and it has been applied both as regards knowledge and as regards practice or duty. Locke's *Essay on the Human Understanding* contained the first elaborate examination of this doctrine, against which he produces an array of most formidable objections (Book I.). Kant and his school have maintained the *à priori* view with reference to a certain class of first principles, such as the axioms of mathematics and the law of causation. Sir John Herschel and Mr John Stuart Mill are among the most distinguished living advocates of the opposite opinion, which would refer such principles as the mathematical axioms ('things that are equal to the same thing are equal to one another,' &c.) to experience, like any other species of knowledge. See COMMON SENSE.

Seventhly, closely allied to this last controversy, if not a part of it, is the instinctive foundation of belief. The faculty of believing must be pronounced a genuine instinct, for although experience supplies us with natural conjunctions, as that 'water drowns,' 'fire burns,' 'the stars are distant,' that peculiar energy called belief, and which implies a readiness to *act* upon our knowledge, must come from some other part of our nature, which can be no other than the sources of action. See BELIEF.

So much as regards the human instincts. The mental system of the lower animals is much less perfectly understood, and no sufficient observations exist to enable us to draw clearly the line between the intuitive and the acquired powers in any single species. The popular tendency has been to underrate the acquired knowledge of animals, if not to ignore it altogether. It is then made a matter of vulgar marvel that they should do by inborn power what human beings require an education to perform. We even attribute to them something like a superhuman inspiration, as when we speak of the bee as a geometer, of the swallow as a meteorologist, and of the beaver as an architect, implying that these creatures have found a royal road to the sciences. The facts confidently asserted and universally believed respecting animals so familiar as the chick and the duckling are really, if examined, such as to stagger credibility, for they involve in these creatures the knowledge at birth of the facts of the external world, as when it is affirmed that the duckling knows on first seeing water that this is its proper element, where it can swim and float, instead of walking awkwardly on its two feet. Now, although such knowledge *à priori* of the matter of fact of nature is not intrinsically impossible, yet it is so completely at variance with all our best grounded observations, that we must pronounce it

incredible, until it shall be established by at least some hundreds of unequivocal experiments made for testing this very point. It is likewise said that the chick recognises grains of corn at first sight, and can so direct its movements as to pick them up at once; being thus able to know the meaning of what it sees, to measure the distances of objects intuitively, and to graduate its movements to that knowledge—all which is, in the present state of our acquaintance with the laws of mind, wholly incredible. It may be possible, not only for this incredibility to be removed, but also for the allegations themselves to be established as true; but the evidence requisite for that purpose has never yet been obtained.

The same uncertainty attaches to those far-sighted provisions that are made by certain animals for their own future wants and for their progeny yet unborn. The precise immediate motive that induces the bird to build its nest, and the circumstances that determine it in the choice of locality, material, and pattern, have never been made the subject of accurate experimental inquiry. It is not known how far imitation can work in the lower animals, nor to what extent they can derive instruction from the elders of their tribe. That they are observant of one another's movements, is shewn in many ways: their keeping company and acting in concert imply as much. The analogies of the human feelings, will, and intellect, might go far to explain their conduct, without supposing a mysterious occult revelation made to them specially, and not partaken of by the higher forms of the animal organisation. At present, we are not in a condition to dogmatise, owing to the want of proper observations in the whole department of brute intelligence. Various striking examples of the mistaken interpretation of the conduct of animals might be quoted in confirmation of the remark now made. See CROUCH'S *Illustrations of Instinct*.

INSTITUTE, a term used in Scotch Entail Law to denote the person who is first mentioned or described as entitled to take the entailed estate. All those who come after him are called substitutes. When the institute dies before the entail, the next person mentioned takes as institute. There are certain rules of construction which favour the institute, but these are entirely technical.

INSTITUTE, THE, in English Law, is the mode of citation or reference to Chief-justice Coke's great work, in four volumes, on English law. Another name for the first part of it is *Coke upon Littleton*, owing to its being a commentary by Coke upon a work of Littleton. The second book is a comment on acts of parliament, the third is a treatise on the pleas of the crown, and the fourth on the different kinds of courts.

INSTITUTE OF FRANCE. On the revival of letters, associations for mutual intercourse and co-operation, called Academies (q. v.), were formed in Italy and France, one of which, composed of poets of no great note, was converted by Richelieu into a national institution, under the name of *Académie Française*, and met for the first time 10th July 1637. The chief object of this institution was the cultivation of the French language; but this was indifferently accomplished, owing to the intermeddling of the court, which arrogated to itself the right of directing the public taste. Many of the judgments of this Academy were strangely erroneous—e. g., its rejection of the *Cid* of Corneille, and its refusal to admit Molière, Boileau, and La Bruyère as members. The Academy was intrusted with the preparation of a Dictionary of the French language; but the merits of this work have been

much disputed, and the plan of it generally condemned.—The taste for devices, inscriptions, and medals, which prevailed in the 17th c., suggested to Louis XIV. the foundation of the *Académie des Inscriptions* in 1663, for the immediate object of examining his collection of medals and other antiquities; but the Abbé Bignon, superintendent of the Royal Library, secured its perpetuation, with an extension of its field of labour, as the *Académie Royale des Inscriptions et Belles-lettres*, under which designation it met for the first time 16th July 1701.—The third Academy in order, and at present the most distinguished scientific association in the world, the *Académie Royale des Sciences*, was founded by Colbert in 1666, remodelled by Bignon in 1699, and further enlarged in 1785.—The painter Le Brun founded in 1648 an *Académie de Peinture*, for which he obtained a charter in 1655; and in 1664, Colbert remodelled and established it as the *Académie Royale de Peinture et Sculpture*.—An *Académie Royale d'Architecture* was also founded.

All these Academies were suppressed by an edict of the Convention, 8th August 1793; but on 25th October 1795, the Directory established a great national association, for the promotion of the arts and sciences, called the *Institut National*. It was at first divided into three classes—viz., Sciences Physiques et Mathématiques; Sciences Morales et Politiques; Sciences de Littérature et Beaux-Arts; but on the suppression of the second class by the First Consul in 1803, the remaining classes were re-arranged as follow: Sciences Physiques et Mathématiques; Langue et Littérature Française; Histoire et Littérature Ancienne; Beaux-Arts; and this arrangement continued during the Empire. On 21st March 1816, a royal ordinance commanded that the four classes should be replaced by four Academies, but the general title, 'Institute of France,' was retained, being modified by the epithet 'Royal,' 'Imperial,' or 'National,' in harmony with the political changes in France. Of course, it is at present the *Institut Impérial*. The four Academies are—1. *L'Académie Française*; 2. *L'Académie des Inscriptions et Belles-lettres*; 3. *L'Académie des Sciences*; 4. *L'Académie des Beaux-Arts*; and an ordinance, bearing date 26th October 1832, re-established the old second class as a fifth Academy, *L'Académie des Sciences Morales et Politiques*, and this organisation still subsists.

Each Academy has its own independent government, and the free disposition of the funds allotted to it, an agency and secretaries; the library and the valuable collections of the Institute are common to the five; the common fund is managed by a committee of ten members (two from each Academy), under the presidency of the Minister of Public Instruction. Members are elected by ballot, the election requiring to be confirmed by government, and members of one Academy may be elected as members of any or all of the other four. Each member has an annual salary of 1500 francs, and the secretaries have 6000. Each member also receives a Napoleon for each meeting of the Academy at which he is present, but is liable to a fine if absent for a whole year, or to expulsion for a prolonged absence without sufficient cause shewn. Each Academy meets once a week for two hours; each has also one public annual sitting; and on 15th August, there is a general public meeting of the whole five. All the Academies, with the exception of the first, have a certain number of *académiciens libres*, *associés étrangers*, and *correspondants*; the 'académiciens libres' have only the right of attending the meetings of the Academy; the 'associés étrangers' are foreign members. The following

table gives the full complement of members and correspondents for each Academy:

	Members.	Académiciens Libres.	Associés Étrangers.	Correspondants.
1. Académie Française, . . .	40			
2. " des Inscriptions et Belles-lettres, . . .	40	10	8	50
3. " des Sciences, . . .	65	10	8	100
4. " des Beaux-Arts, . . .	41	10	10	40
5. " des Sciences Morales et Politiques, . . .	40	6	6	46
	226	36	32	236

Among the 'associés étrangers,' there are, in the 3d Academy, Professors Faraday and Owen, Sir D. Brewster, and Sir J. W. Herschel; and in the 5th Academy, Lord Brougham and Mr McCulloch. Among the correspondents, we find, in the 2d Academy, Sir H. Rawlinson, Mr Layard, and Mr Max Müller; in the 3d, Sir W. Rowan Hamilton, Mr Fairbairn, Professor Airy, Mr Hind, Mr Adams, Principal Forbes, Sir J. C. Ross, Sir E. Brodie, Mr Wheatstone, Sir R. I. Murchison, Sir W. J. Hooker, Admiral Smyth, and Professor Sedgwick; in the 5th, Drs Whewell and Whately, and Mr Grote. The *Académie Française* occupies itself with debates on grammar, rhetoric, poetry, and French literature in general, and its great work is the preparation and continual improvement of a dictionary of the French language. It has the disposal of two prizes of 10,000 francs each, one of 2000 francs, and every alternate year, a sum of 1500 francs to be bestowed on meritorious authors in poor circumstances. The *Académie des Inscriptions et Belles-lettres* has for its subject history in its most comprehensive sense, including chronology, geography, numismatology, and the study of monuments of every kind, and of the languages of all nations at all times. It has in its gift a prize of 2000 francs, and another for numismatology. The *Académie des Sciences* has for its subject statistics, pure and mixed mathematics, medical science, &c.; and has the gift of eleven prizes, several of which are of 10,000 francs; all are annual, with the exception of one, which is decennial. The *Académie des Beaux-Arts* occupies itself with painting, sculpture, architecture, engraving, and music; and with the preparation of a dictionary of the fine-arts, and, alternately with the first Academy, distributes the sum of 1500 francs among poor meritorious authors. The *Académie des Sciences Morales et Politiques* discusses mental philosophy, law and jurisprudence, political economy and statistics, general and philosophical history, and politics, administration, and finance; and has the gift of two prizes—one decennial, the other quinquennial. There is also a Bordin prize in the gift of each Academy; and two general prizes—one annual, the other triennial—in the gift of the Institute.

Each year a sum is voted by the French government for the general fund of the Institute, and from this fund are paid the allowances of members, salaries of the secretaries and other officials, and several prizes; also experiments, printing, &c.

INSTITUTES is the name given to the elementary treatise on the Roman or civil law. See LAW, ROMAN, CIVIL.

INSTITUTION, in Church Law, means the final and authoritative appointment to a church benefice—more especially a bishopric—by the person with whom such right of appointment ultimately rests. Thus, in the Roman Catholic Church—even

after the 'election' of a bishop by the chapter, or his 'nomination' by the crown, when that right belongs to the crown—it is only the pope who confers 'institution.' In English usage, Institution is a conveyance of the cure of souls by the bishop, who, or whose deputy, reads the words of the institution, while the clerk kneels. The institution vests the benefice in the clerk, for the purpose of spiritual duty, who thereupon becomes entitled to the profits thereof. But the title is not complete till Induction (q. v.).

INSTRUMENT, in point of law, is scarcely a technical term, though it is frequently used in England as descriptive of a will or testamentary writing—and often any document not under seal. In Scotland, on the other hand, it is usually descriptive only of a notarial instrument.

INSTRUMENTATION is the arranging of music for a combined number of instruments. The nature and character of the musical ideas must alone determine whether the instrumentation shall be simple or artistic, and perhaps complex; the latter being the case when some of the instruments take a more prominent part than others. For both purposes, a thorough knowledge of every instrument in the orchestra is absolutely necessary, as without this, instrumentation becomes only a deafening mass of sounds. The stringed instruments, from their nature, in most cases, form the principal parts of a score, around which the other instruments move, without depriving them of their importance. The wind instruments represent, more or less, as it were, a subordinate chorus, which may again be divided into two kinds, viz., the wood instruments and the brass, which, with the stringed instruments, give three essentially different choral effects, that may be mixed up together in endless variety. A knowledge of the art of instrumentation is only to be acquired by great experience; at the same time, much may be learned by consulting the following works: *Die Instrumentirung für das Orchester*, von A. Sundelin, published in Berlin by Wagenführ; and Dr Joseph Frühlich's *Systematischer Unterricht in den vorzüglichsten Orchesterinstrumenten*.

INSTRUMENTS, MUSICAL, may be divided into three classes—stringed, wind, and percussion. Stringed instruments are of three kinds: those whose sounds are produced by friction, as the violin, viola, violoncello, &c.; by twitching with the finger or otherwise, as the harp, guitar, mandoline, &c.; by striking, as the pianoforte and dulcimer. Wind instruments are of two kinds, viz., the reed species—as the hautboy, clarinet, &c.—and the flute species, as the flute, flageolet, &c. The trumpet, horn, trombone, and all similar wind instruments, are generally classed among the reed instruments; but whether the sound is produced by the lips of the blower acting as a reed, or by the compressed stream of air, as in flute instruments, is not yet determined. Percussion instruments are those which on being struck produce only one fixed sound, as the drum, triangle, cymbals, tambourine, &c. Whatever material may be used to form a musical instrument, there are only two means of producing musical sounds, and these are by the vibrations of a fixed elastic body, such as the string of the violin or pianoforte, the reed of the hautboy, bassoon, &c.; or by the vibrations of a confined column of air put into motion by a stream of compressed air, as in the flute, flageolet, and all the ordinary flute species of organ-pipes.

INSUCKEN M'LTURES, in Scotch Law, mean the payments made to the miller by persons who are bound to grind their corn at a particular mill, under a servitude called Thirlage (q. v.). Out-

sucken multures mean the payment for the mere grinding, which strangers pay; and the insucken multures include that *plus* a small premium, which goes to the proprietor of the mill.

INSURANCE, a contract of indemnity, whereby one party, in consideration of a specified payment, called a 'premium,' undertakes to guarantee another against risk of loss. The first principles of insurance would appear to have been acted on at a very early period, since, without attaching undue importance to the opinions of writers who contend, on the authority of Livy, that they were known during the second Punic war, or that the Emperor Claudius can be considered an insurer, because, in order to encourage the importation of corn, he took all the loss or damage it might sustain upon himself—there are yet extant rules of sundry 'guilds,' or social corporations of the Anglo-Saxons, whereby, in return for certain fixed contributions, the members guarantee each other against loss from 'fire, water, robbery, or other calamity.' It was, however, to cover maritime casualties that insurance, viewed in its commercial aspect, seems to have been first undertaken. So early as 1435, the magistrates of Barcelona issued an ordinance relating to this class of business, and we find in the speech of the Lord Keeper Bacon, on opening Queen Elizabeth's first parliament, the allusion, 'doth not the wise merchant, in every adventure of danger, give part to have the rest assured.' The merit of being the first to apply mathematical calculations to the valuation of human life belongs to the famous John de Witt, pensionary counsellor of Holland, whose Report to the States-general, on the valuation of life annuities, has been lately brought to light by Mr Hendriks. The first insurance company established in Britain appears to have been the 'Amicable,' founded in 1696; not the office known by that name now, but the one that still exists as the 'Hand in Hand.' Omitting the gambling and other objectionable projects for which the science of insurance has been held responsible, it would exceed the limits of the present article to give any detailed account of even the more legitimate applications of it which are current at the present day: the traveller can be protected from the pecuniary loss entailed from damage by rail or flood; the gardener from the devastation of the hailstorm; the farmer from the inroads of disease among his cattle; and employer and employed alike reap the benefit of a guarantee on fidelity. Two hundred established offices within the United Kingdom appeared in an accredited list published in 1862, and although there were, besides, 56 winding up in Chancery, there is an amount of confidence to be placed in the stability and integrity of the greater number existing, that cannot be exceeded in any other commercial interest. We propose confining our remaining remarks to the divisions of fire, life, and marine insurance.

1. *Fire Insurance*.—Although the business of fire insurance is not founded upon such exact data as can be made available in the practice of life insurance, yet considerable progress has been made by the offices towards a correct classification of the risks they run, and the rates of premium range by slight gradations, from a minimum of 1s. 6d. per cent., which covers an ordinary private dwelling-house, to £3, 3s. per cent. and upwards, charged for insuring cotton-mills, sugar-refineries, theatres, and like specially hazardous risks. The average rate of premium received for risks in the United Kingdom may be estimated at 4s. per cent. A duty of 3s. per cent. per annum is levied by government upon all fire insurances, except farming-stock and public hospitals, and the parliamentary returns made of it

afford valuable statistical information of the total amount insured. The duty paid in the year 1860, per return last published, amounted to £1,558,608, representing a gross amount insured over the year of £1,039,072,140, and there was likewise covered by the different companies, farming-stock to the extent of £73,309,898. The effect of such a heavy impost as the duty, is felt to be a serious impediment to the progress of fire insurance, although the ease and trifling expense at which it is collected offer great inducements to successive chancellors of the exchequer to perpetuate the tax. Conceding that the revenue must be obtained, a tax on *prudence* certainly seems an objectionable method of raising it, and it is likewise found to be an inequitable one. A very large proportion of the whole property insured is covered at the minimum rate of 1s. 6d. per cent., and from this the office having to pay its agency and other expenses of management, it is hardly too much to say that in such cases the tax is threefold the net premium required to cover the risk. Fire insurance policies are of too familiar use to require explanation here, but one point in connection with them may be noticed: unlike a marine policy, they guarantee the insured to the extent of the whole amount specified in them, without regard to the excess of value of the entire property before the fire, unless an exceptional 'average clause' is attached to the policy.

2. *Life Assurance*, in its widest sense, is a contract entered into by the assurer to pay a certain benefit contingent upon the duration of one or more lives. The 'present value' or single premium corresponding to an assurance of £1, payable at the end of the year of death of an individual, is deduced from the value of an annuity on the same life (see ANNUITY), and is expressed by the formula $v - (1 - v) A_x$, where v is the sum which will amount to £1 in one year (therefore equal to $\frac{1}{1+r}$, r being the interest of £1 for a year), and A_x is the value of an annuity of £1 per annum on the life aged x .

The more common form in which a life assurance is carried out is, however, by the payment of an annual premium to the company assuring, and this is determined (using the same symbols as above) by the formula $\frac{1}{1+A_x} - (1-v)$. The demonstration of which, in a popular form, is thus ingeniously done by Mr Gray. The present value of an 'immediate' annuity on a life aged x —i.e., of an annuity of which the first payment falls to be made at the commencement of the transaction—being $1 + A_x$, it is easily deduced by proportion that £1 will purchase an immediate annuity of $\frac{1}{1+A_x}$, the reciprocal of the first value; and this would be the proper premium for the benefit if the latter were paid to the assured at the beginning of the first, and not at the end of the last year of the duration of the policy; but inasmuch as the benefit is not paid until the close of the stipulated period, the difference between its immediate value and its value if due a year hence $(1-v)$ has to be deducted from each year's premium, and the formula is the result.

The three important elements that have to be taken into account in the calculation of office-premiums are—the rate of interest which is to accrue from their investment, the mortality returns with which the future experience of the insured is expected to agree, and the proportion or 'loading' to be added to the *net* rates to meet expenses of management, and afford a profit to the insurer. The rate of 3 per cent. has, with a very few exceptions, been adopted as a basis for such calculations,

as the nearest to what can be expected to be realised on good security for transactions extending over many years. The mortality table most generally in use is that originally published by Mr Milne, derived from the observations of Dr Heysham on the rate of mortality in Carlisle during the nine years 1779 to 1787 inclusive, and hence known as the Carlisle Table. It is admitted to be a correct representative of *healthy* life in England, and from the great number of published computations founded on it, is likely to retain its place in the estimation of actuaries.

The following are examples of *net* premiums calculated on these data:

SINGLE AND ANNUAL PREMIUMS FOR ASSURANCE OF £100, FOR WHOLE OF LIFE—CARLISLE, 3 PER CENT.

Age.	Single Premium.			Annual Premium.		
	£	s.	d.	£	s.	d.
20	33	17	11½	1	9	10½
25	36	17	10½	1	14	0½
30	40	2	6	1	19	0½
35	43	7	11½	2	4	8
40	47	3	2	2	11	11½
45	50	17	8½	3	0	4½
50	55	8	7½	3	12	5½
55	60	18	11	4	10	10½
60	66	10	7½	5	15	9½

The question of the addition to be made to such (net) premiums is influenced by different considerations having regard to the practice of the office using the table.

Assurance companies are divided into three classes: 1. *Proprietary Companies*, being those offices possessing a capital the property of the partners, and which, in addition to the accumulated premiums, is pledged to the policy-holders as a guarantee for the fulfilment of their claims. As the liability in such companies is limited to the net sums assured, the addition made to the premiums requires to be only such a proportion as will cover the actual outlay for management, and remunerate the shareholders for the risk of loss by fluctuation in the mortality, or from bad investments, which they run. A comparison of the above premiums with the 'non-participation' rates usually advertised, will show that the prevailing competition has induced the construction of tables very favourable to the public. 2. *Mutual Offices*, where the members themselves constitute the company, being liable to each other for all claims. Here, in the absence of a capital, it is usual to adopt a scale of premiums known to be in excess of what is required to meet the sums insured. The profit arising therefrom is periodically ascertained, and allotted to the assured, most frequently in the form of 'bonuses' or additions to the claims payable under the policies. Some companies doing a large business are of this class, and in point of stability and irreproachable management bear the highest character. 3. *Mixed Companies* are proprietary companies charging such increased rates as will yield a bonus, but which, in return for the expenses of management and guarantee of their capital, reserve for their proprietors a stipulated proportion of the profits.

It would be beyond our province to deal with the comparative merits of these systems; undoubtedly, offices in which the assured participate in a part or the whole of the profits, have for some years back enjoyed the largest share of public support. Life-assurance, in the abstract, is certainly one of the greatest blessings of modern times. The extent to which it has been made available may be judged from the fact, that the total sum, including vested bonuses, for which the existing offices are liable is estimated at about £200,000,000 sterling; the

annual premiums payable, therefore, being between five and six millions—a sum equal to $\frac{1}{12}$ th of the net public revenue of the United Kingdom.

A greatly increased facility for making the necessary calculations in connection with life-assurance has been developed within the last few years by the use of 'Commutation Tables,' the invention of Mr George Barrett, and of which a large collection, calculated by Mr D. Jones, is published by the Society for the Diffusion of Useful Knowledge. For the best information on their construction, and other formulae, the reader is referred to the standard works of De Morgan, Gray, Milne, and the transactions of the Institute of Actuaries, published quarterly. See POST-OFFICE INSURANCE in SUPP.

3. *Marine Insurance.*—Although this branch of the subject does not possess such a general interest as the preceding, it is one that requires quite as great an amount of study and experience to insure its successful prosecution. In estimating the rate of premium, the insurer has to take into account not only the quality of the vessel covered, but the season in which she sails, the known character of her captain, the nature of the commodity carried, and (the contract being an indemnification both against the elements and the enemy) the state of our political relations. Nevertheless, losses at sea, like other incidents, are observed to follow certain laws, and if the average from which the value of the risk is deduced is of sufficiently broad basis, the result over equal intervals of time can be predicted with reasonable certainty. Until 1824, the only companies that could grant marine insurances were the 'Royal Exchange' and 'London Assurance,' and although the monopoly of these offices then ceased, and various other companies were established, such is the force of usage, that by far the greater portion of the business continues to be transacted by individual insurers designated 'underwriters.' The underwriters of London form an influential society known as 'Lloyd's' (q. v.), from having originally met in a coffee-house kept by a person of that name in Abchurch Lane; and their extensive business, numerous agents for procuring information, and general influence in the mercantile community, have long gained for them a world-wide reputation. As a small number of risks, viewed in connection with the great hazard to which property at sea is exposed, would not secure a safe average to the individual insurer, he finds it prudent to take but a fractional part of the entire risk on himself, and this is done by subscribing or 'underwriting' the stipulated proportion on a policy drawn out for the whole amount to be covered. The necessity for circulating the policy for this purpose, and otherwise negotiating the insurance, has given rise to another business, that of the 'insurance broker,' with which, however, that of the underwriter is often combined. A system of mutual insurance is frequently carried out by associations of ship-owners forming 'clubs,' differing in some degree from the protection afforded by the ordinary underwriter, inasmuch as a club grants an indemnification for the loss for which the insured may at law be held responsible for damage done by his ship to another. As such a 'collision' guarantee is now frequently made a stipulation in an ordinary policy, this distinction is, however, gradually disappearing.

Marine insurance differs from an ordinary fire insurance, in respect that in case of partial loss the underwriter pays only such a proportion of the sum insured as the damage sustained bears to its whole value at the time of insurance. See AVERAGE. In adjusting a partial loss, it is usual to deduct one-third of the nominal value, for new materials furnished to replace the older destroyed, and labour.

Policies are of two kinds, 'valued'—where the insurance is based on a specific bill of lading—and 'open,' where, in case of loss, the value of a ship with her stores is estimated as at the date of sailing, her freight at the amount she would have earned had the voyage terminated favourably, and her cargo at its invoice price, adding premium and all charges. The insurance is binding although the ship may have been lost when the policy was executed, but any warranty, if not true, is held to vitiate the insurance, even although the misstatement is not material to the risk. A stamp-duty is levied upon all marine insurance policies, although well-grounded objections are urged against it. A tax on prudence, it is unfairly made to increase with the risk. In the coasting traffic, it presses unequally on the carriage by sea in competition with the land traffic on which no such burden is imposed, and in other business it offers an inducement to employ the foreign in preference to the British underwriter. In fixing the amount of stamp-duty, the choice lies with the insured of doing so with reference to the *term* of insurance (not exceeding one year), or to the rate of premium per single voyage, by the following table:

BY TIME.		s.	d.
For any term not exceeding Six Months,		2	6 per £100.
Exceeding Six Months,		4	0 "
BY RATE OF PREMIUM.		s.	d.
Not exceeding 10s. per cent.		0	3 per £100.
" 20s. "		0	6 "
" 30s. "		1	0 "
" 40s. "		2	0 "
" 50s. "		3	0 "
Exceeding 50s. "		4	0 "

The revenue of the government from this source was for the year ending March 1861, £328,735, but although this was a slight advance on the amount of previous years, it has been shewn, from returns obtained by Mr Leone Levi, that the proportion of vessels insured to the number of wrecks has over the same period been gradually diminishing, a diminution in the ratio of insurances which Mr Levi attributes to the pressure of the duty.

INSURANCE, IN LAW.—The law on the subject of insurance is substantially the same throughout the United Kingdom.

Fire Insurance.—The contract is generally preceded by proposals, in which case the proposals and policy of insurance must be read together, if the policy refers to these proposals. In order to insure property, the insurer must have some interest in the property insured, for otherwise there would be an inducement to commit arson. But he need not be owner; it is enough that he be accountable for the goods, or hold a lien on them, as a carrier, wharfinger, or bailee. Thus, many carriers keep up a floating policy to cover all goods which may happen to be on their premises within a given period. In all these cases, the words of the policy are the important points; and good faith is required in giving a correct description of the goods or premises, for every statement or representation as to anything that is essential is taken to be a warranty. The premises must not be materially altered during the risk, otherwise the policy will be void; but often the policy stipulates that alterations may be made on giving notice. A person in lodgings may insure his goods, and may safely call the house his 'dwelling-house' for that purpose. But, as a general rule, great care must be taken by the insured not to misrepresent anything material, and not to conceal any extraordinary risk which the insurer ought to know. If a fire happens, either on the premises, or in neighbouring premises, the

insurer cannot set up in defence that it was caused by the negligence of the insured or his servant, for these are generally the very things which an insurance is intended to guard against. When a fire happens, it is generally always provided by the policy that notice of the loss is to be sent in, and full particulars of the damage done, and the alleged value, for it is only the actual loss which is insured against, and that only can be recovered. Thus, if a person insures his house or furniture for £600, and damage only to the extent of £50 has been done by fire, he can only recover the £50, for otherwise he would be better off than he was before the fire, and the contract is one merely of indemnity—i. e., it does not add to one's wealth, but merely secures against loss. It is often provided that the annual payment of the premium on a contract of insurance may be paid within 15 days after the first or previous year has expired, but it is dangerous to allow the payment to be postponed so long, for if a fire happen in the interval, the insurer will not in general be liable. Sometimes the same property is insured in several offices, but in that case the insured party can nevertheless only recover the value of his loss once and no more. He can sue either of the insurers, however, for the amount, if each policy cover the whole value, and the party who pays can then recover a proportionate part from the other co-insurers, for they all divide the loss among them. In cases where carriers and others take out a floating policy of fire insurance, the carrier can sue for the full loss of the goods, though far exceeding the extent of his own interest in them, but in that case the owner of the goods destroyed is entitled to recover the balance from the carrier, even though originally he never gave authority to the carrier to insure them. And so, in like manner, if a person is insured, and recovers his loss from the insurer, and then sues a third party for the wrong which caused the loss, the insurer gets the benefit of what may thus be recovered, in diminution of his own loss.

Life Insurance is not a contract of indemnity, like fire insurance, and therefore a person may insure his life in as many insurance offices as he pleases, and his executors will recover the full amount insured from each of the insurers, regardless of the rest. In order, however, to insure a life, the insurer must either himself be 'the life' or must have a pecuniary interest in the life. Thus, a creditor is entitled to insure his debtor's life; a wife may insure her husband's, because he is bound to support her; or the husband may insure the wife's, if she has an annuity or property settled upon her for life, in which he has an interest. It is enough, also, that the interest of the insurer exist at the time the policy is entered into, and hence, though the interest afterwards cease, he will still be entitled to recover the amount, if the policy is kept up. Thus, a creditor whose debt is satisfied, may still recover on the policy. In entering into contracts of life insurance, scrupulous good faith is exacted in the description of the nature of the life insured, and any fraudulent misrepresentation in a material point is fatal to the insurer's right to recover. Some companies even go the length of inserting in their policies a clause, that if any misrepresentation (i. e., however trifling) be made, the policy will be void. But particular care should be taken to avoid such offices, for the policies taken out on such terms will generally be so much waste paper, as far as any security is concerned. At the same time, it is often dangerous for the insurer to treat lightly any misrepresentation, for in the end the question, whether it is material or not, will be one not for him or his executors, but for a jury, in case an action is brought. When the policy is effected through an agent on the principals

life, and the agent, unconsciously and without the authority of the principal, makes a misrepresentation, this will bind the principal. Where the person whose life is insured commits suicide, or is hanged, the policy is void, unless, in the case of suicide, he was in a state of insanity at the time. The policy, however, frequently has an express provision on this subject, the terms of which will be in that case all-important, and will govern the liability. In case the policy provides, as it often does, for its continuance, if payment after the expiration of the year is made within 15 or 21 days, it is dangerous to run the risk of this interval, for if the party dies during the 15 days before the premium is paid, the policy will not be set up by his executors coming forward to pay within those days. But the policy sometimes expressly allows of this, in which case it will be competent for the executors to make the payment. Life assurances are often assigned in security of a debt, in which case the assignor generally covenants to pay the premiums, so as to keep the security up; and failing payment by the assignor, the assignee is generally authorised to pay them himself, and recover the amount from the assignor. Notice of an assignment of a life policy should always be given to the insurance company, so as to let them know whom they are to pay.

Maritime Insurance is effected either on a voyage from one port to another, in which case it is called a voyage policy, or it is from one given day to another, in which case it is called a time policy. When the value of the property insured is expressed in the policy, it is called a valued policy, and when not so expressed it is an open policy. In general, wagering or gaming policies are void by statute, and the insurer must have some interest in the ship, such as the profits of the voyage or the freight. The insurance of seamen's wages, however, is not competent, for it tends to take away the stimulus of exertion from the crew. When the policy states a fixed sum as the value of the property, and expressly provides that the policy shall be deemed sufficient proof of interest, the insurance is an insurance 'interest or no interest,' and void by the statute. When the policy is a voyage policy, there is an implied warranty by the insurer that the ship is seaworthy at the commencement of the voyage, but there is no such warranty in a time policy. As is the case in fire and life policies, any fraudulent concealment of material circumstances which increase the risk will void the policy. But everything done in the usual course of navigation and trade is presumed to have been foreseen, and in contemplation of both parties. The policy is understood to cover the risk, not only of the perils of the sea, properly so called, but of ignorance or negligence on the part of the master or mariners. But the loss caused by mere tear and wear is not covered by the policy; the cause of the loss must be something fortuitous or accidental. Every policy impliedly assumes that the vessel will proceed straightway to her place of destination, without unnecessary delay. But sometimes, from unforeseen causes, it is absolutely necessary for the master to deviate, in which case, and in which only, the policy will remain good, strict proof, however, being always given of this imperious necessity. When the ship has been so injured or deteriorated as to render it hopeless to restore it, and the repairs will cost more than the ship is worth, the assured may abandon the ship, and claim for a total loss. See AVERAGE.

INTAGLIO (Ital. 'cutting in'), a term in art, the opposite of relief (see ALTO-RELIEVO), means the representation of a subject by hollowing it out in a gem, or other substance; so that an impression

taken from the engraving presents the appearance of a bas-relief.

INTEGRAL CALCULUS. See **CALCULUS**.

INTEGRATION. See **CALCULUS**.

INTELLECT, the name for the thinking portion of our mental constitution. Mind contains three elementary constituents—Emotion or Feeling, Volition or the Will, and Intelligence or Thought. See **EMOTION**, **WILL**. The intellectual powers are explained in part by their contrast with feeling and will. When we enjoy pleasure or suffer pain, we are said to feel; when we act to procure the one or avoid the other, we put forth voluntary energy; when we remember, compare, reason, our intelligence is exerted.

The powers of the intellect have been variously classified. Among the commonly recognised designations for them, we may mention Memory, Reason, and Imagination, which imply three very distinct applications of our mental forces. Reid classified them as follows: Perception by the Senses, Memory, Conception, Abstraction, Judgment, Reasoning. Stewart added Consciousness, to denote the power of recognising our mental states, as Sensation and Perception make us cognizant of the outer world; likewise Attention (a purely voluntary function, although exerted in the domain of intelligence), Imagination, and the Association of Ideas.

It might be easily shewn that in such a classification as the above there is no fundamental distinctness of function, although there may be some differences in the direction given to the powers. There is not a faculty of Memory which is all memory, and nothing but memory. Reason and Imagination equally involve processes of recollection. And with regard to the Association of Ideas, it has been shewn by Mr Samuel Bailey (*Letters on the Human Mind*) that if this is to be introduced into the explanation of the intellect, it must supersede the other faculties entirely; in short, we must proceed either by faculties (as Memory, Reason, &c.) or by Association, but not by both.

In endeavouring to arrive at a satisfactory account of the human intellect, we must make a deeper analysis than is implied in the foregoing designations. We find at least three facts, or properties, which appear in the present state of our knowledge to be fundamental and distinct, no one in any degree implying the rest, while taken together they are considered sufficient to explain all the operations of Intelligence, strictly so called.

1. **DISCRIMINATION**, or the consciousness of Difference. When we are affected by the difference of two tastes or odours, or sounds or colours—this is neither mere feeling nor volition, but an intelligent act, the foundation of all other exercises of our intelligence. We must recognise the impressions on our senses as differing, before we can be said to have the impression of anything; and the greater our powers of discrimination in any department, as colour, for example, the more intellectual are we in that special region. We could have no memory if we did not first recognise distinctness of character in the objects that act on the senses, and in the feelings that we experience. In some of the senses, discrimination is more delicate than in others; thus, Sight and Hearing give us a greater variety of impressions than Taste or Smell, and are therefore to that extent more intellectual in their nature. In the course of our education, we learn to discriminate many things that we confounded at first. Every craft involves acquired powers of discrimination as well as habits of manipulation. A man is in one respect clever or stupid, according as his perceptions of difference in a given walk are delicate or blunt.

2. The next great intellectual property is **RETENTIVENESS**, or the property whereby impressions once made persist after the fact, and can be afterwards recovered without the original cause, and by mental forces alone. When the ear is struck by a sonorous wave, we have a sensation of sound, and the mental excitement does not die away because the sound ceases; there is a certain continuing effect, generally, although not always, much feebler than the actual sensation. Nor is this the whole. After the sensation has completely vanished, and been overlaid by many other states of mind, it is possible to evoke the idea of it by inward or mental links, shewing that some abiding trace had been left in the mental system. The means of operating this revival is to be found in the so-called forces of Association. See **ASSOCIATION OF IDEAS**.

3. The last great fundamental fact of intellect is **Agreement or SIMILARITY**. See **ASSOCIATION OF IDEAS**.

It is believed that these three properties, in combination with the other two powers of the mind (Feeling and Volition or Will), are adequate to explain all the recognised intellectual faculties or processes—Memory, Reason, Imagination, &c. Memory is almost a pure case of Retentiveness, or Contiguity, aided occasionally by Similarity. Perception by the senses is only another name for Discrimination, the basis of all characteristic mental appreciation of matter or mind. Judgment is either Discrimination or Similarity, according as it discovers difference or agreement in the things judged of.

Sir W. Hamilton, in departing from the common classifications of the intellect, adopted the following division into six faculties or powers. 1. The *Presentative* Faculty, by which he meant the power of recognising the various aspects of the world without and the mind within, called in the one case External Perception; in the other, Self-consciousness, and sometimes Reflection. 2. The *Conservative* Faculty, or Memory proper, meaning the power of storing up impressions, to be afterwards reproduced as occasion requires. 3. The *Reproductive* Faculty, or the means of calling the dormant impressions up into consciousness again. These means are, as stated above, the Associating principles. 4. The *Representative* Faculty, for which Imagination is another name, which determines the greater or less vividness of the impressions or ideas thus reproduced. 5. The *Elaborative* Faculty, or the power of Comparison, by which Classification Generalisation, Abstraction, and Reasoning are performed. This, in fact, is one (not the only) application of the general power of Similarity. Lastly, 6. The *Regulative* Faculty, or the cognition of the *à priori* or supposed instinctive notions of the intellect, as Space, Time, Causation, Necessary Truths, &c. This corresponds to what in German philosophy is called the 'Reason,' as contrasted with 'Understanding,' which deals with experienced or contingent truth.

On examining the above distribution, it will appear that while the first faculty, the Presentative, coincides with the primary fact of Discrimination, the three subsequent, Conservation, Reproduction, Representation, are merely modes or distinct aspects of Retentiveness. All the three must concur in every case of the effective retention or recollection of anything. The last power, the Regulative, is of course disputed by the opposite school, who refuse to recognise a primary or distinct faculty as giving birth to the ideas in question. See **CONSCIOUSNESS**, **CAUSE**.

INTEMPERANCE. See **INTOXICATION**.

INTENDANT, or **INTENDANT MILITAIRE**, an officer in the French army charged with the organisation and direction of all the civil services attending a force in the field. The officers acting

under his orders are those in charge of all the finance services, the provisions, stores, hospitals, artillery train, and transport departments, besides the interpreters, guides, and such like temporary services. The *intendant-en-chef* of an army is the representative of the Minister of War; and, short of superseding the general's orders, can exercise, in case of need, all the functions of that high officer of state. The intendants are divided into intendants, ranking with general officers, sub-intendants with colonels, and assistant-intendants with majors; besides cadets, who receive no pay, and constitute a probationary grade.

Intendant was the name given in France before the Revolution to the overseer of a province. Such permanent officers were first appointed by Henry II. (1551). Under the complete system of centralisation established by Richelieu, these intendants, as they were now called, became the mere organs of the royal minister, to the exclusion of all provincial action. To them belonged the proportioning of assessments, the levying of soldiers, &c. The National Assembly, in 1789, established in each department an elective administration. Napoleon virtually restored the intendants, but exchanged the hated name for that of *Préfets* (q. v.).

INTERCALARY (Lat. *intercalaris*, for insertion), an epithet applied to those months or days which were occasionally inserted in the calendar, to make it correspond with the solar year. See **CALENDAR**.

INTERCESSION, DOCTRINE OF. Scripture, in many places, represents Christ, after having finished his redemptive work on earth, and ascended into his state of glory and exaltation, as ever pleading with God on behalf of those whom he has redeemed by the shedding of his blood (Rom. viii. 34; Heb. vii. 25; 1 John, ii. 1). Theologians say, however, that we are not to suppose that God needs to be interceded with, as if he were still reluctant to forgive men, or that Christ's intercession makes him more merciful than before. They tell us, that since it is evident from the whole tenor of the New Testament, as well as from a multitude of special passages, that the penal sacrifice of Christ on Calvary reconciled God to man, we must regard the intercessory work of Christ rather as serving to illustrate the eternal holiness of God and the changeless love of the Saviour, and as intended to keep continually in view the sacrifice of atonement on which it is founded. The doctrine of the intercession of Christ is held both by Protestants and Roman Catholics; but the latter, in addition, believe in the efficacy of the intercession of the Virgin and the saints, who, however, do not directly intercede for men with God, but with the Saviour, the sinless One, who alone has the ear of the King of the universe.

INTERCOLUMNIATION, in Classic Architecture, the distance between the columns of a building, measured at the bottom of the shaft. The intercolumniation varies in different examples, but the most favourite distance for the columns to be placed apart is $2\frac{1}{2}$ diameters of the column, which by Vitruvius is called *Eustyle*. The central intercolumniation of a colonnade is frequently made wider than the others when required for access to a gate or door. In Doric architecture, the intercolumniation is decided by the spacing of the triglyphs, the columns being usually placed under the centre of every other triglyph.

INTERCOMMUNING, LETTERS OF, was an ancient writ issued by the Scotch Privy Council, warning persons not to harbour rebels.

INTERDICT, an ecclesiastical censure or penalty in the Roman Catholic Church, consisting in the withdrawal of the administration of certain sacraments, of the celebration of public worship, and of the solemn burial-service. Interdicts are of three kinds—*local*, which affect a particular place, and thus comprehend all, without distinction, who reside therein; *personal*, which only affect a person or persons, and which reach this person or persons, and these alone, no matter where found; and *mixed*, which affect both a place and its inhabitants, so that the latter would be bound by the interdict even outside of its purely local limits. The principle on which this ecclesiastical penalty is founded may be traced in the early discipline of public penance, by which penitents were for a time debarred from the sacraments, and from the privilege of presence at the celebration of the Eucharist; but it was only in the medieval period that, owing to circumstances elsewhere explained (see **EXCOMMUNICATION**), it came into use as an ordinary church censure in the then frequent conflicts of the ecclesiastical and civil power. It was designed to awaken the national conscience to the nature of the crime, by including all alike in the penalty with which it was visited. The most remarkable interdicts are those laid upon Scotland in 1180 by Alexander III.; on Poland by Gregory VII., on occasion of the murder of Stanislaus at the altar; by Innocent III. on France, under Philippe Auguste, in 1200; and on England under John in 1209. The description of England under the last-named interdict, as detailed by some of the contemporary chroniclers, presents a strangely striking picture of the condition of the public mind, which it is difficult with our modern ideas fully to realise or to understand. It would be a great mistake, however, to suppose that, during the continuance of an interdict, the people were *entirely* destitute of spiritual assistance. The interdict mainly regarded the *solemnities* of public worship; it was permitted to administer baptism, confirmation, and the Eucharist in all cases of urgency; to confess and absolve all who were not personally the guilty participators in the crime which the interdict was meant to punish; to celebrate marriage, but without the solemnities; and to confer orders in cases of necessity. And under the popes Gregory IX., Innocent III. and IV., and Boniface III., still further mitigations of its rigour were introduced, one of which was the removal of the interdict and restoration of public worship on certain great festivals, especially Christmas, Easter, Pentecost, Assumption, and All Souls. The council of Basel enacted very stringent rules as to the use of this penalty, and in later times the general interdict has been entirely disused, although occasionally, in very special circumstances, and to mark the horror of the church for some enormous crime, instances are still recorded in which a particular place or church has been visited with the penalty of a local interdict.

INTERDICT, in Scotch Law, is an order issued by the Court of Session to stop or prohibit a person from doing an illegal or wrongful act. It is obtained on presenting a note of suspension and interdict to the Lord Ordinary on the Bills. The party applying for it must have both title and interest—that is, he must be more than a mere stranger. The principles on which it is granted in Scotland are substantially the same as those in which the parallel Writ of Injunction (q. v.) is granted by the Court of Chancery in England.

INTERDICTION is a process peculiar to the law of Scotland, by which persons of imbecile minds may either restrain themselves, if conscious of their

weakness—then called voluntary interdiction—or may be restrained by the Court of Session in *invitum*, then called judicial interdiction. The effect of both is to appoint trustees or interdictors, whose consent is necessary to all deeds whereby the imbecile's heritable estate is alienated. See IMBECILITY.

INTERESSE TERMINI, a term sometimes used in English law to denote the kind of interest which a lessee takes in land when the lease is executed. It amounts to a right of entry on the lands, which is assignable.

INTEREST, the payment due by the borrower of a sum of money to the lender for its use. The interest of £100 for one year is called the rate *per cent.*; the money lent, the principal; and the sum of any principal and its interest, the amount. The current or market rate of interest fluctuates widely, by reason, not, as is often supposed, of the extent of the supply of money, but of the variable rates of profit, as in Holland, where it has always been comparatively low, and in our own time in Australia and California, where mercantile profits being in excess, the rate of interest is relatively high.

A strong prejudice against exacting interest existed in early times, arising from a mistaken view of some enactments of the Mosaic law;* and as late as the reign of Edward VI., there was a prohibitory act passed for the alleged reason that 'the charging of interest was a vice most odious and detestable, and contrary to the word of God.' Calvin, the famous reformer, was one of the first to expose the error and impolicy of this view, although a series of enactments, known as the Usury Laws, to some extent perpetuated it, by an attempted restriction of the maximum rate to be paid. In England, this rate was fixed by act 21 James I. at 8 per cent. During the Commonwealth, it was reduced to 6 per cent.; and by the act 12 Anne, c. 16, to 5 per cent., at which rate it stood till 1839, when the law was repealed. In Scotland, any charge for interest was prohibited before the Reformation. In 1587, the rate was fixed by law at 10 per cent.; in 1633, at 8 per cent.; in 1661, at 6 per cent.; and by the act of Anne, as above noted, at 5 per cent. It is now admitted that the operation of such laws tended only to raise the real rate of interest, by driving men in distress to adopt extravagant methods of raising money—the bonuses thus paid being really and in effect an addition to the nominal interest.

Interest is computed on either of two principles: 1. Simple interest, where, should the interest not be paid as due, no interest is charged upon the arrears. Although this mode of reckoning has little to recommend it in reason, it is adopted in many transactions, and receives the sanction of the law. The computation of simple interest is easy, it being only necessary to calculate the product of the principal, the rate per cent., and the period in years and fractions of a year, the result, divided by 100, giving the sum required. Thus, wanted the interest of £356, 6s. 8d. for 3½ years at 4 per cent.

$$356\frac{1}{2} \times 3\frac{1}{2} \times 4 \div 100 = £49, 17s. 9d.$$

2. Compound interest is the charge made where—the interest not being paid when due—it is added to the principal, forming the amount upon which the subsequent year's interest is computed. The rules for most readily making computations by compound interest can only be effectively expressed

algebraically, and, using the symbols in article DISCOUNT, we annex a few of the elementary formulæ.

1. Since £1, increased by its interest r , at the end of one year becomes $1 + r$, this amount at the end of the second year becomes $(1 + r)^2$, and generally at the end of the n^{th} year $(1 + r)^n$. Example: To find the amount of £1, improved at 5 per cent. for six years. r , the interest for £1, is .05, and $n = 6$; therefore $(1.05)^6 = 1.34$, or £1, 6s. 9½d. 2. Since £1 becomes in one year $1 + r$, it is found by ordinary proportion that the fraction of £1 which will amount to £1 in a year is $(1 + r)^{-1}$ (i.e., $\frac{1}{1 + r}$).

$= v$; and reasoning as above, the sum which will amount to £1 n years hence is $(1 + r)^{-n} = v^n$. 3. The amount of £1 in n years being $(1 + r)^n$, it will be seen that the excess of this sum over the original £1 invested, or $(1 + r)^n - 1$, is the amount of an annual increment or 'annuity' of £ r for the period, and from this, by proportion, is deduced the formula for the amount of an annuity of £1 for the same time, being

$$\frac{1}{r} (1 + r)^n - 1.$$

4. Reasoning as in (3), the present value of an annuity certain of £1 for n years, or the sum which, improved at interest, will meet the annuity is

$$\frac{1}{r} \left[1 - \frac{1}{(1 + r)^n} \right] = \frac{1 - v^n}{r}$$

Tables for the four classes of values above described, based on various rates of interest, are given in most works on annuities. Those by Mr Rance are computed for each quarter per cent. from ¼ to 10 per cent. It may be useful to note two results that can be easily deduced from a table of the present values of annuities (4). 1. The annuity which £1 will purchase for any number of years is the reciprocal of the corresponding value in such a table. Example: A person borrows £100, to be repaid by annuity in 15 years, with interest at 5 per cent.; required the annuity? The present value of an annuity of £1 per annum for that period, at the rate stated, is £10.38, and $100 \times 10.38^{-1} = 9.6342 = £9, 12s. 8½d.$ 2. To find the annuity which in a given period will amount to £1—subtract from the annuity that £1 will purchase, ascertained as above, r , the interest of £1 for a year. Example: The annuity which, paid for 15 years, will amount to £1, taking interest at 5 per cent. is—

Value of annuity which £1 will purchase as last found,	£.096342
Subtract r , at 5 per cent.,	.050000

Annuity required, £.046342

Or £4, 12s. 8½d. will amount in 15 years to £100.

INTEREST, IN LAW.—In England and Ireland, when a debt has been for some time due, there is no obligation imposed on the debtor by the common law to pay any interest whatever, though the sum has been fixed and often demanded. The creditor can always sue for his debt, which is his proper remedy, but he derives no benefit from giving time to his debtor. Therefore, if interest is to be paid, this must be, as a general rule, by virtue of express agreement. Nevertheless, there has always been one or two exceptions to this rule. Thus, by the usage of merchants, it has always been usual, when an action has been brought to recover the amount of a bill of exchange or promissory-note, for the jury to add interest from the time it was due; but even this was not a matter of course—it was a matter of discretion for the jury, and was generally withheld when there was delay in bringing the action. Another exception existed

* See Exodus, xxii. 25; Leviticus, xxv. 39; Deuteronomy, xxiv. 19: the application being to money lent for the relief of distress, and not advanced to the borrower that he might improve it.

in the case of money due upon an award by an arbitrator, in which case interest is due from the day when the award was made. A third exception was in the case of a bond for money, in which case interest was added from the day it ought to have been paid. And lastly, if a surety had to pay money for his principal, he could recover it back with interest. In all other cases, if there was no express agreement about interest, none could be claimed. If, however, there was a course of dealing between the parties, or a usage affecting a particular trade to give interest, then, without express agreement, this was understood. A recent statute somewhat amended the above defect of the common law, for by 3 and 4 Will. IV. c. 42, s. 28, a jury may now add interest at the ordinary rate on all debts or sums certain, which are made payable under some written instrument at a certain time; and even if not due under a written instrument, then if a written demand has been made, expressly giving notice that interest will be charged from and after the date of the demand, if not paid then, interest will also be due. But even in these last cases, it is discretionary in the jury to give the interest, and therefore it is not claimable as a matter of course. As regards compound interest, it is *à fortiori* not claimable in any case, except where it has been expressly stipulated for, or where there is in some particular trade a definite custom to pay interest, and such custom must always be proved.

It ought also to be added, that the Court of Chancery has always been in the habit of charging trustees who have misapplied funds with 5 per cent. interest on the amount, and also compound interest; but in simple cases of retaining moneys in hand without investing them, they have been charged 4 per cent. Formerly, it was prohibited by statute in England to lend money on the security of real estate at a higher rate than 5 per cent.; but these statutes have been abolished, and now any person may borrow or lend at whatever rate of interest he can agree with the other party. Pawnbrokers are allowed to charge interest not exceeding a fixed sum. See PAWNBROKERS.

In Scotland, the law has always been much more liberal in allowing interest to be claimed on outstanding debts, for there the converse principle was acted on, that on nearly all debts whatever, interest was claimable either by statute or by common law. Thus, interest is due on bills of exchange, on the amount contained in a horning or charge to pay, on sums paid by cautioners, on the price of lands sold, on money advanced at request, on the price of goods sold, if the usual time of credit has expired, and generally on all debts which there has been delay in paying.

INTERFERENCE, a term employed to express the effect which rays of light, after being bent or diffracted, produce on each other. If the rays meet after diffraction, their light, when allowed to fall on a surface, will be divided into bars or stripes, alternately light and dark, as is shewn in the article DIFFRACTION (q. v.). This phenomenon has been made the touchstone of the two rival theories of light, the *undulatory* and the *emission*. According to the former, it is thus explained: if two luminous waves simultaneously impel a molecule of ether, its motion will be the resultant of the original impulses; and if the two motions (as in the case of diffraction) be nearly in the same direction, the resultant will be nearly their sum; if opposite, their difference. Thus, when a particle has begun to undulate from the action of a luminous wave, and if, while in motion, another wave impinge upon it, the result will be increase of light, if the motion of the second

wave conspire with that of the first; but a decrease, if they oppose each other; and total darkness, if, while opposing, they are equal in velocity. Let d be the distance corresponding to a complete period of vibration; then, if the second wave impinge upon the molecule after it has accomplished one or more whole vibrations corresponding to the distances d , $2d$, $3d$, &c., and has returned to its original position, the two waves will evidently conspire together, and produce more violent motion; but if it impinge on the molecule, when the latter has only accomplished half a vibration, corresponding to distances $\frac{1}{2}d$, $\frac{3}{2}d$, $\frac{5}{2}d$, &c., then the wave will oppose the particle's return to its original position; thus producing diminution of motion, or, if equal, rest. In the former case, the intensity of light is increased; in the latter, diminished; and if the undulations are of equal velocity, the light is doubled in the first case, and destroyed in the second. The emission theory totally fails to explain interference. In light of different colours, the value of d differs for each colour, being least for violet, and greatest for red light. The principle of interference accounts in the most satisfactory way for the colours of thin plates, the fringes that accompany shadows, &c.; and its explanation forms the most decisive reason yet known for adopting the *undulatory* in preference to the *emission* theory of light. See LIGHT.

INTERJECTIONS are exclamations expressive not so much of a thought as of an emotion—as, ah! alas! hurrah! pooh! They are, therefore, hardly parts of speech, and never form part of a sentence. They are, in fact, more akin to the sounds emitted by the lower animals, than to articulate language.

INTERIM, in the history of the Reformation, the name given to certain edicts of the German emperor for the regulation of religious and ecclesiastical matters 'in the meantime' (Lat. *interim*), till they could be decided by a general council. The first is the *Ratisbon Interim*, the result of the deliberations of a commission appointed during the diet of Ratisbon (Regensburg) in 1541, of which Eck, Pflug, and Gropper were the Roman Catholic, and Melancthon, Bucer, and Pistorius the Protestant members. On the greater number of doctrinal points, the commission found it possible to agree on terms which might be deemed consistent with the views of both parties; but as to the sacraments and the power of the church, the differences were irreconcilable. By the Protestants in general, the whole movement was looked on as a scheme to entrap them into a formal return to the Church of Rome. At the next diet, at Augsburg in 1548, a new interim was by the emperor's command prepared by Pflug, Holding (Sidonius), and Agricola. It is called the *Augsburg Interim*. In it the use of the cup by the laity, the marriage of priests, and some other minor things, were conceded to the Protestants; but it met with very general opposition, particularly in the north of Germany, and was revoked in 1552. By the exertions of the Elector Maurice of Saxony, a third interim, the *Leipsic Interim*, was adopted at the diet of Leipsic on 22d December 1548, which guarded the Protestant creed, but admitted great part of the Roman Catholic ceremonial, and recognised the power of popes and bishops, when not abused. But the offence given to the more zealous Protestants by this interim, which Melancthon, Bugenhagen, and Major supported, led to division in the Protestant Church.

INTERLAKEN ('between the lakes'), a village of Switzerland, is delightfully situated on the right bank of the Aare, in a plain between Lakes Thun and Brienz. Along the *Walnut Avenue* or *Highway*,

between the lakes, there is an almost uninterrupted line of hotels or *pensions*. Within a few miles of the village are many of the most wonderful sights that the country affords. Ten miles southward is the Staubbach (the 'sky-born waterfall'), with its perpetual iris; a few miles further south, and in

View of Interlaken and Unterseen.

full view from the village, are the magnificent Jungfrau and several other remarkable peaks of the Bernese Alps. The visitors are the chief source of income to the inhabitants, who number from 1000 to 2000.

INTERLINEATIONS in a deed are additions or corrections written either on the margin or between the lines. In England, interlineations in a deed are not fatal, provided only it is proved that they were made before executing the deed. It is usual to put the parties' initials opposite the place where the interlineations occur, in proof of this, or at least by way of memorandum. In affidavits and other documents, the initials should also be put at the places interlined. In Scotland, if the interlineation is at all material, it ought to be signed by the parties, and the fact mentioned in the testing clause, otherwise it will be presumed that the interlineations were made after the execution, and will vitiate the deed.

INTERLOCUTOR, in Scotch Law, means a finding or judgment of a judge or court in a cause. In England, the word is not used.

INTERLOCUTORY JUDGMENT, in England, Ireland, and Scotland, means a judgment which is not final, but which is merely a step in the suit or action. So as to interlocutory decrees or orders.

INTERLUDE, in Music, is a short melodious phrase played by the organist (generally extempore) between the verses of a psalm-tune. In the German Protestant Church, the interlude (or *zwischenenspiel*) is generally played between each line of the verse, to give the congregation time to breathe. To accompany the *chorale* of the Lutheran Church with scientific and appropriate interludes, is reckoned in Germany the chief test of a good organist.

INTERMARRIAGE. The intermarriage or intercourse of near relatives has been universally believed to entail degeneration upon the offspring,

and the act has been condemned and prohibited. The physical deformity and mental debasement of the *Cagots* of the Pyrenees, of the *Marrons* of Auvergne, of the *Sarrasins* of Dauphiné, of the *Cretins* of the Alps, and the gradual deterioration of the slave population of America, have been attributed to the consanguineous alliances which are unavoidable among these unfortunate peoples. More recently, the same opinion has been supported by the history of deaf-mutism and of idiocy. Of 235 deaf and dumb children whose parentage could be traced, 70, or nearly 30 per cent., were the offspring of the intermarriage of blood-relations. But in opposition to, and apparently destructive of such an hypothesis, may be adduced the unimpaired condition and symmetry of the Jews, of the small Mohammedan communities in India, of the isolated tribes in North America, among whom the repeated intermarriage of near relatives is compulsory. Moreover, this opinion does not hold in the analogous cases among the inferior animals, as the Arabs can trace the pedigree of their most valuable horses to the time of Mohammed, whilst they avoid all crossing; the stud-books in this country record the ascendants of racers for 200 years, and shew the perpetuation of the qualities of strength, and weight, and fleetness by propagation within the endowed family, both *Eclipse* and *Childers* being descended from a horse the offspring of a parent and foal; and the descendants, again, of these horses, which still maintain the highest estimation, afford many instances of very close breeding; and lastly, the Durham ox and the Ditchely sheep were the result and triumph of breeding in and in. The present state of the controversy, as it has been recently conducted in France, may be summed up in the proposition, that consanguineous alliances are not necessarily hurtful to the offspring, provided the parents be healthy and robust; but the observations of Devay and Bemiss in America shew that such generalisations should be received with

caution. It should be added, that even were it established that mental disease generally followed such unions, the transmission might depend rather upon the increased certainty of reproducing hereditary tendencies, than upon the violation of any physiological law.—Steinau, *Essay on Hereditary Diseases and Intermarriage*; Devay, *Du Danger des Mariages Consanguins* (1862); Boudin, *Dangers des Unions Consanguines, &c.*; *Annales d'Hygiène Publique, Juillet* (1862).

INTERMEDIATE HARMONIES, in Music, are the harmonies introduced between extreme non-related keys, while modulating from the one key to the other, which harmonies prepare the ear to receive the new key.

INTERMEZZO, a short dramatic comic scene, with singing, peculiar to the Italian stage, and introduced between the acts of an opera or play.

INTERMITTENT FEVER. See AGUE.

INTERNATIONAL LAW is divided into public international law and private international law. 1. *Public International Law*, or the law of nations, consists of those rules which independent nations agree among themselves to be just and fair in regulating their dealings with each other in times of war and peace. The mode in which they arrive at this common understanding of what is just and fair, is by comparing the opinions of text-writers who profess to set forth and collect the general opinion of civilised nations, for all these writers appeal ultimately to the principles of natural reason and common sense, as the test of what they profess to be the proper rule. Treaties of peace, alliance, and commerce also define and modify the existing international law as between the contracting parties. The decisions of prize-courts, which profess to proceed on principles of natural justice, of universal application, are also declarations of this international law. The leading doctrines thus adopted are as follows: A sovereign state is one which governs itself independently of foreign powers. In the event of a civil war in one nation, other nations may remain indifferent spectators, and treat the ancient government as sovereign, and the government *de facto* as entitled to the rights of war against its enemy. If the foreign state profess neutrality, it is bound to allow impartially to both belligerent parties the free exercise of those rights which war gives to public enemies against each other, such as the right of blockade, and of capturing contraband and enemy's property. Where a colony or province asserts its independence, and has shewn its ability to maintain this independence, the recognition of its sovereignty by other foreign states is a question of policy and prudence only; but until acknowledged, courts of justice and private individuals are bound to consider the ancient state of things as remaining unaltered. When a change occurs in the person of the sovereign, or in the internal constitution of a state, all treaties made by such state which were not personal to the former sovereign, continue to be binding on the succeeding sovereign.

All sovereign states are, in the eye of international law, on a footing of equality. Each state has the right to require the military service of its own people for purposes of self-defence, and to develop all its resources in the manner it thinks fit, so long as it does not interfere with the same equal rights of other nations. When, however, one state unduly aggrandises itself, and augments its military and naval forces beyond what all the other states consider proportioned to its position, then those other states have some ground to interfere. This, however, is considered a delicate business, and not to be attempted rashly; and it is difficult to define

what is a just ground of interference. The acquisition of colonies and dependencies has never been considered a just motive for such interference. According to Wheaton (*International Law*, 88, 6th ed.), interferences to preserve the balance of power have been generally confined to prevent a sovereign, already powerful, from incorporating conquered provinces into his territory, or increasing a dictatorial influence over the councils and conduct of other independent states. The aversion to interference has no doubt, in modern times, become stronger and stronger; and it may be taken to be now almost an axiom, that no foreign state has any just ground of interfering in what is merely an internal revolution of a state, or a mode of readjusting its own constitution; in short, each state ought to be allowed to manage its own internal affairs, and to choose whatever form of government best suits the people, for the exercise of this right can, in general, nowise affect other states.

Each state has the natural right to make its own laws regulating the property and status of all the subjects within its territory. On the high seas, both the public and private vessels of every nation are subject to the jurisdiction of the state to which they belong. Offences there committed against its own municipal laws give to the state to which the vessels belong jurisdiction; but no right of visitation and search belongs to a nation in time of peace, though piracy and other offences against the law of nations, being crimes not against any particular nation, but against all mankind, may be punished by any state in which the offenders can be found. The traffic in slaves is, however, not classed with piracy by the law of nations, though nations may declare it to be so as regards their own subjects; and they may also enter into a compact as to that matter, as has been done by Great Britain with other nations. With regard to crimes and their punishment, though each state will punish all crimes by whomsoever committed, if committed within its own territory, and also all crimes committed in its public and private vessels on the high seas, or in a foreign port; likewise all crimes, wherever committed, by one of its own subjects, yet it cannot arrest one of its own citizens if he is within the territory of another state; to do so would be an invasion of the municipal law of that state; hence it can only arrest its criminals in foreign states by the leave of such state, and such state is not bound to accede to such a request. Hence arises the expediency of two states entering into an extradition treaty, by which they bind themselves to give up to each other criminals who have committed certain specified offences.

There are certain usages or ceremonials of respect shewn by one nation to another in certain circumstances, and these are founded on the theory of the equality of sovereign states. As regards the right of precedence among kings, emperors, and princes, there is nothing settled and binding, except, perhaps, that Catholic powers concede the precedence to the pope. But as regards minor matters, it is the settled courtesy for one nation to salute by striking the flag or the sails, or by firing a certain number of guns on approaching a fleet or a ship of war, or entering a fortified port or harbour. Sometimes these ceremonials are regulated by express treaty, as, for example, as regards the maritime honours exacted by Denmark from vessels passing the Sound and Belts at the entrance of the Baltic Sea.

The rights of states in time of peace consist of the rights of legation and of negotiation. Every independent state has a right, in point of courtesy and usage, to send public ministers or representatives

to, and receive ministers from, any other sovereign state with which it desires to maintain relations of peace and amity. See AMBASSADOR; ENVOY; CHARGÉS D'AFFAIRES; CONSUL.

When war is commenced between two countries, there are certain rights acknowledged to exist towards each other. Before war is proclaimed, intermediate methods are sometimes adopted, with a view to avoid that last necessity; these are laying an embargo on the ships or property of the offending state found in the territory of the offended state; also taking forcible possession of the thing in controversy, also retaliating and making reprisals. When war is once declared, the first step is to seize and confiscate all the enemy's property within the territory. It becomes unlawful for the subjects of each belligerent state to trade with the subjects of the other belligerent. The test of whether a person is a subject of either state is generally his domicile; so the character of ships depends on the national character of the owner, as ascertained by his domicile. As regards the conduct of one belligerent state against the other, some writers have laid it down, that everything is fair against an enemy, and that no means of punishment are too severe; but this rigid rule has been qualified by the more humane practice of modern times. Instead of putting prisoners of war to death, the practice is to exchange or discharge them on conditions. Instead of indiscriminate destruction of the enemy's property, temples, public edifices, monuments of art and science, are spared. The laws of war are more unsparing at sea than on land; the practice prevails of commissioning privateers to prey on the commerce of the enemy, the captor being in general entitled to the property. When property taken is recaptured, states differ as to the mode of dealing with the property recaptured. The validity of a capture at sea must be determined in a prize court of the captor's country or of an ally, and the prize court professes to act on universal principles applicable to all countries.

As regards neutrals in time of war, the leading doctrines are stated under the heads CONTRABAND; BLOCKADE; FOREIGN ENLISTMENT ACT.

At the Congress of Paris, 1856, the ambassadors of Great Britain, France, Russia, Austria, Prussia, Turkey, and Sardinia, agreed to a joint declaration, modifying the state of the laws of war as follows: 1. To abolish privateering; 2. To adopt the maxim, 'free ships free goods'—i.e., an enemy's goods shall not be taken in a neutral ship unless they are contraband of war; 3. To allow a neutral's goods in an enemy's ship to be free except as to contraband; 4. To abolish blockades unless they are real, and kept up by an effective force. These declarations were not acceded to by America, because it objected to the abolition of privateering, so that though, in the event of war between the countries which agreed in the declaration, the above modifications will probably be adopted, this will not be the case in the event of America being at war with one or other of these parties. See Wheaton's *International Law*; Mackenzie's *Studies in Roman Law*; Macqueen's *Chief Points in the Laws of War*.

2. *Private International Law* is that collection of laws that regulates the mode in which ordinary courts of justice administer the remedies and give effect to the rights of parties where such rights were acquired partly or wholly in a foreign country, and where different remedies must otherwise have necessarily applied. In such cases, the court which administers the remedy, acting on what is called the courtesy of nations, or *comitas gentium*, endeavours to put the parties in the same position as if they were still bound by the foreign laws, and gives

effect to those laws so far as they do not conflict with the native laws in essential principles. The fundamental doctrine which underlies this branch of law is, that each subject of a foreign independent state is entitled to have the protection of his own laws, so far as is compatible with the equal independence of the state whose courts administer the remedy, and hence, though a court can in general only administer the laws of its own state, it may, *pro hac vice*, incorporate part of the foreign laws as part of its own remedies. Accordingly, in carrying out this doctrine, certain fair and equitable rules are adopted in dealing with foreigners in certain situations, the chief of which arise out of the heads of marriage, death, intestacy, and remedies generally.

This branch of the law has been long cultivated by the continental countries of Europe, where many learned jurists have discussed its principles. But probably owing to the insular position of the United Kingdom, little attention was given to it there; and indeed no work even incidentally treated of the subject until Mr Justice Story, an American judge, in 1834, first produced his celebrated treatise on the *Conflict of Laws*, and gave to British lawyers a methodical view of the results at which foreign jurists had arrived. In the United States, where each independent state had its own municipal laws, which often differed materially from those of the other federal states, it was natural and inevitable that some system should be adopted as to the way each state should deal with the rights of persons coming from the neighbouring states; and hence America preceded England in the development of this branch of the law. Story's work is still the standard authority in the United Kingdom. Since the laws of Scotland differ in many respects from those of England and Ireland, and each country has its own courts exercising independent jurisdiction, it is a matter of course that questions of conflict under these two codes of law should often arise. Not only do the courts of Scotland and England treat the laws of the other country as foreign laws, and deal with each other in much the same way as they would deal with France or any other foreign country, but the laws in other respects are materially different, and give rise to conflicts. On this particular branch of the law affecting England and Scotland, Mr Paterson's *Compendium of English and Scotch Law* contains a summary of all the material differences existing between the laws of these two countries, that are of the greatest practical importance to residents in the United Kingdom.

As regards marriage, the leading doctrine of the *comitas gentium* is, that it is immaterial in what part of the world a man is married provided he is married, and when once married according to the law of the place where he then is, such marriage will be held a valid marriage all the world over, and wherever he goes. This doctrine, however, is qualified in this way, that the *lex loci contractus*—i.e., the law of the place where the marriage was contracted—shall regulate the validity of the marriage only so far as any ceremony is essential to the institution of marriage; but it is not allowed to dictate who the parties are who may validly marry, nor to vary any essential part of the contract. The reason of the latter qualification is, that there may be rules of policy in one country which may prohibit marriages between certain persons, or may prohibit certain consequences, and therefore the evasion of the native law by persons going abroad for such a purpose is not to be tolerated. For example, in Scotland, marriage is treated as a mere contract, which requires no particular ceremony beyond mere mutual consent; while in England some ceremony

is absolutely essential—viz., the ceremony of the marriage being celebrated in a parish church by a priest, or in a superintendent-registrar's office, if there is no priest. Accordingly, any two English persons may go to Scotland, and be married there by exchanging a mutual declaration of marriage, and they may immediately return to England, and will be there and everywhere else held to be married persons. On the other hand, if two Scotch persons go to England, they cannot be married by exchanging mere verbal declarations; they must be married, according to the English law, either by a priest in a church, or without one in a superintendent-registrar's office; and if so, they will be held to be married all the world over. Again, the law of England declares that no marriage shall be valid within certain prohibited degrees, and amongst others no man is there allowed to marry his deceased wife's sister. Hence, if a man and his deceased wife's sister go from England to Denmark, where the law allows such persons to marry, and they there are married according to the form there prevailing, and then return to England, where their domicile is, they will not be treated as married persons, because they went to evade their own law in a matter which is considered of vital importance. It would, however, be different if a man and his deceased wife's sister, who were Danes, and domiciled in Denmark at the time of their marriage, came afterwards to this country; they would in that case be treated as properly married, for their domicile was then Danish, and they had a right to follow their own law.

Another important head of international law is as to the law which regulates the succession to the property of a person deceased. On this subject, the rule is, that it is the law of the country in which a man was domiciled at the time of his death which regulates the succession to his personal property, even though such property is scattered over all parts of the world; hence, it is necessary first to ascertain where the deceased person had his domicile. See *DOMICILE*. The above rule as to the domicile of a deceased person governing the succession applies only to his personal property; as to his landed or real property, the succession to it is governed by the law of the country where such land is situated. Hence, if an Englishman dies domiciled in England, leaving a Scotch estate, such estate will descend according to the Scotch, and not the English law, and it is well known the rules of succession differ materially in the two countries. See *Paterson's Compendium of English and Scotch Law*. Where the person does not die intestate, but leaves a will, then it is merely statute, almost immaterial whether his will was made according to English or Scotch law.

Another important head of private international law is as to the court in which a remedy can be obtained on ordinary contracts. The rule is, that wherever a contract was made, the contract must be valid according to the law of the place where it was made, but the remedy may be had anywhere else wherever the defendant can be found. Thus, if a person makes a contract or incurs a debt in Scotland, and afterwards goes to England, he may be sued in the English courts, though the English court will only allow the remedy, provided the contract was valid according to Scotch law. It follows also from this rule that if a debt be incurred in Scotland which would prescribe in three years, yet, if the debtor be in England, he can be sued any time within six years, for that is part of the English remedy. It is often of no small importance to know where and in what country a person may be sued. The general

rule is, that one must follow his debtor, and sue the debtor in whatever country such debtor resides. In this respect, however, Scotchmen have greater advantages over Englishmen than Englishmen over Scotchmen, for while the rule in England is, that a Scotchman can only be sued there in ordinary cases, provided such Scotchman is actually present in England, and can be personally served with process of the court—i. e., with a copy of a writ of summons—in Scotland the rule is, that in many cases an Englishman can be sued though he never in his life were in Scotland at all; it is enough if he has some debt due to him there, or has left some trifling article of property—such, for example, as his umbrella—which can be arrested. In the latter case, the chattel or debt is first seized by the Scotch creditor, in order to found jurisdiction, or, as it is technically called, *arrestum jurisdictionis fundandæ causæ*, and then the Englishman can be sued, and judgment may be obtained against him in his absence, even though he never heard of the action. Englishmen have often complained of this as a barbarous practice of the Scotch courts; nevertheless, the very same practice exists in the city of London, though nowhere else in England. When judgment is once obtained either in England, Scotland, or Ireland, it is not competent for the judgment creditor at once to imprison or seize the goods of the debtor in either of the two other countries, if in the meantime the debtor has gone there. The creditor must commence a fresh action in the new country to which the debtor has removed, and go through precisely the same process again. This circuitous process has been sought of late years to be remedied by an act of parliament, which, however, has hitherto been successfully opposed in parliament, on the ground that so great a facility of pursuing a debtor may be abused.

INTERPLEADER SUIT is a suit brought in the Court of Chancery in England or Ireland to determine which of several parties claiming the same thing is entitled. Formerly, there was no analogous process in courts of common law whereby several parties claiming one thing could be brought into the field to contest their claims, but in 1831 a statute gave power to do this to a limited extent. The corresponding process in the law of Scotland is an action of Multiplepinding (q. v.).

INTERPOLATION, the insertion of a word, line, verse, sentence, part of a sentence, or whole passage, generally with a view to secure respect for some opinion by the apparent support of antiquity, or of those whose authority is greatest. Many instances of interpolation are well known, and others are with great probability suspected, in which the works of early Christian writers have been tampered with, to make them yield support to novel doctrines and practices.—In mathematics, interpolation is the insertion between two members of a series increasing according to a certain law, of other members such as, if not absolutely, yet very nearly, may accord with the same law.

INTERVAL, in Music, is the difference of pitch between sounds in respect to height or depth, or the distance on the stave from one note to another, in opposition to the unison, which is two sounds exactly of the same pitch. From the nature of our system of musical notation, which is on five lines and the four intervening spaces, and from the notes of the scale being named by the first seven letters of the alphabet, with repetitions in every octave, it follows that there can only be six different intervals in the natural diatonic scale until the octave of the unison be attained. To reckon from C upwards, we find the following intervals; thus, C to D is a

second; C to E is a third; C to F is a fourth; C to G, a fifth; C to A, a sixth; C to B, a seventh; and from C to C is the octave, or the beginning of a similar series. Intervals above the octave are therefore merely a repetition of those an octave lower; thus from C to D, above the octave, although sometimes necessarily called a ninth, is neither more nor less than the same interval which, at an octave lower, is termed the second. A flat or a sharp placed before either of the notes of an interval does not alter the name of the interval, although it affects its quality; for example, from C to G[#] is still a fifth, notwithstanding that the G is raised a semitone by the sharp. Intervals are classified as Perfect, Major, and Minor. Perfect intervals are those which admit of no change whatever without destroying their consonance; these are the fourth, fifth, and the octave. Intervals which admit of being raised or lowered a semitone, and are still consonant, are distinguished by the term *Major* or *Minor*, according as the distance between the notes of the interval is large or small. Such intervals are the third and sixth; for example, from C to E is a major third, the consonance being in the proportion of 5 to 4; when the E is lowered a semitone by a flat, the interval is still consonant, but in the proportion of 6 to 5, and is called a minor third. The same description applies to the interval of the sixth from C to A, and from C to A flat. The second and seventh, though reckoned as dissonances, are also distinguished as major and minor. The terms 'extreme sharp' and 'diminished' are applied to intervals when they are still further elevated or depressed by a sharp or a flat. For the mathematical proportions of intervals, see HARMONICS.

INTESTACY, the state of a person who has died without leaving a will. Every person in the United Kingdom has the right, as one of the incidents of ownership, of regulating the succession of his property after his death; that is, of executing a will which must comply with certain requisites, so as to shew that it was solemnly and deliberately made, by which will the owner can give his property to whomsoever he pleases. The forms in Scotland differ from those in England and Ireland, and there is some restriction on the right of testing or bequeathing property, but in all places the principle is, that if no will, or deed equivalent to a will, is executed, or, if a will executed is invalid from defect of form, then an intestacy occurs, and the law provides an heir or next of kin, in lieu of the owner himself doing so. See **HEIR**; **SUCCESSION**; **WILL**. A person may die partially intestate, for his will may have included only some of his property, in which case the property not so included goes to the heir-at-law, or next of kin, according as it is real or personal estate, as if no will had been made. But it is often a difficult question in construing the will, whether the property not specially mentioned was not conveyed by general words to the residuary legatee or devisee—a question which turns entirely on the language used in each case.

INTESTINES. See **DIGESTION**, **ORGANS** AND **PROCESS** OF.

INTONING, according to the general use of the word, is the recitative form of offering prayer. Intoning differs from ordinary reading in having fewer inflections of the voice, and these only at stated parts of the prayers, and according to certain rules. The greater part of the prayer is recited on one note, the last two or three words being sung to the proximate notes of the scale. In the longer prayers, the terminal inflection is generally omitted. The words Intoning and Chanting are sometimes

used interchangeably, but, though there is ground common to both, each has a domain peculiar to itself. Intoning may be defined as ecclesiastical recitative, and when several voices are employed in its performance, they sing, for the most part, in unison, breaking into harmony at the termination of the clause or sentence. Chanting embraces recitative and rhythm, both divisions being in continuous harmony. In the Anglican service, as performed in cathedral churches, all those parts of the ritual, speaking generally, which are not set to rhythmical music, are intoned; these embrace that part of the morning and evening service which precedes the daily psalms, the litany, and the prayers in general.

John Marbeck (1550) was the first in England to adapt the offices of the reformed church to music; his work contained melody only. He was followed by Thomas Tallis, who flourished during the reigns of Henry VIII., Edward VI., Mary, and Elizabeth. The grave melody (founded on the ancient usage) and sublime harmonies of Tallis have never been equalled, and have continued in use till the present day with but slight modification. Tallis seems to have invented the form of the Anglican chant now used for the psalms. In the Roman Catholic Church these are sung to the Gregorian tones. See **GREGORIAN CHANT**. The canticles are sung to rhythmical music of a more elaborated character, in which form they are technically named 'Services.' The lessons, previous to the last review (1661) of the *Book of Common Prayer*, were intoned; since then, the invariable practice has been to read them.

The practice of intoning existed among the Jews at a very early period, and there is great probability that the ecclesiastical chant in present use throughout Christendom is but a modification of that which formed part of the ancient Jewish ritual. The eastern and western churches, at variance on most points, are at one on this. Mohammedans also make use of this mode of prayer; and barbarous tribes (American Indians and South Sea Islanders) are wont to propitiate their false gods in a species of rude chant; all which seems to point to some deeply seated instinct of human nature, and to indicate an intuitive perception of the truth, that a solemn and reverential manner, distinct from his manner of ordinary intercourse with his fellows, best befits the creature in his approaches to the Creator. The Lutheran Church and the Church of England have continued the practice, though only to a permissory and non-essential extent. The latter uses it in her cathedral and collegiate churches, and in these vast edifices its advantages over reading are strikingly manifest.

INTOXICATION. Whether induced by fermented liquors or by distilled spirits, it is through the alcohol contained in either that the effects of intoxication ensue. These may be considered under two heads: 1. As they immediately manifest themselves during a single act of intoxication; and, 2. As they gradually arise through the frequent repetition of the act. The one refers to the state of drunkenness simply, the other to the habit (Intemperance).

The effects of alcohol, in a single act of intoxication, vary according to the way in which the spirit has been taken. If swallowed rapidly, in large quantities or in a concentrated form, the agency is that of a powerful narcotic poison. The mode of action here is partly through a direct impression by the alcohol on the nerves of the stomach, and partly by its absorption into the blood, and its transmission thus to the brain, which is proved to take place with great rapidity. The individual falls into a deep stupor, from which it

is impossible to rouse him. The face is ordinarily livid, with a swollen aspect, but sometimes it is ghastly pale. The skin is covered with chilly damps; the pulse is feeble, or perhaps wholly imperceptible; the breathing is slow and weak, though sometimes laborious and snorting; the eyes are rolled upwards, with contracted or, occasionally, dilated pupils; the jaws are clenched, and there are frequently convulsions. Where death follows, it may ensue in a few minutes, or after a period varying from a single hour to a day. Where the quantity taken is swallowed more slowly, as in ordinary drinking, the consequences are those which are too familiarly known as characterising a fit of drunkenness, and are the product of the more gradual and less excessive absorption. The first effect is that of a feeling of well-being, diffused over the body, and imparted to the mind. This gradually leads to a state of exhilaration, and thence to boisterous mirth and loquacity, attended at first by a swift transition and vivacity of the ideas, but speedily lapsing into indistinctness and confusion. In the increasing whirl of excitement, the individual loses all sense of prudence and self-government, betrays himself by his indiscretions, provokes pity and ridicule by his follies, or incurs danger by his recklessness. Along with this mental condition, the flushed face, flashing eye, and throbbing brain shew, at first, the corresponding state of excitement of the bodily functions; while, along with the subsequent confusion of thought, the reeling gait and the look of stolid incomprehension denote the enthrallment that has followed. In a further stage, the memory fails, the individual maunders and mumbles in his speech, and the surrounding objects, recently seen imperfectly and misapprehended, wholly cease to impress him. At length, amid other loathsome concomitants, he sinks powerless, and stupor intervenes, from which he again awakens to consciousness after an indefinite number of hours; but then usually to suffer from qualms of sickness and other feelings of pain and depression, entailed upon him by a natural law as the reaction from his excess, and only dispelled after a still longer interval. The outline of the effects may vary. With some, the progress of a fit of drunkenness is never attended by hilarity or other conspicuous excitement, and a dreamy and subdued forgetfulness seems all that is produced or that is sought for. With some, even, it leads to a state of querulousness or of unreasoning melancholy. With others, the condition is one of furious madness, hesitating before no extreme of violence and outrage.

It is chiefly to the after-effects of the paroxysm that we are to trace the original growth and ultimate inveteracy of the drunken habit. The uneasy sensations of depression, following upon the excitement of the previous debauch, are sought to be relieved by a fresh recurrence to the stimulant; and a morbid appetite is thus created which craves its relief, and finds it, in the renewed administration of spirituous drinks, just as the natural appetite of hunger develops those sharp disquietudes that are allayed by food. This morbid appetite, in so far as it is morbid, may in itself be regarded and treated as a disease. But the universal health shews ultimately signs of a more deep injury. The cheeks begin to have a bloated and flabby look, with a complexion that either wears a peculiar pallor, or verges into shades of purple, while the nose not rarely presents a suspicious tinge of crimson. The appetite for ordinary food fails, the digestion is impaired, the sleep is disturbed, and the vigour of frame and capacity for exertion sink accordingly, the limbs often aching and trembling, and the heart drooping, with a miserable feeling of nervous

exhaustion. Even prior to this, the drunkard is often liable to those minor illusions which end in the full development of what is known as the drunkard's delirium, or *delirium tremens*, a form of temporary insanity characterised by a state of abject terror, with shaking of the limbs, the sufferer fancying that he is surrounded with monstrous phantasms, or that he is devoted otherwise to horrors, disasters, or crimes. One effect, and a leading one, of the customary presence of alcohol in the blood of the drinker, is to reduce the vitality of that fluid, so that it tends to sustain only the lowest forms of nutrition and animalisation, and deposits, in great part, merely an inert fat within those organs where it should minister to the growth and maintenance of a delicate construction, destined for uses essential to life. Thus we have fatty deposits, or changes of higher structures into fat, in the heart, the liver, and in the blood-vessels, the coats of the last becoming easily ruptured. Hence, liability to diseases of the heart and of the liver often followed by dropsies, or to affections of the other intestines, or to attacks of apoplexy and palsy. If not cut off abruptly in his career, the life of the drunkard becomes one long malady towards its close, the final condition being usually one of imbecility of mind and body, yet with throes of suffering to the last. It has been authoritatively shewn that, while the average expectation of future life to the temperate man at fifty may be reckoned at twenty years, that of the drunkard at the same age is only four years. Again, between the ages of twenty-one and thirty, the deaths among drunkards have been found to be more than five times, and between thirty-one and fifty, more than four times what occur among the general community at the like ages. See *DIPSOMANIA AND DELIRIUM TREMENS*, in SUPP.

INTOXICATION, or DRUNKENNESS, is, in point of law, no excuse for any wrong done by the drunken party. Crimes which are committed in a state of drunkenness are punishable in the same way as if the actor were sober, though it is discretionary in the court to mitigate the sentence. As regards contracts entered into by a drunken party, there is no peculiarity, unless the fact of drunkenness was taken advantage of by the sober party, in which case it lies on the drunken party to prove this. Cases may no doubt arise where the drunkenness may be an element of fraud, and so the contract or deed may be rescinded or set aside. The mere act or state of drunkenness, when privately indulged in, is not an offence against the law; but if it be shewn in public, it may become so. If, for example, a person be drunk in the streets or a public place, he was made, by a statute of James I., liable to be fined 5s., or, if unable to pay, to be committed to the stocks for six hours. By a more modern enactment of 1860, called the Refreshment Houses' Act, 23 Vict. c. 27, every person found drunk in any street or public thoroughfare, and who, while drunk, is guilty of riotous or indecent behaviour, incurs a penalty of 40s.; and if a person is drunk, riotous, quarrelsome, or disorderly in any public-house, beer-house, or refreshment-house, and refuses to leave the premises on request, he incurs a penalty of 40s. The above enactments are of general application in England, but there are also similar enactments in many local improvement and police acts regulating large towns. In Scotland, several ancient statutes were passed against drunkenness, which, however, are in desuetude. In several local police acts, a penalty is imposed on drunkenness in the streets, and the Police and Improvement Act of Scotland, 25 and 26 Vict. c. 101, s. 254, subjects drunken persons in the streets to a penalty of 40s., or 14 days' imprisonment, in all places where that act is adopted.

INTRADOS, the under or inner side or soffit of an Arch (q. v.), the upper or outer curve being called the *extrados*.

INTRENCHMENT, in a general sense, is any work, consisting of not less than a parapet and a ditch, which fortifies a post against the attack of an enemy. As a means of prolonging the defence in a regular work of permanent fortification, intrenchments are made in various parts, to which the defenders successively retire when driven in from forward works. Bastions are ordinarily intrenched at the gorge by a breastwork and ditch, forming either a re-entering angle or a small front of fortification. Such a work across the gorge of the Redan at Sebastopol caused the repulse of the British attack in September 1855. A cavalier, with a ditch, is also an intrenchment. An army in the field often strengthens its position by intrenchments, as by a *continued line* of parapet and ditch, broken into redans and curtains, or by a *line with intervals*, consisting of detached works of more or less pretension flanking each other.

INTRODU'CTION (Ital. *introduzione*), in Music, is a kind of preface or prelude to a following movement. Formerly, the introduction was only to be found in large musical works, such as symphonies, overtures, oratorias, &c.; but now it is found in every rondo, fantasia, polonaise, waltz, &c., on the principle that it is considered abrupt to begin all at once, without preparing the audience for what is to come. In a stricter sense, introduction is applied to the piece of music with which an opera begins, and which immediately follows the overture. In some cases, the overture and introduction are united, the composition going on without any formal pause, as in Gluck's *Iphigénie en Tauride*, Mozart's *Idomenio* and *Don Giovanni*. As the overture, which contains a harmonical sketch of the opera, should make a permanent impression on the audience, the custom of uniting it with the introduction has very properly been discontinued, and the introduction treated as an independent movement.

INTROMISSION, in Scotch Law, is the assumption of legal authority to deal with another's property. It is divided into legal and vicious. Legal intromission is where the party is expressly or impliedly authorised, either by adjudgment or deed, to interfere, as by drawing the rents or getting in debts. Vicious intromission is where an heir or next of kin, without any authority, interferes with a deceased person's estate; as, for example, where a person not named by a will, or without the authority of any will, collects the property of the deceased person, as if he were regularly appointed. By so doing, the vicious intromitter incurs the responsibility of paying all the debts of the deceased. The vitiosity, however, may be taken off by the intromitter being regularly confirmed executor. The corresponding phrase in England to a vicious intromitter is an *executor de son tort*.

INTRUSION, the Scotch law-term for a trespass on lands.

INTUITION. See **INSTINCT**, and **COMMON SENSE**.

INTUS-SUSCEPTION, or **INVAGINATION**, is the term applied to that partial displacement of the bowel in which one portion of it passes into the portion immediately adjacent to it, just as one part of the finger of a glove is sometimes pulled into an

adjacent part in the act of withdrawing the hand. In this case, the contained portion of intestine is liable to be nipped and strangulated by the portion which contains it, and all the danger of Hernia (q. v.) results, with far less chance of successful interference on the part of the surgeon or physician. It is one of the most frequent and fatal causes of obstruction of the bowels. The extent of the intus-susception may vary from a few lines to a foot or more. Even when inflammation is set up, the affection, although in the highest degree perilous, is not of necessity fatal. The invaginated portion mortifies and sloughs, while adhesion is established between the peritoneal surfaces of the upper and lower portions at their place of junction, so that the continuity of the tube is preserved, although a large portion may be destroyed. If the patient is strong enough to bear the shock of the inflammation, gangrene, sloughing, &c., a complete recovery ensues.

INULIN. See **ELECAMPANE**.

INUUS, or **INNUUS**, a genus of apes, to which the Barbary Ape (q. v.) belongs. The Barbary Ape is *I. sylvanus*.

INVALIDES, wounded veterans of the French army, maintained at the expense of the state. The *Hôtel des Invalides* is an establishment in Paris where a number of these old soldiers are quartered. Its chapel contains the tomb of the Great Napoleon,

Hôtel des Invalides.

and is an object of much attraction to all visitors. It was founded by Louis XIV. in 1671, and during his reign, and for a long time afterwards, was a place of retirement for the aged servants of court favourites as well as for invalided soldiers; but this abuse was put an end to by St Germain in Louis XV's reign. In 1789, the Hôtel had a revenue of £68,000, but during the time of the Republic its property was alienated, and the institution supported from the public revenue. The Hôtel can accommodate 5000 men, and the actual number of inmates is not much below this.

INVALIDING signifies the return home, or to a more healthy climate, of soldiers or sailors whom wounds or the severity of foreign service has rendered incapable of active duty. The man

invalided returns to his duty as soon as his restored health justifies the step.

INVARIABLE PLANE. The position of a point in space is determined—as explained in the article **CO-ORDINATES**—by referring it to planes intersecting one another at right angles; and in ascertaining the motion of the point by this means, the planes must either be immovable, or allowance must be made for their altered position, an operation of considerable complexity. In astronomy, none of the obviously marked planes, such as that of the Ecliptic (q. v.) or of the Equator (q. v.), possess this requisite quality of fixity so as to form a convenient basis for determining the position of heavenly bodies with absolute exactness. Laplace, therefore, conferred a boon on astronomy, when he discovered that, in the solar system, there does exist 'an invariable plane, about which the orbits perpetually oscillate, deviating from it only to a very small extent on either side. This plane passes through the centre of gravity of the solar system, and it is so situated, that if all the planets be projected on it, and if the mass of each planet be multiplied into the area, corresponding to any given time, which is described by the projected radius vector, the sum of such products will be a maximum. By means of this property, which is independent of any particular epoch, it will be easy for astronomers in future ages to determine the exact position of the plane, and to compare observations together by means of it.' (*Grant's History of Physical Astronomy*.) Such a plane is not peculiar to the solar system, but must exist in all systems where the bodies are acted on by no other force than their mutual attraction. See **FORCE**.

INVE'CTA ET ILLA'TA, a phrase used in Scotch law to denote all things which a tenant has brought upon the premises, as his household furniture, tools, utensils, &c.; also, in case of thirlage, all corn brought within the limits of the thirl or servitude.

INVE'CTED, or **INVECKED**. See **ENGRAILED**.

INVENTION. See **PATENT**.

INVENTORY, a list or schedule of goods or property setting forth the particulars, so as to inform parties interested. The term is used in England in reference to an executor or administrator making out a list of the deceased person's effects. In Scotland, it is also used in reference to the property of an infant, pupil, or minor, whose estate is under the care of a guardian, tutor, curator, judicial factor. In Scotland, it is also used in connection with the various pleadings and deeds and documents produced or used in a suit or action, then called an inventory of process. So as to an inventory of titles, that is, the titles of an estate shewn to a purchaser.

INVERARAY, a small royal and parliamentary burgh and seaport of Scotland, the county town of Argyllshire, is picturesquely situated on the west shore of Loch Fyne, where the river Aray falls into the loch, 45 miles north-west of Glasgow. It consists of one principal street running parallel to the loch, and a square with a church in the centre. An obelisk, standing near the church, commemorates the death of 17 gentlemen, all Campbells, who were executed here without trial in 1685, for their adherence to Presbyterianism. Close to the town stands Inveraray Castle, the chief residence of the Dukes of Argyll. I., the ancient town, the capital of the West Highlands, was situated at some distance to the north of the present town. Not a vestige of it now remains. The trade of I. is chiefly in herring-fishing. Pop. in 1871, 902.

INVERCARGILL, a town in the province of Otago, New Zealand, formerly capital of Southland when a province, lies at the mouth of the New River. In 1860, it received 117 immigrants, all from the Australian colonies; imported to the value of £36,679, exported to the amount of £4345, and paid of customs-duties £3061, 16s. 5d. In the town are several churches, and an agency of the Bank of New Zealand; and two newspapers are published. Pop. 1966.

INVERNE'SS, a royal, parliamentary, and municipal burgh, situated at the mouth, and mostly on the right bank, of the river Ness. It is the chief town of the county to which it gives name, and may be regarded as the capital of the Highlands. Its environs, well cultivated and beautifully wooded, are almost surrounded by mountains and hills of various heights, forming altogether a most picturesque and interesting landscape. Pop. (1871) 14,469; annual value of real property, £52,113; corporation revenue, £3205 a year. It unites with Fortrose, Nairn, and Forres, in returning one member to parliament. The first charters of I. as a burgh are granted by King William the Lion (1165—1214 A.D.). By one of these, it is stipulated that when the king has made a ditch round the burgh, the burgesses shall make a palisade on the edge of the ditch, and keep it in good repair for ever. In 1411, the town was burned by Donald, Lord of the Isles, on his way to Harlaw (q. v.). Macaulay, writing of the year 1689, describes I. as 'a Saxon colony among the Celts, a hive of traders and artisans in the midst of a population of loungers and plunderers, a solitary outpost of civilisation in a region of barbarians.' The Castlehill, on the south side of the town, part of an old sea-terrace, was the site of a castle, which, in 1303, was taken by the adherents of King Edward I. of England, but subsequently retaken by those of King Robert Bruce. King James I. is said to have held a parliament in the castle in 1427. An iron suspension-bridge, constructed in 1855, connects the two parts of the town. In the High Street stand the town-cross, and beside it the famous Clach-na-cuddin, a lozenge-shaped blue slab, formerly regarded as the palladium of the burgh. In the same street, are the Town-hall and Exchange, built in 1708. Of the old religious foundations of I., there is little more than mere tradition. The Dominicans seem to have had a monastery, founded by King Alexander II., in 1233. The Franciscans also are believed to have had a convent in the town. Among more modern buildings and foundations, may be enumerated Raining's School, established 1747; the spire of the old jail, 150 feet high, built in 1791, curiously twisted by the earthquake of 1816, and since readjusted; the Royal Academy, 1792; the County Buildings and jail, on the site of the castle, 1835; and St Andrew's Cathedral, a fine Gothic building, the foundation-stone of which was laid in October 1866 by Dr Longley, Archbishop of Canterbury. There is a small woollen manufactory, a Workmen's Club and library, several printing establishments, three newspapers, a native bank (the Caledonian), and five other banking-offices. Inverness has still its four great annual fairs, but the establishment of shops throughout the county has greatly diminished their importance. It has three harbours, built at different times, and a considerable amount of shipping by the Moray Firth and the Caledonian Canal, which connects it with the west coast.

INVERNESS-SHIRE, the largest county of Scotland, includes Badenoch, Glenroy, and the valley of the Spey on the east; Lochaber on the

south; Glenelg, Glen Garry, Arisaig, Moydart, and Frasers' County on the west; Glen Urquhart and Glen Morriston towards the centre. It includes also Strathglass on the north; and several of the western islands, viz., Skye, Harris, North and South Uist, and Barra, &c. The mainland portion lies between N. lat. $56^{\circ} 40'$ and $57^{\circ} 36'$, and W. long. $3^{\circ} 30'$ and $5^{\circ} 55'$; and is bounded on the E. by the counties of Aberdeen, Banff, Elgin, and Nairn; on the S. by Perth and Argyleshire; on the W. by the Atlantic and Ross-shire; and on the N. by Ross-shire. It measures from north-east to south-west 85 miles, and from north-west to south-east 57 miles; and has an area of 4256 square miles, of which more than two-thirds consist of barren heath. The wildest and most mountainous portion is towards the west, comprising a tract 70 miles in extent, and designated the *Rough Bounds*. The most extensive moss in Great Britain lies on the south of Badenoch, where, in the naturally formed wooded islands, large herds of deer find a refuge. These mosses had at one time been mostly, if not wholly, covered with trees, some of them of great magnitude. In Strathspey, three tiers of stocks, one above another, have been found, shewing that a succession of forest trees must have grown up, flourished for ages, and then, one after another, disappeared by the work of time or the axe. At present, the natural pines occupy a larger space than in any other county of Britain. There are also many thousand acres of plantations of ordinary forest trees. Some mountains attain considerable altitude. Ben Nevis, now ascertained to be the highest in Great Britain, is 4406 feet above the level of the sea. Cairngorm, partly in this county, is 4050 feet high. The geological formation of the county is various; but primary rocks consisting of gneiss, mica-slate, granite, porphyry, and trap rocks, mostly prevail. The most fertile soil of the county rests on the red sandstone in the valley of the Aird, and between the county town and Beaully. There are several lakes of some extent, as Loch Ness, Loch Lochy, Loch Laggan, Loch

Ericht, and a number of other lochs forming arms of the sea. The principal rivers are the Ness, Spey, Lochy, Beaully, Findhorn, Nairn, Garry, Morriston, and the Foyers (q. v.). The county is divided among 80 or 90 proprietors, a few of whom possess above 100,000 acres of surface. The old valued rent was £6099; the valuation for 1862—1863 was £224,288. The assessment on the land for all county purposes amounts to £5500. According to the agricultural returns of 1872, the total acreage under all kinds of crops, fallow and grass, was 118,552; 40,099 acres were under corn crops, 19,254 under green crops, 24,579 under clover and grasses under rotation, 38,872 with permanent pasture (exclusive of heath and mountain-land). Of the land under crops, 1778 acres were wheat, 7083 barley, 30,006 oats, 1081 rye. Of land under green crops, 8423 acres were potatoes, 10,657 turnips, 159 vetches, &c. Of live-stock, there were 8371 horses, 47,038 cattle, 788,001 sheep, and 5099 swine. There are comparatively few antiquities worth noting in the county. These consist principally of remains of vitrified forts and ruins of old castles. The battle which decided the fate of the Stuarts was fought 16th April 1746, on Culloden Moor, a few miles from Inverness. The Gaelic language is still generally, but in scarcely any district exclusively, spoken. Pop. in 1871, 87,531. The constituency returns one member to parliament.

INVERSION, in Music, is the transposing of one of the two notes of an interval by an octave upwards or downwards, to a position the reverse of that which it before occupied with respect to the other note, so that if the transposed note was the lower note of the two, it shall now be the higher one, and *vice versâ*. The new interval thus formed takes its name from the complement of the octave; for example, a unison inverted becomes an octave, a second becomes a seventh, a third becomes a sixth, a fourth becomes a fifth, a fifth becomes a fourth, a sixth becomes a third, a seventh becomes a second, and an octave becomes a unison. The following shews how these arise:

By inversion diminished intervals become augmented, and augmented become diminished; major become minor, and minor become major; but perfect intervals are also perfect when inverted. For inversion of chords, see **CHORD**. An important use is also made of the word inversion, in reference to a whole passage or phrase, for which see **DOUBLE COUNTER-POINT**.

INVERTEBRATE ANIMALS (*Invertebrata*) are those animals which have not a vertebral column or spine. The division of animals into *Vertebrata* and *Invertebrata* is a natural and unavoidable one, acknowledged in all systems of zoology. But these groups being formed, the one on a positive, and the other on a negative character, are by no means of equal value in the classification of the animal kingdom. In Cuvier's system, the invertebrate animals form three of the great divisions of the animal kingdom—viz., *Mollusca*, *Articulata*, and *Radiata*, each of which, like *Vertebrata*, exhibits a peculiar type of structure. There are also animals of lower organisation than those which can with certainty be referred to these divisions, although included by Cuvier amongst the *Radiata*, forming the *Acrita* and *Protozoa* of recent systems. Amongst the lower invertebrate animals, much more than amongst

vertebrate animals, the arrangement into groups must be regarded as at present, in a great measure, tentative and provisional; although in the higher departments of invertebrate zoology many of the classes and other groups are very well defined. The organisation of some of them, as *Insects*, however different from that of vertebrate animals, is not evidently lower, but exhibits a perfection as admirable as in any of them, whilst all vital powers are most fully displayed.

INVESTITURE (Lat. *in*, and *vestio*, to clothe), in feudal and ecclesiastical history, means the act of giving corporal possession of a manor, office, or benefice, accompanied by a certain ceremonial, such as the delivery of a branch, a banner, or an instrument of office, more or less designed to signify the power or authority which it is supposed to convey. The contest about ecclesiastical investitures is so interwoven with the whole course of mediæval history, that a brief account of its origin and nature is indispensable to a right understanding of many of the most important events of that period. The system of feudal tenure had become so universal that it affected even the land held by ecclesiastics, and attached to most of the higher ecclesiastical dignities, monastic as well as secular. Accordingly,

ecclesiastics who, in virtue of the ecclesiastical office which they held, came into possession of the lands attached to such offices, began to be regarded as becoming by the very fact feudatory to the suzerain of these lands; and, as a not unnatural result, the suzerains thought themselves entitled to claim, in reference to these personages, the same rights which they enjoyed over the other feudatories of their domains. Among these rights was that of granting solemn investiture. Now, in the case of bishops, abbots, and other church dignitaries, the form of investiture consisted in the delivery of a pastoral staff or crosier, and the placing a ring upon the finger; and as these badges of office were emblematic—the one of the spiritual care of souls, the other of the espousals, as it were, between the pastor and his church or monastery—the assumption of this right by the lay suzerains became a subject of constant and angry complaint on the part of the church. On the part of the suzerains it was replied, that they did not claim to grant by this rite the spiritual powers of the office, their function being solely to grant possession of its temporalities, and of the temporal rank thereto annexed. But the church-party urged, that the ceremonial in itself involved the granting of spiritual powers; inasmuch that in order to prevent the clergy from electing to a see when vacant, it was the practice of the emperors to take possession of the crosier and ring, until it should be their own pleasure to grant investiture to their favourites. The disfavour in which the practice had long been held found its most energetic expression in the person of Gregory VII., who having, in the year 1074, enacted most stringent measures for the repression of simony, proceeded, in 1075, to condemn, under excommunication, the practice of investiture, as almost necessarily connected with simony, or leading to it. This prohibition, however, as is observed by Mosheim (ii. 326), only regarded investiture in the objectionable form in which it was then practised, or investiture of whatever form, when the office had been obtained simoniacally. But a pope of the same century, Urban II., went further, and (1095) absolutely and entirely forbade, not alone lay investiture, but the taking of an oath of fealty to a lay suzerain by an ecclesiastic, even though holding under him by the ordinary feudal tenure. The contest continued during the most of the 11th century. In the beginning of the 12th c., it assumed a new form, the pope, Pascal II., having actually agreed to surrender all the possessions and royalties with which the church had been endowed, and which alone formed the pretext of the claim to investiture on the part of the emperor, on condition of the emperor (Henry V.) giving up that claim to investiture. This treaty, however, never had any practical effect; nor was the contest finally adjusted until the celebrated concordat of Worms in 1122, in which the emperor agreed to give up the form of investiture *with the ring and pastoral staff*, to grant to the clergy the right of free elections, and to restore all the possessions of the church of Rome which had been seized either by himself or by his father; while the pope, on his part, consented that the elections should be held in the presence of the emperor or his official, but with a right of appeal to the provincial synod; that investiture might be given by the emperor, but only *by the touch of the sceptre*; and that the bishops and other church dignitaries should faithfully discharge all the feudal duties which belonged to their principality.

Such was the compact entered into between the contending parties, and for a time it had considerable effect in restraining one class of abuses; but it went only a little way towards eradicating

the real evil of simony and corrupt promotion of unworthy candidates for church dignities. Still the principle upon which the opposition to investiture was founded was almost a necessary part of the mediæval system, and Mosheim (ii. 327) regards it as 'perfectly accordant with the religious principles of the age.' It was, in fact, but one of the many forms in which the spirit of churchmanship has arrayed itself, whether in ancient or modern times, against what are called the Erastian tendencies which never fail to develop themselves under the shadow of a state church, no matter what may be its creed or its constitution.

INVESTITURE, the term used in Scotch law to denote the giving feudal possession of heritable property. It was formerly given to the vassal in presence of the *pares curia*, but latterly has been superseded by infektment or sasine, and now it is effected by mere registration of the deed of conveyance.

INVOCATION OF ANGELS AND SAINTS, the act of addressing prayers to the blessed spirits who are with God, whether the angels or the souls of the just who have been admitted to the happiness of heaven. The practice of addressing prayers to angels, especially to the angel-guardian, to the Virgin Mary, and to other saints, prevails in the Roman, the Greek, the Russo-Greek, and the eastern churches of all the various rites. In the Christian religion, the principle of the unity of God excludes all idea of subordinate sharers of the divine nature, such as is to be found in paganism, and all alike, Roman Catholics as well as Protestants, agree that its very first principles exclude the idea of rendering divine worship, no matter how it may be modified, to any other than the One Infinite Being. But while Protestants carry this principle so far as to exclude every species of religious worship and every form of invocation addressed to angels or saints, as trenching upon God's honour, and irreconcilable with the Scriptures, which hold Him forth as the sole object of worship and the only fountain of mercy, the Roman Catholic religion permits and sanctions a worship (called *douleia*) of the saints, inferior to the supreme worship (*latreia*) offered to God, and an invocation of the saints, not for the purpose of obtaining mercy or grace from themselves directly, but in order to ask their prayers or intercession with God on our behalf. For this doctrine and the analogous practice, they do not advance the direct authority of Scripture (except a few passages which seem to them to imply the intercommunion of the two worlds, as Matt. xiii. 3, Luke xiv. 17, Exod. xxxii. 13), but rely on what to them is equally decisive testimony, viz., the unwritten word of God conveyed by tradition. Origen (Opp. ii. p. 273) speaks of the belief that 'the saints assist us by their prayers' as a doctrine which is 'doubted by no one.' St Cyprian, addressing the confessors going to martyrdom, engages by anticipation their prayers in his behalf when they shall have received their heavenly crown (Ep. 60, Dodwell's edition). To the same effect are cited the testimonies of Basil (Opp. ii. 155), Gregory Nazianzen (Opp. i. 288), Gregory of Nyssa (ii. 1017), Ambrose (ii. 200), Chrysostom (iv. 449), and many other Fathers, as well as the liturgies of the various ancient churches, whether of the Roman, the Greek, the Syrian, or the Egyptian rite.

On the other hand, Protestant historians, even admitting the full force of these testimonies to the existence of the practice, allege that the practice is an early, but unscriptural addition, dating only from the infusion into the church system of Alexandrian Neo-platonism and Oriental Magianism,

which they believe to have left traces even in the so-called orthodox Christianity of the fourth and fifth centuries. But leaving aside the doctrinal controversy, the fact at least is certain, that in the fourth, and still more in the fifth and following centuries, the usage was universal; and a curious evidence of its prevalence is furnished by the fact, that the very excess to which it was carried was condemned as a heresy (that of the Collyridians) by those who themselves confessed the lawfulness of the practice when confined within its legitimate limits. That similar excesses in the practice, and similar abuses as to the nature and limits of the legitimate invocation of the saints continued through the mediæval period, Roman Catholics themselves admit, although they allege that such abuses were at all times reprobated by the authentic teaching of the church; and the multiplied devotions to the saints, especially to the Blessed Virgin, the efficacy claimed for them, and the extraordinary legends connected with them, and the prominence which the worship had assumed in the church, were among the most fertile themes of invective with the first Reformers. The Council of Trent (25th Sess., *On the Invocation of Saints*) defines very precisely what is the doctrine of the Catholic Church on this subject. It declares 'that the saints who reign with God offer up their prayers to God for men; that it is good and useful suppliantly to invoke them, and to resort to their prayers, aid, and help, for the purpose of obtaining benefits of God through his son Jesus Christ our Lord, who alone is our Redeemer and Saviour.' From this decree it is inferred that the Catholic doctrine on the saints does not prescribe the practice of invoking them as necessary or essential, but only as 'good and useful,' and that what is to be asked of them is not the direct bestowal of grace and mercy, as from themselves, but only their prayers, their assistance, and their help in obtaining benefits from God; and although many forms of prayer which are in use among Catholics bear, especially to a Protestant reader, all the appearance of direct appeals to the saints themselves for the benefits which are implored, yet all Catholic authorities are unanimous in declaring that these forms of words are to be interpreted, and that, from habitual use, they are so interpreted, even by the most superficially instructed Catholics, with the understood explanation, that all the power of the saints to assist us consists exclusively in their prayers for us, and seconding our prayers by their own. See Bellarmine, *Controversiæ de Sanctorum Beatitudine*, lib. i. cap. xvii.

Protestants object to the invocation of saints and of angels, that it is without evidence of divine authority, contrary to the whole tenor of Scripture, and derogatory to the mediatorship of Christ. They ask what reason can be adduced for believing that prayers addressed to saints are even *heard* by them, or that they have always a knowledge of the worship addressed to them? They further deny that the prayers addressed to saints—and particularly to the Virgin Mary—are always capable of explanation as merely an asking of their prayers on behalf of those who invoke them, and quote many instances in proof.

INVOICE, a list or account of merchandise or goods sold, either sent along with the goods themselves or separately.

INVOLU'CRE (Lat. a wrapper or envelope), in Botany, is a group of bracts surrounding flowers in their unexpanded state, and occupying a place on the floral axis beneath them after their expansion. The bracts which form an involucre are generally grouped in a whorl. In umbelliferous flowers, there

is very commonly an involucre, not only to the umbel, but to each division of the umbel, or *umbellule*. The former is called the *general involucre*, or simply the *involucre*; the latter are *partial involucre*s, or *involucels*. The cup of the acorn, hazel, chesnut, &c., may be regarded as an involucre.

INVOLUTE. See **EVOLUTE**.

INVOLUTION AND **EVOLUTION** are two operations the converse of each other. The object of the first is to raise a number to any power, which is effected by continuously multiplying the number by itself till the number of factors is equal to the number designating the power, thus, 2 raised to the *third* power is $2 \times 2 \times 2$, or 8; 7 raised to the *fourth* power is $7 \times 7 \times 7 \times 7$, or 2401, &c. Evolution, on the other hand, is the extraction of a root of any number, that is, it is a method for discovering *what* number, when raised to a certain power, will give a certain known number—e. g., the square root of 64 is 8, that is, 8 is the number which, raised to the second power, will give 64; 3 is the fourth root of 81, that is, 3 raised to the fourth power is 81, and so on. The symbols expressive of the two operations are as follow: 5^3 means that 5 is to be raised to the third power; $(7^2)^5$ means that the square or second power of 7 is to be raised to the fifth power; $\sqrt[3]{9}$ or $9^{\frac{1}{3}}$ signifies that the extraction of the second or square root of 9 is required; $\sqrt[4]{256}$ or $256^{\frac{1}{4}}$, that the fourth root of 256 is to be extracted; and so on. Involution and evolution, like multiplication and division, or differentiation and integration, differ in the extent of their application; the former, or direct operation, can always be completed, while there are numberless cases in which the latter fails to express the result with perfect accuracy.

IODINE (symb. I, equiv. 127) is one of a group of four non-metallic elements to which the term Halogens (q. v.) has been applied. It derives its name from Gr. *iōdēs*, violet-like, in consequence of its magnificent purple colour when in a state of vapour. At ordinary temperatures, it usually occurs in solid dark-gray glistening scales; it is, however, crystallisable, and sometimes appears as an octahedron with a rhombic base. It is soft, and admits readily of trituration, has the high specific gravity of 4.95, and evolves a peculiar and disagreeable odour, which indicates its great volatility. It fuses at 225°, and at about 350° it boils, and is converted into the purple vapour to which it owes its name; it has an acid taste, and communicates a brownish-yellow colour to the skin. It is very slightly soluble in water, but dissolves readily in watery solutions of iodide of potassium and of hydriodic acid, and in alcohol and ether. Iodine vapour is the heaviest of all known vapours, its specific gravity being 8.716. It combines directly with phosphorus, sulphur, and the metals. Its behaviour with hydrogen is analogous to that of chlorine and bromine (see **HYDROCHLORIC ACID**), but its affinities are weaker than those of the last-named elements. It likewise combines with numerous organic substances, and the compound which it forms with starch is of such an intense blue colour, that a solution of starch forms the best test for the presence of free iodine. By means of this test, one part of iodine may be detected when dissolved in one million parts of water.

The following are some of the most important iodine compounds. With hydrogen, it forms only one compound, *hydriodic acid* (HI), a colourless pungent acid gas, which in most respects is analogous with hydrochloric acid. It is obtained by the action of water on teriodide of phosphorus.

The soluble iodides of the metals may be obtained by the direct combination of hydriodic acid with the metallic oxides, the resulting compounds being the metallic iodide and water. Some of these iodides are of extreme brilliancy, and others are of great value in medicine; amongst the latter must be especially mentioned iodide of potassium, iodide of iron, and the iodides of mercury.

Iodide of potassium is, next to quinine and morphia, the most important medicine in the pharmacopœia. It crystallises in colourless cubes, which are sometimes clear, but usually have an opaque whitish appearance, and are soluble in water and spirit. It is decomposed and the iodine set free, by chlorine, bromine, fuming nitric acid, and ozone (q. v.). There are various ways of obtaining this salt; the following is one of the best. If iodine be added to a warm solution of potash until a brown tint begins to appear, iodide of potassium (KI) and iodate of potash (KO_2IO_3) are formed. By gentle ignition of the residue obtained by evaporation, the iodate is decomposed into iodide of potassium and oxygen, so that all that remains is fused iodide of potassium, which is dissolved in water, and allowed to crystallise. Iodide of iron is formed by digesting iron wire or filings in a closed vessel with four times the weight of iodine suspended in water. Direct combination takes place, and a pale-green solution is formed, which by evaporation *in vacuo* yields crystals. It is the solution which is most commonly employed in medicine, but as, on exposure to the air, it becomes decomposed, and iodine is liberated, it is usually mixed with strong syrup, which retards this change.

There are two iodides of mercury, viz., the green sub-iodide (Hg_2I) and the red iodide (HgI). They may be formed either by the direct union of the two elements, or by the double decomposition of iodide of potassium and mercurial salts. There are two well-defined compounds of iodine and oxygen, viz., iodic acid (IO_3) and periodic acid (IO_7), corresponding to chloric and perchloric acid, neither of which are of any special interest.

Iodine in small quantity, and usually in combination with sodium, magnesium, or calcium, is very widely diffused over the earth's surface. It exists in sea-water, in marine animals and plants, and in certain mineral springs. It is also found in several minerals, as, for example, in certain Mexican silver ores, in Silesian zinc ores, in phosphorite from the Upper Palatinate, and in coal.

Iodine was discovered in 1811, by Courtois, in the waste liquors produced in the manufacture of carbonate of soda from the ashes of sea-weeds. A few years later, Gay-Lussac discovered that it was a simple elementary body. It is obtained from the half-fused ash of dried sea-weeds, which is known in this country as Kelp (q. v.), and in Normandy as Varek, and contains the iodides of sodium, potassium, magnesium, and perhaps calcium in considerable quantity. The iodine is liberated by the addition of binocide of manganese and sulphuric acid. Most of our commercial iodine is prepared in Glasgow.

The preparations of iodine are employed extensively in medicine and in Photography (q. v.). Iodide of potassium, and the preparations of iodine generally, are almost entitled to be regarded as specifics in cases of goitre, bronchocele, or Derbyshire neck. Out of 364 cases (collected by Bayle) which were treated with iodine, 274 were cured. Manson, Lugol, and others have shewn the value of the iodine-treatment in scrofula. The preparations of iodine are also eminently successful as resolvents in chronic induration, and enlargement of the liver, spleen, uterus, &c. In many forms of

chronic rheumatism, and in certain affections of the osseous system, due to a syphilitic taint, iodide of potassium is of the greatest service; and its value in the treatment of chronic lead-poisoning is not so generally known, even in the medical profession, as it deserves to be. The iodide of potassium dissolves the compounds of lead with albumen, fibrine, &c., which abound in the body in chronic lead-poisoning; and these dissolved compounds are excreted by the kidneys. In these cases, lead may often be detected in the urine, almost immediately after the administration of the iodide. This salt has a similar action in chronic mercurial poisoning, and cases are recorded of mercurial salivation having come on during the use of iodide of potassium, in consequence of the liberation of mercury, which had been previously fixed in the system.

Iodide of iron, which may be given either in syrup or in the form of Blancard's Pills (an excellent French mode of administering this salt), is especially serviceable in scrofulous affections of the glandular system, in which the use both of iodine and of iron is indicated. The iodides of mercury have been prescribed with good effect in various forms of syphilis. They must be given with caution, on account of their energy, the average dose of the red iodide being a fraction ($\frac{1}{16}$ to $\frac{1}{8}$) of a grain. Pure iodine is seldom prescribed internally; but in the form of tincture and ointment, it is a most useful topical application in cases of goitre, local enlargements, diseases of joints, chilblains, &c.

In large doses, iodine and most of the iodides act as irritant poisons; but very few fatal cases are on record. In the event of poisoning with the tincture of iodine, the first point is to evacuate the stomach; and the vomiting is assisted by the copious use of tepid liquids, containing starchy matter, as, for instance, starch, flour, or arrow-root boiled in water; the object being to form iodide of starch, which is comparatively inert.

IO'NA, the modern name of the most famous of the Hebrides, is believed to have originated in a mistaken reading of *n* for *u*; the word, in the oldest manuscripts, being clearly written *Ioua*. From the 6th c. to the 17th c., the island was most generally called *I, Ii, Ia, Io, Eo, Hy, Hi, Hii, Hie, Hu, Y, or Yi*—that is, simply, 'the Island;' or *Icolmkill, I-Colum-Kille, or Hii-Colum-Kille*—that is, 'the Island of Columba of the Church.'

It is about three miles long, and varies in breadth from a mile to a mile and a half. In 1861, it had a population of 264. Its area, computed by Bede at 'five families' (or 'five hides of land,' as the passage is rendered in the Anglo-Saxon Chronicle), is estimated at 2000 imperial acres, of which rather more than a fourth part is under tillage. The soil is naturally fruitful, and yields earlier crops than most parts of Great Britain, barley sown before the middle of June being ready for the sickle in August. This remarkable fertility was regarded as miraculous in the dark ages, and, no doubt, led to the early occupation of Iona. Dunii, the highest point of the island, is 330 feet above the sea-level.

Its history begins in the year 563, when St Columba (q. v.), leaving the shores of Ireland, landed upon I. with twelve disciples. Having obtained a grant of the island, as well from his kinsman Conall, the son of Comhall, king of the Scots, as from Bruidi, the son of Melchon, king of the Picts, he built upon it a monastery, which was long regarded as the mother-church of the Picts, and was venerated not only among the Scots of Britain and Ireland, but among the Angles of the north of England, who owed their conversion to the self-denying missionaries of Iona. From the end of the 6th to the

end of the 8th c., I. was scarcely second to any monastery in the British Isles; and it was this brilliant era of its annals which rose in Johnson's mind when he described it as 'that illustrious island which was once the luminary of the Caledonian regions, whence savage clans and roving barbarians derived the benefits of knowledge and the blessings of religion.' But neither piety nor learning availed to save it from the ravages of the fierce and heathen Norsemen. They burned it in 795, and again in 802. Its 'family' (as the monks were called) of 68 persons were martyred in 806. A second martyrdom, in 825, is the subject of a contemporary Latin poem by Walafridus Strabus, abbot of the German monastery of Reichenau, in the Lake of Constance. On the Christmas evening of 986, the island was again wasted by the Norsemen, who slew the abbot and 15 of his monks. Towards the end of the next century, the monastery was repaired by St Margaret, the queen of King Malcolm Canmore. It was visited in 1097 by King Magnus the Barefooted, of Norway. It was now part of that kingdom, and so fell under the ecclesiastical jurisdiction of the Bishop of Man and the Archbishop of Drontheim. In 1203, the bishops of the north of Ireland disputed the authority of the Manx bishop, pulled down a monastery which he had begun to build in the island, and placed the abbey under the rule of an Irish abbot of Derry. The Scottish Church had long claimed jurisdiction in I., and before the end of the 13th c., the island fell under the rule of the Scottish king. Its abbey was now peopled by Clugniac monks; and a nunnery of Austin canonesses was planted on its shores. Towards the end of the 15th c., it became the seat of the Scottish Bishop of the Isles, the abbey church being his cathedral, and the monks his chapter.

No building now remains on the island which can claim to have sheltered St Columba or his disciples. The most ancient ruins are the Laithrichean, or Foundations, in a little bay to the west of Port-a-Churraich; the Cobhan Cuidlich, or Culdees' Cell, in a hollow between Dunii and Dunbhuirg; the rath or hill-fort of Dunbhuirg; and the Gleann-an-Teampull, or Glen of the Church, in the middle of the island, believed to be the site of the monastery which the Irish bishops destroyed in 1203. St Oran's Chapel, now the oldest church in the island, may probably be of the latter part of the 11th century. St Mary's Nunnery is perhaps a century later. The Cathedral, or St Mary's Church, seems to have been built chiefly in the early part of the 13th century. It has a choir, with a sacristy on the north side, and chapels on the south side; north and south transepts; a central tower, about 75 feet high; and a nave. An inscription on one of the columns of the choir appears to denote that it was the work of an Irish ecclesiastic who died in 1202. On the north of the cathedral are the chapter-house and other remains of the conventual or monastic buildings. In the 'Reilig Oran'—so called, it is supposed, from St Oran, a kinsman of St Columba, the first who found a grave in it—were buried Ecgfrid, king of Northumbria, in 684; Godred, king of the Isles, in 1188; and Haco Ospac, king of the Isles, in 1228. No monuments of these princes now remain. The oldest of the many tombstones on the island are two with Irish inscriptions, one of them, it is believed, being the monument of a bishop of Connor who died at I. in 1174.

After centuries of neglect, this interesting island seems now to be in the way of improvement. It possesses a church connected with the Establishment, also a Free Church, and a school. At present (March 1863), a small and commodious inn is in

course of erection by the Duke of Argyle, proprietor of I.; by which means tourists and antiquarian explorers will be enabled to make visits of satisfactory duration. During summer, steamers from Oban (see *HEBRIDES*) call at I. twice a week; they land passengers by boats at Baile Mor, the only village on the island, and usually stay an hour, to allow time for visiting the ruins.

IO'NIA, the ancient name of the most flourishing country of Asia Minor. It received its name from the Ionians (one of the four most ancient tribes in Greece), who, again, according to the mythological account, derived theirs from Ion, the son of Apollo by Creusa, a daughter of a king of Athens. According to the usually received tradition, they were driven out of the Peloponnesus by the Achæians, and removed to Attica, whence, about 1050 B.C., bands of them went forth to settle on the coast of Asia. I. was a beautiful and fertile country, extending, according to Ptolemy, from the river Hermus to the river Meander, along the coast of the Ægean Sea, but Herodotus and Strabo make it somewhat larger. It soon reached a high point of prosperity; agriculture and commerce flourished, and great cities arose, of which Ephesus, Smyrna, Clazomenæ, Erythræ, Colophon, and Miletus were the most celebrated. These free cities, which formed the nucleus of the IONIAN LEAGUE, were, however, gradually subdued by the kings of Lydia, and passed (557 B.C.) under the sway of the Persians, but were allowed a considerable measure of internal liberty. During the great Persian war, the contingent which they were compelled to furnish to their Oriental masters deserted to the Greeks, at the battle of Mycale (479 B.C.), whereupon the Ionians entered into an alliance with Athens, upon which they now became dependent. After the Peloponnesian war, they were subject to the Spartans, and again (387 B.C.) to the Persians till the time of Alexander the Great. From this period, I. shared the fate of the neighbouring countries, and in 64 B.C. was added to the Roman empire by Pompey, after the third Mithridatic war. In later times, it was so ravaged by the Turks that few traces of its former greatness are now left.—The *Ionians* were regarded as somewhat effeminate. They were wealthy and luxurious, and the fine arts (see IONIC ARCHITECTURE) were cultivated amongst them at a much earlier date than amongst their kinsmen in the mother-country. The *ionic Dialect* excels the other Greek dialects in softness and smoothness, chiefly from the greater number of vowels introduced.

IO'NIAN ISLANDS, a group, or rather chain, running round the west coast of Epirus, and west and south of Greece. It consists of about 40 islands, of which Corfu, Paxo, Santa Maura, Theaki, Cephalonia, Zante, and Cerigo, are of considerable size; the total area is about 1041 square miles, and the population (1860) 232,426, is mostly of Greek descent. The proportion of females to males is as 100 to 116. The collective term 'Ionian' is of modern date. After the division of the Roman Empire, these islands were included in the eastern half, and so continued till 1081, when the Duke of Calabria (subsequently king of Naples) took possession of them. From this time they underwent a continual change of masters, till the commencement of the 15th c., when they by degrees came into the possession of the Venetians, who in 1797 ceded them to France. They were seized by Russia and Turkey in 1800, by France in 1807, by Britain in 1809, and on November 5, 1815, were formed into a republic ('The Septinsular Republic') under the protectorate of the latter. The following is a sketch

of their present political condition. The government is carried on by two assemblies, and the *Lord High Commissioner*, who is the representative of Her Majesty. The *lower assembly* consists of 40 members, who must be nobles; 29 of them are elected by the islanders themselves, and 11 by the Lord High Commissioner; their term of office is five years, during which period they must hold three sessions, of three months each. The *senate*, composed of five members, which the commissioner has power to increase to seven, forms the executive. The commissioner is invested with extensive powers; he can convoke an extraordinary meeting of parliament, confirm or reject the resolutions of the senate, and veto all bills passed by the legislature. He has the nomination of most of the public functionaries, and has supreme jurisdiction in all matters of finance, police, and public safety. Up to 1848, the press was restricted, and the government was really a despotism; but since that time they have obtained liberty of the press, lowering of the franchise, perfect freedom of election, both parliamentary and municipal, and vote by ballot. Justice is administered by a supreme court; and a civil, criminal, and commercial tribunal in each of the seven principal islands. The protecting force consists of a British garrison at Corfu, four native regiments of militia, and two war-vessels. In 1860, the islands produced 69,553 barrels of olive-oil, 30,250,897 lbs. of currants, and 148,539 barrels of wine; and of wheat, only 67,580 bushels; the value considerably exceeding £500,000. The live-stock for the same year consisted of 13,171 horses, 10,374 cattle, 131,684 sheep, and 111,907 goats, a considerable increase on the previous years. The revenue (1860) was £140,855, and the expenditure (which generally exceeds the income), £151,187. The chief item in the revenue is the export-duty on olives and olive-oil. The Board of Trade Reports lately published (1862) give, for 1859, the imports at £1,306,303, and the exports at £649,057. The entrances and clearances of shipping for 1860 were respectively 517,320 and 525,802 tons. The I. I. have cost Britain, on an average, £100,000 per annum.

Notwithstanding the advantages enjoyed under British government, there is a widespread dislike to Britain, and especially since 1853, the mass of the people have clamoured for annexation to Greece. Recently (1862), it has been proposed by the British government, under certain conditions, to resign the protectorate of the I. I., and to permit annexation to Greece. (This took place in 1863.)

IONIAN MODE, in Music, one of the old church modes, said to be the same as the ancient Greek mode of that name, and the only one of the old church modes which agrees with our modern system of music, the Ionian mode being the same as our key of C major. The character of the Ionian mode, however, must have appeared to the ancients more properly defined than it can to us, as it was the only one of their modes which had a major third and a sharp seventh.

IONIC ARCHITECTURE, a style of Greek architecture which took its origin in Ionia, and seems to have derived many of its characteristic features from Assyria. See **GRECIAN ARCHITECTURE**. The chief peculiarity of Ionic architecture is the capital of the Columns (q. v.), which is decorated with spiral ornaments called Volutæ (q. v.). The columns have also bases, which were not used in Doric architecture. The cornice is distinguished by the dentil band, an ornament first introduced in this style. The Honeysuckle ornament (q. v.), so much used in Ionic architecture, is one of the features which indicate its eastern origin.

Many large temples were erected in this style in Asia Minor and Greece. Among the finest examples now existing are the temples of Erechtheus and Minerva Polias on the Acropolis at Athens, Apollo Didymæus at Miletus, Minerva Polias at Priene, and Bacchus at Teos; and the temple of Fortune at Rome.

IONIC SCHOOL is the collective name given to the earliest Greek philosophers, Thales, Anaximander, Anaximenes, Heraclitus, and Anaxagoras, on account of their following one general tendency, and belonging for the most part to Ionia. See the biographies of these philosophers.

I. O. U., a memorandum of debt given by a borrower to a lender, so called from being made in this abbreviated form:

LONDON, January 1, 1862.

Mr A. B.,

I. O. U. £20.

C. D.

It is a convenient document, because it requires no stamp, and yet it is valuable evidence of the existence of the debt, in case an action is afterwards brought. If, however, the I. O. U. contain any promise to pay the debt, then it will amount to a promissory-note, and be void unless it have a stamp.

IOWA, one of the United States of America, was organised as a state, with governor and legislature, in 1846. It lies between 40° 20' and 43° 30' N. lat., and 90° 12' and 96° 53' W. long., and extends 208 miles from north to south, and 300 from east to west, with an area of 50,914 square miles, or 32,584,960 acres. It is bounded on the N. by Minnesota; E. by Wisconsin and Illinois, from which it is separated by the Mississippi River; S. by Missouri; and W. by Nebraska Territory, from which it is separated by the Missouri River. It has 99 counties, with Des Moines, a central town, for its capital. The population in 1840 was 43,112; in 1850, 192,214; in 1860, 674,948. The rivers are the Mississippi and Missouri on its eastern and western borders, and the Des Moines, Iowa, Red Cedar, and their branches. The surface is undulating and beautiful, with alternate forests and prairies. There are no mountains; but bold bluffs, with picturesque ravines, line the rivers. In the north-east, there are rich deposits of lead, and coal in the south and west, with iron, marble, clay, gypsum, &c. The soil is exceedingly fertile, and the climate healthful; the peach blossoms in the middle of April, but the winters are severe, with an average of 26°. The chief productions are wheat, maize, flax, tobacco, cattle, and hogs. It has not much direct foreign commerce, but trades extensively with the Atlantic and Gulf towns, and with the interior. The chief river ports of I. are Keokuk, Fort Madison, Burlington, Muscatine, Davenport, Clinton, Bellevue, and Dubuque. There are many manufactories, and 13 railways built or in progress, mostly crossing the state from east to west. There are 28 colleges, and 2700 public schools.

IOWA CITY, a city in Iowa, United States of America, formerly the capital of the territorial government, is situated on the Iowa River, 80 miles from its mouth. It is built on a succession of plateaux, rising from the river. The first is a public promenade; the third is crowned by the capitol, now the state university. It has also county buildings, and the state asylums, with factories on the falls of the river. There is steam-boat navigation to the Mississippi, and connection with the east by railway. Pop. in 1850, 2262; in 1860, 5214.

IPECACUANHA, the name both of a very valuable medicine and of the plant producing it. The plant (*Cephaelis Ipecacuanha*) belongs to the natural order *Cinchonaceae*, and grows in damp shady woods in Brazil and some other parts of South America. It is somewhat shrubby, with a few oblongo-lanceolate leaves near the ends of the branches, long-stalked heads of small white flowers, and soft dark purple berries. The part of I. used in medicine is the root, which is simple or divided into a few branches, flexuous, about as thick as a goose-quill, and is composed of rings of various size, somewhat fleshy when fresh, and appearing as if closely

Ipecacuanha.

strung on a central woody cord. The different kinds known in commerce (*Gray, Red, Brown*) are all produced by the same plant; the differences arising from the age of the plant, the mode of drying, &c. I. root is prepared for the market by mere drying. It is collected at all seasons, although chiefly from January to March; the plant is never cultivated, but is sought for in the forests chiefly by Indians, some of whom devote themselves for months at a time to this occupation. It has now become scarce in the neighbourhood of towns.

Various other plants, containing emetine, are used as substitutes for true ipecacuanha. The I. of Venezuela is produced by *Sarcostemma glaucum*, of the order *Asclepiadeae*; and to this order belongs *Tylophora asthmatica*, the root of which is found a valuable substitute for I. in India.

It is in the bark of the root that the active principle, the *emetine*, almost entirely lies, and in good specimens it amounts to 14 or 16 per cent.; the other ingredients, such as fatty matters, starch, lignine, &c., being almost entirely inert. Emetine is represented by the formula $C_{37}H_{27}NO_{10}$. It is a white, inodorous, almost insipid powder, moderately soluble in alcohol, and having all the characters of the vegetable alkaloids. It acts as a violent emetic in doses of $\frac{1}{2}$ th of a grain or less, and is a powerful poison. The incautious inhalation of the dust or powder of I.—as in the process of powdering it—will often bring on a kind of spasmodic asthma.

In small and repeated doses—as, for instance, of a grain or less—I. increases the activity of the secreting organs, especially of the bronchial mucous membrane, and of the skin. In larger doses of from 1 to 5 grains it excites nausea and depression, while in doses of from 15 to 30 grains it acts as an emetic, without producing such violent

action or so much nausea and depression as tartar emetic.

I. is useful as an emetic when it is necessary to unload the stomach in cases where there is great debility, or in childhood. As a nauseant, expectorant, and diaphoretic, it is prescribed in affections of the respiratory organs, as catarrh, hooping-cough, asthma, &c.; in affections of the alimentary canal, as indigestion, dysentery, &c.; and in disorders in which it is desired to increase the action of the skin, as in diabetes, febrile affections, &c.

Besides the Powder, the most useful preparations are the Wine of I.—of which the dose to an adult as a diaphoretic and expectorant ranges from 10 to 40 minims, and as an emetic from 2 to 4 drachms—and the Compound I. Powder, commonly known as *Dover's Powder* (q. v.). To produce the full effect as a sudorific, a dose of ten grains of *Dover's Powder* should be followed by copious draughts of white-wine whey, treacle-posset, or some other warm and harmless drink.

IPHIGENIA, in Grecian legend, a daughter of Agamemnon and Clytemnestra, or, according to others, an adopted daughter of Clytemnestra. Her father, having offended Diana, vowed to make atonement by sacrificing to the goddess the most beautiful thing born within the year. This happened to be Iphigenia. Agamemnon long delayed the fulfilment of his vow, but at length the Trojan expedition drew on, and the Greek fleet being detained in Aulis by a calm, the seer Calchas declared that Agamemnon must keep his promise. When I. was brought to the altar, however, she disappeared, and a hind lay there in her stead, Diana herself having carried her off in a cloud to Tauris, where she became her priestess, but was afterwards recognised by her brother, Orestes, who carried her, along with the image of Diana, to Attica. The legend is of post-Homeric origin. It has, however, been much wrought into Grecian poetry, and afforded many subjects to painters and sculptors. In modern literature, it has been again employed with great power of genius and poetic art by Goethe in his *Iphigenia auf Tauris*.

IPOMEEA, a genus of plants of the natural order *Convolvulaceae*, differing very little from the genus *Convolvulus*. The species are numerous. They are mostly natives of warm countries. Some of them are often to be seen in flower-gardens and hot-houses, being very ornamental, and readily covering trellises with their twining stems, large leaves, and large beautiful flowers. The roots of some of them yield a resinous substance, which possesses properties resembling those of jalap, and the true Jalap (q. v.) plant itself has sometimes been referred to this genus.

IPSAMBU'L. See **ABOUSAMBU'L**.

IP'SICA. See **MODICA**.

IPSWICH, a market-town, parliamentary and municipal borough, and river-port of England, capital of the county of Suffolk, is agreeably situated on the river Orwell, at the foot of a range of hills, 68 miles north-east of London. The older portions of the town consist of narrow and irregular streets, some of the old houses of which are ornamented with curious carved work. It contains numerous churches, and benevolent and charitable institutions; a Mechanics' Institution, with about 700 members; and a Working Men's College, with 200 members. Of its educational establishments, the principal is the grammar-school, founded by Cardinal Wolsey, and endowed by Queen Elizabeth. It has an income from endowment of £116, 6s. 8d., has six scholarships, exclusive of an Albert scholarship,

IRAQ-AJEMI—IRELAND.

founded as a memorial of the late Prince Consort, and two exhibitions at Pembroke College, Cambridge. There are large iron and soap factories, breweries, corn-mills, and ship-building docks. In 1869, 2213 vessels, of 179,469 tons, entered and cleared the port. The exports are chiefly agricultural produce, and agricultural implements and machinery; imports, wine, coal, iron, and timber. The town can be approached by vessels of 500 tons. It sends two members to the imperial parliament. Pop. (1871) 43,136. I. was pillaged by the Danes in 991, and again in 1000.

IRAQ-A'JEMI, a large province of Persia, is bounded on the N. by the provinces of Azerbaijan, Ghilan, and Mazanderan, and on the E. by Khorasan. On the S. and W., the boundaries are not definitely laid down. In the extreme north are the Elburz Mountains, and throughout the province are several other chains, all of them running from south-east to north-west. A great portion of the surface of the province consists of elevated tablelands, but there are also numerous fertile valleys traversed by rivers. Many of the rivers of I. are swallowed up by sandy tracts into which they flow. The chief towns of the province are the capital Teheran and Isphahan.

IRAQ-A'RABI, a district in Turkey in Asia, the ancient Babylonia (q. v.), comprises the ruins of the ancient cities of Babylon, Seleucia, and Ctesiphon. During the last 250 years of the califate, this was the poor remnant of their once wide dominion which remained to the successors of Mohammed.

IRA'N, the modern native name of Persia. See **ARYAN RACE**.

IRBIT, a district town of the government of Perm, Eastern Russia, since 1775; founded (1635) by Russian emigrants. The town is situated on the rivers Irbit and Nitza, in lat. 57° 35' N., and long. 62° 50' E., is 1760 miles distant from St Petersburg, and contains 3248 inhabitants. It is remarkable for its extensive fair, the largest in Russia, after that of Nijni-Novgorod. The fair takes place annually from the 27th of February till the end of March, has been instituted for more than 200 years, and attracts about 10,000 merchants and visitors from Russia, Siberia, Persia, Bokhara, &c. The principal goods are cloths, silk stuffs, brocades, sugar, coffee, china, and hardware from Russia; tea and nankeen from China, through Kiachta; furs and fish from Siberia; cotton stuffs from Bokhara, &c. The whole quantity of goods brought to market is valued at £5,500,000.

IRELAND, an island, forming part of the United Kingdom of Great Britain and Ireland, lies between lat. 51° 26' and 55° 23' N., and long. 5° 20' and 10° 26' W. It is washed on the N., W., and S. by the Atlantic, and on the E. by a strait, called at different places the North Channel, the Irish Sea, and St George's Channel, which separates it from the larger island of Great Britain. Its greatest length, from Fair Head in Antrim to Crow Head in Kerry, is 306 miles, but its greatest meridional length is not more than 225; its greatest breadth, between the extreme points of Mayo and Down, is 182 miles, but between Galway Bay and Dublin, it is not more than 120. The total area is about 32,524 square miles, of which 15,464,825 acres are arable land; 4,357,338 acres are uncultivated; 316,597 are covered with wood; 49,236 are occupied by towns of 2000 inhabitants and upwards; while the lakes and waters of the country cover 627,464 acres. Pop. (1871) 5,402,759. I. is divided into the four provinces of Ulster, Leinster, Munster,

and Connaught, which again are subdivided into 32 counties. The following table exhibits the area of the different provinces and counties, the number of inhabited houses, and the population in 1861 and 1871:

Physical Aspect.—I. is of oblong form, and like Great Britain, the eastern coast is comparatively unbroken, while the west, north, and south are deeply indented. It is an undulating or hilly country—less rugged than the Highlands of Scotland, and not so tame as the eastern section of England. Its hills are more rounded than abrupt, and lie not so much in ranges as in detached clusters round the coasts. These mountain tracts rarely extend more than twenty miles inland, and they seem to form a broad fringe round the island; while the interior appears as a basin composed of flat or gently swelling land. The principal ranges are the Mourne Mountains in Down, which attain their highest elevation in Slieve Donard, 2796 feet above the sea; the mountains of Wicklow, which rise to a height of 3039 feet; and Macgillcuddy Reeks in Kerry, which, in the peak of Carran-Tual, the loftiest point in Ireland, reach 3414 feet. The purely flat or level portions of the island, with the exception of some fine tracts of fertile valley-land in Kilkenny, Tipperary, and Limerick, consist mainly of *bog* or morass, which occupies, according to Dr Kane, 2,830,000 acres, or about a seventh part of the entire superficies. The largest of these morasses is the Bog of Allen, which stretches in a vast plain across the centre of the island, or over

a large portion of Kildare, Carlow, King's and Queen's counties—having a summit elevation of 280 feet. Extensive tracts of deep wet bog also occur in Longford, Roscommon, and other counties, and give a peculiarly dreary and desolate aspect to the scenery. Notwithstanding the quantity of water in these bogs, they exhale no miasma injurious to health, owing to the large quantity of tannin which they contain.

Hydrography.—The principal river of I., and the largest in the United Kingdom, is the Shannon (q. v.). The streams which drain the eastern part of the central plain are the Liffey and the Boyne; the south-eastern part, the Suir, the Barrow, and the Nore; while the waters of the north-eastern part are collected into Lough Neagh, chiefly by the Blackwater, and thence discharged into the sea by the Lower Bann. The rivers *external* to the great central plain are necessarily short. The principal are the Erne, flowing to the north-west; the Foyle and the Bann, to the north; the Lagan, to the north-east; the Slaney, to the south-east; and the Bandon, Lee, and Blackwater, flowing in an easterly course through the county of Cork, the most southern county in the island. None of these rivers are naturally of importance to navigation. The Shannon, however, has been made navigable to its source by means of locks and lateral cuts; the Barrow, by similar means, to Athy; the Foyle, by canal to Strabane; and several of the others have been artificially united by such lines as the Lagan, Newry, Ulster, Royal, Grand, Athy, and other canals—which now intersect a considerable portion of the island.

The lakes of I. (called loughs) are, as might be expected from the surface-character of the country, both numerous and extensive in proportion to the size of the island. The largest is Lough Neagh in Ulster, covering an area of 100,000 acres. The other loughs of consequence are Loughs Erne and Derg, also in Ulster; Conn, Mask, and Corrib, in Connaught; the Allen, Ree, and Derg, which are expansions of the river Shannon, and the lakes of Killarney (q. v.) in Kerry.—The bays and salt-water loughs which indent the island are also numerous and of considerable importance. About seventy are suitable for the ordinary purposes of commerce; and there are fourteen in which the largest men-of-war may ride in safety. The principal are Loughs Foyle and Swilly, on the north coast; the Bays of Donegal, Sligo, Clew, and Galway, the estuary of the Shannon, Dingle Bay, and Bantry Bay, on the west; the harbours of Cork and Waterford, on the south; Wexford harbour, the Bays of Dublin, Drogheda, and Dundalk, and Loughs Carlingford, Strangford, and Belfast, on the east.—The islands are, generally speaking, small and of little importance. On the east coast, the largest is Lambay, about two and a half miles off the coast of Dublin; on the south and south-east coasts are Clear Island, the Saltees, a dangerous group of islets, about eight miles south of the Wexford coast, indicated by a floating light, and Tuscar Rock, about eight miles east of Carnsore Point, also a dangerous ledge, rising 20 feet above the sea, and surmounted by a light-house after the model of the Eddystone; on the west coast, the Skelligs, Valentia, the Blaskets, the South Arran Isles, Innisbofin, Innis-turk, and Clare, Achil or 'Eagle' Island, and the Inniskea Islets; on the north coast, the North Arran Isles, the Tory Isles, and Rathlin.

Geology.—A great series of grits and slates of Cambrian age occur in the south-east of I.; the upper portion contains a few fossils of zoophytes and worms. Lower *Silurian strata* rest unconformably on the Cambrian rocks in the same district. They

consist of flags, slates, and grits many thousand feet in thickness, extending over large portions of Kildare, Wicklow, Wexford, and Waterford. Several detached patches occur to the west of this district, forming the Keeper, Arra, and Inchiquin Mountains. A tract of similar beds stretches from the centre of I., near the source of the Shannon, to the coast of Down. The strata in proximity to the Wicklow and Dublin granites are converted into gneiss and mica-slate. This is the condition of all the beds in the north-west, in Donegal, Tyrone, and Mayo; they appear to be a continuation of the highly altered strata of the north of Scotland. Detached portions of Upper *Silurian* measures occur on the western side of the island, in Kerry, Galway, and Mayo.

Between the *Silurian* and Old Red Sandstone is an enormous thickness (11,000 feet) of sandstone grit and shale in Kerry and Cork. These strata are almost wholly unfossiliferous.

Old Red Sandstone strata, consisting of red and yellow sandstone and slate, cover a large tract of the south of I., stretching almost continuously from the extreme west of Cork and Kerry into Waterford and Kilkenny, being stopped by the *Silurian* rocks of Wexford and Carlow. Along the bases of the *Silurian* mountains of the south centre of I., and in the southern portion of the county of Cork, occurs a great thickness of sandstones, which have hitherto yielded no fossils; some geologists refer these to the Old Red series, others hold them to be Lower Carboniferous.

The *Carboniferous Limestone* is extensively developed in I., occupying the whole of the centre of the country, except in those places already alluded to, where the older rocks appear on the surface. This great tract is an extensive plain covered with drift, and with peat-moss and freshwater marl, in which are found the remains of *Megaceros Hibernicus* and *Bos longifrons*. In Kerry, Cork, and Waterford, the strata are very much contorted, the coal-seams are changed into anthracite, and so squeezed and crushed as to be got only in small dice-like fragments. Further north, the strata are nearly horizontal, but the coal-fields are limited, and the seams are generally of inconsiderable thickness. They occur chiefly in Tipperary, Kilkenny, Tyrone, and Antrim.

Small deposits of *Permian strata* are found at Ardrea in Tyrone, and at Cultra near Belfast; the sandstones of Roan Hill near Dungannon are probably of the same age. The red and variegated marls containing beds of gypsum and rock-salt, which exist on the coast north from Belfast, are probably *Triassic*. Resting on these marls are a few thin beds of *Lias*. *Cretaceous* strata occur in Antrim and Derry.

Climate.—Though the climate of I. bears, as might have been expected, a strong resemblance to that of Great Britain (q. v.), it has yet a character peculiar to itself, owing to the marked difference in the configuration of its surface, its greater distance from the continent of Europe, and its being, as it were, more completely bathed in the warm waters of the Gulf Stream. The mean annual temperature of the central parts of the country is about 50°·0, rising in the south to 51°·5, and falling in the north to 48°·5. There are thus 3°·0 of difference between the extreme north and south, and it may be noted that, speaking generally, this difference is constant through all the seasons of the year. The mean temperature in winter is 41°·5; in spring, 47°·0; in summer, 60°·0; and in autumn, 51°·0.

The annual rainfall averages from 25 to 28 inches, except in the neighbourhood of hills, where the precipitation is considerably augmented; thus, at Valentia, in Kerry, the rainfall of 1861 amounted to 73 inches, and doubtless this large fall was

IRELAND.

greatly exceeded in those parts which are situated among the higher hills. The rainfall in winter, particularly in the west, is greatly in excess of the other seasons, owing to the low temperature of the surface of the ground during winter, which suddenly chills the warm and moist south-west winds that prevail, especially at this time of the year, and condenses their vapour into rain. Since in Great Britain the chief mountain ranges are in the west, it follows that over the whole eastern slope of the island the climate is drier, the amount and frequency of the rainfall much less, and the sunshine more brilliant than in the west. In I., on the other hand, the hills in the west do not oppose such a continuous barrier to the onward progress of the south-west winds, but are more broken up and distributed in isolated groups. It follows that the sky is more clouded, and rain falls more frequently in I., and the climate is thus rendered more genial and fostering to vegetation; hence the appropriateness of the name 'Emerald Isle.' Again, owing to its greater distance from the continent, the parching and noxious east winds of spring are less severely felt in I., because the north-east winds have acquired more warmth and moisture in their progress. It is on this account that the most salubrious spring climates possessed by England, Scotland, and I. are situated in the south-west of their respective countries. Thus, Queenstown, in the south-west of I., enjoys an average spring temperature as high as 50° 0, which is about the highest in the British Islands, and nearly 3° 0 higher than the east of Kent, which is nearly in the same latitude.

Since wheat ripens in these latitudes with a mean summer temperature of 56° 0, it follows that the climate of I. is quite sufficient for the successful cultivation of the finer sorts of grain, which are subjected to much less risk in backward seasons than is the case in North Britain, where the summer temperature is only a degree and a half from the extreme limit of wheat-cultivation. Also, considering its remarkably open winters, which lengthen out the period of grazing, its mild and genial climate through all the seasons, and its comparative freedom from droughts, it will be seen that its climate is equally well adapted for the rearing of cattle. These considerations, combined with the fertility of the soil, open up for I., as far as the physical conditions are concerned, a prospect of great national prosperity, based on most remarkable, though as yet only partially developed agricultural resources.

Soil and Vegetation.—Until the middle of last century, I. was almost exclusively a pasturing country, and in 1727 an attempt was made (unsuccessfully, however) to pass an act compelling landholders to 'till five acres out of every hundred in their possession, and to release tenants to the same extent from the penal covenants in their leases against tillage.' The result of this state of things is the wretchedly poor system of agriculture, from which I. still suffers largely. The natural fertility of the country is nevertheless great.

The extent under each of the principal crops in 1870, 1871, and 1872, is given in the following table:

Crops.	Extent cultivated in		
	1870. Acres.	1871. Acres.	1872. Acres.
Wheat,	259,847	244,451	228,189
Oats,	1,650,039	1,636,136	1,621,813
Barley, bere, and rye, .	253,081	232,534	228,889
Beans and pease, . . .	10,689	10,913	11,782
Potatoes,	1,043,583	1,058,434	991,802
Turnips,	339,059	327,035	346,464
Other green crops, . .	116,081	126,220	135,650
Flax,	194,910	156,070	122,003
Meadow and clover, .	1,773,851	1,829,044	1,799,930

The estimated produce in 1870 and 1871 was as under:

Crops.	Produce, 1870.	Produce, 1871.
Wheat,	754,261	705,939 qrs.
Oats,	7,559,303	7,410,814 "
Barley, bere, and rye, .	1,072,340	965,709 "
Beans and pease, . . .	47,192	49,690 "
Potatoes,	4,218,445	2,793,641 tons.
Turnips,	3,941,402	4,246,332 "
Mangel and cabbage, .	664,281	761,863 "
Flax,	30,771	12,929 "
Meadow and clover, .	3,387,444	3,315,525 "

Live-stock.—According to the census returns of 1851, the estimated value of the live-stock was £27,737,393; for 1861, £33,434,385; and for 1871, £37,515,211.

Fisheries.—In her fisheries, I. is supposed to possess an almost inexhaustible mine of wealth, but, strange to say, they are much neglected. The surrounding seas abound with cod, ling, hake, herrings, pilchards, &c., and yet the Irish markets are extensively supplied with cured fish from Scotland and the Isle of Man. The number of vessels and boats engaged in the sea-fisheries in 1846 was 20,000, employing 100,000 men and boys; but in 1872, it had decreased to 8000, employing only 31,000 persons. The inspectors of fisheries have recommended the advance of a loan, for the repair and purchase of boats and gear.

Manufactures.—According to M'Culloch, 'Ireland is not, and never has been, a manufacturing country. Its unsettled turbulent state, and the general dependence of the population on land, have hitherto formed insuperable obstacles to the formation of great manufacturing establishments in most parts of the country; whilst the want of coal, capital, and skilful workmen, and the great ascendancy of England and Scotland in all departments of manufacture, will, there is reason to think, hinder Ireland from ever attaining eminence in this department.' Linen is the staple manufacture, of which Belfast and the surrounding districts of Ulster are the chief seats. The export of linen manufactures from I. to Great Britain was, in 1864, £10,327,000. The manufacture of woollen stuffs is limited to a few localities, as Dublin, Cork, Waterford, Queen's County, and Kilkenny. Silk and cotton manufactures are also carried on, but only to a comparatively inconsiderable extent. In 1870, the number of factories (cotton, woollen, worsted, flax, jute, and silk) in I. amounted to 273, employing 1,081,694 spindles, 18,630 power-looms, and 63,952 persons of both sexes; of these, 154 were flax-factories, employing 916,660 spindles, 14,834 power-looms, and 55,039 persons. A great source of employment for females has of late years sprung up in the north of I., in the working of patterns on muslin with the needle. Belfast is the centre of this manufacture, which employs about 300,000 persons, chiefly females, scattered through all the counties of Ulster, and some localities of the other provinces. About forty firms are engaged in the trade, and the gross value of the manufactured goods amounts to about £1,400,000. Silk manufactures, since their introduction by French emigrants in the beginning of the last century, have been almost entirely confined to Dublin; but poplin is now extensively manufactured there, and in a few other towns.

Commerce and Shipping.—The exportation of the agricultural produce of the country has always been the chief commercial business carried on in Ireland. By far the greater part of this trade is carried on with Great Britain. It cannot, however, be traced later than 1825, when the commercial intercourse between Great Britain and I. was assimilated by law to the coasting-traffic carried on between the different ports of England, except in the single article of grain.

The number of sailing and steam vessels, with

IRELAND.

their tonnage, registered in the ports of I., in 1871, was 1776 vessels, tonnage 218,162; the number of men being 11,887.

Government.—The government of I., since the Union in 1801, is identical with that of Great Britain. It is represented in the imperial parliament by 32 members of the House of Lords, and 105 of the House of Commons. The executive government is invested in a Lord-lieutenant, assisted by a Privy Council and Chief Secretary; and the law is administered by a Lord Chancellor, a Master of the Rolls, and twelve judges of the supreme courts of Queen's Bench, Common Pleas, and Exchequer. County, peace, and municipal matters are conducted much in the same way as in England, with the exception of an armed national constabulary or police force of nearly 12,000 men, with 348 horses.

Religion.—A vast majority of the inhabitants of I. are Roman Catholics; but the established church was a branch of the Episcopal Church of England till January 1871, when it was at length disestablished, after much opposition. According to the statistics of 1871, the number of Roman Catholics was 4,141,933; of Protestants, 1,260,568; and of Jews, 258.

Education.—I. possesses several universities: Dublin University (q. v.), was founded by Queen Elizabeth in 1591; the Queen's Colleges of Belfast, Cork, and Galway, were opened in 1849, and are united in one university. Maynooth College, for the education of Roman Catholic priests, is supported at the public expense, and is attended by 520 students. There are also several Irish colleges and medical schools in connection with the London University. The primary schools of I. are mostly under the management of the 'Commissioners of National Education.' This system, established in 1833, proceeds on the principle that 'the schools shall be open alike to Christians of every denomination; that no pupil shall be required to attend any religious exercise, or receive any religious instruction which his parents may not approve; and that sufficient opportunity shall be afforded to pupils of each religious persuasion to receive separately such religious instruction as their parents or guardians may think fit.' The following table exhibits the progress of the system:

Years.	No. of Schools.	No. of Pupils.	Parliamentary Grants.
1834	1,106	145,521	£35,000
1840	1,978	232,560	50,000
1850	4,547	511,239	140,000
1860	5,632	804,000	285,377
1870	6,806	998,999	394,209
1871	6,914	1,021,700	408,388

Taking the pupils of 1871, we find the number of Roman Catholic children to be 822,016; of Presbyterian, 113,227; of Episcopalian, 78,789; belonging to other sects, 7668. Besides these national schools, the 'Church Education Society' had, in 1870, 52,166 scholars, of whom 44,662 belonged to the established church, 3747 to other Protestant churches, and 3757 to the Roman Catholic.

History.—According to ancient native legends, I. was in remote times peopled by tribes styled Firbolgs and Danauns, eventually subdued by Milesians or Gaels, who acquired supremacy in the island. The primitive inhabitants of I. are now believed to have been of the same Indo-European race with the original population of Britain. Although I., styled *Iernis*, is mentioned in a Greek poem five centuries before Christ, and by the names of *Hibernia* and *Juverna* in various foreign pagan writers, little is known with certainty of her inhabitants before the 4th c. after Christ, when, under the appellation

of *Scoti*, or inhabitants of *Scotia*, they became formidable by their descents upon the Roman province of Britain. These expeditions were continued and extended to the coasts of Gaul till the time of Laogaire MacNeill, monarch of Ireland (430 A.D.), in whose reign St Patrick (q. v.) attempted the conversion of the natives. Although Christianity had been previously introduced in some parts of the island, Patrick encountered great obstacles, and the new faith was not fully established in I. till about a century after his decease.

From the earliest period, each province of I. appears to have had its own king, subject to the *Ard-Righ* or monarch, to whom the central district called Meath was allotted, and who usually resided at Tara. Each clan was governed by a chief selected from its most important family, and who was required to be of mature age, capable of taking the field efficiently when occasion required. The laws were peculiar in their nature, dispensed by professional jurists styled *Brehons*, who, as well as the poets and men of learning, received high consideration, and were endowed with lands and important privileges. Cromlechs, or stone tombs and structures, composed of large uncemented stones, ascribed to the pagan Irish, still exist in various parts of Ireland. Lacustrine habitations, or stockaded islands, styled *Crannógs* or *Crannoges* (q. v.), in inland lakes, also appear to have been in use there from early ages. Of articles of metal, stone, clay, and other materials in use among the ancient Irish, a large collection has been formed in the Museum of the Royal Irish Academy at Dublin. It is remarkable that a greater number and variety of antique golden articles of remote age have been found in I. than in any other part of Northern Europe; and the majority of the gold antiquities illustrative of British history, now preserved in the British Museum, are Irish.

In the 6th c., extensive monasteries were founded in I., in which religion and learning were zealously cultivated. From these establishments, numerous missionaries issued during the succeeding centuries, carrying the doctrines of Christianity under great difficulties into the still pagan countries of Europe, whose inhabitants they surprised and impressed by their self-devotion and asceticism. Many students of distinction from England and the continent frequented I., and received gratuitous instruction at this period. To these ages has been ascribed the origin of the peculiar style of art-ornamentation, specimens of which are still extant in Irish manuscripts, and which was long erroneously assigned to the Anglo-Saxons, who now appear to have been indebted to the Irish mainly for Christianity, and entirely for letters. Among the eminent native Irish of these times were Columba (q. v.), or Colum Cille, founder of the celebrated monastery of Iona; Comgall, who established the convent of Bangor, in the county of Down; Ciaran of Clonmacnoise; and Adamnan, abbot of Iona, and biographer of Columba. Of the Irish missionaries to the continent, the more distinguished were Columbanus (q. v.), founder of Bobio; Gallus of St Gall, in Switzerland; Dichuill, patronised by Clotaire; and Ferghal, or Virgilius, the evangeliser of Carinthia. The progress of Irish civilisation was checked by the incursions of the Scandinavians, commencing towards the close of the 8th c., and continued for upwards of 300 years. Establishing themselves in towns on the eastern coast of I., with the assistance of friendly native tribes, they continued to make predatory expeditions into the interior until their signal overthrow at the battle of Clontarf, near Dublin (1014 A.D.), by Brian, surnamed Borumha, monarch of Ireland. From the

close of the 8th to the 12th c., I., although harassed by the Scandinavians, produced many writers of merit, among whom were *Ængus*, the hagiographer; Cormac MacCullenan, king of Munster, and Bishop of Cashel, the reputed author of *Cormac's Glossary*; Cuan O'Lochain; Gilla Moduda; Flan of Monasterboice; and Tigerhach, the annalist. The Irish scholars who during these times acquired highest eminence on the continent were Joannes Erigena, the favourite of Charles the Bald of France; Dungal, one of the astronomers consulted by Charlemagne; Dichuill, the geographer; Donogh, or Donatus, Bishop of Fiesole; and Marianus Scotus. Of the state of the arts in Ireland during the same period, elaborate specimens survive in the shrine of St Patrick's bell, the Cross of Cong, in Mayo (12th c.); the Limerick and Cashel crossiers, and the Tara brooch, all displaying minute skill and peculiar style. To these times some are inclined to assign the *Book of Kells*, a Latin copy of the four Gospels in the Irish character, in the library of Trinity College, Dublin, which Mr Westwood has pronounced to be the most elaborately executed manuscript of early art now in existence, and of portions of which fac-similes are given in his work *Palæographia Sacra Pictoria*. Of the Irish architecture of the period, examples survive at Cashel. The well-known round towers of I. are believed to have been erected about this era as belfries, and to serve as places of security for ecclesiastics during disturbances. The skill of the Irish musicians in the 12th c. is attested by the enthusiastic encomiums bestowed by Giraldus Cambrensis upon their performances. The Scandinavians have left behind them in I. no traces of civilisation except coins struck at Dublin, Waterford, and Limerick, in which towns they were, for the most part, subject and tributary to the natives.

The first step towards an Anglo-Norman descent upon I. was made by Henry II., who obtained in 1155 a bull from Pope Adrian IV., authorising him to take possession of the island, on condition of paying to the papal treasury a stipulated annual revenue. Political circumstances prevented Henry from entering upon the undertaking till 1166, when Dermot MacMurragh, the deposed king of Leinster, repaired to him, and obtained authority to enlist such of his subjects as might be induced to aid him in attempting to regain his forfeited lands. Dermot, returning to I. in 1169, with the aid of his foreign mercenaries, and still more numerous Irish allies, succeeded in recovering part of his former territories, and in capturing Dublin and other towns on the eastern coast. After his death in 1171, the succession to the kingdom of Leinster was claimed by his son-in-law, Richard FitzGislebert, Earl of Pembroke, surnamed 'Strongbow.' In the following year, King Henry, with a formidable armament, visited I., received homage from several of the minor native chiefs, and from the chief adventurers, granting to the latter charters authorising them, as his subjects, to take possession of the entire island, in virtue of the grant made to him by the pope. The chief Anglo-Norman adventurers, FitzGislebert, Le Gros, De Cogan, De Lacy, and De Curci, encountered formidable opposition before they succeeded in establishing themselves on the lands which they thus claimed. The government was committed to a viceroy, and the Norman legal system was introduced into such parts of the island as were reduced to obedience to England. The youthful Prince John was sent by King Henry into I. in 1184; but the injudicious conduct of his council having excited disturbances, he was soon recalled to England. John, when king, made an expedition

into I. in 1210, to curb the refractory spirit of his barons, who had become formidable through their alliances with the natives. During the 13th c., the principal Anglo-Norman adventurers succeeded in establishing themselves, with the feudal institutions of their nation, in some parts of I., by the assistance or suppression of native clans. The Fitzgeralds, or Geraldines, acquired almost unbounded power in Kildare and East Munster, or Desmond; the Le Botillers, or Butlers, in Ormond or West Munster; and the De Burghs, or Burkes, in Connaught. After the battle of Bannockburn, the native Irish of the north invited over Edward Bruce, and attempted to overthrow the English power in Ireland. The court of Rome, at the instigation of England, excommunicated Bruce with his Irish allies; but although his enterprise failed of success, the general result was a comparative collapse of the English dominion in Ireland. The descendants of the most powerful settlers gradually became identified with the natives, whose language, habits, and laws they adopted to so great an extent, that the Anglo-Irish parliament passed, in 1367, the 'Statute of Kilkenny,' decreeing excommunication and heavy penalties against all those who followed the customs of, or allied themselves with, the native Irish. This statute, however, remained inoperative; and although Richard II., later in the 14th c., made expeditions into I. with large forces, he failed to effect any practical result; and the power and influence of the natives increased so much, that the authority of the English crown became limited to a few towns on the coast, and the district termed 'the Pale,' comprising a small circuit about Dublin and Drogheda.

In 1534, Thomas Fitzgerald, son of the viceroy of Henry VIII., revolted, but not meeting with adequate support from his Anglo-Irish connections, he was, after a short time, suppressed and executed. Henry received the title of 'King of Ireland' in 1541, by an act passed by the Anglo-Irish parliament in Dublin; and about the same period, some of the native princes were induced to acknowledge him as their sovereign, and to accept peerages. The doctrines of the Reformation met little favour either with the descendants of the old English settlers or with the native Irish. About the middle of the 16th c., Shane O'Neill, a prince of the most powerful ancient family of Ulster, attempted to suppress his rivals, and to assume the kingship of that province, in which he was eventually unsuccessful; but after his death in 1567, his successor received the title of Earl of Tirone from Elizabeth. The attempts of the English government in I. to introduce the Reformed faith and English institutions stirred up great dissensions in Ireland. Among the first to revolt was the Earl of Desmond, after whose death, in 1583, his vast estates in Munster were parcelled out to English settlers. Soon after, the chief clans of Ulster took up arms; and in opposing them, the forces of Elizabeth, commanded by officers of high military reputation, encountered many reverses, the most serious of which was that in 1598 at the battle of the Yellow Ford, near Armagh, where the English army was routed and its general slain. Philip III. of Spain, at the solicitation of the Irish chiefs, despatched a body of troops to their assistance in 1601, which, landing in the extreme south, instead of in the north, as had been expected, were unable to effect anything, and were constrained to surrender. Although Elizabeth was supported by numbers of native Irish, the northern chiefs, O'Neill and O'Donnell, held out till the queen's government came to terms with them in 1603, recognising them as Earls of Tirone and Tirconnell. In 1608, these noblemen, having apprehensions for their personal

safety, quitted Ireland unexpectedly, and retired to the continent. Their withdrawal enabled James I. to carry out that project of parcelling out the north of Ireland to Scottish and English settlers, which is usually known as the 'Plantation of Ulster.' The Irish took advantage of the contentions in England to rise in insurrection (1641) and massacre the Protestants. It is believed that nearly 40,000 fell victims to their fury. The country continued in a state of anarchy till 1649, when Cromwell overran it. At the Revolution, the native Irish generally took the part of James II., the English and Scotch 'colonists' of William and Mary; and the war was kept up for four years (1688—1692). From this time till 1778, history records little beyond the passing of penal statutes against the Roman Catholics. In 1778, parliament relaxed the stringent pressure of these acts; but the widely spread disaffection which they caused gave birth to numerous societies, resulting in the rebellion of 1798, which was not suppressed till 1800. On January 1 of the following year, the legislative union of Great Britain with I. was consummated, and from this period the history of the country merges in that of Great Britain.

IRELAND, ARMS OF. The insignia of Ireland have been variously given by early writers. In the reign of Edward IV., a commission appointed to inquire what were the arms of I., found them to be three crowns in pale. It has been supposed that these crowns were abandoned at the Reformation, from an idea that they might denote the feudal sovereignty of the pope, whose vassal the king of England was, as lord of Ireland. However, in a MS. in the Heralds' College of the time of Henry VII., the arms of I. are blazoned azure, a harp or, stringed argent; and when they were for the first time placed on the royal shield on the accession of James I., they were thus delineated: the crest is on a wreath or and azure, a tower (sometimes triple-towered) or, from the port, a hart springing argent. Another crest is a harp or. The national flag of I. exhibits the harp in a field vert. The royal badge of I., as settled by sign-manual in 1801, is a harp or, stringed argent, and a trefoil vert, both ensigned with the imperial crown.

IRELAND, NEW. See NEW IRELAND.

IRELAND ISLAND, one of the Bermudas (q. v.).

IRENÆUS, one of the most important of the ante-Nicene Christian writers, was an Asiatic by birth, but is known in history solely through his connection with the Greco-Gaulish church of Southern France, of which he was a bishop. He was a scholar of Polycarp, through whom he may be regarded as having sat at the feet of St John the apostle and evangelist. I. was a priest of the church of Lyon under the Bishop Pothinus, upon whose martyrdom, in the persecution of Marcus Aurelius in 177, he was himself elected to the same see, which he continued to govern for twenty-five years. I. is commonly believed to have suffered martyrdom at Lyon in the persecution under Septimius Severus in 202. His principal, indeed almost his only perfect, work is that which is commonly cited as *Adversus Hæreses* (Against Heresies). It is directed against the Gnosticism of his own age, and is most valuable as a picture of the doctrinal and moral condition of that age. Most of his other works also were doctrinal, but they are known only by description or by fragments. The earliest edition of the works of this Father is that of Erasmus (Basel, 1526). They have been several times re-edited, the most prized edition being that

of the Benedictine, Dom Massuet (Paris, 1710, and Venice, 1734).

IRENE, a celebrated Byzantine empress, was born in Athens about 752 A.D. Her beauty and talent excited the admiration of the Emperor Leo IV., who married her, 769 A.D. She is believed to have poisoned her husband, 780 A.D., after which event she became regent during the minority of her son, Constantine VI., then only nine years of age. A great worshipper of images—in fact, this species of idolatry had during the lifetime of her husband caused her to be banished from the imperial palace—she quickly began to plot for their restoration, and with this purpose assembled a council of bishops at Constantinople, 786 A.D., which, however, was broken up by the troops of the capital. A second council held at Nice in the following year was more successful, and image-worship was re-established in the Eastern Church. In 788 A.D., her army was defeated in Calabria by Charlemagne, who threatened the Byzantine empire. In 790 A.D., Constantine succeeded in taking the government out of her hands; but seven years after, she caused him to be deprived of his eyes, and shut up in a dungeon, where he soon died. Still she was not free from anxieties. Her two favourites, Stauracius and Ætius, were constantly embroiled with each other, and their jealousies only ceased with the death of the former, 800 A.D. She now tried to secure her possession of the throne by a marriage with Charlemagne, but the Frank emperor had apparently no relish for a woman who had committed so many crimes, and the scheme proved abortive. Two years later, her treasurer, Nicephorus, rebelled against her, and suddenly seizing her person, banished her to the isle of Lesbos, where she was forced to spin for a livelihood. Here she died of grief, 803 A.D. I. was a wise, able, and energetic ruler; but her crimes were so great and unnatural, that history can speak of her character as a whole only in the language of reprobation. The Greek Church, however, on account of her zeal for image-worship, has placed her in the catalogue of its saints.

IRIARTEA, a genus of palms, all South American, having lofty, smooth, faintly ringed stems, and pinnate leaves with somewhat triangular leaflets. The leaf-stalks rise from a sheathing column. The **PASHICUBA** or **PIZICUBA PALM** (*I. exorhiza*), common in swamps and marshy grounds in the forests of the Amazon district, is remarkable for sending out roots above ground, which extend obliquely downwards, and often divide into many rootlets just before they reach the soil; the tree as it grows still producing new roots from a higher point than before, whilst the older and more central ones die, so that at last a lofty tree is supported as on three or four legs, between which a man may walk erect with a palm of seventy feet high rising straight above his head. The outer wood is very hard, so as to be used for harpoons; splits easily, and into perfectly straight laths; is excellent for floors,

Pashinba Palm (*Iriarte exorhiza*).

ceilings, shelves, &c.; and is exported to North America for umbrella-sticks.

IRIDEÆ, or IRIDA'CEÆ, a natural order of endogenous plants, mostly herbaceous, although a few are somewhat shrubby. They have very generally either root-stocks or corms. The leaves are generally sword-shaped, in two rows, and *equitant* (so placed that one seems to ride on the back of another). The perianth is 6-partite, coloured, often very beautiful, in some regular, in others irregular. The stamens are three, with anthers turned outwards. The ovary is inferior; there is one style, with three stigmas, which are often petal-like, and add much to the beauty of the flower. The fruit is a 3-celled, 3-valved capsule. Almost 600 species are known, of which the greater number are natives of warm countries. They are particularly abundant in South Africa. A few are British. *Iris*, *Gladiolus*, and *Crocus* are familiar examples of the order. Saffron is the principal economical product. Acridity is a prevailing characteristic, and some species are medicinal; but the corms and root-stocks of some are edible.

IRIDIUM (sym. Ir, eq. 99, sp. gr. 15.93) is one of the so-called noble metals. It is occasionally found native and nearly pure in considerable masses among the Uralian ores of platinum, but is usually combined with osmium as an alloy in flat scales. It is a very hard, white, brittle metal, which may be melted by the oxyhydrogen blowpipe, or by the heat of a voltaic current. In its isolated form, it is unacted upon by any acid, or by aqua regia, but as an alloy it dissolves in the latter fluid.

It forms three oxides, IrO , Ir_2O_3 , and IrO_2 , which pass readily into one another, and thus occasion the various tints which solutions of the salts of this metal assume. It was in consequence of these varying tints that the name of iridium, derived from *Iris*, the rainbow, was given to this metal. Three sulphides and chlorides, corresponding to the oxides, have been obtained. This metal was discovered at the same time as osmium, in 1803, by Smithson Tennant.

IRIS, in Classic Mythology, the daughter of Thaumus and Electra. She is described (in Homer) as a virgin goddess; but later writers state that she was married to Zephyrus, by whom she became the mother of Eros. She was employed, like Mercury, as the messenger of the gods, and to conduct female souls into the shades, as he conducted those of men. She is frequently represented on vases and in bas-reliefs as a youthful winged virgin, with a herald's staff and a pitcher in her hands. There can be no doubt that this myth originated in the physical phenomena of the rainbow, which was personified at first as the messenger of peace in nature.

The broad coloured ring in the eye is called the IRIS. See EYE.—IRIS is also the name of one of the Planetoids (q. v.), discovered in 1847.

IRIS, or FLOWER-DE-LUCE, a genus of plants of the natural order *Iridææ*, having the three outer segments of the perianth reflexed, the three inner arched inwards, and three petal-like stigmas covering the stamens. The species are numerous, chiefly natives of temperate climates. The YELLOW I., or CORN FLAG (*I. pseudacorus*), is a well-known native of moist grounds in all parts of Britain, often spreading over a considerable extent of land, and conspicuous even at a distance by its tall leaves and large deep yellow flowers. The STINKING I. (*I. fetidissima*) is very abundant in some of the southern parts of England, but does not extend far north. It has livid purple flowers. The leaves have a very disagreeable smell. The south of Europe produces a greater number of species, as also does

North America. The flowers of most of the species are beautiful. Some of them have received much attention from florists, particularly *I. xiphoides*, sometimes called SPANISH I.; *I. xiphoides*, or ENGLISH I.; and *I. Germanica*, or COMMON I., all corm-rooted

1. Yellow Water Flag
(*Iris pseudacorus*).

2. Florentine Orris
(*Iris Florentina*).

species, and all European. Many fine varieties have been produced. The PERSIAN I. (*I. Persica*), the SNAKE'S-HEAD I. (*I. tuberosa*), and the CHALCEDONIAN I. (*I. Susiana*) are also much esteemed. The Persian I. is delightfully fragrant. The roots of all these species are annually exported in considerable quantities from Holland. Many other species are of frequent occurrence in flower-gardens.—The fresh root-stocks of *I. pseudacorus* are very acrid, as are those of many other species. Those of *I. Florentina*, *I. pallida*, and *I. Germanica* are ORRIS ROOT (q. v.). Those of *I. dichotoma* are eaten in Siberia; those of *I. edulis* at the Cape of Good Hope.

IRISH (GAELIC) LANGUAGE AND LITERATURE. The Irish (Gaelic) is one of the still living Celtic languages (see CELTIC NATIONS). The alphabet consists of the following eighteen letters—*a, b, c, d, e, f, g, h, i, l, m, n, o, p, r, s, t, u*, corresponding in their forms with the Roman characters of the 5th c. after Christ. In Irish, there is no indefinite article; nouns are masculine or feminine, and anciently a neuter gender existed. The nominative and accusative are the same in form, as are also the dative and ablative; the nominative and vocative feminine, and the genitive and vocative masculine, always have similar terminations. Nouns substantive have five, and nouns adjective four declensions. Verbs are active, passive, regular, irregular, impersonal, and defective; their moods are indicative, consuetudinal, past indicative, imperative, infinitive, and conditional; regular active verbs have no subjunctive; the tenses are the present, consuetudinal present, preterite, consuetudinal past, and future; in the tenses of the passive voice there is no distinction of number or person. Prepositions are rarely compounded with verbs or adjectives, instead of which the Irish use prepositions or adverbs placed after the verbs. Adverbial phrases composed of two or more parts of speech are very numerous both in ancient and in modern Irish. The simple conjunctions are few, but there are many conjunctive phrases. Interjections are numerous, and vary throughout the provinces. The

regular versification of the Irish consists of four distinct metres, styled *Oglachas*, *Droighneach*, *Brúilegeacht*, and *Dan Direach*; of the last, there are five species, each distinguished by peculiar features. There are also classes of popular poetry possessing distinct linear and syllabic components. The best authorities on the Irish language are the *Irish Grammar*, by J. O'Donovan (1845); the *Grammatica Celtica* of J. C. Zeuss (1856); and *Irish Glosses* (1860), published by the Irish Archaeological and Celtic Society.

The oldest existing specimens of the Irish language are to be found in sepulchral inscriptions in Ireland, and in the glosses or interpretations affixed to Latin words in documents transcribed by Irish ecclesiastics of the 8th and succeeding centuries, now preserved in some continental libraries. The principal ancient vernacular manuscripts in Ireland are *Leabhar na-h-Uidhre*, and the *Book of Leinster* (12th c.); the *Books of Ballymote*, *Lecan*, and *Dun Doighre*, or *Leabhar Breac* (14th c.); all compiled from older writings on historical and miscellaneous subjects. The most ancient manuscripts in Ireland containing original matter in the Irish language are the *Book of Armagh* (9th c.) and the *Book of Hymns*, of a somewhat later date, both ecclesiastical in their contents. The writings extant in the Gaelic language of Ireland consist of ecclesiastical documents, laws, bardic or semi-historic tales, historic tracts, genealogies, historic poems, treatises on medicine, translations from foreign authors, proverbs, compilations of the 17th c., popular poetry, political and satirical poems and songs, composed by native Gaelic writers in Ireland within the last century. Of the ecclesiastical documents, the next in importance, after the *Book of Armagh* and the *Book of Hymns*, are the metrical Festologies of *Ængus Ceile De* (9th c.), the Martyrology of Tallaght (10th c.), and that of Marianus O'Gorman (12th c.). In this department there are also extant many lives of saints, monastic rules, devotional and religious poems. A large body of old Irish jurisprudence, known as the *Brehon Laws*, is preserved in manuscripts of the 14th and 15th centuries. Of the Irish bardic or semi-historic tales, numbers are extant ranging in date from the 12th to the 18th century. The principal Irish historic tracts are those on the tribute styled *Borumha*, the wars of the Danes with the Irish, and the wars of Thomond. Copious genealogies of the principal native families exist in various manuscripts, and from such sources MacFirbis, a learned Irish antiquary of the 17th c., made an elaborate compilation known as *Leabhar Genealach*, or the 'Genealogical Book,' now considered a high authority. The chief composers of poems on the history of Ireland were Eochadh O'Flin (10th c.), Gilla Caemhain, and Flan of Monasterboice (11th century). The most important ancient Irish annals are those of Tighernach, of Ulster, of Inisfallen, and of Connacht.

The Irish manuscripts on medicine contain original treatises by native physicians of the 14th and 15th centuries, with commentaries on the then known medical authors of Europe and the East. The Irish translations from foreign languages are chiefly versions of medieval Latin and continental books—historic, scientific, romantic, and religious. Of original adages and proverbial sentences, great numbers exist, of various ages. The privileges enjoyed by the Irish poets under the clan system enabled them to devote themselves to the production of elaborate metrical compositions, many of which possessed high excellence, and elicited the praises of the poet Spenser. During the wars against Elizabeth, the bards were energetic in

stimulating the chiefs to whom they were attached. The merit of the elegiac poem on the deaths of the Earls of Tirone and Tirconnell by their bard Mac an Bhaird, who accompanied them in exile (1608 A.D.), attracted the attention of the critical Lord Jeffrey, who became acquainted with it through Mangan's English version in the metre of the original. Among the native writers in Ireland after the establishment of the English dominion, in the reign of James I., was Dr Geoffrey Keating, compiler of a history of Ireland in the Gaelic language, and author of religious treatises and poems. About the same period, historical and hagiographical compilations were made by the O'Clerighs, the most important of which was that styled the *Annals of the Kingdom by the Four Masters*, extending from the earliest period to 1616 A.D., edited in seven large volumes (Dublin, 1848), with an English version and copious notes, by the late Dr John O'Donovan, the ablest of Irish scholars. The Gaelic continued to be the language of the native rural population of Ireland during the 17th and 18th centuries, and many religious and romantic pieces were composed in it for popular use. Differing from the English settlers in religious and political sentiments, the native Irish found gratification in satirising and ridiculing them in the Gaelic language, in which they composed numerous songs in favour of the Stuarts, and denunciatory of the Hanoverians and their adherents. Members of old Irish families who attained high distinction in military service on the continent, retained with pride the Gaelic tongue; it was also commonly spoken by the soldiers in the Irish Brigades in France, and in the American army during the War of Independence. Various attempts were made since the middle of the last c. to print Gaelic documents, but the critical knowledge of the language in its archaic forms having fallen into abeyance, such publications proved entirely unsatisfactory, until the subject was taken up about 1830 by government, during the progress of the Ordnance Survey of Ireland. From this may be said to date the true Irish school of accurate historic and linguistic learning, which has since produced many valuable volumes, under the superintendence of the Antiquarian section of the Royal Irish Academy and the Irish Archaeological and Celtic Society. On the works issued by these two bodies, which for many years have included nearly all the most erudite scholars of Ireland, philological and historic students must now depend, as other publications on these subjects are, with few exceptions, illusory and misleading.

The Irish, in its modern forms, is still spoken commonly by the rural classes and native landowners in Connaught, Munster, the remote parts of Ulster, the south of Leinster, as well as in the islands off the western coast of Ireland. The provincial dialects vary considerably in words, pronunciation, and idioms. The Irish emigrants have carried their language across the Atlantic, and songs and poems in the Irish language and character occasionally appear in American newspapers. Professorships of the Irish language exist in Trinity College, Dublin; in the Queen's Colleges at Belfast, Cork, and Galway; and in the Roman Catholic College at Maynooth. The chief collections of Irish manuscripts are those of the Royal Irish Academy and Trinity College, Dublin; numbers are also preserved in the British Museum, in the Bodleian, and in some private libraries.

IRISH MOSS. See CARRAGEEN.

IRISH SEA, a continuation northward of St George's Channel (q.v.), separates the north of Ireland from the central districts of the United

Kingdom. Between the coasts of Louth and Lancaster, the I. S. has a width of 120 miles; its greatest length between St George's Channel on the south and the North Channel on the north is also about 120 miles.

IRITIS is the term applied to inflammation of the iris. See **EYE**. The cavity across which the iris is stretched, and the iris itself, which projects into that cavity, and divides it into an anterior and a posterior chamber, are lined or invested by a membrane which resembles the larger serous membranes of the body, such as the pleura, peritoneum, &c., and consequently the inflammation of this membrane is of the adhesive kind. See **INFLAMMATION**. When it is added that the effusion of lymph may limit or entirely stop the movements of the iris, and may alter the form, or even close up the aperture of the pupil, the serious nature of the disease will be at once perceived.

The *objective* symptoms of iritis (those which can be observed by the physician) are: 1. Redness of the eye, arising from vascularity of the sclerotic; 2. Change in the colour of the iris. When lymph is effused in the texture of the iris, a gray or blue eye is rendered yellowish or greenish, while in a dark eye a reddish tint is produced. The brilliancy of the colour of the iris also disappears. When the inflammation is very violent, or has been unchecked by remedies, suppuration may take place. 3. Irregularity, and sometimes immobility of the pupil, produced by the adhesion of the back of the iris to the crystalline lens. The *subjective* symptoms (those of which the patient alone is conscious) are intolerance of light, dimness of vision, and pain in and around the eye.

The causes of iritis are various. The disease may arise from actual injury in surgical operations performed on the eye; from over-exertion, and too prolonged continuous use of the eye (thus, it is common among needlewomen, engravers, and watchmakers); or from some constitutional taint, especially syphilis, gout, rheumatism, and scrofula.

The treatment of iritis varies to some extent according to the cause which induces it, but the great remedies are three. 1. *Blood-letting*, for the purpose of moderating the febrile disturbance, and of facilitating the operation of the second remedy, which is, 2. *Mercury*, which used to be given in large doses (such as two, three, or four grains, with a little opium, every four or six hours), but which is preferably given in small doses, such as two or three grains of hydrarg. c. cretâ, with a little hyoscyamus, two or three times in the twenty-four hours. This dose should be lessened as soon as the mouth begins to be tender, and by that time the lymph will be found to break up, and leave the pupil clear. 3. *Belladonna*. The pupil should be kept well dilated by the application of the extract of belladonna to the skin round the eye, or, far better, by the instillation into the eye of a weak solution of sulphate of atropine, with the view of preventing adhesion of the iris, or of breaking, or, at all events, of stretching and elongating any adhesive bands that may be formed; and thus of preventing any impairment of the movements of the iris, and any irregularity of the pupil, after the inflammation shall have abated.

IRKUTSK, capital of the Russian government of that name, is the residence of the governor-general of Eastern Siberia, and the seat of a bishop. It is situated on the right bank of the Angara, near its confluence with the river Irkut, in lat. 52° 17' N., and long. 104° 26' E., and is 3842 miles distant from St Petersburg. The town is about 1200 feet above the level of the sea, and

enjoys a very healthy climate, though in winter the cold is so severe as to freeze mercury. The streets are straight and wide, but ill-paved, and the houses mostly built of timber. The best buildings are the palace of the governor-general, the schools for boys and girls, and the hall of the American Company. Besides these, the town contains a public library, a museum of natural history, and some other public institutions. The population in 1858 was 18,908, consisting mostly of Russians and Buriats. I. was founded in 1661 by a Cossack chief named Iwan Pochapof, and, owing to its position on the great thoroughfare between Eastern and Western Siberia, between China and Russia, it soon became the commercial centre of Siberia, especially for the tea-trade. The current of the Angara is so rapid that the strongest frosts cover it but seldom with ice. Nevertheless, it is navigable, and constitutes the mainway for the goods bound for Kiachta by means of Lake Baikal, as well as for those coming from Eastern Siberia, Russian America, and China to Irkutsk. The former are chiefly furs and metals; the latter, tea, meat, and fish from Lake Baikal. The communications between I. and Jakutsk, and the other northern towns of Siberia, are carried on by the river Lena. The manufactures of I. are purely local, and supply the half-nomad Buriats and Tunguses, inhabiting the adjacent country.

IRKUTSK, a government of Eastern Siberia, bounded by the government of Jenisseisk, the province of Jakutsk and the Chinese Empire, occupies an area of 267,555 square miles. The soil is partly fertile, partly hilly and marshy; the climate in general severe. The Baikal and Nerchinsk Mountains, with their numerous branches, give the country a high alpine character; besides these, the Saïán range extends along the southern borders, and the Jäblonovy or Apple range along the eastern. The principal rivers are the Lena, Shilka, Ägün; the largest lake is the Baikal (q. v.). The productions of the country are rye, wheat, barley, oats, rhubarb, hops; reindeer, sables, ermines, foxes, seals; fish—sturgeon, cod, silure; minerals—gold, silver, lead, jasper, amethysts, topazes, emeralds, yellow amber, rock-salt, and coal. The population of the government exceeds 325,000, and consists of Buriats, Tunguses, and Russians. The inhabitants are for the most part employed in agriculture, and to some extent in fishing and hunting. As a local industry, the manufacturing of an excellent oil out of stone-pine nuts deserves notice. The foreign commerce consists in the trade with China, carried on through Troitzko-Savsk and Kiachta (q. v.), and has risen to great importance in recent times.

The government of I. is divided into two districts—Irkutsk and Kirensk—and the township of Kiachta. The capital is Irkutsk; the other towns are Telma, with a cloth-factory, Troitzko-Savsk, Kiachta, Kirensk on the Lena, Nijneudinsk, and Verkholsensk.

IRON (sym. Fe [Lat. *ferrum*], eq. 28, sp. gr. 7·844) occurs more abundantly than any other metal. In its native form it is chiefly found in meteoric stones (see **ÆROLITES**), and in certain ores of platinum, and is consequently of comparatively rare occurrence, but the so-called iron ores—the oxides, sulphides, &c.—are very widely distributed. The most important of these ores are mentioned below.

Pure iron may be obtained by the ordinary method described below, and also by reducing the peroxide by means of hydrogen gas and heat, when it is obtained in the form of a fine black powder,

or by heating the protochloride in a glass tube through which a current of dry hydrogen is passed. In this case, pure iron is deposited as a glistening mirror on the glass.

This important metal will be most conveniently considered under the three heads of

1. *Chemistry of Iron.*—Chemically pure iron is of so little general interest that we shall confine our remarks on the properties of this metal to those which are exhibited by bar or wrought iron. Its colour is gray or bluish-white; it is hard and lustrous, takes a high polish, is fibrous in texture, and when broken across, exhibits a ragged fracture. It requires a very intense heat for its fusion, but before melting passes into a soft pasty condition, in which state two pieces of iron may, by being hammered together, be united or welded so completely as to form, to all intents and purposes, a single portion. At a red heat, it may be readily forged into any shape; but at ordinary temperatures it possesses very little malleability, as compared with gold and silver. In ductility, it stands very high, being barely exceeded by gold, silver, and platinum; and in tenacity, it is only exceeded by cobalt and nickel. Its susceptibility to magnetism is one of its most remarkable characteristics. See **MAGNETISM**. At a high temperature, it burns readily, as may be seen at the forge, or (more strikingly) when a glowing wire is introduced into a jar of oxygen. In dry air and at ordinary temperatures, the lustrous surface of the metal remains unchanged; but in a moist atmosphere the surface rapidly becomes oxidised and covered with rust, which consists mainly of the hydrated oxide of iron. At a red heat, iron decomposes water, and liberates hydrogen, the oxygen combining with the iron to form the black or magnetic oxide (Fe_3O_4), which occurs in minute crystals. This is one of the ordinary methods of obtaining hydrogen.

The affinities of iron for most of the non-metallic elements are very powerful. The chief of the iron compounds are—

a. *Oxides of Iron.*—Iron forms four definite compounds with oxygen—viz. (1), the *protoxide* (FeO), which is the base of the green or ferrous salts of iron; (2), the *sesquioxide* or *peroxide* (Fe_2O_3), which is the base of the red or ferric salts; (3), the *black* or *magnetic oxide* (Fe_3O_4), which is regarded by some chemists as a compound of the two preceding oxides; and (4), *ferric acid* (FeO_3). The *protoxide* cannot be obtained in an isolated form, but it forms the base of various ferrous salts, and combines with water to form a hydrate (FeO.HO), which, on the addition of an alkali, falls in white flakes.

The most important protosalts of iron, or ferrous salts, are the carbonate, the sulphate, the phosphate, and the silicate.

Carbonate of iron (FeO.CO_2) exists naturally in various minerals, and may be obtained artificially by precipitating a soluble protosalt of iron with carbonate of potash or soda, when the carbonate falls in white flakes. On exposure to the air, it absorbs oxygen, and gives off carbonic acid, and is thus converted into the hydrated peroxide. *Sulphate of iron* ($\text{FeO.SO}_4 + 7\text{HO}$) is obtained by the solution of iron, or its sulphide, in dilute sulphuric acid; in the former case, there is an evolution of hydrogen, and in the latter, of sulphuretted hydrogen. The reactions in the two cases are expressed by the equations,

On evaporation of the solution, the salt is obtained in clear bluish-green rhomboidal crystals, containing seven atoms of water. This salt is commercially known as *copperas* or *green vitriol*, and its various

applications in technology are noticed in the article **VITRIOLS, BLUE AND GREEN**.

Phosphate of iron is obtained by precipitating a solution of a protosalt of iron with phosphate of soda, when a white precipitate of phosphate of iron is thrown down.

All these salts, especially the carbonate and sulphate, are extensively used in medicine.

Silicate and phosphate of iron occur naturally in several minerals.

The *peroxide of iron*, termed also *sesquioxide*, red oxide, or ferric oxide, is obtained in an anhydrous form by igniting the protosulphate, and is known in the arts under the names *Colcothar*, *Crocus of Mars*, or *Rouge*, according to the degree of levigation to which it has been submitted. It is employed for polishing glass, jewellery, &c., and is also used as a pigment. It occurs both in the anhydrous and in the hydrated form in various minerals.

The hydrated peroxide ($2\text{Fe}_2\text{O}_3.3\text{HO}$) is obtained by precipitating a solution of a persalt of iron or of a ferric salt, with an excess of potash, ammonia, or alkaline carbonate. It falls as a yellowish-brown flocculent precipitate, which when dried forms a dense brown mass. This hydrated peroxide of iron, when freshly prepared and suspended in water, is regarded as an antidote in arsenical poisoning. Rust, as has been already mentioned, is a hydrated peroxide, combined with a little ammonia.

The most important of the persalts of iron, or ferric salts, are the neutral and the basic sulphate, whose formulæ are $\text{Fe}_2\text{O}_3.3\text{SO}_3$ and $\text{Fe}_2\text{O}_3.3\text{SO}_3.5\text{Fe}_2\text{O}_3$ respectively, the nitrate ($\text{Fe}_2\text{O}_3.3\text{NO}_3$), the phosphate, and the silicate. Of these, the neutral sulphate, the phosphate, and the silicate occur in various minerals. The nitrate, which is obtained by the solution of iron in nitric acid, is a useful medicinal agent.

The *black* or *magnetic oxide* and *ferric acid*, which has not been obtained in a free state, and is only known as a constituent of certain salts, must be passed over without comment.

b. *Haloid salts of iron*—the chlorides, bromides, and iodides—next require notice. There are two chlorides—viz., a protochloride (FeCl) and a perchloride or sesquichloride (Fe_2Cl_3). The latter may be obtained by dissolving peroxide of iron in hydrochloric acid. The tincture of the sesquichloride of iron is perhaps more generally employed in medicine than any other preparation of this metal. The protiodide is an extremely valuable therapeutic agent.

c. There are probably several *sulphides* or *sulphurets of iron*. The ordinary sulphide is a protosulphide (FeS). It occurs in small quantity in meteoric iron. It may be obtained artificially by the direct union of the two elements at a high temperature, or by the precipitation of a protosalt of iron by sulphide of ammonium. It exists in glistening masses, varying in colour from a grayish yellow to a reddish brown. It is insoluble in water, but in moist air becomes rapidly oxidised into protosulphate of iron. With acids, it develops sulphuretted hydrogen. The bisulphide of iron (FeS_2) is the *iron pyrites* of mineralogists, and the *mundic* of commerce. Under the latter name, it is used extensively in the preparation of oil of vitriol. There are also other sulphides of less importance.

The *protosalts* and the *persalts*, or the *ferrous* and the *ferric salts*, give totally different reactions with the ordinary tests. The solutions of the former have a greenish colour and a peculiar metallic taste, while those of the latter are generally of a brownish-yellow colour, and are very acid. Sulphuretted hydrogen gives no precipitate when an acid solution of a ferrous salt, while it gives a milky precipitate

of sulphur with a solution of a ferric salt. Potash, soda, and ammonia throw down a white hydrated oxide from the former, and a brown hydrated peroxide from the latter. Ferrocyanide of potassium gives with ferrous salts a white precipitate, which soon becomes blue, while with ferric salts it at once produces a blue precipitate, even in a very dilute solution. Tincture of galls (tannic acid) produces no immediate change of colour with the ferrous, but a deep blackish-blue colour (ink) with the ferric salts. Sulphocyanide of potassium produces no change with the ferrous, but gives a deep blood-red tint with the ferric salts. Succinate and benzoate of ammonia produce no precipitate or change of colour with the former, while with the latter, if the solution is not too acid, they throw down pale reddish-brown precipitates.

2. *Manufacture of Iron.*—The increasing use of iron is a prominent characteristic of the present age. Every day sees some new application of it in the arts of life. Although the most useful of the metals, it was not the first known. The difficulty of reducing it from its ores would naturally make it a later acquisition than Gold, Silver, and Copper (q. v.). See also BRONZE, and BRONZE PERIOD. The reduction of the ore known as the black oxide of iron, however, has been carried on in India from the earliest times.

In Europe, the rich specular and other ores of Spain and Elba were much used during the Roman period; in Greece, also, iron was known, though, as among the Romans, its use was subsequent to that of bronze. We are informed, too, by the Roman historians that this metal was employed by the ancient Britons for the manufacture of spears and lances. The Romans, during their occupation of Britain, manufactured iron to a considerable extent, as is evidenced by the cinder-heaps in the Forest of Dean and other places. The rude processes then in use left so much iron in the cinders, that those of Dean Forest furnished the chief supply of ore to twenty furnaces for between 200 and 300 years. In those early times, the iron ores were reduced in a simple conical furnace, called an air-bloomery, erected on the top of a hill, in order to obtain the greatest blast of wind. The furnaces were subsequently enlarged, and supplied with an artificial blast. Charcoal was the only fuel used in smelting till 1618, when Lord Dudley introduced coal for this purpose; but the iron-masters being unanimously opposed to the change, Dudley's improvement died with himself. It was not reintroduced till Abraham Derby, in 1713, employed it in his furnace at Coalbrook Dale. But as this method was not properly understood, the production of English iron declined with the change of fuel, till, in 1740, it was only three-fourths of what it had formerly been. About ten years after this, however, the introduction of coke gave renewed vigour to the iron-trade, and then followed in rapid succession those great improvements in the manufacture which have given to the history of iron the interest of a romance. The introduction of Watt's steam-engine in 1770, the processes of puddling and rolling invented by Henry Cort in 1784, and the employment of the hot-blast by Neilson of Glasgow in 1830, have each been of inestimable service. So recently as 1856, Mr Henry Bessemer patented a process (see BESSEMER'S PROCESS) for the production of malleable iron and steel, which will probably ere long take its place as one of the greatest improvements ever introduced into the iron manufacture.

The great supply of iron is derived from its numerous ores, which are abundantly distributed over the globe; the chief of which are—1. *Hæmatite*, specular, or red iron ore; 2. *Brown hæmatite*,

or brown iron ore; 3. *Magnetic*, or black iron ore; 4. *Ironstone*, blackband, or clay iron ore; 5. *Bog iron ore*, or phosphate of iron.

The ore richest in the metal is the *magnetic* (see MAGNETISM), or *black oxide of iron*. When pure, it contains nothing but oxygen and iron, its chemical formula being Fe_3O_4 , which gives 73 per cent. of iron by weight. It occurs in dark heavy masses or black crystals, and is found in the older primary rocks. Sweden is famous for this ore, and for the iron produced from it, which is esteemed the best in Europe. The celebrated mines of Dannemora, in that country, have been constantly worked since the 15th century. Russia, too, has great iron works in the Ural Mountains, which are supplied with this ore. So, also, have Canada and several of the American states, as Virginia, Pennsylvania, New Jersey, &c. The rock formations in which magnetic iron ore occurs contain no coal, hence it is almost always smelted with wood-charcoal, which, as it contains no sulphur, is one great cause of the superiority of the iron produced from it.

The *red oxide* differs from the last only in containing proportionally a little more oxygen, its formula being Fe_2O_3 , that is to say, 70 per cent. of iron by weight. There are several varieties of this ore, but only two need be referred to. The first of these, *specular iron*, so called from its bright metallic lustre, occurs in large and beautiful crystalline masses in the island of Elba, where it has been worked for more than 2000 years, and is likewise found in many other parts of the world. It is of a steel gray colour, assuming a red tint in thin fragments and when scratched. The other variety is *red hæmatite*, an ore whose origin is still a curious problem, as its deposits occur sometimes in veins, and sometimes in apparently regular beds. Its characteristic form is in large kidney-shaped nodules, with a fine radiated structure. This shape, however, is only assumed in the cavities of massive deposits. Red hæmatite is sometimes called bloodstone. It is used for polishing metals, and yields a blood-red powder, used as a pigment. This valuable iron ore is found in many countries, but perhaps nowhere in greater abundance than at Whitehaven and Ulverstone, in the north-west of England, where splendid masses of it occur, 15, 30, and even 60 feet in thickness. These two districts produced, in 1861, about 1,000,000 tons of hæmatite.

Brown hæmatite is a hydrated peroxide of iron, and has the same composition as red hæmatite, except that it contains a certain proportion of water. It is generally found massive, more rarely crystalline, and a variety, occurring in small rounded nodules, is called *pea iron ore*. When mixed with earth or clay, it forms yellow ochre and brown umber, so largely used as pigments, but the latter also contains manganese. Brown hæmatite, though not much used in England, is an important ore on the continent, especially in France, Belgium, Prussia, and Austria.

Bog iron ore is a mixture of brown hæmatite and phosphate of iron, occurring in marshy districts of recent formation. This ore is also extensively smelted in France.

There is a sparry carbonate of iron, termed *spathose iron ore*, of considerable importance on the continent of Europe, especially in Prussia, where extensive deposits of it exist. It is of a yellowish-gray colour, very much resembles the common mineral calc-spar, and yields from 40 to 50 per cent. of iron. It is much used for the manufacture of steel.

Most of the ores of iron already described possess, either by their bright metallic surfaces, or the beauty of their crystalline forms, a certain attraction for

the cabinet of the mineralogist. But there remains to be noticed a dull, blackish or clay-coloured mineral, possessing no beauty or symmetry, which Great Britain prizes as one of the greatest of her mineral treasures: this is the ironstone of the coal-measures, which is variously named *clay iron ore*, *clay carbonate of iron*, and *blackband*. It is essentially a mixture of carbonate of iron with clay, containing also water, and in the case of blackband, coaly or bituminous matter. It is estimated that the coal-measures of Great Britain produce about nine-tenths of our iron; and it is a fortunate thing that, along with the ore, are found both the fuel and the limestone that are indispensable for its reduction.

About ten years ago, the three great iron districts of Britain were South Staffordshire, South Wales, and Central Scotland, each producing nearly equal quantities, and together yielding about four-fifths of the total produce of the country. Now, however, the South Staffordshire field is being rapidly exhausted, its produce having diminished about a half, while that of the South Wales and Scottish districts have increased, and they are now yielding nearly a million tons each. North Staffordshire, Shropshire, Derbyshire, and the West Riding of Yorkshire are the principal remaining districts yielding ores of this class, but their total produce is not more than that of South Staffordshire, although the iron of the West Riding is the best in Britain as regards quality.

There is yet another great iron district, yielding an ore belonging to a more recent formation than the carboniferous beds—namely, the lias. This deposit, which fifteen years ago was unknown, is already producing iron to the enormous amount of 400,000 tons per annum. It is the ironstone of the Cleveland Hills, in the north-east of Yorkshire, which, from its resemblance to common sandstone, passed unnoticed till 1847. About that time, isolated blocks of it, found on the sea-coast, were discovered to contain about 30 per cent. of iron. On further examination of the district, these were proved to be detached pieces of a massive bed, no less than 15 feet thick, which could be traced for many miles along the sides of the hills. Some idea of the value of this vast deposit of iron ore will be found in the fact, that the ironstone seams of the coal-measures seldom exceed 20, and are worked as low as 8 inches in thickness. Another mass of ironstone of great thickness, also belonging to the lias beds, has very recently been discovered in North Lincolnshire. In the oolite, too, beds of brown iron ore have been discovered in several counties, but chiefly in Northamptonshire, where it has been worked with so much spirit, that from 150,000 to 200,000 tons of ore per annum are now raised.

To those remarkable discoveries may be added that by Mr Rogers of Abercarn, who, after examining the position of the psilotic ore at the base of the carboniferous limestone in Belgium, searched the corresponding strata in South Wales, and curiously enough was rewarded with the discovery of a precisely similar bed at Cwm Noddi. The same gentleman, struck by the appearance of the sparry carbonates of iron in the Austrian and Prussian departments of the Exhibition of 1851, soon afterwards noticed veins of a like ore in the Devonian rocks of Somersetshire. In fact, the sources which have been discovered within the last fifteen years are already yielding a larger supply of iron than the total produce of any other European country except France.

Before proceeding to describe the manufacture of iron, we give two analyses of British ores: the first is by Mr J. Spiller, taken from a series published in

the *Memoirs of the Geological Survey*, and the second is by Dr Murray Thomson.

CLAY IRONSTONE, CHIEFLY A CARBONATE OF IRON, BLACK-BED MINE, LOWMOOR, YORKSHIRE.

It will be noticed that in the case of these ores the impurities are rather numerous. Nevertheless, the modes of preparing and smelting them are somewhat rude and simple, as the low price of iron will not permit of its ores being treated with the same care as the ores of lead, copper, tin, and some other metals.

Iron ore is still reduced in the south of Europe by the old and imperfect process of the Catalan forge, not unlike a common smith's forge. In Great Britain, however, as well as in all other countries where iron is largely smelted, the blast-furnace is now universally employed, by means of which the metal is obtained in the state of crude or cast iron. For the finer kinds of iron, charcoal is the fuel employed, because, unlike coal or coke, it contains no sulphuret of iron or other injurious ingredients. The Russian and Swedish furnaces smelt with charcoal, and on this, as much as on their pure ores, depends the high reputation of their iron. A solitary charcoal-furnace at Ulverstone in England, and another at Lorn in Scotland, are still working—the only relics of times past, when this was the only fuel employed.

As a preliminary process to the actual smelting in the blast-furnace, clay and blackband ironstones are generally roasted. This is accomplished by breaking the ore into small pieces, spreading it in open heaps on the ground, and mingling it more or less with small coal according to the nature of the ore. Blackband commonly contains enough of carbonaceous matter to burn without the addition of coal. The pile, which may contain from one to several thousand tons of ore, is lighted at the windward end, and burns gradually along, aided by occasional fires in the sides, till the whole heap has undergone calcination, the time required for this purpose being generally about a month. Sometimes the operation of roasting is performed in close kilns, instead of open heaps, a mode by which the ore is considered to be more uniformly roasted, and with considerably less fuel. By calcination, clay ironstone loses from 25 to 30, and blackband from 40 to 50 per cent. of its weight, the loss consisting

chiefly of carbonic acid and water. When roasted, the ore contains about 10 per cent. more of iron than it does in its raw state; and, moreover, it is reduced to the state of black oxide of iron and clay. It is now ready to be smelted.

The blast-furnace is generally built in the form of a truncated cone, with a massive square base. Internally, it is either barrel-shaped or in the form of a double cone, like two flower-pots placed mouth to mouth. The inside requires to be built of the most refractory firebrick. The external portion is either of common brick or stone, secured with iron binders; without this, the great heat would soon displace the most substantial brickwork. A good-sized blast-furnace measures about 30 feet across

the base, and is 50 or 60 feet in height. Three sides of the base have arched recesses for the pipes conveying the blast, and on the fourth there is a similar recess, in which are the openings for running off the metal and slag.

Fig. 1 is a sectional view of a hot blast-furnace, with the blowing engine and other appliances, which is taken, with some modification, from Mr Fairbairn's work on Iron. It may be well to state here that one engine usually supplies the blast to several furnaces. A is the body of furnace; B, the hearth, above which are placed the tuyeres, C; D is the tunnel-head, around which there is a gangway, for the workmen to have access to the feeding-doors at E. The blowing-engine is shewn at F. Air is

Fig. 1.—Hot Blast-furnace.

forced into the furnace by means of the blowing cylinder, G, from which it passes into the receiver, H, and thence along a pipe into the heating-oven, I. Here a large surface of pipe is exposed, in arch-shaped rows, to the fire, which heats the enclosed air to 600° F. and upwards—a heat sufficient to melt lead. At this temperature, it enters the lower part of the furnace by means of the tuyeres, C. From 5000 to 10,000 cubic feet of air is discharged into the furnace per minute.

The operation of smelting is thus performed: the roasted ore, coal, and lime (flux) are either hoisted, or, if the nature of the ground permits, moved along a platform or gangway to the gallery near the top of the furnace, and fed into it at intervals through the openings in the side. We may here state that the furnace is kept continually burning except when under repair. The materials are of course raised to a very high heat, and gradually fuse into a softened mass. The clay of the ironstone then unites with the lime to form a coarse glass, or slag; the oxide of iron at the same time gives up its oxygen to the fuel, and allows the metal itself to collect on the hearth at the bottom of the furnace, united with about 5 per cent. of carbon, which it takes from the fuel, forming the variety called cast iron. Every twelve, and sometimes every eight hours, the metal is run off from the furnace, by means of a tap-hole at the bottom of the hearth, into rows of parallel moulds, called pigs, which are formed in sand, hence the name 'pig iron.' The slag which floats on the melted iron is run off by an opening at the top of the hearth. If the furnace

is working well, the slag should be of a light-gray colour; a dark-brown or black colour shews that too much iron is passing into it.

The quantity of materials necessary to yield a ton of pig iron may be taken roundly as follows: 2 tons of calcined ironstone; 2 tons of coal, of which about 8 cwts. are required for the blowing-engine and hot-air pipes; and from 12 to 16 cwts. of broken limestone. The weekly produce of a single blast-furnace varies extremely—50, 100, and even the enormous quantity of 600 tons, is now occasionally obtained. The last amount, however, can only be procured from hæmatite ore.

There are about six varieties of cast iron, but it will be sufficient to describe three of them. No. 1 has a large and clear grain, is of a dark-gray colour, and contains its carbon for the most part mechanically diffused through its substance. It brings the highest price, is very fusible, and therefore largely used for castings, especially for those of a fine description. No. 4 has a much closer grain, is of a light, though dull gray colour, and contains its carbon partly diffused through it and partly in chemical combination. It is generally employed for conversion into malleable iron. No. 6 is called white or silvery iron, and has all its carbon chemically combined with the metal. It is not in much request, being usually produced when the furnaces are working badly. The qualities of the intermediate numbers differ only in degree from those described; thus, No. 2 is rather less gray, crystalline, and fusible than No. 1, and so on.

The hot-blast process which has been described

above, was introduced, in 1830, by Mr James B. Neilson, of Glasgow, and has been productive of very remarkable effects on the iron trade. The whole invention consists in simply heating the air blown into the furnace, and yet the saving of fuel by this is about one half, and the production of iron, since it came into use, has increased at least fourfold. The 'cold blast' is still, however, to a limited extent employed, and produces the strongest iron, though necessarily at a much higher cost. The difference in quality appears to be caused by the greater heat in the case of the hot blast facilitating the passage of impurities into the iron.

We pass now to the consideration of malleable or wrought iron. It differs from cast iron in containing no carbon. The great object in the processes adopted for the conversion of cast into malleable iron, accordingly, is to deprive the former of its carbon. But it is also very desirable to get rid of deleterious ingredients, such as sulphur and phosphorus, which are generally present in minute quantities in the cast iron. The ordinary processes for the manufacture of malleable iron are *refining*, *puddling*, *shingling* or *hammering*, and *rolling*. The refinery is shewn in section in fig. 2. It consists of a flat hearth, A, covered with sand or loam, and surrounded with metal troughs, B, through which a stream of water is constantly flowing, to keep the

Fig. 2.—Refinery.

sides from melting. C are the tuyeres in connection with the blowing-engine. The cast iron is melted with coke on the hearth, and a blast of air kept blowing over it, which causes its carbon to unite with the oxygen of the air, and pass off as carbonic oxide gas. Oxygen also unites with silicon to form silica, and with iron to form the oxide. The silica of the sand uniting with oxide of iron, produces a slag of silicate of iron. The refined metal is finally run out in cakes on a bed of cast iron, kept cool by a stream of water. Being only partially decarbonised by this process, it is next broken up for the puddling furnace. About 10 per cent. of iron is lost in the refinery.

Fig. 3 shews a puddling furnace in longitudinal section. A represents the hearth; F, the grate or fireplace; and C, the chimney, which has a damper at the summit, to regulate the draught. The grate is separated from the hearth by means of a bridge, D, which prevents the direct contact of the fuel with the iron. In the operation of puddling, about four cwts. of refined iron are placed on the hearth, and the heat raised till it is melted; the metal is then thoroughly stirred with an iron rod, so as to expose fresh surfaces to the oxygen of the air which

is flowing over its surface. In this way, the carbon and other impurities are burned off, the fusibility of the iron is diminished, and ultimately it becomes

Fig. 3.—Puddling Furnace.

a spongy, granular mass. The whole charge of the furnace is now divided and formed into 'balls,' weighing from 80 to 110 lbs. each, which are then raised to a welding heat, and taken singly to be shingled.

Instead of being both refined and puddled, pig iron is now largely decarbonised by means of the single process of 'boiling.' By this method, which is very similar to puddling, gray pig iron is deprived of nearly the whole of its carbon in the puddling furnace. In this way the metal requires to be raised to a higher heat and more frequently stirred than in ordinary puddling, so as to expedite the escape of the larger amount of carbon; which has the effect of causing the metal to boil or bubble as the gases become disengaged. The boiling process requires about 24 cwts. of pig to produce a ton of bar iron, while the two processes of refining and puddling require 26 cwts. or thereby for a ton of similar bar iron. There is therefore least loss when the single operation of boiling is adopted, but, on the other hand, with it there is more tear and wear of the furnaces, and also more manual labour required.

The process immediately following the puddling or boiling is called 'shingling,' and consists in hammering the puddled balls with either the helve or steam-hammer, or in passing them through a *squeezer* till they are sufficiently consolidated, and the greater part of the cinders forced out. Fig. 4 represents Mr Nasmyth's steam-hammer (see HAMMER), which is now largely used in shingling as well as in heavy forgings. Puddled balls which have undergone shingling are called *slabs* or *blooms*. These are next passed through heavy rollers termed 'forge' or 'puddle-bar rolls,' and reduced to the form of a flat bar. For all the better kinds of iron, the bars thus treated are cut into short lengths, piled together, reheated in a furnace, and again passed through the forge rolls. Once more the iron is cut, piled, and heated, and then passed through the 'mill-train,' consisting of what are termed the 'bolting' or 'rough rolls,' and finally through the 'finishing rolls.' Both these sets of rolls in the case of plates and sheets are plain, but in the case of bars are grooved, so as to form them into the required shape, such as flat, square, round, octagonal, or T-shaped iron. Fig. 5 indicates the arrangement and appearance of the 'rough' and 'finishing rolls' of a bar mill-train.

There is still another important variety of iron, viz., *Steel*, the manufacture of which remains to be described. Steel is essentially iron containing from $\frac{1}{2}$ to $1\frac{1}{2}$ per cent. of carbon. Remembering that cast iron contains some 5 per cent. of carbon, the uninitiated reader will be a little astonished to learn that, in this country at least, most of the steel is made from malleable iron, seeing that, at some stage

IRON.

of the conversion of cast into wrought iron, the metal must have passed into the condition of steel. ing malleable iron into steel is called *cementation*. See BLISTERED STEEL.

Fig. 4.—Steam-hammer.

Nevertheless, our manufacturers have hitherto thought it best to take the whole of the carbon out of the cast iron, and then restore a certain portion by heating with charcoal. This process of convert-

ing melted iron a given quantity of *spiegeleisen* (a peculiar kind of cast iron), containing a known percentage of carbon; and so steel may be produced with any required proportion of carbon. The *spiegeleisen*

Fig. 5.—Rough and Finishing Rolls.

dissolves in the iron like sugar in water, rendering the metal more fusible and very liquid. Unfortunately, when pig iron containing phosphorus is operated on in this way, this injurious element is

not separated in a sensible degree, as is the case in the process of puddling; so that only those varieties of iron which are free from phosphorus, such as hæmatite pigs, &c., can be advantageously used. Short as is the time since Mr Bessemer took out his patent, his process has been already put into practice on a large scale in England, France, Belgium, Sweden, and India.

We will now take a glance at the properties of each of these three kinds of iron, and the purposes to which it is chiefly applied. Cast iron, as the crudest, cheapest, and most fusible, is used for the heavy portions of engineering work, such as bed-plates for machines, cylinders, columns, cisterns, low-pressure boilers, water and gas pipes, rollers, girders, and the like. A large quantity is consumed in the manufacture of 'hollow-ware,' which includes pots, pans, and other cooking-vessels. For ornamental objects, again, it is almost exclusively used, because here its property of being readily cast into moulds gives it a great advantage on the score of cheapness. Thus, fountains, statues, vases, gates, balustrades, garden-seats, candelabra, stoves, fenders, and many smaller decorated articles, even to the minuteness of a watchguard and breastpin, are almost invariably made of cast iron.

Malleable iron differs considerably in its properties from cast iron. The latter is practically incompressible, but it can be comparatively easily torn asunder. Malleable iron, on the contrary, possesses great tenacity; it is, moreover, very malleable and ductile, especially at a high temperature, so that it can be rolled into sheets as thin as paper, or drawn into the finest wire. Further, it possesses the valuable property of welding, that is, two pieces can be completely united together by hammering at a white heat. Malleable iron is largely employed for the innumerable variety of articles included under the general term 'hardware,' such as locks, keys, hinges, bolts, nails, screws, wirework, and the so-called tin-plate, which is merely sheet iron dipped in melted tin. It is the mainstay of the railways and the electric telegraph, and is fast displacing timber as a material for bridges and steam-ships. A high interest is at the present time attached to the manufacture of rolled armour-plates for war-ships. Several were shewn in the late International Exhibition (1862) of large size; one of them measured 21 feet 3 inches long, 6 feet 3 inches wide, and 5½ inches thick, and weighed about 13 tons. The possibility of rolling such great masses of iron would, a few years back, have exceeded belief.

Steel possesses several valuable properties which do not belong to either cast or wrought iron. It is harder, denser, and whiter in colour. It is also more elastic, takes a higher polish, and rusts less easily. But its most characteristic property consists in its admitting of being tempered at will to any degree of hardness. If, for instance, a piece of steel be heated to redness and plunged into water, it is made hard and brittle; but if it be again heated and slowly cooled, its original softness is restored. By gently reheating the steel, it will acquire a gradation of tints indicating various degrees of hardness, beginning with pale straw colour, and passing successively to full yellow, brown, purple, and finally to blue. The straw colour is the result of a temperature of about 440°, and the blue of about 570° F., the former being the hardest, and the latter the softest tempering.

The chief use of steel has hitherto been in the manufacture of files, edge-tools, and cutlery, for which its peculiar properties render it so admirably adapted. A large quantity is also consumed in the manufacture of needles and steel-pens. But the use of steel is no longer confined to the production

of these comparatively small articles. By means of improved machinery and processes, steel is at present manufactured on a scale that was little dreamed of a few years ago, so that such objects as field-guns, railway-axes, tires, boiler-plates, and the like are now being made of this material. The superior tensile strength of steel, which is about double that of malleable iron, gives it a great advantage where lightness is required.

Perhaps few things illustrate more strikingly than iron the great difference in value that exists between the same material according to the quality and form in which it is sent into the market. Thus, the average price of British pig-iron for 1861 was £3, 2s. per ton, but some of it of very superior quality sold as high as £9 per ton. Malleable iron in the form of bars may be had, while we write, as low as £6 per ton; Swedish bars are worth £15 per ton, and Lowmoor bars (the finest English iron) cost about £18. Superior sheet iron sells about £20, and fine wire for about £40 per ton. Steel, again, ranges from, say, £30 per ton for blister steel, and £60 per ton for superior shear and cast steel in bars or rods, up to a considerably higher price for the finest kinds.

With reference to the statistics of iron, the present (1863) is a favourable time for comparing the produce of other countries with that of Great Britain, as authentic returns of their yield for last year have been prepared by several foreign governments for the International Exhibition. The following statement, which has been chiefly made up from the Jury Reports of the International Exhibition of 1862, shews the production of pig iron in the principal countries for 1861: Great Britain, 3,712,390 tons; France, 900,000 tons; Prussia, 397,400 tons; Austria, 310,077 tons; Belgium, 319,844 tons; Russia, 250,000 (?) tons; Sweden, 215,000 tons; Spain, 50,000 tons; Italy, 38,000 tons; United States (1855), 750,000 tons. Great Britain, France, Belgium, and Prussia have nearly doubled their annual yield within the last twelve years, and the produce of the British Islands is probably now about equal to that of all other countries put together.

3. Iron in its Physiological and Therapeutic Relations.—Iron is an essential constituent of the colouring matter of the blood-corpuscles of all vertebrate animals; and according to the best authorities, 1 part by weight of iron is found in 230 parts of blood-corpuscles, and the total quantity of this metal in the blood of a man weighing 140 pounds is about 38 grains. It is the presence of iron in the blood that communicates to the ashes of that fluid their reddish-brown colour, the iron being found in them as the peroxide. The ashes of the hair, of birds' feathers, of the contents of eggs, of the gastric juice, of milk, and indeed of most animal fluids, contain traces of this metal.

Nothing is known with certainty regarding the chemical condition of the iron in the animal body, that is to say, whether it is present as a protoxide, a peroxide, &c. It is introduced into the system with the food and drink, and any excess beyond what is required is discharged with the excrements. When an insufficient quantity is contained in the nutriment, chalybeate medicines become necessary. The iron that is set free within the system by the constant disintegration of blood-corpuscles is carried out of the system partly by the urine, partly by the colouring matter of the bile, which is highly ferruginous, and probably is in part eliminated by the hair. The exact part which the iron plays in the body is uncertain; but it is most probable that the power which the blood-corpuscles possess as oxygen carriers is mainly due to the presence of this substance.

IRON BARK TREE—IRON MASK.

When from any cause the blood-corpuscles are reduced in number, the state known as *Anæmia* (q. v.) is produced, which is accompanied by general weakness and deranged functions. In this condition of the system the iron compounds are of incomparably more service than any other remedies. In Chlorosis (q. v.), which is closely allied to anæmia, in amenorrhœa, and in certain painful nervous affections, the salts of iron are of especial service. The forms in which iron may be prescribed are very numerous, and vary considerably in their utility, according to the readiness with which they get taken up into the blood. Amongst the most generally used ferruginous medicines may be mentioned the tincture of the sesquichloride, the saccharine carbonate, the compound iron mixture (containing the carbonate), the sulphate, the potassio-tartrate, several citrates (especially the citrate of iron and quinine), &c. A course of Chalybeate Waters (q. v.) may often be prescribed with great advantage, when the patient cannot bear the administration of iron in its ordinary medicinal form.

IRON BARK TREE, a name given in Australia to certain species of *Eucalyptus* (q. v.), and particularly *E. resinifera*, on account of the extreme hardness of the bark. These trees attain a height of 80 or 100 feet, and a circumference near the base of 20 to 25 feet. The timber is very valuable for ship-building, and for other purposes in which hardness and durability are required. It withstands vicissitudes of weather for a great number of years without injury, or even underground remains uninjured for 45 years or more. (Bennett's *Gatherings of a Naturalist in Australasia*, 1860.)

IRON CROSS, a Prussian order of knighthood, instituted, on March 10, 1813, by Frederick William III., and conferred for distinguished services in the war which was then being carried on. The decoration is an iron cross with silver mounting. The grand cross, a cross of double the size, was presented exclusively for the gaining of a decisive battle, or the capture or brave defence of a fortress.

IRON CROWN, the crown of the ancient Longobardian kings, given, according to an un-authenticated tradition, by Pope Gregory the Great to Queen Theodolinda, and preserved till lately in the sacristy of the cathedral of Monza. Henry of Luxemburg, in 1311, is the first German emperor who is known with certainty to have worn it. In 1859, it was removed by the Austrians to Mantua, and is now in Vienna. The outer part of the crown consists of a golden hoop, with enamelled flowers and precious stones, in form like an ancient diadem, within which is a thin plate or fillet of iron, which is declared by a tradition long opposed by the church at Milan, but adopted by the congregation 'dei sacri riti' at Rome, to have been hammered from one of the nails of the true cross; hence the crown is also called *il sacro chiodo*. When Napoleon I. was elected king of Italy in 1805, he took the relic from the *tesoro* of Monza, where it had remained from the time of Charles V., and crowned himself with it, disdaining to receive it from the hands of a bishop; and at the same time, he founded an order of knighthood, taking its name from the iron crown. The reigning kings of Italy were to be grandmasters of the order; and the members of the order, at first 620 in number, and afterwards 985, were either dignitaries, commanders, or knights. The badge was the iron crown, and in the middle, the French eagle with raised wings. Round the ring of the crown was the motto, *Dio me la diede, guai a chi la tocca* ('God gave it to me, woe to him who touches it')—the words used by Napoleon when placing the crown on his head;

and the front exhibited the effigy of Napoleon. The order—forgotten after the fall of Napoleon—was restored and re-modelled in 1816 by the Emperor Francis I., who gave it the name of the Austrian Order of the Iron Crown, limited its members of

Iron Crown of Italy.

the 1st class to 20, of the 2d to 30, and the 3d to 50, exclusive of the princes of the imperial house. He introduced a new decoration in place of the former one, consisting of a gold crown of the same form with the iron crown, on which is placed the Austrian eagle on both sides, bearing upon the obverse a blue escutcheon upon the breast, with the letter F (Francis) in it; and on the reverse, the year 1816. The knights of the 1st class have, in addition, a silver star embroidered on the left breast, with the iron crown in its centre, and round its blue edge the words *Avita et aucta*. There is also a tricoloured costume, consisting of a yellow under-garment, white stockings and shoes, and a blue velvet cap and mantle.

IRON MASK, THE MAN WITH THE. The story of the prisoner, so called, confined in the Bastille and other prisons in the reign of Louis XIV., has long kept up a romantic interest. The first notice of him was given in a work entitled *Mémoires Secrets pour servir à l'Histoire de Perse* (Amst. 1745—1746). According to this writer, he was the Duke of Vermandois, a natural son of Louis XIV. and De la Vallière, who, having given a box on the ear to his half-brother, the grand dauphin, had to expiate it with imprisonment for life. The assertion was without foundation, for the Duke of Vermandois died in camp in 1683; but the confidence with which it was made caused a deep sensation, and the romance of Mouhy, *L'Homme au Masque de Fer*, which immediately followed (Hague, 1746), was read with all the more avidity that it was prohibited. Voltaire, in his *Siecle de Louis XIV.*, treats the anecdote historically. According to him, the prisoner was young, and of a noble figure. In journeying from one prison to another, he wore a mask, and was at last transferred to the Bastille, where he was treated with great distinction; and so on.

In the meantime, an endless variety of hypotheses were formed on the subject. Some Dutch writers asserted that the prisoner was a young foreign nobleman, the chamberlain of Queen Anne, and the real father of Louis XIV. Lagrange-Chancel attempted to prove, in *L'Année Littéraire* for 1759, that the Mask was no other than the Duke of Beaufort, the *King of the Markets*, as he was called,

a supposition conclusively set aside by Sainte-Aulaire in his *History of the Fronde*.

The first authentic information with regard to the Iron Mask was given by the Jesuit Griffet, who acted for nine years as confessor in the Bastille, in his *Traité des différentes Sortes de Preuves qui servent à établir la Vérité dans l'Histoire* (Liège, 1769). He brought forward the MS. Journal of Dujonca, the lieutenant of the Bastille, according to which Saint-Mars arrived, on the 18th September 1698, from the Isle de Sainte-Marguerite, bringing with him in a litter a prisoner whom he had already had in custody at Pignerol. The prisoner's name was not mentioned, and his face was always kept concealed by a mask of black velvet. The journal mentions his death on 19th November 1703, and that he was buried in the cemetery of St Paul. This is confirmed by the register of burials for the parish of St Paul's, where the prisoner is mentioned under the name of Marchiali. Griffet himself inclines to the supposition advanced in the *Mémoires Secrets*.

After long silence, Voltaire returned to the subject in his *Essai sur les Mœurs*, but he brought forward nothing new. In the seventh edition of the *Dictionnaire Philosophique*, he related the story anew, under the head *Anna*, corrected his errors as to time from the journal of Dujonca, and concluded with the assurance that he knew more about the matter than Griffet, but chose, as a Frenchman, to be silent. An addition to the article, apparently by the editor of the work, freely states the opinion that the Mask was an elder brother of Louis XIV. The writer makes Anne of Austria to have had this son by a favourite, and being thus undeceived as to her supposed barrenness, to have brought about a meeting with her husband, and in consequence born Louis XIV. Louis is held to have first learned the existence of this brother when he came of age, and to have put him in confinement, to guard against any possible unpleasant consequences. Linguet, in the *Bastille Dévoilée* ('The Bastille Exposed'), ascribes this paternity to the Duke of Buckingham. Saint-Michel published a book in 1790, in which he relates the story of the unfortunate being, and points to a secret marriage between Queen Anne and Cardinal Mazarin. What is remarkable is, that the court continued to manifest an interest in the matter, and took every means to keep the identity of the prisoner in the dark. When the Bastille fell, the prisoner's room was eagerly searched, and also the prison register; but all inquiry was vain. The Abbé Soulavie, who published *Mémoires de Maréchal Richelieu* (Lond. and Par. 1790), tries to make out from a document written by the tutor of that unfortunate prince, that the Iron Mask was a twin-brother of Louis XIV. A prophecy had announced disaster to the royal family from a double birth, and to avoid this, Louis XIII. had caused the last born of the twins to be brought up in secret. Louis XIV. learned of his brother's existence only after the death of Mazarin, and that brother having discovered his relation to the king by means of a portrait, was subjected to perpetual imprisonment. This view of the matter was that almost universally prevalent till the time of the Revolution. It is also followed in Zschokke's German tragedy, and in Fournier's drama, founded on the story.

The first conjecture of what seems the truth is contained in a letter dated 1770, written by a Baron d'Heiss to the *Journal Encyclopédique*. The same is repeated by Louis Dutens in his *Intercepted Correspondence* (1789), who declares that there is no point of history better established than the fact that the prisoner with the Iron Mask was a minister

of the Duke of Mantua. This minister, Count Matthioli, had pledged himself to Louis XIV. to urge his master the duke to deliver up to the French the fortress of Casale, which gave access to the whole of Lombardy. Though largely bribed to maintain the French interests, he began to betray them; and Louis XIV., having got conclusive proofs of the treachery, contrived to have Matthioli lured to the French frontier, secretly arrested, 2d May 1679, and conveyed to the fortress of Pignerol, which was his first prison. The conclusion of D'Heiss and Dutens, that Matthioli was the Iron Mask, though acute, was only a conjecture. But the documents since discovered and published by M. Roux-Fazillac in his *Recherches historiques et critiques sur l'Homme au Masque de Fer* (Par. 1800), and by M. Delort in his *Histoire de l'Homme au Masque de Fer* (Par. 1825), leave little doubt on the subject. The reason why so much pains was taken to preserve the secret seems to have been that Matthioli being a minister plenipotentiary at the time, his seizure was a flagrant violation of the law of nations, which it was safer to be able to deny than to attempt to justify; and the denial once made, the honour of the court was involved in upholding it. See *The True History of the Iron Mask*, by A. Ellis (Lond. 1826); *Quarterly Review*, vol. 34; *Chambers's Tracts*, new edition, No. 70.

IRONMONGERY, a term applied to the small manufactures of iron or hardware kept for general sale in shops.

IRONS, otherwise called **BILBOES**, are shackles of iron into which the ankles of a prisoner are fixed, and which slide on a long iron bar. Refractory sailors and soldiers, who evince violent behaviour, and become unmanageable, are commonly put in irons, several being placed side by side along the same bar. In cases of extreme violence, the wrists may be similarly treated, but instances of this latter punishment are rare. The punishment of 'putting in irons' is more common in the navy than in the army.

IRONWOOD, a name bestowed in different countries on the timber of different trees, on account of its great hardness and heaviness.—*Metrosideros vera* belongs to the natural order *Myrtaceæ*, and is a native of Java and other eastern islands. It has ovato-lanceolate, shortly stalked, smooth, sharp-pointed leaves; and axillary, many-flowered, stalked cymes. Its wood is much valued by the Chinese and Japanese for making rudders, anchors, &c., and is imported into Britain in small quantities under the name of Ironwood. The bark is used in Japan as a remedy for diarrhoea and mucous discharges.—*Mesua ferrea*, a tree of the natural order *Guttifera*, is a native of the East Indies, and is planted near Buddhist temples for the sake of its fragrant flowers, with which the images of Buddha are decorated. The flowers resemble small white roses, and contrast singularly with the deep crimson buds and shoots. The timber, known as *I*, is very hard, as is that of *M. speciosa*, another tree of the same genus and region.—The wood of *Vepria undulata*, of the order *Diosmaceæ*, is called White *I*. at the Cape of Good Hope. It is very hard and tough, and is chiefly used for axles, ploughs, and other agricultural implements.—The wood of *Olea laurifolia*, a species of olive, is called Black *I*. in the same country, and is used for the same purposes, and for furniture.

IRONY (Gr. *eirōneia*, from *eirōn*, a dissembler) is the name given to that peculiar style of thought and expression by which words are made to convey a meaning exactly opposed to their literal sense. When skilfully used, irony is one of the most crushing

and irresistible figures of rhetoric. Instances will readily occur to every reader of history and literature. One of the most celebrated is that recorded in Scripture, where Elijah taunts the discomfited priests of Baal on Mount Carmel. The great master of irony in ancient times was Socrates, who, as has been happily said, raised it to the dignity of a philosophic method.

IROQUOIS. See **INDIANS**.

IRRATIONAL NUMBERS, a term applied to those roots of numbers which cannot be accurately expressed by a finite number of figures. For instance, $\sqrt{2}$ is an irrational number. If the diameter of a circle is one foot, the circumference is an irrational number. Irrational numbers have been defined to be numbers which are incommensurable with unity. They are also commonly termed **Surds**.

IRRAWADI (said to mean, like Mississippi, 'father of waters'), the great river of Farther India, is believed to rise in Tibet, near lat. 28° N., and long. 98° E., terminating in lat. $16^{\circ} 20'$ N., and long. 96° E. Its course is pretty nearly due south, and has been estimated at 1200 miles in length. After receiving the Ning-thee, the Mogonny, the Bhamo, and the Lungtchuen, it begins to form its delta about 17° N., which, between the Rangoon on the east and the Bassein on the west, comprises 10,000 square miles of forest and pasturage, curiously intersected by an inextricable network of the smaller branches of the stream. With regard to facilities of communication, the I. appears to be decidedly superior to the Indus and the Ganges, being navigable even at low water, for vessels of 200 tons, as far as Ava, which is 400 miles from the sea, and for canoes as far as Bhamo, which is 180 miles higher up. The I. successively traverses China, Burmah, and Pegu. As the region last mentioned, forming the lowest part of its basin, is a province of British India, the I., as a whole, may be said to be virtually under the control of England. In both our Burmese wars, it constituted the line of advance for our armies.

IRREDUCIBLE CASE occurs in the solution of Cubic Equations (q. v.) by Cardan's method when p is negative, and $\frac{p^3}{27}$ greater than $\frac{q^2}{4}$ (abstracting from the sign). These conditions render $\sqrt{\left(\frac{q^2}{4} + \frac{p^3}{27}\right)}$ an imaginary quantity, and thus Cardan's formula fails in its application. The difficulty is got over by the aid of trigonometry.

IRRELEVANT, a term used in Scotch law to denote that what is said or put forward by an opponent in an action has no bearing on the subject, even if it were true. The corresponding term, in English law, is that the pleading containing the irrelevant matter is demurrable.

IRRIGATION (Lat. watering), a method of producing or increasing fertility in soils by an artificial supply of water, or by inundating them at stated periods. Irrigation was probably first resorted to in countries where much of the land must otherwise have remained barren from drought, as in Egypt, where it was extensively practised nearly 2000 years before Christ, and where great systems of canals and artificial lakes were formed for the purpose. Extensive works, intended for the irrigation of large districts, existed in times of remote antiquity in Mesopotamia, Persia, India, China, and some other parts of the East; and in such of these countries as have not entirely lost their ancient prosperity, such works still exist. In many parts of the world, the necessity of irrigation, at least at certain seasons of the year, is so strongly felt, that

the agriculture even of comparatively rude tribes depends on the facility with which it can be accomplished. Some plants also require a very abundant supply of water, and irrigation has become general where their cultivation prevails. This is particularly the case with rice, the principal grain of great part of Asia. Irrigation is supposed to have been introduced into Britain by the Romans, but was very little practised till the beginning of the present century. In Europe, irrigation prevails chiefly in the south, where it was extensively practised by the Romans, from whom it was adopted by the Lombards; and it is most extensively practised in Lombardy, and in some parts of Spain and of the south of France, so that the great plains and valleys of the Po, Adige, Tagus, Douro, and other rivers, are almost entirely subjected to a systematic irrigation, which prodigiously increases their fertility. The extent of irrigated land in the valley of the Po is estimated at 1,600,000 acres, and the increase of rental thus caused at £830,000.

Irrigation in Britain, and in most parts of Europe, except Lombardy, is almost exclusively employed for the purpose of increasing the produce of grass by converting the land into water-meadows. The value of it, even for this one purpose, does not seem to be sufficiently understood. Poor heaths have been converted into luxuriant meadows by means of irrigation alone. But in the countries in which irrigation is most extensively practised, the production of all crops depends on it.

The irrigation of land with the sewage water of towns is, under another name, the application of liquid manure. In no small degree the water of rivers and of springs depends on its organic and mineral constituents for its fertilising properties, so that the application of it is not in principle different from that of liquid manure; but it must be borne in mind that the mere abundance of water itself is of great importance for many of the most valuable plants, as the most nutritious substances brought into contact with their roots are of no use to them unless in a state of solution; whilst it is an additional recommendation of irrigation, that the supply of water most favourable to the growth of many valuable plants, is destructive of some which in many places naturally encumber the soil, as heath, broom, &c. The water which is used for irrigation should be free from mud and such impurities as mechanically clog the pores of leaves, or cover up the hearts of plants, and interfere with their growth. Irrigation is far from being so extensively practised in Great Britain as seems desirable. The extent of water-meadows in England is stated to be not more than 100,000 acres. They are mostly confined to the west and south of England. Individual farms, irrigated with sewage water, are to be met with in Nottinghamshire, Staffordshire, Lancashire, Cheshire, and in one or two counties in Wales. The most successful instance, however, of sewage irrigation in Great Britain is to be found near Edinburgh, where an extensive tract of meadows, lying between Portobello and Leith, yield a rent of £20 to £40 an acre; the grass is cut from three to five times a year, and as much as ten tons an acre have been obtained at a cutting. See **SEWAGE, MANURE**.

The method of forming and laying out water-meadows will be easily gathered from the following sketch of the different species of irrigation as practised in this country.

1. *Bed-work Irrigation*.—This method can only be conveniently applied to ground which is nearly level. It consists in laying out the ground into sloping beds or ridges, from 30 to 40 feet wide, according to the nature of the soil, having their

upper ends lying in a gentle slope from one side to the other of the meadow. Along the upper ends of the beds is drawn the drain or *conductor*, which brings the water from the reservoir or river, as the case may be; and this conductor must be tapered off towards its further end, in order that the diminished supply of water may still overflow. From this conductor, small drains, called *feeders*, are led down along the crown of each ridge. In the lowest part of the meadow, a main-drain, which must be made nearly as large as the conductor, is cut across the lower ends of the beds, and the water, after having served the purpose of irrigation, is led into it, by means of small drains cut in the furrows. The feeders should, like the conductor, taper towards their further extremity, both for the purpose of retarding the velocity of the water, and of preserving a continual overflow along their whole length. On the contrary, the small drains should gradually widen towards their lower extremity, where they meet the main-drain. The dimensions and inclination of the conductor and feeders must be so regulated to the water-supply, that the beds can be wholly laid under water to the depth of about one inch. The expense of bed-work irrigation ranges from £20 to £40 per acre.

2. *Catch-work Irrigation* differs materially from the former; it can be applied to land whether level or not, costs only £4 per acre, and, in the opinion of many, is quite as effective. The conductor formed as before is led along the highest side of the field, then with the aid of a level, a succession of perfectly level gutters (which, of course, must be winding), are drawn across the field in the same direction as the conductor, and not more than ten yards from each other; these are crossed by feeders running from the conductor to the lowest side of the field, thus forming a kind of checkwork. The main-drain is made as before, and the feeders, which taper towards their lower extremity, serve for small drains. This plan is more effective than the former, when the supply of water is limited; and as it can be applied to a hillside as well as to a level field, its application is rapidly extending.

3. *Subterraneous Irrigation* is only applicable to perfectly level fields, and consists, first, of ditches being formed all round the sides. At right angles to these, drains or conduits are drawn across the field in parallel lines. When the land is to be irrigated, water is let into the ditches, and thence to the cross-drains, till it rises to the level of the surface; and when the ground is to be laid dry, the side-ditches are emptied by sluices. The bottom of the ditches is below the level of that of the cross-drains, so that they serve both as conductor and main-drain.

The first two methods of irrigation are only applied to pasture-lands, and the third to fens and drained morasses, which are apt to become parched in summer; the last method would be very valuable for land under green crop in cases of drought.

The management of water-meadows requires great skill and care, but we can only here mention the chief points to be attended to, which are these: the water, if limited in quantity, must be confined to a part which it can effectually irrigate; too much water or too rapid a flow tends to wash away the soil; the meadow may be kept under water for a fortnight at a time, in November, but the time should be diminished till April or May, when regular watering should cease; after the grass is cut or eaten down, the water may be let on for a few days; and it is necessary that between the times of watering the land should be laid perfectly dry. Special precautions are necessary in

winter, to guard against any bad effects resulting from frost, &c.

IRRITABILITY in Plants, a term employed to designate phenomena very interesting and curious, but than which none connected with vegetable life are more imperfectly understood. Such are the phenomena of what is usually called the *Sleep* (q. v.) of plants; the motion of the Spores (q. v.) of many cryptogamic plants by means of cilia; the motions of *Oscillatoria*, *Diatomacea*, and others of the lowest *Algae*; the successive approaches of the stamens of *Parnassia palustris* to the pistil; the movements of the leaves of the *Moving Plant* (q. v.) of India; and those caused by agitation or by the touch of a foreign body in the leaves of *Sensitive Plants* (q. v.), of the *Dionaea* or Venus's Fly-trap, &c., in the stamens of the Barberry, *Schizanthus*, &c., and in the stigmas of *Mimulus*, &c. Many explanations have been proposed of these phenomena, but none satisfactory. Of the existence of anything analogous to the nervous system of animals, which has been imagined, there is not the slightest proof, closely as some of the phenomena resemble those of animal life. The explanations which have been proposed are no better than mere guesses. See MUSCLES.

IRRITANCY (Lat. *irritus*, of no effect), a term in Scotch law to denote something in the nature of neglect or injury which destroys or makes void an existing right; in English law it is called *Forfeiture*. Thus, there is the irritancy of a feufright from non-payment of the duty for two years. —**IRRITANT CLAUSE**, in a Scotch entail, is a clause which makes void certain prohibited acts of the heir of entail, such as selling the property.

IRRITATION is the term applied to any morbid excitement of the vital actions not amounting to inflammation; and it is often, but not always a cause of that condition.

In cases of irritation, remarkable sympathetic symptoms are often observed. Thus, irritation of a calculus occasions intense sickness and vomiting. But of all sources of sympathetic morbid affections of this class, irritation of the stomach and intestines is at once the most common and the most important. The ordinary sick headache is the most frequent form of this sympathetic affection; but in certain morbid conditions, and especially in the puerperal state, the symptoms may be such as pretty closely to resemble those of acute inflammation of the peritoneum, the heart, the pleura, or the membranes of the brain. It is to Dr Marshall Hall that the credit is mainly due of pointing out those cases in which irritation so closely resembles inflammation. He has shewn that blood-letting affords a certain means of diagnosis in these cases. In true inflammation, 30 or 40 ounces of blood may be taken before there are any symptoms of faintness; while in irritation, the loss of a very few ounces (nine or ten) of blood will cause the most decided syncope.

IRTI'SH, a river of Siberia, an affluent of the Obi (q. v.).

IRVINE, a royal and parliamentary burgh, seaport, and market-town of the county of Ayr, Scotland, is situated on both banks, but principally on an eminence on the right bank of the river Irvine, which is here crossed by a handsome stone bridge, about a mile above the embouchure of the river in the Firth of Clyde. It is 11 miles north of Ayr, and 29 miles south-west of Glasgow by railway. The harbour has now become so much sanded up, as only to admit vessels of about 100 tons burden. The 'Academy' is one of the most flourishing educational institutions in the west of Scotland. Ship-building, and the manufacture of book-muslins, jaconets and checks, are among the branches of

industry. Formerly, many women were employed in sewing muslins. The shipping trade for vessels under 100 tons burden is considerable. I. unites with Ayr, Campbeltown, Oban, and Inverary in sending a member to parl. Pop. (1871) 6866.

IRVING, WASHINGTON, a distinguished American author, was born in the city of New York, April 3, 1783. He was the youngest son of William Irving, who had emigrated from Scotland, and settled in New York as a merchant before the Revolution. Washington I., at the age of 16, entered a law office; but he profited largely by his father's well-stocked library, Chaucer and Spenser being his favourite authors. New York, at this period, was a small town of about 50,000 inhabitants, many of whom were descendants of the original Dutch settlers, having quaint manners and customs, of which I. was a curious observer. In 1804, with the excuse of a tendency to pulmonary disease, he visited, and travelled extensively in Europe; returned to New York in 1807, and contributed a series of genial and humorous essays to a periodical called *Salmagundi*. In 1809, he wrote *A History of New York, from the Beginning of the World to the End of the Dutch Dynasty*, by Diedrick Knickerbocker, a burlesque chronicle written in so quiet a vein of humour, that it has sometimes been taken for a veritable history.

Having no inclination for law, he engaged in commerce with his brothers as a silent partner, but devoted his time to literature, and in 1813, edited the *Analectic Magazine*, in Philadelphia. At the close of the war in 1815, he visited England, where he was warmly welcomed by Campbell, whose biography he had formerly written, and was introduced by him to Walter Scott. While he was enjoying his English visit, his commercial house failed, and he was suddenly reduced to poverty, and the necessity of writing for his bread. The *Sketch-book*, portions of which had appeared in New York, was offered to Murray, and afterwards to Constable, but was refused by both of these celebrated publishers. After an unsuccessful attempt of the author to publish it on his own account, Murray, on Scott's recommendation, took the *Sketch-book*, paying £200 for the copyright, which he afterwards increased to £400. It had a charm in its beauty and freshness, and was a surprise as the work of an American, and was therefore received with great favour. I. went to Paris, and in 1822 wrote *Bracebridge Hall*, and in 1824 the *Tales of a Traveller*. He was then invited by Everett, the American ambassador to Spain, to accompany him to Madrid, to translate documents connected with the life of Columbus. With these materials he wrote his *History of the Life and Voyages of Columbus* (1828); *Voyages of the Companions of Columbus*; *The Conquest of Granada*; *The Alhambra* (1832), a portion of which was written in the ancient palace of the Moorish kings; *Legends of the Conquest of Spain* (1835); and *Mahomet and his Successors* (1849). In 1829, I. returned to England as secretary to the American legation. In 1831, he received the honorary degree of LL.D. from the university of Oxford; and next year returned to America, where he was received with great enthusiasm. A visit to the Rocky Mountains produced his *Tour on the Prairies*. He also contributed sketches of Abbotsford and Newstead Abbey to the *Crayon Miscellany*, and from the papers of John Jacob Astor, wrote *Astoria* (1837), and the *Adventures of Captain Bonneville*; also a series of stories and essays in the *Knickerbocker Magazine*, collected under the title of *Wolfert's Roost*. In 1842, he was appointed minister to Spain. In 1846 was published his *Life of Goldsmith*; and his

great work, the *Life of Washington*, was published in 1855—1859. An edition of his works in 15 vols. reached a sale of 250,000 vols. He spent the last years of his life at Sunnyside, in his own 'Sleepy Hollow,' on the banks of the Hudson, near Tarrytown, with his nieces, where he died suddenly of disease of the heart, November 28, 1859. He was never married.

IRVING, REV. EDWARD, was born in the town of Annan, Dumfriesshire, August 15, 1792; studied at the university of Edinburgh, and, after completing his curriculum for the ministry, became assistant (in 1819) to Dr Chalmers, then a minister in Glasgow. His sermons did not prove very popular. Chalmers himself was not satisfied. In 1822, I. received a call to the Caledonian Church, Hatton Garden, London, which he accepted. His success as a preacher in the metropolis was such as was never witnessed before or since. After some years, however, the world of fashion got tired of I.; but it was not till his more striking singularities of opinion were developed that fashion finally deserted him. At the close of 1825, he began to announce his convictions in regard to the second personal advent of the Lord Jesus, in which he had become a firm believer, and which he declared to be near at hand. This was followed up by the translation of a Spanish work, *The Coming of the Messiah in Majesty and Glory*, by Juan Josafat Ben Ezra, which professed to be written by a Christian Jew, but was, in reality, the composition of a Spanish Jesuit. I.'s introductory preface is regarded as one of his most remarkable literary performances. In 1828, appeared his *Homilies on the Sacraments*. He now began to elaborate his views of the incarnation of Christ, asserting with great emphasis the doctrine of his oneness with us in all the attributes of humanity. The language which he held on this subject drew upon him the accusation of heresy; he was charged with maintaining the sinfulness of Christ's nature, but he paid little heed to the alarm thus created. He was now deep in the study of the prophecies; and when the news came to London in the early part of 1830, of certain extraordinary manifestations of prophetic power in the west of Scotland (see IRVINGITES), I. was prepared to believe them. Harassed, worn, baffled in his most sacred desires for the regeneration of the great Babylon in which he dwelt, branded by the religious public, and satirised by the press, the great preacher, who strove above all things to be faithful to what seemed to him the truth of God, grasped at the new wonder with a passionate earnestness. Matters soon came to a crisis. I. was arraigned before the presbytery of London in 1830, and convicted of heresy; ejected from his new church in Regent's Square in 1832; and finally deposed in 1833, by the presbytery of Annan, which had licensed him. His defence of himself on this last occasion was one of his most splendid and sublime efforts of oratory. The majority of his congregation adhered to him, and gradually a new form of Christianity was developed, commonly known as Irvingism, though I. had really very little to do with its development. Shortly after, his health failed, and in obedience, as he believed, to the Spirit of God, he went down to Scotland, where he sank a victim to consumption. He died at Glasgow, December 8, 1834, in the 42d year of his age.—See Carlyle's *Miscellaneous Essays*, and Mrs Oliphant's *Life of Edward Irving* (London, 1862).

IRVINGITES, the common but improper designation of a body of Christians who call themselves collectively the *Apostolic Catholic Church*. Their

existence as a distinct sect dates from about 32 years ago. In the winter of 1829—1830, the Rev. Edward Irving (q. v.), then a minister of the Scotch Church, Regent Square, London, delivered a series of lectures on spiritual gifts, in which he maintained that those which we are in the habit of calling 'extraordinary' or 'miraculous,' were not meant to be confined to the primitive church, but to be continued through the whole period of the present dispensation. About the same time, as if to confirm the views of the great preacher, there occurred at Port-Glasgow, in the west of Scotland, certain strange phenomena. It was alleged that miraculous acts of healing had happened, and that the gift of tongues had reappeared. After what seemed to be a sufficient investigation on the part of some of the members of Mr Irving's church, it was concluded that the manifestations were genuine. Similar manifestations shortly after occurred in his own church, which were also pronounced to be genuine. They were held to be of two kinds: 1st, speaking in tongues, and 2d, prophesying. As the former bore no resemblance to any language with which men were conversant, it was believed to be strictly an 'unknown tongue,' the Holy Ghost 'using the tongue of man in a manner which neither his own intellect could dictate, nor that of any other man comprehend.' The latter, 'prophesying,' consisted chiefly of 'exhortations to holiness, interpretations of Scripture, openings of prophecy, and explanations of symbols.' After some time, Irving was deposed from his office for heresy by the Church of Scotland, but meanwhile the religious opinions with which his name is associated had been assuming a more definite and ecclesiastical shape. The final result was the *Apostolic Catholic Church*, the constitution of which is briefly as follows:

There are, as in the apostolic times, *four* ministries: 1st, that of 'Apostle;' 2d, that of 'Prophet;' 3d, that of 'Evangelist;' and 4th, that of 'Pastor' or 'Angel.' The apostles are invested with spiritual prerogatives; they alone can convey the Holy Ghost by the laying on of hands; to them the mysteries of God are revealed and unfolded to the church, so that they may be described as sacred 'mediums' of communication between Heaven and earth. Nothing that transpires in any church in the way of 'prophetic utterance' can be authoritatively or infallibly explained save by them; and the various 'angels of the churches' are bound to bring all such utterances under their cognizance, in order that they may be rightly interpreted. The function of the 'prophet' has been already indicated. The work of an 'evangelist' mainly consists in endeavouring to 'bring in' those who are without; while the 'angel' of the Catholic Apostolic Church corresponds with the pastor or teacher of other Christian denominations. The ministers of each congregation comprise an angel with six ruling presbyters; various assistant ministers, deacons and deaconesses; evangelists, and those who may have prophetic or other gifts. This ministry is supported by tithes, the people giving a tenth of their income for the support of the priesthood. Church affairs are managed by a council of ministers of all classes, whose selection and arrangement are conceived to have been foreshadowed in the structure of the Mosaic Tabernacle.

The Catholic Apostolic Church does not differ from other Christian bodies in regard to the common doctrines of the Christian religion; it only accepts, in what it considers to be a fuller and more real sense, the *phenomena* of Christian life. It believes that the wonder, mystery, and miracle of the apostolic times were not accidental, but are essential to the divinely instituted church of God, and its main function is

to thoroughly prepare a people for Christ when he comes in his kingdom. A very special feature of the Catholic Apostolic Church is its extensive and elaborate symbolism. In regard to the sacrament of the Lord's Supper, however, it appears to entertain very much the same view as the Roman Catholic Church.

The Catholic Apostolic Church has established itself in England, Canada, the United States, Prussia, France, and Switzerland, but the congregations are not numerous.

ISAAC ('he will laugh'), a Hebrew patriarch and pastoral chief, was the son of Abraham and Sarah, and half-brother of Ishmael. His birth happened when both his parents were advanced in age. The incidents of his life, as recorded in Genesis, are well known. He died at Hebron, aged 180 years, leaving two sons, Jacob and Esau.—I's character has always been very differently interpreted. What has been called by some his mild and gentle disposition, simple pastoral piety, others have termed weakness and want of character. His (for the most part) blameless ways, however, call forth our love and esteem. The Midrash ascribes to him, in allusion to Gen. xxiv. 63, the institution of the afternoon prayer.

ISAAC I., COMNENUS, emperor of Constantinople, was the first of the family of the Comneni who attained to that dignity. His father Manuel, his brother John, and himself were employed in important military and civil capacities by Basil II. (976—1025); but during the reign of the latter's imbecile and tyrannical successors, in whose eyes it was criminal for any one to excel in wisdom and ability, I. was exposed to considerable danger. Such, however, was his prudence, and the affection of the people for him, that the emperors unwillingly suffered him to live unmolested; and on the deposition of Michael VI. (1056—1057), I. was elevated to the vacant throne. On his accession, he found the affairs of the empire in what was by this time their normal condition; rebellion within, aggression without, and the treasury exhausted. He succeeded in establishing a system of great economy in all branches of the administration, and in order still further to lighten the taxes on the people, called upon the clergy to contribute their share. But the clergy, then as now, refused to endure the imposition of any such burdens, and the patriarch Michael is reported to have even threatened him with deposition. But death delivered I. of this formidable opponent, and the clergy were compelled to submit. In 1059, he repelled the Hungarians, who had encroached upon his possessions in the north-west; but soon afterwards, to the great grief of his subjects, he was attacked by a violent fever, and believing his dissolution approaching, appointed his famous general, Constantine Duca, as his successor. He, however, recovered from his illness, but resigning the crown, retired to a convent, where he lived for two years in the odour of sanctity, and died in 1061. He was one of the most virtuous emperors of the East, and to great learning, wisdom, and prudence, united an administrative ability and energy, that would, had his reign been of longer duration, have gone far to regenerate the effete Byzantine empire. Nor was he deficient in literary attainments. We still possess by him Scholia—hitherto unedited—on Homer, his favourite author; further, a work, *Characteristics*, scil., of the Greek and Trojan chiefs mentioned in the *Iliad*; and finally, a treatise *On the Works of Homer*.

ISABELLA of Castile, queen of Spain, born on 23d April 1451, was the daughter of John II., king of Castile and Leon, and in 1469 married

Ferdinand V., surnamed 'the Catholic,' king of Aragon. On the death of her brother, Henry IV., in 1481, she ascended the throne of Castile and Leon, to the exclusion of her elder sister Joanna. She had won the support of great part of the states of the kingdom during her brother's life, and the victorious arms of her husband compelled the consent of the rest (see FERDINAND). I. was a woman of remarkable energy and talent, and possessed no inconsiderable beauty and much winning grace, although proud, ambitious, and deficient in true womanly gentleness. She was always present in meetings of council, and insisted on the use of her name along with that of Ferdinand in all public documents. She died at Medina del Campo, on 26th November 1504, after having exacted from her husband, of whom she was always jealous, a promise, confirmed by oath, never to marry again.

Order of Isabella
the Catholic.

of Grand Crosses, Commanders, and Knights.

ISAIAH (Heb. *Yeshayahu*, 'Salvation of God'), the most sublime of the Hebrew prophets, was the son of one Amoz. He uttered his oracles in the reigns of Uzziah, Jotham, Ahaz, and Hezekiah, kings of Judah. Regarding his outward life, almost nothing is known. He appears to have resided at Jerusalem, in the vicinity of the temple, was married, and had three sons, given him, he says, 'for signs and for wonders in Israel.' The period of his death is not known, but according to a rabbinical legend, apparently accepted by the writer of the Epistle to the Hebrews (xi. 37), (Sanh. 103 b, &c.), he was slain asunder by order of King Manasseh, who abhorred his oracles (cf. Jos. Ant. x. 31). If this statement is well founded, I. must have been nearly 100 years old when he was thus barbarously murdered.—The prophecies of I., viewed in their literary aspect, do not exhibit a continuous unity of design; they consist, of a series of 'visions' beheld at different times, and arranged neither exactly in chronological nor material order. The compiler or editor of the whole is believed by many not to be I. himself. Verse 38th of chap. xxxvii. is regarded by the majority of scholars of note as conclusive proof of a later hand. The grand controversy, however, is not concerning the arrangement of these prophecies, but concerning their authorship. Did they all proceed from one and the same person, or are different authors discernible? Orthodox critics maintain the unity of authorship, and assert that I., if he did not edit, certainly wrote the whole 66 chapters. The first who doubted this was the German scholar Koppe (1779—1781), who suspected that the last 27 chapters (40—66) were the work of a later hand. He was followed by Döderlein, Eichhorn, and Justi, and the same view has been substantially adopted by Paulus, Bertholdt, De Wette, Gesenius, Hitzig, Knobel, Umbreit, and Ewald. The chief arguments against the Isaiah-authorship

are: 1. That the subject-matter of these burdens relates to what happened long after I.'s death, 100 years at least, viz., the redemption of the Jews from captivity, consequent upon the overthrow of the Babylonian monarchy by the Medo-Persian army. 2. That the writer speaks of the exile as something present, and of the desolation of Judah as a thing that had already taken place. 3. That Cyrus is mentioned by name, and an intimate knowledge exhibited of his career. 4. That an extraordinarily minute acquaintance with the condition and habits of the exiles is shewn. 5. That the sentiments are far more spiritual. 6. That the style is totally different, being more smooth, flowing, rhetorical, and clear. To these objections, Hengstenberg, Hävernick, Keil, Henderson, Jahn, Möller, Alexander, and others have replied more or less satisfactorily. Their principal argument is the predictive character of prophecy. In these prophecies, we have the first distinct and vivid announcements of a Messianic deliverer (whence I. has been called the 'Evangelical prophet'). As, however, they are found chiefly in the last 27 chapters (the supposed work of a Deutero-Isaiah), it has been made a question, by those who do not believe in prophecy in the usual sense, whether the 'deliverer,' who redeems the people by his own sufferings, is a literal prediction of Jesus Christ on the part of the prophet, or only a personification of the sanguine hope of deliverance that animates his patriotic and religious soul.

The style of I. possesses an astonishing richness and variety. It reaches the pinnacle of grandeur, and melts into the softest pathos. Ewald, a master of æsthetic as well as of philologic criticism, attributes to him 'the most profound prophetic excitement and the purest sentiment, the most indefatigable and successful practical activity amidst all perplexities and changes of outward life, and that facility and beauty in representing thought which is the prerogative of the genuine poet. . . . In the sentiments which he expresses, in the topics of his discourses, and in the manner of expression, I. uniformly reveals himself as the kingly prophet' (*Propheten des Alten Bundes*, vol. i. p. 166, &c.). Among the chief commentators on I. are Jerome, Aben-Ezra, Abarband, Vitringa, Lowth, Henderson, Calmet, Hitzig, Rosenmüller, Gesenius, Hengstenberg, and Alexander.

ISAR, or **ISER**, a river of Germany, rises in the Tyrol, to the north of Innsbruck, and, entering Bavaria, flows generally in a north and north-east direction, and joins the Danube at Deggendorf, after a course of about 180 miles. Munich and Landshut are situated upon its banks. In the first part of its course, it is an impetuous mountain torrent; and even after it leaves the Alps, it has many rapids and islands, but for a great part of its course it is navigable for boats. Much wood is floated down the I. from the mountains.

ISCHIA (the ancient *Ænaria*), an island situated between the Bay of Naples and that of Gaeta. It is about 24 square miles in extent, and has a population of 25,000 inhabitants. I. is a favourite place of summer resort, and is noted for the excellence of its mineral waters, and numerous springs, the great richness of its soil, the exquisite flavour of its fruits and wines, and the enchanting character of its scenery. Its highest point is the volcanic Monte Epomeo, 2574 feet above the level of the sea, of which the eruptions have been numerous and disastrous; that of 1302 was of two months' duration, and occasioned a serious loss of life and property. The Lake of Ischia appears to occupy an extinct crater of the volcano, and abounds in fish.

ISCHL, a small town of Upper Austria, surrounded on all sides by gardens, is finely situated on the river Traun, amid magnificent Alpine scenery, 28 miles east-south-east of Salzburg. It is the chief town of the district called the Salzkammergut (q. v.). The situation of I., and the salt baths which were established here in 1822, have attracted to it vast numbers of visitors. The emperor and many of the Austrian nobility have built villas here, and the town has also acquired celebrity from having been the scene of various diplomatic conferences. Pop. 3000.

ISE'O, LAKE, or LACUS SEVINUS, a lake of Northern Italy, situated between the provinces of Bergamo and Brescia. Its extreme length from north to south is about 20 miles; its average breadth, 6 miles; and its greatest depth, 984 feet. On its banks is situated the town of Iseo. The lake is fed by the rivers Oglio and Borlazzo. The surrounding scenery is highly interesting, broken into picturesque heights, and studded with fine villas, vineyards, and olive-gardens.

ISERE, a river of the south-east of France, rises in Savoy, at the western base of Mount Iseran, flows in a general south-west direction through Savoy, and through the departments of Isère and Drome, and joins the Rhone 8 miles above Valence. Its entire length is about 190 miles, for the last 50 of which it is navigable, but not without difficulty, as its channel is interrupted by shoals and islands.

ISÈRE, a department in the south-east of France, is bounded on the N. and W. by the river Rhone, on the E. by the department of Savoie, and on the S. and S. E. by those of Drome and Hautes-Alpes. Area, 2,078,799 acres, of which nearly a half is in arable land, and a fifth in wood. Pop. (1866) 531,386. The surface is level in the north-west, but becomes mountainous as one proceeds south, where the scenery is very imposing. Mount Olau, on the south-eastern border, is 12,664 feet high. The chief rivers, besides the Rhone, are the Isère, from which the department derives its name, and its affluents the Drac and Romanche. The department of I. is one of the richest of France in mineral productions. Mines of iron, lead, copper, and coal are worked, and gold and silver occur. The vine is carefully cultivated in the valleys; 5,324,000 gallons are said to be produced annually. Arrondissements, Grenoble, La Tour-du-Pin, St Marcellin, and Vienne; capital, Grenoble.

ISERLO'HN, an important manufacturing town of Prussian Westphalia, is situated in a picturesque and mountainous district, on the Baar, a tributary of the Ruhr, 18 miles west of Arnsberg. The industry of I. is chiefly directed to the manufacture of hardware of various kinds, especially of brass and bronze articles. Pop. 13,429.

ISERNIA (anc. *Æsernia*, a city of the Samnites), a town of Naples, in the province of Molise, is situated in a commanding position on the crest of a hill, 24 miles west of Campobasso, and is surrounded by scenery of romantic beauty. The modern town consists chiefly of one long and narrow street, and is surrounded by walls. Among numerous other antiquities is a subterranean aqueduct, hewn in the solid rock, which still supplies the fountains and manufactories with water, and remains unimpaired throughout its entire course of one mile. I. was much injured by an earthquake in 1805, when some of its finest buildings were ruined. Woollens, paper, and earthenware are here manufactured. Pop. 8534.

ISHIM, a river of Siberia, an affluent of the Obi (q. v.).

ISHMAEL (Heb. *Yishmael*, 'God will hear'), the first-born of Abraham, by Hagar, the Egyptian handmaid of his wife Sarah. His character is found foretold before his birth by an angel, who met Hagar sitting by a well in the wilderness on the way to Shur, whither she had fled to avoid the harsh treatment of her mistress: 'And he will be a wild [literally, 'a wild ass-] man; his hand against every man, and every man's hand against him; and he shall dwell in the presence of all his brethren' (Gen. xvi. 12). Expelled from his father's house, along with his mother, when he was about the age of 15, he went into the southern wilderness where he grew up to manhood, and became famous as an archer. Scripture represents I. in a not unfavourable light, and it was predicted that he should become a great nation. This 'great nation' is commonly believed to be the Arabian; and there is no good reason for doubting that at least the northern Arabs—the wild Bedouins who roam over the great wastes between the peninsula of Sinai and the Persian Gulf—may, to a certain degree, be the descendants of Ishmael. There is, however, not a shadow of reason, as all scholars now admit, for the notion that the founders of the great Joktanite and Cushite monarchies in the south of Arabia were of Ishmaelitic origin; and the description given in Scripture of the character and habits of I. and his descendants does not in the least apply to these monarchies. The Bedouins of Northern and Central Arabia, on the other hand, are full of Ishmaelitic traditions. Mohammed asserted his descent from I., and the Mohammedan doctors declare that Ishmael, and not Isaac, was offered up in sacrifice—transferring the scene of this act from Moriah in Palestine to Mount Arafât near Mecca.

ISIAC TABLE, a monument much esteemed and quoted by archaeologists previous to the discovery of hieroglyphics, being a flat rectangular bronze-plate, inlaid with niello and silver, about 4 feet 8 inches long, by 3 feet in height. It was sold by a soldier of the Constable de Bourbon to a locksmith, and bought of the same by Cardinal Bembo in 1527, passed after his death to Modena, and finally to Turin, where it is now deposited. It consists of three rows of figures of Egyptian deities and emblems. Its object was supposed to have been votive, or even to have been the nativity of the Emperor Trajan; but it is now recognised as a very late or spurious monument.—Winckelmann, Op. iii. 113, v. 450; Wilkinson, Sir G., *Mann. and Cust.*

ISIDORE OF SEVILLE (*ISIDORUS HISPALENSIS*), one of the most distinguished ecclesiastics of the 6th century. He is particularly remarkable as among the earliest representatives of the church of Spain, and of that great movement in the Western Church by which the doctrinal and moral system of Christianity was brought into harmony with the habits and institutions of those various races and nationalities which, by successive immigrations and wars, were eventually erected into the Hispano-Gothic kingdom, which exercised so powerful an influence on what is called Latin Christianity. He was born about 560 or 570, at Carthagera, where his father, Severianus, was prefect. Two of his brothers, Fulgentius and Leander, were, like himself, bishops, the first of Carthagera, the second succeeding himself in the see of Seville. The episcopate of I. is rendered notable by the two half-ecclesiastical, half-civil councils of Toledo in 619 and in 633, which were held under his presidency, and the canons of which may almost be said to have formed the basis of the constitutional law of the Spanish kingdoms, both for church and for state, down to the great constitutional changes of

the 15th century. He also collected with the same object all the decrees of councils and other church laws anterior to his time. His death, which occurred in 636, forms one of the most remarkable scenes in early Christian history. When he became sensible of the approach of death, he summoned his flock to his bedside, exhorted them to mutual forbearance and charity, prayed their forgiveness for all his own shortcomings in his duty, and directed all his property to be distributed among the poor. His works, which are in the most various departments of knowledge—theological, ascetical, liturgical, scriptural, historical, philosophical, and even philological—were first published in 1580; but the most complete edition is that of Arevali, 7 vols. 4to (Rome, 1797—1803). We are indebted to I. for many fragments of Greek and Latin authors, among the number several of whom hardly any other remains have been preserved.

ISIDORIAN DECRETALS, also called FALSE DECRETALS, a spurious compilation of the 9th c., which, by a singular combination of circumstances, obtained currency in the Western Church, and continued for several centuries to enjoy unquestioned authority. Up to the 9th c., the only authentic collection of decretals, that of Dionysius Exiguus, commenced with the decrees of Pope Siricius in the end of the 4th century. The so-called Isidorian Decretals stretch back through the predecessors of Siricius up to Clement himself, and comprise no fewer than 59 decrees or epistles anterior to the time of Siricius. In a later part of the Isidorian collection, moreover, are interpolated nearly forty similar documents, unknown till the time of that compilation. All these documents are presented not merely as authentic, but as the genuine productions of the particular popes to whom they are attributed. The subject-matter of these decretals is most diversified, comprising the authority and privileges of the pope, the whole system of the hierarchy, with the relations of its several orders to each other and to the common head. In all, there is a strong and systematic assumption of the papal supremacy; but it is at the same time more than doubtful whether the direct object of the author was the exaltation of the papal prerogative. It is much more likely that the object was to protect the rights of bishops against the arbitrary rule of the metropolitans. Dean Milman thinks it probable that the author believed that he 'was not asserting for Rome any prerogative which Rome herself had not claimed' (*Latin Christianity*, ii. 378). Catholic historians, indeed, go further, and while they admit and denounce the clumsy fraud, contend that the easy and universal acceptance which the decretals met, furnishes the strongest presumption that the discipline which they have elaborated and methodised, was already in full possession, although without the formal and written law which the daring adventurer attempted to provide in the decretals of the early pontiffs.

It is curious that the author, the place, and the date of this singular forgery are still matter of uncertainty. It is certain that it did not come from Rome; and the most probable conjecture assigns its origin to Mentz, at some time between the years 840 and 847. It was introduced under the name of Isidore of Seville, as a part of the genuine collection known as his, and was believed to have been brought from Spain by Riculf, the Archbishop of Mentz. It is hardly possible, in an age of discussion like ours, to doubt that, when the decretals first appeared, even the most superficial inquiry, or the slightest critical investigation of the historical sources, would have sufficed to detect the fraud. 'It is impossible,' says Dean Milman, 'to deny that

at least by citing without reserve or hesitation, the Roman pontiffs gave their deliberate sanction to this great historic fraud; and yet it is equally impossible to fix the limit beyond which, in an age so uncritical, literary or historical credulity might not be carried without provoking its susceptibility, or disturbing its peace.

From the first circulation of the false decretals down to the 15th c., no doubts were raised regarding them. Nicholas of Cusa and Cardinal Turrecremata were the first to question their genuineness; but after the Reformation, the question was fully opened. The centuriators of Magdeburg demonstrated their utterly apocryphal character. A reply was attempted by Father de la Torre; but the question may be said to have been finally settled by Blondel.—See Milman's *Latin Christianity*, ii. 370—380; Walther's *Kirchenrecht*, p. 155; Gfrörer's *Kirchengeschichte*.

ISINGLASS. See GELATINE.

ISIS, the name of an Egyptian deity, the sister and wife of Osiris, called by that people *Hes*, daughter of *Seb* or Chronos, and Nu or Rhea; according to other versions, of Hermes and Rhea, born on the 4th day of the Epagomenæ, or five days added to the Egyptian year of 360 days. After the murder of Osiris by Typhon, and the throwing of him in the coffin into the Tanitic mouth of the Nile on the 17th Athyr, I. was informed of the deed by the Pans and Satyrs, and went into mourning at Coptos; and hearing from some children where the chest had been thrown, proceeded to seek for it in company with Anubis, and discovered it enclosed in a tamarisk column in the palace of Malcander, at Byblos; and sitting down at a fountain in grief, was discovered by the ambrosial scent of her hair, and invited to the court by the Queen Astarte, to nurse her children. One of these she fed with her finger, and endeavoured to render immortal by placing him in flames, while she herself, under the form of a swallow, flew round the column and bemoaned her fate. Having obtained the column, I. took out the chest of Osiris, wrapped it in linen, and lamented so deeply, that the youngest of the queen's sons died of fright. She then set forth with the chest and eldest son to Egypt, dried up the river Phædrus on her way, and killed with her glances the eldest son, named Maneros, who had spied her secret grief in the desert. Having deposited the chest in a secret place, she proceeded to Buto to Horus; but Typhon discovered the chest, and divided the body into 28 or 26 portions, and scattered it over the country. These the goddess again sought, and found, except the phallus, which had been eaten by fish; and wherever she found any of the limbs, she set up a tablet, or sent an embalmed portion, deposited in a figure of the god, to the principal cities of Egypt, each of which subsequently claimed to be the true birthplace of Osiris. After the battle of Horus and Typhon, I. liberated Typhon, and had her diadem torn off, and replaced by one in the shape of a cow. She was the mother of Haroeris by Osiris before her birth, and of Harpocrates after the death of Osiris. She buried Osiris at Philæ. The monarch Rhampsinitus played at dice with her in Hades. Her soul was supposed to have passed into the star Sothis or Sirius. Her worship was universal throughout Egypt; she was particularly worshipped at Philæ and at Bubastis, where a special festival was celebrated to her; and her tears were supposed to cause the inundation of the Nile. Another festival was celebrated to her at the harvest.

In the monuments, she is called the goddess-mother,

the mistress of heaven, sister and wife of Osiris, and nurse of Horus, the mourner of her brother, the eye of the sun, and regent of the gods. In her terrestrial character, she wears upon her head the throne which represented her name; in her celestial, the disc and horns, or tall plumes. She is often seen suckling Horus; sometimes she has the head of a cow, indicating her identity with the cow Athor, of whom the sun was born. Occasionally, she is identified with other female deities, such as Pasht. On her head, she wears the vulture symbol of maternity. Her attributes were assumed by the queens of Egypt, and Cleopatra sat and gave responses in the character of the youthful Isis.

The worship of I. was introduced into Rome by Sulla (86 B.C.) from Tithorea, and shared the fate of that of other Egyptian deities, being associated with that of Serapis, Anubis, and others, and the temples from time to time destroyed. It flourished under the Flavians and Hadrian. At this time, I. was represented with a sistrum or rattle, a bucket, and a dress with a fringed border, knotted at the chest. On the Alexandrian coins, I. appears as *Pharia*, before the Pharos, holding a full sail. The festivals, seclusion, rules of chastity, attracted many followers, but the worship was not altogether considered reputable by the Romans. It was more extended and respected in Asia Minor and the provinces, but fell before Christianity (391 A.D.). I. was worshipped as the giver of dreams, and in the twofold character of restorer of health and inflicter of diseases.

The myth of I., as given by Plutarch, appears to be a fusion of Egyptian and Phœnician traditions, and the esoteric explanations offered by that writer and others shew the high antiquity and unintelligibility of her name. She was thought to mean the cause, seat, or the earth, to be the same as the Egyptian Neith or Minerva, and Athor or Venus; to be the Greek Demeter or Ceres, Hecate, or even Io. Many monuments have been found of this goddess, and a temple at Pompeii, and a hymn in her honour at Antioch. The representations of her under the Roman empire are most numerous, I. having, in the pantheistic spirit of the age, been compared with and figured as all the principal goddesses of the Pantheon.—Plutarch, *De Iside*; Herod. ii. c. 59; Ovid, *Met.* ix. 776; Bunsen, *Egypt's Place*, i. p. 413; Wilkinson, Sir G., *Mann. and Cust.*, iii. 276, iv. 366; Birch, *Gall. Ant.* p. 31.

ISIS. See THAMES.

ISKANDEROO'N, or ALEXANDRETTA, a seaport of Asiatic Turkey, on the coast of Syria, is situated on a gulf of the same name, 60 miles west-north-west of Aleppo, of which it is the port. Its harbour is the best on the Syrian coast; but the town itself, though much improved within late years, is still poor and miserable. In 1856, 392 vessels of 133,114 tons, and the value of whose cargoes amounted to upwards of a million sterling, entered and cleared the port. Galls, silk, cotton, and fruits are exported; and the chief imports are rice, corn, salt, and goods of British manufacture. Pop. 1000.

ISLA DE PINOS, an almost circular island, of 800 square miles and 900 inhabitants, is the largest of the numerous satellites of Cuba, lying off the south coast of the Queen of the Antilles, pretty nearly on the meridian of the capital, Havana. It is celebrated for its excellent climate, exuberant fertility, rich mines, and valuable timber.

ISLÂM, or ESLÂM (Arab.), the proper name of the Mohammedan religion; designating complete and entire submission of body and soul to God, his will and his service, as well as to all those articles

of faith, commands, and ordinances revealed to and ordained by Mohammed the prophet (see MOHAMMEDANISM). Islam, it is held, was once the religion of all men; but whether wickedness and idolatry came into the world after the murder of Abel, or at the time of Noah, or only after Amru Ibn Lohai, one of the first and greatest idolaters of Arabia, are moot-points among Moslim (a word derived from *Islam*) theologians. Every child, it is believed, is born in Islam, or the true faith, and would continue in it till the end were it not for the wickedness of its parents, 'who misguide it early, and lead it astray to Magism (see GUEBRES), Judaism, or Christianity.' See MOHAMMED, KORÂN.

ISLAMABAD. See CHITTAGONG.

ISLAND (Ang.-Sax. *igland*, 'properly, eye-land, a spot of land surrounded by water, as the eye in the face'—Wedgewood; Ice. *ey*, Dan. *øe*, meaning isle, and akin to eye; the *s* in island crept in through the influence of Fr. *isle*, derived from Lat. *insula*), in Geography, land surrounded with water. New Holland is sometimes regarded as a continent, and sometimes as an island; so that the distinction of the terms is somewhat vague; even the great Eastern and Western continents are surrounded with water. In the ocean between New Holland and Asia, and to the eastward, islands are more numerous than anywhere else in the world. There, also, the largest islands are found. Excluding New Holland, the largest islands in the world are Borneo and Greenland; after these, New Guinea, Madagascar, Sumatra, and Great Britain. Islands are often in groups, and when the number is great, the assemblage is called an archipelago. Some islands have the appearance of intimate geological connection with the continents near which they are situated, and some of such connection with each other that they seem as if they were the remaining parts of a former continent; others, generally of a more circular form, have their geological character more complete in itself. In the South Seas, there are two very distinct classes of islands, the one mountainous, and often with active volcanoes; the other low and flat, formed of coral. See CORAL ISLANDS.

ISLANDS OF THE BLESSED were, according to a very old Greek myth, certain happy isles situated towards the edge of the Western Ocean, where the favourites of the gods, rescued from death, dwelt in joy, and possessed everything in abundance that could contribute to it.

ISLAY, an island on the west coast of Scotland, belonging to the group of the Inner Hebrides, and to the county of Argyll, lies west of the peninsula of Kintyre, from which it is distant about 15 miles, and south-west of the island of Jura, from which it is separated by a strait called the Sound of Islay. Greatest length, 24 miles; greatest breadth, 17 miles; area, about 220 square miles; pop. (1861) 10,332. In the north, the island is hilly, and along the eastern shore runs a ridge rising from 800 to upwards of 1500 feet in height. The central and western districts are undulating or flat. Agriculture has of late years been greatly improved; the number of acres under cultivation is about 20,000, and abundant crops, both white and green, are produced. There are nine distilleries on the island, which produce about 400,000 gallons of whisky annually. Chief exports, black-cattle, sheep, and whisky. Lead and copper ores have been worked in mines in the interior, but have not yet been shipped to any considerable extent. (1871—pop. 8143.)

ISLINGTON, a suburb of London, but so closely

connected with it as to form part of it, is situated two miles north of St Paul's. Pop. in 1851, 95,329; in 1861, 155,341; in 1871, 213,778; it is remarkable for the number of its religious, educational, and benevolent institutions.

ISMAÏ'L, a town and river-port in the principality of Moldavia, on the north bank of the Kilia branch of the Danube, about 40 miles from the mouth of that river. It was taken, destroyed, and its garrison put to the sword by Suwaroff in December 1790; came into possession of Russia after the peace of Bucharest in 1812; reverted to Turkey by the treaty of Paris, 1856; and now belongs to the Danubian principality, Moldavia. It carries on an important trade in corn, as well as a considerable general trade. Pop. (1859) 20,869. Previous to its reversion to Turkey, it was the station of the Russian fleet of the Danube.

ISMU'D, **ISMID**, or **IZMID**. See **NICOMEDIA**.

ISN'IK, or **IZNECK**. See **NICÆA**.

ISOBAROMETRIC LINES (Gr. *isos*, equal) are lines connecting together on a map those places which exhibit the same mean difference between the monthly extremes of the barometer. These oscillations are greater in some countries, as Hindustan and Newfoundland, than in others, as Western Europe and the Antilles.

ISOCHRONISM (Gr. *isos*, equal, *chronos*, time). A pendulum is isochronous when its vibrations are performed in equal times, whether these vibrations be large or small; but it can only possess this property by being constrained to move in a cycloidal arc. See **CYCLOID**. This is managed by causing the string to wrap and unwrap itself round two equal cycloidal cheeks, the diameter of whose generating circle is equal to half the length of the pendulum. Isochronism is closely approximated in practice by causing the pendulum to describe a very small circular arc.

ISOCRATES, a celebrated Grecian orator, was born at Athens, 436 B.C. He had a weak voice, and much natural timidity, which shut him out from a political career; but he taught rhetoric, and wrote orations for others, for which he received large sums; and though he did not mingle in the strife of parties, he was earnestly interested in the cause of his country's independence and honour. The fatal battle of Chæroneia broke his heart: he refused to taste food, and died after an abstinence of several days, 338 B.C., in the 98th year of his age. I. was a friend of Plato. His orations, of which upwards of twenty are extant, are characterised by extreme carefulness and elegance of style, but are not to be compared with those of Demosthenes in fervour, or with those of Lysias in natural beauty and simplicity. The best modern editions are those of Lange (Halle, 1803), Ad. Coraes (Paris, 1807), G. S. Dobson (Lond. 1828), and Baiter and Sauppe (Zürich, 1839).

ISODYNAMIC, **ISOCLINIC**, and **ISOGONIC LINES** (Gr. *isos*, equal, *dynamis*, force, *kline*, to bend, *gonia*, an angle), or lines of equal force, equal inclination, and equal declination, are three systems of lines, which being laid down on maps, represent the magnetism of the globe as exhibited at the earth's surface in three classes of phenomena, the varying intensity of the force, the varying dip or inclination of the needle, and its varying declination from the true meridian. See **MAGNETISM**.

ISOLA BELLA. See **BORROMEAN ISLANDS**.

ISOLA GROSSA, or **LUNGA** (Great or Long

Island), one of the many islands which lie off the western coast of Dalmatia, in the Adriatic Sea, extends between 43° 51' and 44° 11' N. lat. Greatest length, 27 miles; greatest breadth, 3 miles; pop. 12,000.

ISOLA MA'DRÉ. See **BORROMEAN ISLANDS**.

ISO'MERISM (from the Greek word *isomērēa*, composed of equal parts), a term applied to those organic compounds which are identical in their ultimate or percentage composition, but present differences in their chemical properties. Isomeric compounds, or *isomerides*, are divisible into metameric compounds, or *metamerides*, and polymeric compounds, or *polymerides*.

In all metameric compounds, the equivalent number is the same, while in all polymeric compounds the equivalent numbers are simple multiples of the equivalent of the lowest number of the group. As an illustration of metameries, propionic acid, ($\text{HO}, \text{C}_6\text{H}_5\text{O}_3$), acetate of methyl ($\text{C}_2\text{H}_5\text{O}, \text{C}_4\text{H}_7\text{O}_2$), and formic ether ($\text{C}_2\text{H}_5\text{O}, \text{C}_2\text{HO}$) may be taken. Their rational formulæ, which express their probable constitution, are perfectly distinct, yet it will be at once seen that they all have the same empirical formula ($\text{C}_6\text{H}_8\text{O}_4$), and consequently the same percentage composition, and the same equivalent number, viz. 74.

As an illustration of polymerides, the hydrocarbons homologous with olefiant gas may be taken. Olefiant gas is represented by the formula C_2H_4 , propylene by C_3H_6 , butylene by C_4H_8 , amylene by C_5H_{10} . These substances have the same percentage composition, but different equivalent numbers, all the formulæ being multiples of the more simple formula, C_2H_2 , which represents the composition of an alcohol-radical, methylene, which has not yet been isolated.

The carbo-hydrates, which are represented by the general formula, $\text{C}_x\text{H}_y\text{O}_z$, present well-marked examples of isomerism. Thus, cellulose ($\text{C}_{12}\text{H}_{10}\text{O}_{10}$), starch ($\text{C}_{12}\text{H}_{10}\text{O}_{10}$), and gum ($\text{C}_{12}\text{H}_{10}\text{O}_{10}$), are metameric; while grape-sugar ($\text{C}_{12}\text{H}_{12}\text{O}_{12}$) possesses the same percentage composition, but twice as high an equivalent number, as hydrated lactic acid ($\text{C}_6\text{H}_8\text{O}_6$), and the same percentage composition, but three times as high an equivalent number, as hydrated acetic acid ($\text{C}_4\text{H}_6\text{O}_4$); hence the three last-named substances are polymeric.

ISOMORPHISM (derived from the Greek words *isos*, equal, and *morphe*, form) strictly signifies similarity of form, but it is now restricted by chemists to those substances which are not only similar in their crystalline form, but are also analogous in their chemical composition. The diamond (C), magnetic oxide of iron ($\text{FeO}, \text{Fe}_2\text{O}_3$), and alum ($\text{KO}, \text{SO}_2 + \text{Al}_2\text{O}_3, 3\text{SO}_3 + 24\text{aq.}$), all crystallise in octohedra, but there is obviously no analogy in the chemical composition of these substances; on the other hand, the spinelle ruby ($\text{MgO}, \text{Al}_2\text{O}_3$), magnetic oxide of iron ($\text{FeO}, \text{Fe}_2\text{O}_3$), and chrome ore ($\text{FeO}, \text{Cr}_2\text{O}_3$), not only crystallise in octohedra, but (as their formulæ shew) are also analogous in their chemical composition. Hence, the members of the latter group are truly isomorphous in the restricted sense, while the members of the former group present only one of the conditions of chemical isomorphism. In most cases, however, as Mitscherlich (to whom we owe most of our knowledge of this subject) has shewn, the chemical composition of substances that correspond in form is analogous; and that chemist has further endeavoured to prove that crystalline form is independent of the chemical nature of the atoms, and that it is determined solely by their grouping and relative position; the same number of atoms combined in the same way

always producing, as he asserts, the same crystalline form.

Miller, in his *Chemical Physics*, gives fifteen

groups in which the existence of isomorphism has been distinctly ascertained. From these we select three groups—one of elements, and two of compounds:

Arsenic	Chloride of Potassium, KCl	Alumina,	Al_2O_3
Antimony	Iodide of Potassium, KI	Sesquioxide of Iron,	Fe_2O_3
Tellurium	Bromide of Potassium, KBr	Sesquioxide of Chromium,	Cr_2O_3
	Fluoride of Potassium, KFl	Sesquioxide of Manganese,	Mn_2O_3

The discovery of the coincidence of similarity in crystalline form where the chemical composition is also similar, is the most important generalisation yet arrived at in the science of crystallography; and in chemistry it has been of essential service in facilitating the classification of compounds, and in determining the combining numbers or atomic weights of the elementary bodies.

ISO'PODA (Gr. equal-footed), an order of Malacostracous Crustaceans of the section *Edriophthalma* (q. v.), mostly aquatic—some marine, some inhabitants of fresh waters—but some terrestrial, inhabiting damp places, as the armadillo, woodlouse, &c. The body is flattened. The thorax consists of seven segments bearing seven pair of feet—six in the young before their first moulting. The females have usually large plates attached to the thoracic segments, meeting to form a pouch for the eggs and young.

The interesting fossils called *Trilobites* (q. v.) are supposed to be *Isopoda*, or nearly related to them.

ISOTHERMAL LINES (Gr. *isos*, equal, and *thermos*, warm) are lines laid down on maps to connect together places of the same mean temperature. —*Isothermal Lines* (Gr. *thēros*, summer) are those which connect places of equal mean summer temperature. —*Isocheimōnal Lines* (Gr. *cheimōn*, winter) connect places of equal mean winter temperature. —Alexander von Humboldt was the first to lay down these systems of lines on maps in 1817. Their importance in reference to climate, meteorology, and the geographic distribution of plants and animals, can hardly be over-estimated. —If the whole surface of the earth were uniform, it is evident that isothermal lines would precisely correspond with the degrees of latitude, and there would be no isothermal and isochaimonal lines, as distinguished from the isothermal; but neither would the earth be habitable for man, or suitable for almost any of the animal or vegetable tribes which actually exist upon it. Isothermal, isothermal, and isochaimonal lines are therefore laid down altogether from observations recorded and compared. In laying them down, care must be taken to make allowance for the elevation of each place of observation above the level of the sea, they being all laid down as for that level. Isothermal lines are named according to the mean temperature which they indicate, the line of 50°, the line of 60°, &c. They are far from corresponding with parallels of latitude, nor are they parallel with one another, but are curved in such a manner as to indicate two northern and two southern poles or centres of greatest cold. It is in the extra-tropical parts of the northern hemisphere that these curvatures are greatest. The northern poles of cold are situated in the arctic regions, one to the north of Siberia, nearly in the meridian of Jakutsk, and the other to the north of America, nearly in the meridian of the most western part of Hudson's Bay; and the isothermal lines throughout the greater part of the northern hemisphere descend to a lower latitude in the east of Asia and in the east of America than elsewhere, ascending, however, to a comparatively high latitude on the western coasts of both the great continents. Thus, the line of 50° F., which passes through the north of England and the north of Ireland, and there reaches its most northern

latitude, descends below the latitude of New York, on the eastern coast of America. The distances of the isothermal lines are also remarkably various in different parts of the world. Thus, in the east of North America, from Charleston to Labrador, the mean annual temperature varies more than a degree and a half for every degree of latitude; whilst in Central Europe the variation is only about nine-tenths of a degree, and on the western coasts of Europe still less.

The isothermal and isochaimonal lines are neither parallel among themselves nor with the isothermal lines, and it is in this that a chief difference of continental and of insular climates appears, the summers of the former and the winters of the latter enjoying comparatively large proportions of the heat of the year.

Another interesting system of lines relative to temperature has been laid down by Mr Dove, which he calls *Isabnormal Lines*—the term, however, is objectionable, as formed from words of two languages—lines connecting places which have the same excess above or defect below the normal mean temperature of their latitude. See CLIMATE, METEOROLOGY, and TERRESTRIAL TEMPERATURE.

ISPAHÂN, properly ISFAHÂN, a famous city of Persia, capital of the province of Irak-Ajemi, and formerly capital of the entire country, is situated on the Zenderud, in an extensive and fertile plain, 226 miles south of Tehran; lat. 32° 40' N., long. 51° 43' E. The Zenderud is here 600 feet broad, and is crossed by three noble bridges, one of them 1000 feet in length, and having 34 arches. Groves, orchards, avenues, and cultivated fields surround the city for miles; but the permanent beauty of the vicinity only serves to make the contrast all the more striking between the former splendour of the city and its present ruinous condition. Miles of street are now almost tenantless, and many of the palaces are deserted, and rapidly falling to decay. In the *Chahar Bagh*, an extensive pleasure-ground on the south of the city, is a palace called the *Chehel Sitton*, or 'Forty Columns,' once a favourite royal residence. Along the front of this palace is a double range of columns, each rising from the backs of four lions in white marble. The pillars are inlaid with mirrors, and the walls and roof are profusely decorated with glass and gilding. The suburb Julfa, on the southern bank of the river, once a flourishing Armenian settlement of 30,000 inhabitants, is now little better than a mass of ruins. I, however, is still an important city, and the seat of extensive manufactures, including all sorts of woven fabrics, from rich gold brocades and figured velvets to common calicoes. Trinkets and ornamental goods in great variety, with fire-arms, sword-blades, glass, and earthenware, are also manufactured. Many of its bazaars are still crowded daily, and its merchants are still influential enough to affect prices in India. Of late years, too, I. has shewn considerable signs of improvement; many of its edifices have been rebuilt; rice, an important article of commerce, is now largely cultivated in the neighbourhood. Pop. estimated at 60,000.

I. was a trading town of importance, and the

capital of Irak, under the califs of Bagdad. It was taken by Timûr in 1387, when 70,000 of the inhabitants are said to have been massacred. During the 17th c., under Shah-Abbas the Great, it became the capital of Persia, and reached the climax of its prosperity. Its walls were then 24 miles in circuit, and it is said to have had between 600,000 and 1,000,000 inhabitants. It was then the emporium of the Asiatic world; the merchandise of all nations enriched its bazaars, and ambassadors from Europe and the East crowded its court. In 1722, it was devastated by the Afghans, and some time afterwards the seat of government was transferred to Tehran (q. v.).

I'SRAEL, KINGDOM OF. See JEWS.

ISSOIRE (anc. *Issiodurum*), a town of France, in the department of Puy-de-Dôme, at the confluence of the Couze and Allier, 20 miles south-east of Clermont. Pop. 6000.

ISSOUDUN, a manufacturing town of France, in the department of Indre, is situated on the river Théolles, on the railway from Orleans to Limoges, 18 miles north-east of Châteauroux. The principal manufactures are woollen cloth and yarn. Pop. 14,282.

ISSUE, in Law, means the point of fact in dispute which is submitted to a jury.

ISSUS, anciently, a seaport on a gulf of the same name in Cilicia, Asia Minor, celebrated for a victory which Alexander the Great obtained here over Darius (333 B.C.), by which the camp and family of Darius fell into his hands. Its exact site has not been ascertained.

ISTALIF, a town of Afghanistan, situated 22 miles north-west of Cabul, on a tributary of the Cabul river. In 1842, it was partially destroyed by the British. Previous to that event, it had 15,000 inhabitants, who were employed chiefly in spinning, weaving, and dyeing cotton.

ISTHMUS (Gr.), in Geography, a narrow neck of land joining two portions of land. The name isthmus was by the ancients often employed without any addition to designate the Isthmus of Corinth, joining the Peloponnesus to continental Hellas. Here there was a famous temple of Neptune, and here also were celebrated the **ISTHMIAN GAMES** (one of the four great national festivals of Greece), at first every third year, and afterwards every fifth year. They were said to have been originally instituted by Sisyphus, and afterwards restored by Theseus. The games, like those of Olympia, consisted of athletic exercises, with the addition of competitions in music and poetry. The victors were crowned with garlands of fir, and their statues were placed in the temple of Neptune. Down to the destruction of Corinth by the Roman general Mummius (146 B.C.), the management of these games was in the hands of the rulers of that city, though the Athenians always enjoyed the seats of honour. The Romans added the coarser and more brutal amusements of gladiatorial exhibitions and fights with wild beasts. The spread of Christianity was fatal to their popularity, but we still read of them in the reigns of Constantine and Julian.

I'STRIA, an Austrian margraviate, which, with the county of Görz and Gradiska, and the town and territory of Trieste, forms the Austrian crown-land of the coast-districts or Küstenland. It consists of a peninsula projecting into the north-east corner of the Adriatic Sea, together with the adjacent Quarnero Islands.

ISVORN'IK. See ZVORN'IK.

ISWARA (from the Sanscrit *is*, to possess

power, hence literally, *lord*) is an epithet applied to different Hindu divinities, but in mythological acceptance mostly designates *S'IVA* (q. v.).

ITALIAN ARCHITECTURE. This term is usually limited to the style practised by the Italian architects of the 15th, 16th, and 17th centuries, and which has since been adopted in every country in Europe. This style originated in a revival of the ancient architecture of Rome. Although Gothic architecture had been practised in Italy during the 13th and 14th centuries, it had never been thoroughly naturalised. The Italians always shewed a preference for the round arch over the pointed northern form; and even in the buildings they erected in the pointed style, there is a certain simplicity and largeness of parts indicative of a classic feeling. As early as 1350, Giovanni Pisano, in the beautiful sculpture of the pulpit at Pisa, shewed a return to the ancient models. Arnolphi di Lapo built the cathedral of Florence (1290—1300), and in his design, proposed a great dome (a remarkably Roman feature) over the crossing of the nave and transept. This he did not live to complete; but he prepared the way for Brunelleschi, the chief aim of whose life was the accomplishment of the great dome of the cathedral. He went to Rome to study the ancient buildings there, at that time neglected and hardly known to the Italians themselves. After devoting a considerable time to exploring these monuments, he returned to Florence; and, after

Library of St Mark's, Venice, by Sansovino. Ricardi Palace, Florence, by Michelozzo.

great opposition, succeeded in carrying out the construction of the dome as it now stands. From this time, the revival of Roman architecture went on rapidly. It was encouraged by the popes and other

ITALIC VERSION—ITALY.

princes of Italy; and the invention of the printing-press soon spread a knowledge of the works of the Italian architects over Europe. At first, the Roman mouldings and ornaments only were copied and applied to the existing forms. As the ancient style became better understood, its general principles were gradually adopted, until at length the Modern Italian style was formed. This style may be defined as ancient Roman architecture applied to the forms and requirements of modern buildings. It has been admirably applied to domestic, but it has never been so successfully used in ecclesiastical, edifices. The domes of the Italian churches render the interiors of these buildings very impressive, and are a feature, for the introduction of which into the west of Europe, we are indebted to this style; but the façades of the churches are broken up into stories, and want the unity of a Gothic front.

Italian architecture is divided into three styles or schools, according to the places where it was practised—viz., the Florentine, Roman, and Venetian. The Florentine buildings are massive and grand in effect; they are indebted to ancient Roman art chiefly for details, the outlines being the same as those of the older buildings, formed to suit the requirements of the place. Florence being a turbulent city, every man who had anything to lose had literally to make his house his castle. Accordingly, the basement floor is massively built with large blocks of stone, and the windows are small and plain. The Roman school naturally resembles more closely the ancient Roman buildings so numerous in that city—pilasters, arcades, &c., being freely used. In Rome, the plan of including two or more stories in one order of columns or pilasters with their entablature, with an attic or low story above, first originated, and was afterwards extensively, but, as already explained, not successfully applied to churches.

The Venetian style is, as might be expected in a city long accustomed to elegant palaces, the most ornate and picturesque of the Italian schools. Venice is crowded with specimens of all kinds from the earliest to the latest renaissance, and retains its individuality of style from first to last. Each story is marked by a separate tier of columns or pilasters with their entablature; the windows are arched and ornamented with columns, and the spandrls commonly filled with figures. The outline is varied in form, and is usually finished with a balustrade, broken by pedestals, and crowned with sculptured figures. It is from this most picturesque of the styles of the Italian renaissance that the other countries of Europe derived their peculiar forms. See RENAISSANCE, ELIZABETHAN, CINQUE-CENTO.

ITALIC VERSION (*Vetus Italia*), the name given to a translation of the Scriptures into Latin, which preceded the Vulgate. Its origin is commonly supposed to date from the middle of the 2d century. The Italic Version was in general use down to the time of Jerome, who, being dissatisfied with the imperfections which it exhibited, undertook to revise and amend it, but ultimately produced the new translation known as the Vulgate (q. v.). The Italic Version of the Old Testament was made, not from the Hebrew, but from the Septuagint.

ITALY. The geographical territory comprised under the name of I. consists of a considerable stretch of peninsular mainland, closely resembling a boot in shape, besides several islands, situated in Southern Europe, between lat. 36° 35' and 47° N., and between long. 6° 35' and 18° 35' E. From the southern extremity of Sicily to the Alps its

maximum length is about 600 miles, its utmost breadth being 300 miles.

Boundaries.—Its boundaries on the N. are Austria and Switzerland, on the S. the Mediterranean, on the W. France and the Mediterranean, and on the E. the Ionian and Adriatic Seas; while its natural limits are strongly defined by the Alps and the sea.

Area.—The kingdom of Italy—which comprises the whole peninsula, with the small exception of the republic of San Marino—embraces an area of 114,629 English square miles; and a population, in 1871, of 26,716,809. It is composed of the following provinces:

Provinces.	Area in Eng. Sq. Miles.	Population in 1871.

Physical Aspect.—The physical aspect presented by the surface of I. is diversified in the extreme. Northern I. is, for the most part, composed of one great plain—the basin of the Po, comprising all Lombardy and a considerable portion of Piedmont and Venice, bounded on the north-west and partly on the south by different Alpine ranges. Throughout Central I., the great Apennine chain gives a picturesque irregularity to the physical configuration of the country, which in the southern extremity of I. assumes still wilder forms. In the highland districts of Naples, in which the Apennine ridge reaches its maximum elevation (10,000 feet), the scenery exhibits a savage grandeur. Along the extensive coast-lands, as well as in the sub-Apennine valleys, the rural charms of this portion of I. are extreme, while the brilliant flora and vegetation impart to it a novel character of beauty. The chief mountain-system of I. is the frontier ridge of the Alps (q.v.), and its noble continuation the Apennines (q.v.).

Volcanic Zone.—I. likewise comprises a considerable stretch of volcanic zone, which traverses the peninsula from the centre to the south parallel with the Apennines, and of which the most remarkable active summits are Vesuvius, near Naples; Etna in Sicily; and Stromboli in the Lipari Isles.

Plains.—The great plains of I. are those of Lombardy, which stretches from the Mincio to the Ticino and the Po; of Piedmont; the Venetian plains; the plain of the Roman legations; the plain of the *Campo Felice*, on which stands Vesuvius; the Apulian plain; the long, narrow Neapolitan plain of the Basilicata, 100 miles in length, and 24 miles in breadth, stretching along the gulf of Tarento.

Rivers.—The great majority of the rivers of I. are only navigable for small coasting boats or barges. By far the most important is the Po (q.v.), which rises on the borders of France, and flows into the Adriatic. It has numerous tributaries. Among the others may be mentioned the Adige, Brenta, Piave, Tagliamento, Aterno, Sangro, Metauro, Ofanto, Bradano, also belonging to the Adriatic basin; the Arno, the Tiber, the Ombrone, the Garigliano, and the Volturno, which belong to the Mediterranean basin. The classical and historical associations of many of the Italian streams, even when mere rivulets, invest them with perennial interest.

Canal System.—The canal system of I. is most extensive in the north. Nine principal canals in Lombardy administer to the irrigation of the plains, and to the purposes of commercial communication, contributing in no small degree to the prosperity of the district. The *Naviglio Grande* or Ticinello is the finest hydraulic construction in I.; it communicates between the Ticino and Milan, and has a course of 28 miles navigable for vessels of large size. It was begun in 1179. The *Naviglio Martesana*, 38 miles long, unites Concesa on the Adda with Milan; the *Naviglio di Pavia* is 18 miles in

length; the bifurcated *Naviglio d'Ostiglia* unites the Po with the Adige. 253 canals intersect Piedmont, extending over a length of 1932 kilometres. Venice comprises 203 navigable, and 40 minor canals. Numerous canals have been constructed for the drainage of the Pontine Marshes. This system of water-communication was early carried to a high degree of efficiency in I., and is of incalculable service in the agricultural districts.

Lakes.—The mountain lakes of I. are famed for their picturesque beauty. They are mostly in the northern provinces of Lombardy and Venetia. The principal are Maggiore, Lugano, Como, Iseo, and Garda. The Roman lakes of Perugia, Bolseno, and Bracciano, that of Castiglione in Tuscany, and Celano in Naples, also deserve mention.

Springs.—The mineral and thermal springs of I. are innumerable, and possess a great variety of curative and sanitary properties.

Climate.—In the northern provinces, the climate is temperate, salubrious, and frequently severe in winter; in the centre, it assumes a more genial and sunny character; while the heat of the southern extremity is almost of a tropical intensity. The singular clearness of the atmosphere sets off the landscape and monumental beauties of I. with brilliant effect. The drawbacks of I.'s climate are the piercing tramontana or mountain winds; the deadly sirocco, which blights all nature at seasons along the western coast; and the malaria or noxious miasmata which issue from the Maremma of Tuscany, the Pontine Marshes, and the Venetian lagoons, generating pestilential fevers and aguish diseases in the summer season. The mean temperature of the leading divisions of the country throughout a whole year was as follows: Milan, 55° 4' of Fahrenheit's scale; Rome, 59°; Palermo, 62° 5'; and in Sardinia, 60° 5'. The highest temperature at Rome rises to 95°, and in Sicily from 97° to 104°.

Products.—The staple products of I. are corn, wine, oil, raw silk, rice, olives, and fruits, besides hemp, flax, cotton, which are largely grown, and even the sugar-cane is successfully cultivated in the Two Sicilies. Agriculture, however, except in the north, is in a very backward condition. Nevertheless, the annual yield of cereal crops is considerable, and not only suffices for home consumption, but likewise for foreign export. The northern provinces or great plains, Tuscany, and the islands of Sardinia and Sicily, furnish most of the grain of Italy. The minor alimentary products are beans, pease, Indian corn, lupines, and chesnuts, which are largely used. The wines of I. are very numerous, but owing to the defective mode of their manufacture, are unfit for exportation, as they can neither bear transport, nor do they improve by age. The wines of Naples are esteemed the best, small quantities of the famous *Lacrima Christi* and the *Vino d'Asti* being exported, while the Sicilian wines of Marsala form a considerable export trade. The most superior oil and olives are furnished by Tuscany, Lucca, and Naples; the oil of Florence, and that of Gallipoli and Puglia, being unequalled for purity and sweetness. Silk is chiefly manufactured in the northern provinces, the cultivation of the mulberry and the rearing of the silk-worm forming in Lombardy a principal occupation of the population. In Lombardy alone, upwards of 17,000,000 mulberry-trees are required to furnish food for the worms; and the silk exported from the Lombardo-Venetian provinces alone yields an annual revenue estimated at about £5,000,000. The best manufactured silk comes from Piedmont, Tuscany, and the Roman provinces. The cotton-plant is grown extensively in Sicily, and yields

annually about 2,000,000 lbs., which is manufactured in the native looms of Tuscauy, Piedmont, Lombardy, and Rome. The fruits of the Two Sicilies are exquisite in flavour, and embrace several tropical species. Oranges, lemons, almonds, figs, dates, melons, and the pistachio-nut are common to all orchards, and are largely exported. A considerable cheese-trade exists in the northern provinces, that of Lombardy alone yielding a revenue of more than £2,000,000. I. also furnishes various valuable substances, such as sulphur, alum, &c. All the domestic animals of Western Europe are to be found in I., besides buffaloes and camels, which are not uncommon. The fauna of I. includes most of the British species, besides the wolf, lynx, boar, marmot, vulture, ibis, flamingo, and pelican. On the coast of the southern provinces are to be found many species of African water-fowl. The *ortolano* and *beccafico* are small birds, much esteemed for their flavour. The nocturnal fireflies are a remarkable feature of insect life.

Fisheries.—The sea and fresh-water fisheries of I. are considerable; the Mediterranean furnishing immense quantities of tunny, anchovies, sardines, mullet, pilchards, and mackerel. The export of anchovies and sardines is of vast extent. The river-fisheries yield salmon, trout, sturgeon, lampreys, tench, and barbel, &c.; and the lagoons contain excellently flavoured eels. See COMMACCHIO. The crustaceans and shell-fish of the Italian seas are of great variety and delicate flavour, and are a favourite article of Italian consumption.

Exports.—Among the exports of I. may be noted raw silk, rice, fish, fruits of various kinds, marble, alabaster, sulphur, alum, silks, velvets, cloth of gold and silver, perfumes, mosaics in stone and wood, carvings in wood, macaroni and similar culinary pastes, porcelain, majolica, preserved fruits and meats, musical instruments, jewellery, and objects of art.

Army and Navy.—The latest statistics of the military and naval force of the kingdom of I. give the following numbers: On October 1, 1871, the army comprised a total of 333,555, commanded by 15,110 officers, not included in the number given above. The staff numbered 870; infantry, 198,830; depots, 7205; bersaglieri or sharpshooters, 27,527; cavalry, 21,995; artillery, 41,029; corps of engineers, 6774; carbineers, 19,500; local troops, 2756; divers establishments, 7939. If we take into account the provincial militia, 414,445 strong, which is now incorporated with the military forces of I., that country's war-roll numbers 750,000 men. In January 1872, the Italian fleet consisted of 59 war-vessels, and 17 transports—76 in all, carrying 653 guns, with a force of 10,470 sailors and marines; besides 975 officers of all grades, from one admiral and one vice-admiral down to those in charge of the commissariat.

Finances.—The budget of the kingdom of I. for 1872 gave the income at nearly £51,494,104; and the expenditure as about £62,415,083; deficit closely on £10,920,979. The public debt at the beginning of 1872 was £360,807,407; and the total charges on account of the public debt, estimated in the budget for that year were £30,340,000—more than a half of the ordinary revenue of the kingdom.

Religion.—The dominant form of religion of I. is the Roman Catholic. The native Protestants dwell chiefly in the Waldensian valleys of Piedmont, and number only about 20,000. There are also between 40,000 and 50,000 Jews scattered throughout I., who are chiefly engaged in commerce. Political rather than theological reasons, however, before the abolition of the temporal power, brought the papacy into great disrepute among the progressive and national

section of the country. Freedom of worship used to be denied to native Protestants by all the states except Piedmont; but since the late political changes of I., freedom of religious belief is encouraged by the government. The Roman Catholic clergy are estimated at 7 in the 1000 of the entire population. The church revenues of I. have suffered considerable diminution, owing to the suppression of several orders, and the enforced sale of their lands by government.

Education.—The mass of the Italian people are incredibly illiterate; the primary elements of education, reading and writing, are by no means universal even among the better classes. A great educational impulse, however, has been imparted to all the recently united states, in which new public and endowed schools are daily being inaugurated. Normal schools, on the British principle, have been founded for the training of I.'s future teachers. The government has devoted to the cause of education a great part of the confiscated property of religious orders. Besides this, £600,000 is annually voted by parliament for education. The universities of I. are numerous, many of them being of ancient date and European fame. The chief are those of Salerno, Bologna, Naples, Padua, Rome, Perugia, Pisa, Siena, Pavia, Turin, Parma, Florence, Catania, Cagliari (in 1764), Genoa (remodelled and extended, 1733), Modena (recently re-opened).

History.—The ancient history of I. will be more conveniently treated of under ROME; see also ETRURIA, UMBRIA, &c. We proceed to the dawn of modern history. The Western Roman Empire fell before a mixed horde of barbarous mercenaries, chiefly composed of the Heruli, who proclaimed their leader, Odoacer, king of Italy (476 A. D.). After 13 years of military despotism, he was slain, and his followers vanquished by the Ostrogoths, led by their great king Theodoric. The Ostrogoths (see GOTHs), in their turn, were vanquished (552 A. D.); and I. was then governed by an *exarch*, or delegate of the emperor of Constantinople, whose seat of government was Ravenna. Narses, the first *exarch*, having been disgraced, in revenge invited the Lombards to invade Italy (568); and under their rule the ancient political system of Northern Italy was superseded by the introduction of feudal and Teutonic institutions. The Lombards, in their turn, were conquered by Pepin (754) and Charlemagne (774), the latter of whom was crowned emperor of Italy. The Lombards, however, retained the great duchies of Benevento, Spoleto, &c., till the advent of the Normans. In 842 the Saracens invaded I., and took possession of many important places on the southern coast, which they held till 1016, when they were driven out by the Normans. On the fall of the Carolingian dynasty (888), the crown of Italy fell to Berengarius I., chief of the Friuli, whose descendant, Berengarius II., did homage to Otho I. of Germany as his lord-paramount (951); and in 961, Otho deposed his vassal, and assumed sovereign rights over the Italian kingdom. From this period, the chief towns of Italy rapidly emerged from their previous insignificance. A foremost object of Otho and his successors was the abasement of the papacy; and for a time these emperors successfully arrogated to themselves the right of nominating to the chair of St Peter the candidate most attached to imperial rule. The accession of Konrad was the signal for various tumultuous risings of the Italians against their German rulers, who had grown the object of general detestation. Important feudal modifications during this reign tended still further to weaken the great feudal lords, and to exalt the inferior vassals and citizens. Under the reign of his successor, Henry III., we find the spirit of association, alike

for offence or defence, waxing strong in Italy. The aggrandisement of the great Guelphic House of Este (q.v.), the bloody wars of the Investiture (q.v.), and the establishment of an ameliorated form of municipal government (1100), are the three most notable events that occurred under the Franconian dynasty.

Under the Hohenstaufen dynasty, Italy enjoyed an interregnum from foreign rule of about 60 years, which, however, was wasted in suicidal conflicts between the two factions of the Guelphs and Ghibellines. The most terrible incident of this period was the massacre of the Sicilian Vespers (q.v.). Notwithstanding the inveterate internecine feuds of Italy, it was a period of great splendour and prosperity. The free cities or republics of Italy rivalled kingdoms in the extent and importance of their commerce and manufactures, the advancement of art and science, the magnificence of their public edifices and monuments, and the prodigious individual and national wealth to which they attained. Unhappily, a spirit of rivalry and intolerance grew up during this period of mediæval splendour, and in the arbitrary attempt of these states to secure supremacy over each other, they gradually worked their own destruction.

From the Sicilian Vespers (1282) to the reign of Henry VII. (1308), the chief historical incidents are the war between Genoa and Pisa, ending in the abasement and ultimate decline of the latter (1284); the quarrels of the Guelphic factions, the Bianchi and the Neri, in Tuscany; the papal efforts for their reconciliation (1301); the residence of the popes at Avignon (1304—1377); and the rise into importance of the oligarchic republic of Venice (1311). During the first half of the 14th c., the German emperors made several fruitless attempts to regain political supremacy in I.; but in 1355, the Emperor Charles IV. gave up the struggle.

The tyrannical rule of several petty tyrants, of which the foremost were the Visconti or lords of Milan, replaced that of the emperors. From the middle of the 14th c. to the end of the 15th, the collective history of I. ceases, each city being ruled by some powerful local family—as, for example, Verona by the Della Scala, Padua by the Carrara, Ferrara by the Este families, and Mantua by the illustrious princes of Gonzaga; Milan by the Della Torre, Visconti, and Sforza families. See also GENOA, PISA, FLORENCE, VENICE, NAPLES, &c.

From 1495 to 1525, I. was the theatre of the sanguinary struggles between France, the native rulers, and the Hapsburgs, but the battle of Pavia (1525) thoroughly established the ascendancy of the German emperor, who appointed over the various states rulers of his own selection. During the 17th c., no events of note mark the history of I.; the country being at peace, the various states pursued commercial traffic and industry, as far as their decreased limits permitted. In the following century, some territorial changes were effected during the war of the Spanish Succession. In 1793, I. partially entered the European coalition formed against France, whose arms, however, proved irresistible. By the treaty of Campo Formio, 17th October 1797, the entire state of Venice was transferred to Austria, while the rest of the country, under various designations, became for the most part a dependency of France. In this anomalous condition it remained during the rule of Napoleon. After the battle of Waterloo, the final reconstitution of I. was decreed as follows by the congress of Vienna: the kingdom of Sardinia reverted to the House of Savoy, to which were added all the provinces of the Genoese republic; the Lombardo-Venetian kingdom fell to Austria; the principalities

of Modena, Reggio, and Mirandola, to which was soon annexed Massa and Carrara, were restored to the family of Este; Lucca was created a duchy for the rightful Duke of Parma, whose hereditary state was conferred on Maria Louisa, ex-empress of the French; the duchy of Tuscany was restored to the Austro-Lorraine dynasty; the Papal States to the pope; the kingdom of Naples to the Bourbons; while the petty state of San Marino was allowed to retain its republican form; and Monaco remained an independent principality under the Prince of Valentinois.

By the congress of Vienna, I. was again cast at the feet of the papacy and of Austria, and this at a period when progressive aspirations were strongly re-awakened in the Italian people. The system of resolute oppression adopted by the reinstated rulers speedily produced an irreconcilable hostility between themselves and their subjects, and a network of secret societies for the organisation of national resistance spread throughout the entire land. The first-fruits of their organisation were the risings of 1820 and 1821 in Piedmont and Naples, to demand constitutional rights. Austrian intervention quelled both these movements; and in 1831, when a similar rising occurred in Modena and the Roman States, it was subdued with sanguinary ferocity by an Austrian army. In these movements, no distinct tendency towards national unity is perceptible; and only on the accession of Charles Albert to the throne of Piedmont (1831) was this grand idea of modern I. propounded by Joseph Mazzini, in an address to the king, urging him to assume the rôle of liberator and leader of Italy. The king of Piedmont, by yielding in some degree to the spirit of his time, prepared for Piedmont pre-eminence throughout the country. The accession of Pius IX., in 1846, seemed the inauguration of a new era for I.: a general amnesty was followed by wise, liberal measures, which were also adopted by Tuscany and Piedmont, in emulation of Rome. Naples and the other states resolutely refused every measure of reform, and by a simultaneous outbreak in Sicily and Milan in January, the great revolution of 1848 was inaugurated in Italy. The revolution of France in February imparted a strong impulse to that of I., and speedily Naples, Piedmont, and Rome conceded constitutional rights to the popular demands. The Milanese unanimously revolted against Austrian rule on the 17th of March, and after five days of heroic fighting, the Austrians were expelled from the city, and Radetsky, with 70,000 troops, compelled to retreat from its walls. On the 29th, Charles Albert entered Lombardy, the avowed champion of Italian independence, and the leader of the national struggle. All the sovereigns of I. contributed their best troops for the war, and on the Roman volunteers setting out for Lombardy, the pope himself in public pronounced a solemn benediction on their banners.

But ere a month had elapsed, Pius IX. suddenly halted in his career of liberator of Italy, and abandoning the national cause, launched (19th April) a severe censure against 'this unjust and hurtful war,' which, chiefly by his own benediction, had been consecrated in the eyes of at least the more ignorant of the people. The recall of the Neapolitan troops was the first-fruits of the encyclical letter, which may be considered the tocsin of the subsequent fierce reaction through all Italy. For a time, however, the revolution made way; at the close of the year Rome became agitated; the pope fled to Gaeta; and on the 8th of February, the Roman Republic was proclaimed, under the presidency of Mazzini. On the same day the Grand Duke of Tuscany abandoned his state. Piedmont again assumed

the lead, but the disastrous battle of Novara (23d March) finished the national Italian war of 1848. The treacherous French expedition against the Roman republic, and the return of the pope in 1850, are the concluding acts of this great revolution.

The reaction was complete and merciless in every state save Piedmont, the king of which kept faith with his subjects, and observed the constitutional forms conceded in 1848. Austrian troops exercised a crushing tyranny, and from time to time Europe shuddered at the recital of the dark cruelties practised in the dungeons of Naples and Rome. In the Congress of Paris, at the close of the Russian war (1856), Cavour (q. v.) forcibly exposed the unavoidable dangers of a continuance of Austrian and papal misrule. He strongly urged the expediency of a withdrawal of French and Austrian troops from Rome and the legations. In the beginning of 1859, Victor Emmanuel proclaimed from the Sardinian parliament his intention of actively aiding in the deliverance of the oppressed Italian population from the yoke of Austria. Towards the close of the year, Sardinia and France jointly prepared for war with Austria, and in April 1859 the war commenced. The victories of Magenta and Solferino were quickly followed by the abrupt and inconclusive peace of Villafranca, 11th July 1859, by which a confederation of the Italian states with the papal protectorate was proposed as the best solution of I.'s difficulties. The whole of I. energetically rejected the scheme; and early in 1860, the various states whose sovereigns were in flight from the Lombard campaign voluntarily declared in favour of annexation to the kingdom of Piedmont. On the 18th of March, Parma, Modena, and the Emilian provinces were incorporated with Sardinia; and the grand duchy of Tuscany on the 22d. On the 17th March, the law by which Victor Emmanuel assumed the title of King of Italy was promulgated amidst universal rejoicings. On the 24th March, the provinces of Nice and Savoy were ceded to France. On the 6th of the ensuing May, Garibaldi, with about a thousand volunteers, set sail from Genoa for Sicily, where a revolutionary outbreak had taken place. His swift and comparatively bloodless conquest of the Two Sicilies is one of the most extraordinary incidents in modern history. Meanwhile, the Sardinian generals Cialdini and Farini having advanced into the papal provinces, the papal forces under Lamoricière were routed at Castelfidardo, which was followed by the capture of 4000 prisoners at Loretto, and the surrender of Lamoricière at Ancona. Thence the Sardinian forces marched into the Abruzzi, while Victor Emmanuel proceeded in person to Naples. On 7th November, at Teano, Garibaldi unconditionally relinquished to his sovereign the southern provinces liberated by his genius and valour. Umbria and the march of Ancona were next incorporated with the kingdom of I. The kingdom of I. was formally recognised by all the great European powers with the exception of Austria. On the death of Cavour, June 1861, the ministry of Baron Ricasoli was formed, but after a brief term of office was succeeded by that of Ratazzi, 31st March 1862, whose avowed subserviency to the French empire created considerable alarm amongst the liberals of Italy. One of its earliest acts was the incorporation of the southern volunteer forces with the regular army. On the 9th and 10th, a great aggregate meeting of deputies from all the liberal clubs of the kingdom was held under Garibaldi's presidency; and on the 20th, having previously been entertained at a grand banquet by the royal princes, he set out on his almost triumphal tour throughout I., with the view of organising rifle-clubs amidst the youth of all the

chief cities. An apprehension on the part of the government that Garibaldi contemplated an armed expedition in aid of Venice, led to stringent and unlooked-for measures of repression. Ministerial orders were next transmitted to Garibaldi, prohibiting any further organisation of the rifle societies. On the 20th of June, Garibaldi arrived in Turin, and on the 28th landed at Palermo, in Sicily, where he met with a warm reception from Prince Humbert, the heir-apparent of the Italian crown. On the 4th of July, the ministry was seriously disturbed by the warmth with which Garibaldi denounced the French occupation of Rome. On the 7th, a grand review at Palermo was held in his presence. Volunteers speedily hastened to join him, with the avowed intention of proceeding to Rome, despite the royal proclamation, which accused them of rebellion against their sovereign. A special message, accompanied by the royal proclamation, was forwarded by the king to Garibaldi, who, under the impression that he possessed the covert approbation of the sovereign, declined to desist in his expedition to Rome, but expressed his unshaken sentiments of loyalty to the king. On the 22d August, Sicily was declared in a state of siege, the liberal clubs were dissolved, and an armed force despatched to pursue and disperse the volunteers. Garibaldi reached Catania on the 18th, and some days later succeeded in effecting a landing on the coast of Calabria with the greater part of his followers. General Cialdini having been appointed commissioner extraordinary in the island of Sicily, with full powers over the civil and military authorities, proceeded to the most stringent measures to effect the capture of Garibaldi. The 'affair of Aspromonte,' in which Garibaldi's small force of volunteers were compelled to surrender, their heroic leader ordering them not to fire on the royal troops, put an end to the semblance of revolution. The wounded chief was conveyed as a prisoner to the fortress of Varignano, at Spezzia. The amnesty granted to him and his followers by the Italian monarch enabled him to proceed to Pisa, whence he returned to his island-home of Caprera.

On the meeting of the houses of parliament, the ministry of Ratazzi had to sustain a formidable attack from the liberal members, who demanded the impeachment of the premier and his colleagues. Ratazzi, finding himself unsupported by any section of the house, after an unavailing defence, resigned his portfolio on the 10th of December, and was succeeded in office by Signor Farini (q. v.)

At the close of the German-Italian war (see *GERMANY* in SUPP.), Venetia, on 3d October 1866, became part of the kingdom of Italy by treaty with Austria. Turin, the chief town of Piedmont, was the capital from 1859 till 1865; the court was transferred to Florence during the latter year. In 1867, the French army began to be withdrawn from Rome, and the national aspiration to have the Eternal City as capital of the kingdom of Italy seemed now near its realisation. Some of the French troops remained at Rome until the urgent necessities of the Franco-Prussian war compelled the Emperor Napoleon to withdraw them. The last detachment left the pontifical territory on 8th August 1870; and on the 20th of the following month, the Italian troops, under General Cadrona, entered Rome after a short resistance by the Pontifical troops, who ceased firing at the request of the pope. On 2d October 1870, the kingdom of Italy assumed the last of its extensive limits, when the whole of the papal states were absorbed by it, and Rome was its recognised capital; and thus were realised the aspirations of many generations, the dreams of Mazzini, and the policy of Count Cavour.—

In preparing the preceding sketch of the history of Italy, the following authors, along with many others, have been consulted: Sismondi, *Republics of Italy*; Macchiavelli, *Istorie Fiorentine*; Guicciardini, *Storia d'Italia*; Denina, *Rivoluzioni d'Italia*; Botta, *Storia d'Italia*; Balbo, &c.

Italian Language and Literature.—The Italian language, the most musical of all the tongues of Europe, is descended from the Latin, and there have been various opinions as to the way in which the transition took place. In the view, however, of the scientific students of language, there is nothing special in the case; the changes are sufficiently accounted for by that tendency to phonetic decay or corruption which is always at work in a living tongue, and which is especially active in a chaotic and transition state of society like that of I. at the downfall of the Roman empire. The already corrupt dialects of the uneducated become predominant, and being released from the fixing influence of a written literature, depart more and more from the grammatical standard; and in the case of I., the barbarian intruders would, to a still greater degree, mutilate the Latin, and introduce multitudes of words from the northern tongues. For some centuries, this corrupting process went on, in the course of which the Latin gradually divested itself of its original classical peculiarities, and degenerated into the impure or vulgar form known as the *Romana rustica*, or *lingua Romanza*, which became the prevailing language of the various races of South-western Europe, and received from each some of the most salient characteristics of their own native dialects.

This 'rustic Latin' may be termed the direct offspring of Latin, and the parent of Italian: in the compositions of the Provençal poets, we find one form of it elevated to the rank of a polished, or *illustre*, written language as early as the 10th c., while the form which prevailed in Italy continued as late as the 12th c., an uncouth and vulgar dialect, contemptuously excluded from all learned composition. In the Sicilian court of the Hohenstauffen emperor, Frederick II., the Italian dialect was first rescued from this state of degradation; adopted by this monarch as the choice language of his court, it became the medium of his own and his son's literary and poetic creations, while his learned friend and secretary, Pier delle Vigne, may be termed the earliest Italian poet; his odes and canzones, composed a hundred years before Dante, are written in wonderfully pure Italian. The university of Naples, and several of the Sicilian schools, were founded by Frederick, whose cultivated and enlightened court became the centre of the letters and learning of Italy, and the abode of the best intellects of the time. Here, Italian reached a considerable degree of refinement and correctness, and received the name of the *Aulic* (court) or of the *Sicilian* language.

Poets have in all ages been the elevators and guardians of language; and we find Italian in the 12th and 13th centuries honourably employed by the poets of the age, especially by those of Tuscany, whose own oral dialect soon took precedence over all the others in polished expression and grammatical accuracy. The chief Italian poets of this age are Guido Guinelli, Guido Ghisilieri, Fabrizio and Onesto of Bologna, Guido Lapo of Mantua; and the Tuscan poets Guittone d'Arezzo, Bonagiunta da Lucca, and Brunetto Latini Fiorentino, the illustrious preceptor of Dante. Fra Guittone, a member of the order of the Cavalieri Gaudenti, has left several compositions of merit, including sonnets and odes, but his most interesting literary legacy consists of forty letters in prose, which are regarded as a

valuable specimen of early Italian, being the most ancient epistolary composition in the language. The writings of these early poets possess more linguistic than poetic interest, and are to be found in various collections, chiefly in the *Rime Antiche* (1518), the *Poeti Antichi* by Alacci (1661), and the modern work of Rannucci, *Manuale della Letteratura del Primo Secolo* (Florence, 1837, 3 vols.). Brunetto Latini (1260), the preceptor of Dante, was reputed 'a man of great sense and science.' His work, *Il Tesoro*, is a marvel of heterogeneous knowledge. *Il Tesoretto* is a curious compendium of moral precepts, and *Il Pataffio* a still more curious production, the obscene levity of which earned for him a place in the *Inferno* of his pupil. Guido Cavalcanti, the cherished friend of Dante, was more of a philosopher than a poet. Italian also began to be now adopted as the vehicle of learned and scientific prose. The historical chronicles of Matteo Spinola, a Neapolitan, are the oldest specimen of Italian prose literature (1247–1268); but the Florentine Malespini (died about 1280) is the first historical writer whose style is elevated and polished. In short, contemporary with the appearance of Dante (q. v.), the Italian dialect was rapidly superseding Latin in grave prose composition, as well as in poetry, and soon became the recognised oral and written polite language of the entire country, while various local dialects were preserved in use amongst the illiterate classes of the people. It has been finely observed that Dante found the Italian language in its cradle, and exalted it to a throne; the *Divina Commedia* imprinted on the Italian tongue a grave and majestic character, which at once qualified it to rank with the languages of Greece and Rome. The impetus imparted by Dante to the language and intellectual life of his country, has continued to the present day.

The minor poets, Francesco Stabile, or Cecco d'Ascoli, burned by the church (1327), and author of *L'Acerba*, a critical attack upon Dante, and a wonderful mixture of learning, acuteness, and superstition; Francesco da Barberino (1264–1348); and Cino da Pistoja, the learned jurist and poet, whose work on jurisprudence, *Il Comento sul Codice*, and pleasing amatory verses, won for him the commendations both of Dante and Petrarch (1270–1336), claim mention before the great name of Francesco Petrarca (q. v.) (1304–1374), the creator of Italian lyrical poetry, and the enricher and perfecter of its language. The lustre of Petrarch's fame, however, is not derived from his sonnets alone. Apart from their exquisite beauty and pathos, their classical elegance and simplicity of diction render them an abiding standard of Italian poetry. Italian, which, in its poetical capacities, we have seen created by Dante, polished and refined by Petrarch, was first moulded into a perfect form of prose by the prince of novelists, Boccaccio (q. v.). The *Decamerone* is a series of tales, and Boccaccio's best known work. Boccaccio's style is deeply tinged by his culture of classical literature; and in his straining after the pompous majesty of Latin construction, he frequently exceeds the structural capabilities of his own language, which is naturally direct and simple in the order of its composition. Franco Sacchetti (1335–1400) of Florence, and Ser Giovanni Fiorentino (1348), also composed tales distinguished by the excellence of the language; while Dino Compagni and Giovanni Villani enriched the historical literature of I. with excellent chronicles, written in a spirit of fairness, and with great beauty of style.

The 14th c. was lavishly productive of great original literary creations, the writers of that age, or *I Trecentisti*, according to their Tuscan appellation,

being as distinguished for the sublime originality of their genius as those of the 15th c. were famed for their abstruse erudition and philosophy. Italian was the chosen language of the *Trecentisti*, and in their writings attained a high degree of refinement and purity. On the other hand, the scholastic writers of the 15th c. almost entirely excluded Italian from their works, substituting for the language of Dante and Petrarch a faulty form of Greek or Latin. To this circumstance may probably be attributed the languid development of literature during a period in which the most magnificent protection was afforded both by the pontifical and sovereign courts of Italy to the literature and art of the century, and when the discovery of printing imparted an impulse to the intellectual vitality of Christendom. Foremost among the encouragers of literature and art were the Medici at Florence; the Visconti, and, later, the Sforzas, at Milan; the houses of Gonzaga and Este at Mantua and Ferrara; the house of Aragon at Naples; and the Pontiff at Rome. Marsilio Ficino, Pico della Mirandola, Leon Battista Alberti, are some of the most distinguished writers who discarded their mother tongue and adopted Latin; while a host of grammarians, historians, philologists, and theologians openly pronounced the *illustrious* Italian language a vulgar dialect, unfit for philosophical or learned composition. But this debasement of literary taste was happily of brief duration, and to Lorenzo dei Medici, entitled the 'Father of Letters,' is owing the literary revival of the Italian tongue. Under this princely patron of letters, arts, and sciences, public libraries were founded or replenished, learned societies inaugurated, rich antiquarian treasures collected, universities opened, and a true standard of literary truth and beauty once more set up. His friend and protégé, Angelo Poliziano, wrote elegantly both in Italian and Latin, and composed the first regular dramatic work in the former language, under the title of *L'Orfeo*. Towards the close of the 15th c. and the opening of the 16th, a taste for the romantic and heroic in poetry began to shew itself. This taste was cultivated by Durante da Gualdo, by Luigi Pulci (q. v.) in his *Morgante Maggiore*, and by the still more famous Matteo Boiardo (q. v.), whose *Orlando Innamorato* evidently suggested the greatest of all the works of this kind, the *Orlando Furioso* of Ariosto. But by far the most important historical works of the time were written in Latin—for example, those of Silvio Piccolomini, Marc Antonio Sabellicus (died 1506), Bernardo Giustinianus (died 1489), and Georgius Stella (died 1480). During the century of scholastic erudition, the spring of Italian eloquence flowed with sluggish course until the impassioned and unstudied oratory of Jerome Savonarola (burned 1498) revived the traditions of ancient Rome, and reminded his hearers that Cicero too was an Italian.

The 15th c., though not marked by much creative genius in literature, unquestionably exercised an immense influence on the Italian mind. The revival of letters, the invention of printing, the discovery of a new world, and the opening up of a maritime channel to the wealth and traffic of the Indies, co-operated, one may say, in producing that wonderful development of art and enterprise which the succeeding age exhibited; while the advancement of learning and science was promoted and systematised by the founding of numerous universities and literary institutions, the aim of these latter being the diffusion of general knowledge and sound practical science. Many of the magnificent typographical treasures with which the great public libraries of Italy abound, belong to this golden age, and are

due to the artistic taste of Aldo Manuzio. See *ALDINE EDITIONS*.

The 16th c. is confessedly the Augustan age of Italian letters, art, and science. In a galaxy of splendid names, the brightest are those of Ariosto (q. v.), Tasso (q. v.), Macchiavelli (q. v.), Guicciardini (q. v.), Raphael (q. v.), Michael Angelo (q. v.), Palladio, and Vignola. Pope Leo X. and his successors vied with the other sovereigns of Italy in their munificent patronage of those men of genius, who, under the title of Cinquecentisti, are considered models of pure and noble Italian composition. The *Orlando Furioso* of Ariosto, held to be the first genuine epic of chivalry and romance, celebrates the deeds of the legendary ancestors of the house of Este. It exercised immense influence, even amongst the most illiterate classes, by whom its choicest beauties were committed to memory, in order to be sung as the solace of labour in the field or city. The next great work of the century was *La Gerusalemme Liberata*, by Torquato Tasso (q. v.), whose father was also an excellent poet and scholar. Tasso's prose writings and epistles are noble in style, and grave and philosophical in matter (1544–1595). Their best imitators are L'Alamanni, *Il Giron Cortese* and *L'Avarchide*; Rucellai; and Erasmo da Valvasone, in his *La Caccia* and *L'Angeleida* (or *The Wars of the Angels*), from which Milton probably borrowed some valuable hints (1593). Giangiorgio Trissino wrote the first notable Italian drama, *Sofonisba*. Besides this, the *Tullia* of Ludovico Martelli, the *Canace* of Sperone Speroni (1500–1588), the *Torrismondo* of Tasso, and the *Edipo* of Andrea dell'Anguillara, deserve mention—the last is considered the best Italian tragedy of the time. The comedies of Bentivoglio, Salviati, Cecchi, Firenzuola, and others, are stamped with that prevailing spirit of licentiousness which disfigures many of the finest productions of the age. The popular dramatic pieces, or *Commedie dell'Arte*, enjoyed as high repute among the lower classes as the higher drama did in courtly and patrician circles. Some of the chief composers of these pantomimic comedies are Flaminio Scala, Angelo Beolco, Andrea Colmo. The writers of pastoral dramas inundate this epoch, but none can compete with Guarini (q. v.) in his sweet idyllic work, *Il Pastor Fido*. Poetry was first combined, during this century, with music—one of the earliest operatic compositions being the *Dafne* of Rinuccini (died 1621). The sonnets of Michael Angelo excel in a certain dignity and originality of thought. Vittoria Colonna, celebrated in the verse of Ariosto, was the most illustrious poetess of her time; which produced numerous other female writers, whose works have been collected and published by Domenichi.

Foremost among the prose-writers stands Macchiavelli; his *Arte della Guerra* (Art of War), *Istorie Fiorentine* (History of Florence), and political treatise, *Il Principe* (The Prince), all excel in their various styles. Giovanni Botero, Giannotti, and Paruta, are also political writers of high merit. Greater than either is Francesco Guicciardini, whose *History of Italy* has only one blemish, viz., want of brevity. The works of Bembo (q. v.), historian and poet, exhibit the Italian language subjected to a regular grammatical system. Literature was historically treated by Barbieri and Doni; art, by Vasari, Campi, and Lomazzi; and architecture, by Vignola and Palladio.

The progress of the age is equally perceptible in philosophy, which, bursting the fetters of scholastic formalism, displays the utmost freedom of speculation in the works of Cardan (q. v.), Bruno (q. v.), and Vanini. Many celebrated institutions or academies for the discussion and diffusion of

knowledge date from the 16th c., one of the most noted being the academy Della Crusca, founded at Florence for the preservation and perfecting of the Italian language.

The 17th c., if less prolific in great literary names than its predecessor, is nevertheless the golden age of Italian science; it produced a host of illustrious discoverers in philosophy, mathematics, and physic. Such was the fame of Italian science at this period, that the universities of Florence, Naples, Pisa, and Venice were thronged with foreign students. Learned societies for the cultivation and practical demonstration of the physical sciences were opened throughout Italy (see ACADEMY). Libraries were collected and enriched, to afford every facility to learned research. The most celebrated savants are the world-famous Galileo (q. v.), Torricelli (q. v.), Borelli, the astronomer Cassini (q. v.), and Viviani, the pupil and biographer of Galileo; Malpighi and Bellini, anatomists and physicians. Contemporary with these, we find Gian Vincenzo Gravina, whose lectures on civil law attracted audiences from all Europe. In historical composition, the best known works are Sarpis's famous *History of the Council of Trent*; its equally famous refutation by Pallavicino; *The History of the Wars of the Netherlands*, by Bentivoglio; and of *The Civil Wars of France*, by Davila (q. v.). A few of the great names of literature are—Bianchi, an acute thinker on political and social science; Monte-Cuculi, author of the *Aphorisms of the Art of War*, written with Spartan brevity of style; Bartoli, the Jesuit historian; and Segneri, the Jesuit orator.

The poets of the 17th c., at least Marini (q. v.) and his school, display a degenerate taste. Fondness for trivial conceits, false glitter, and artificiality, are their characteristics; but several of his contemporaries—Chiabrera, Guidi, Tassoni, author of the admirable mock-heroic poem, *La Secchia Rapita* (The Stolen Pail), Filicaja (q. v.), and others, have written with a grave energy of style and a warmth of sentiment elevating to any age. The theatrical and operatic representations at the various sovereign courts were of exceeding splendour, as if in compensation for the paucity of dramatic compositions.

In the 18th c., a vigorous revival of poetry and letters took place. Giannone, in history; Capasso, in literature; Cirillo, in physic; Mazzochi, in archæology; Il Genovesi, in political economy; the brothers Galiani, in their respective sciences of architecture, political economy, and philology; Filangieri (q. v.) and Beccaria (q. v.) in the philosophy of jurisprudence; Mario Pagano, in the science of civil law; Poli (1746—1825), Volta (1745—1826), Galvani (1737—1798), Scarpa (1748—1832), and Spallanzani (1729—1799), in physical science; Maffei and Calsabigi, in poetry, are some of the names by which this period was ennobled. The 18th c. can also boast of the greatest names in Italian dramatic literature, Metastasio (q. v.) (1698—1782), who is considered the master of the pastoral drama: flowing, sweet, and silvery, the language of his gentle muse presents a strange contrast to the brevity, sternness, and classical plainness of Italy's greatest tragedian, Vittorio Alfieri (q. v.) (1749—1803), by whom a thorough revolution was effected in the drama of his country. A no less marked reformer of comedy is his contemporary, Carlo Goldoni (q. v.) (1707—1793).

During the present (19th) century, the genius of Italy has revived anew in science and literature. By the best writers of the day, a sound Italian style, untainted either by Gallicisms or by the false glitter of the *Seicentisti* school, has been adopted. One of the best modern poets of the classical school, Vincenzo Monti, has materially assisted this literary

reform: the resolute combatant of the school of Marini, his fine works are rigidly moulded on the pure *Trecentisti* style; and in his great poem, *Basvilliana*, the language is impregnated with a Dantesque grandeur, which has caused it to be said that the spirit of Dante has inspired the works of Monti. His translation of the *Iliad* and that of the *Odyssey* by Pindemonte, are the best classical translations in Italian. In the wayward and fervid genius of Ugo Foscolo (q. v.), we find the reflection of the vicissitudes and political chaos of his times; his lyrical work, *I Sepolcri*, is written with extreme polish and faultless taste, which may also be said of the lyrics of Leopardi. Botta, Ricci, Bagnoli, Arici Sestini, Pananti, and Lorenzi, deserve mention among the modern poets. Grossi is a spirited poet, who has written chiefly in the Milanese dialect. In the poignant and imbibed verses of Berchet, we recognise the double inspiration of his country's and his own political sufferings; and the gentler poet, Silvio Pellico, was already famous for his poetic tragedy, *Francesca da Rimini*, previous to his incarceration in an Austrian dungeon.

Rossetti, the exile and poet, and the most distinguished commentator on Dante's *Divina Commedia*; Giov. Battista Niccolini, whose drama, *Arnoldo da Brescia*, is one of the finest works of modern Italian genius; Leopardi, poet, philologist, and philosopher; Giusti (q. v.), the first Italian satirical lyricist of the 19th c.; Mameli, the patriot poet, who fell in 1848 at Rome; Prati, Aleardi, Dall' Ongaro, Carcano, and Montanelli, are some of the most conspicuous worshippers of the Italian muse in the 19th century. Among the most successful novelists are Manzoni, whose *Promessi Sposi* has created a new school of fiction; Rosini (*Monaca di Monza*, *Luisa Strozzi*, *Il Conte Ugolino*), Cantù (*Margherita di Pusterla*), Grossi (*Marco Visconti*), and D'Azeglio, whose patriotic novels have exercised a wide influence on the youth of the country. *Ettore Fieramosca* and *Nicolo dei Lapi* are models of classical romances. Guerrazzi has written novels full of the noblest poetry. Bersezio and Ruffini are also worthy of notice. And among authoresses, we may mention Teresa Bandinella, Cecilia de Luna Folliero, Guistina Michiel, Isabella Albrizzi (whose biography of Canova is a graceful and accurate delineation), and Signora Ferrucci, whose educational works possess high merit. The modern historians of Italy are very numerous. Balbo's *Summary of Italian History*, Botta's *History of Italy*, Coletta's *Naples*, Amari's *Sicilian Vespers*, Cantù's colossal work on *Universal History*, Zeni's *Compendium of Italy's History*, and Scopoli's *History of Italian Legislation*, are among the best works; while interesting historical monographs of various periods or states have been published by Canetti, Canale, Brofferio, Anelli, Cattaneo, the graphic recorder of the rising at Milan in 1848, and the learned compiler of the *Archivio Triennale*, or series of documents bearing on Italian modern history from 1848 to 1850. Political economy and philosophy have found in Mazzini, Gioja, and Romagnosi able exponents. The political writings of Joseph Mazzini (q. v.), apart from their political tendencies, have exercised immense influence on the youth of Italy by their high moral tone and beauty of language. The various schools of philosophy have found adherents and expounders in Borelli, Galuppi (1770—1846), Mamiani, Rosmini, Gioberti, and Tommaseo, mostly all exponents of ecclesiastical philosophy; while Testa, Franchi, Mastriani, and Cattaneo are the exponents of speculative and independent philosophy. Anti-quarian and archæological science has been ably illustrated by Inghirami, Fannucci, Manno, Litta, Visconti, and Sestini. Bossi, Fumigalli, Ferrario,

and Rosini have written the best dissertations on art. Biography, which as yet has been somewhat neglected by Italian writers, has found in Professor Villari a successful cultivator; his *Life of Savonarola* is written with liberality, grace, and eloquence. The most complete histories of Italian literature are Crescimbeni, *Storia della Volgar Poesia*, 6 vols. (Rome, 1698; Venice, 1731); Quadrio, *Storia e Regione d'ogni Poesia*, 7 vols. (Bologna, 1739); Tiraboschi, *Storia della Letteratura Italiana*, 14 vols. (Modena, 1772—1783; 16 vols. 1787—1794; 12 vols. Rome, 1785; 16 vols. Milan, 1822—1826); Coruiani, *Secoli della Letteratura Italiana*, 9 vols. (Brescia, 1818—1819); Maffei, *Storia della Letteratura Italiana*, 2d ed., 4 vols. (Milan, 1834); Cimorrelli (Milan, 1845); Giudici (Florence, 1847); Levati (1831).

ITA'SCA, LAKE. See MISSISSIPPI.

ITCH (known also as SCABIES and PSORA) is a contagious vesicular disease of the skin. All parts of the body, unless perhaps the head, are liable to be affected, but the most common seats of the disease are the wrists and hands, and especially between the fingers. The first sign of this affection is an itching sensation, which, upon minute examination, is found to proceed from a minute conical vesicle, while the adjacent portions of epidermis present a more scaly appearance than is natural. This condition of the skin is due to the presence of a minute acarus, the ITCH-MITE (q. v.), which burrows within the epidermis, and excites the cutaneous irritation. The affected parts itch with increased intensity when the patient is warm in bed, or after the use of stimulating drinks or exciting condiments; and as he cannot refrain from scratching himself, the vesicles get more or less broken, and become interspersed with numerous little bloody points.

The itch being popularly regarded as a somewhat disreputable affection, and being highly contagious, it is very important that it should be distinguished from other cutaneous disorders. Eczema, prurigo, and lichen, are the affections most likely to be confounded with it; but eczema, though a vesicular disease, presents rounded and not conical vesicles, and at most only a pricking sensation, and nothing like the irritation of itch; while prurigo and lichen are papular disorders, and are not accompanied by the presence of vesicles; moreover, none of these diseases are contagious.

The itch is always communicated by contact, either immediately, as by the act of shaking hands, or through the medium of articles of clothing or bedding which have been used by a person suffering from the disorder. In some cases, the proximate cause of the disease, the itch-insect, is conveyed to the sound person in its perfect form; while in other cases, the ova or embryos suspended in the fluid of the vesicles may be the mode of transmission.

The disease, if not cured, will go on for an indefinite period, probably for life; but in cold and temperate climates, never gives rise to serious injury to the health. Numerous external remedies have at different times been employed for the cure of this disease, but the great remedy is sulphur, which may be regarded as a specific. In the case of an adult, Mr Erasmus Wilson, our highest English authority on skin-diseases, recommends that 'four ounces of sulphur ointment should be well rubbed into the entire skin before the fire, and particularly into the affected portions, morning and evening, for two days. It is desirable also that the patient should wear a flannel shirt, and retain the same during the whole of the treatment. On the morning of the third day, the patient should take a

warm bath, and wash the skin thoroughly with plenty of soap, when the cure will generally be found to be effected.'

When patients strongly object to the smell of sulphur, which is not unfrequently the case, an ointment made by digesting over a vapour-bath, for 24 hours, three parts of stavesacre in powder, with five parts of lard, and then straining, may be used. According to M. Bourguignon (who has made numerous experiments on the deleterious action of medicines on the living itch-mite), this ointment will cure the disease in four days.

ITCH-MITE (*Acarus scabiei* or *Sarcoptes scabiei*) is supposed by some naturalists to have been referred to by Aristotle in the 5th book of his *História Animalium*, cap. 31. But although the itch was undoubtedly known both to the Greeks and Romans, there is no certain evidence that a mite was recognised as the cause of the disease earlier than by Avenzoar, an Arabian physician of the 12th century. Throughout the whole of the middle ages, and till the present century, the necessary connection between the disease and the mite was universally recognised, as is obvious from the writings of Scaliger (1557) and others; and a paper read by Adams before the Royal Society in 1805, contains two very good figures of the mite. During the first ten years of this century, many practitioners, not succeeding in finding the animal, expressed doubts concerning its existence, and in 1812 there occurred a remarkable incident in the history of this mite. M. Gales, the chief apothecary to the Hospital of St Louis, tempted by a prize offered by one of the unbelievers, published in that year a treatise on the itch, in which he declared that he had seen more than 300 of the mites, and in which he gave a drawing of the animal, which, although it differed materially from the delineations of earlier observers, was at once accepted as an exact representation of the true parasite, and was copied for several years into all works treating the itch, until Raspail discovered that M. Gales's Memoir was a tissue of deceptions, and that the animal which he had figured was the *cheese-mite*! The existence of the itch-mite was now more distrusted than ever, until, in 1834, Renucci, a Corsican student, demonstrated the presence of the creature. Many points regarding the structure and habits of this curious animal have been since revealed by the investigations of Gras, Raspail, Hebra, Gudden, and especially De la Foad and Bourguignon, who have presented to the French Institute *A Practical Treatise on the Entomology and Comparative Pathology of the Itch as it occurs in Man and the Domestic Animals*, which has been published in the last volume (1862) of the *Memoires présentés par divers Savants a l'Académie des Sciences*.

The adult female mite is considerably larger than the male; it is visible to the naked eye, and forms a roundish grayish-white corpuscle, not unlike a starch granule; it is about $\frac{1}{4}$ th of a line in length, and $\frac{1}{4}$ th in breadth. When seen under the microscope, it presents a truncated tortoise-like shape, and is seen to be studded with hairs and bristles. The head terminates in two pairs of mandibles, and as these mandibles afford good characteristic distinctions of the species, representations are given in fig. 2 of the mandible in the female itch-mite and in fig. 3 of the mandible in the sugar-mite.

In order to penetrate the horny layer of the epidermis, the mite assumes, according to Gudden, a nearly perpendicular position; and to avoid as much trouble as possible, it usually selects such spots as give least resistance, such as the space between the fingers, the inside of the wrist, &c. Once fairly buried, it does not again come out, but burrows, and

forms tortuous galleries within the skin. These galleries resemble the mark which is formed when a pen is drawn lightly over the skin without causing

Itch-Mite :

1, abdominal view of female itch-mite, magnified 65 diameters ; 2, one of its mandibles, magnified 65 diameters ; 3, mandible of male sugar-mite, magnified 390 diameters.

a scratch. In young children, and in persons with a delicate skin, they appear of a grayish-white colour ; while in persons with a coarse dirty skin they are of a blackish tint. At certain intervals, the galleries are pierced by small openings, for the admission of air ; it is through these openings, which sometimes appear like very minute black dots, that the young escape. The vesicles characteristic of the itch-disease are attributed to a poison ejected by the mite. The males are smaller and much scarcer than the females.

There are numerous species of itch-mite (*Sarcoptes*) which infest the lower animals. One of them (*S. canis*) produces *Mange* (q. v.) in dogs ; another (*S. equi*), a comparatively large species, sometimes occurs in horses ; another (*S. bovis*) in oxen in some parts of Europe ; another (*S. ovis*) in sheep. Some of these are occasionally transferred to human beings, and cause irritation and annoyance, which, however, seems to be limited to the life of the individual mites transferred, the situation not being congenial enough for their increase.

For further information on the structure and habits of this animal, the reader is referred to the second volume of Küchenmeister's work on Parasites (translated for the Sydenham Society), and to Bourguignon's treatise.

ITHACA (now **THIAKI**), one of the Ionian Islands (q. v.), and the smallest of them except Paro. It lies 17 miles west of the mainland of Greece, and 2 miles north of Cephalonia. The surface is mountainous, but there are many pleasant valleys. Length, 15 miles ; breadth, 4 ; area, about 44 square miles. It was celebrated among the ancients as the principality and home of Ulysses ; and some Cyclopean ruins near Porto Molo are called by the islanders the ruins of the Castle of Ulysses. In 1858, the population of the island amounted to 11,348, of whom about 2500 were in the town of Vathi, its seaport and capital.

ITHACA, a village in the state of New York, America, at the southern extremity of Cayuga Lake, 162 miles west-by-south from Albany. It has a large trade in coal, and 30 mills and manufacturing. Pop. (1860) 6843.

ITINERARY (Lat. *itinerarium*, derived from *iter*, a journey), the name given by the Romans to a table of the stages between two places of importance, with the distances from one to another. The itineraries of the ancients contribute much to our acquaintance with ancient geography. Of these,

the most important are the *Itineraria Antonini* and the *Itinerarium Hierosolymitanum*. The *Itineraria Antonini* are two in number, the *Itinerarium provinciarum* and the *Itinerarium marinum*, the former containing the routes through the Roman provinces in Europe, Asia, and Africa ; and the latter the principal routes of navigators, who then sailed only along the coasts. They take their name from Antoninus Caracalla, by whom they were published, as corrected up to his time, but they seem to have been originally prepared at an earlier date.—The *Itinerarium Hierosolymitanum* was drawn up 333 A. D., for the use of pilgrims from Burdigala (Bordeaux) to Jerusalem. Of these itineraries, various editions have been published.

ITINERATING LIBRARIES are small collections of books for popular reading contained in boxes, one of which, after being stationed in a village for a certain length of time, is transferred to another village, when another takes its place ; and so on with any assigned number of boxes, each with its special assortment. The principle of shifting about boxes of books in this way in rural districts is referred to in the memoirs of Oberlin (q. v.), and has been long known in Wales, as well as the Highlands ; but it met with no significant approval, until it was improved upon and carried practically into effect on a broad scale by Samuel Brown, a merchant in Haddington (died 1839), who, taking a deep interest in popular instruction, set on foot itinerating libraries in several villages of East Lothian, 1817. The books were assorted to the extent of 50 volumes in a box. At first, there were four boxes ; and as the time allowed for each was two years at a village, the inhabitants of four villages had the perusal of 200 volumes in the space of eight years, at one-fourth the expense of the whole. The undertaking was begun and locally superintended from motives of benevolence, and the books were supplied gratuitously. The success attending this economic method of establishing libraries in a country district, led to its extension over a wider sphere, on the principle of readers paying a small sum per annum, also of forming the assortments of books from the used new works in a central subscription library. In 1862, there were 18 itinerating divisions in use in East Lothian, while there are several elsewhere in Scotland, as also in England, and 12 divisions were lately transmitted to Jamaica, where they are to be under the charge of missionaries. From all that can be gathered, the establishment of libraries of this simple class proves a valuable auxiliary to schools, churches, and other agencies of social improvement. For a variety of particulars on the subject, see a small volume, *Some Account of Itinerating Libraries and their Founder* (Edin. 1856).

I'TZEHOE, a town of Denmark, in the duchy of Holstein, and the oldest in the duchy, is situated on the Stör, in a valley backed by finely wooded hills, about 50 miles by water north-west of Hamburg. Tobacco, chicory, sugar, and brandy, are manufactured, and important horse and cattle markets are held here. I. also carries on a considerable general trade by water with Altona and Hamburg. Pop. 6691.

The original castle around which I. gradually arose was built by Charlemagne in 809. I. was twice taken by Tilly in the Thirty Years' War, and in 1657 a great portion of it was burned down by the Swedes.

IVAN, or **I'WAN** (the Russian form of John), the name of a number of Russian czars.—**IVAN I.** (1462—1505) may be regarded as the founder of the Russian empire. He was at first only Grand Duke

of Moscow, but succeeded in shaking off entirely the yoke of the Tartars, and in subjecting a number of the Russian principalities to his own sway. In 1472, he married Zoë, a niece of the last Byzantine emperor, and thus brought the two-headed Byzantine eagle into the Russian arms, an emblem with which are connected pretensions not likely to be forgotten by the Russian emperors, although they may not be openly urged. This marriage opened up a way also for the entrance of European civilisation into Russia.—IVAN II. (1533—1584) did much for the advancement of his country in arts and commerce, as well as for its extension by arms. He concluded a commercial treaty with Queen Elizabeth, after the English had discovered the way to Archangel by sea. He bore, however, the surname of the Cruel, and merited it by his deeds, amongst which was the slaughter of 60,000 persons—other accounts make the number only 25,000—at Novogorod in six weeks, on account of a supposed plot to deliver up the city and surrounding territory to the king of Poland.—IVAN III., born 23d August 1740, was the son of the Duke Anthony Ulric of Brunswick-Wolfenbützel, and the Russian Grand Duchess, Anna Carlowna. The Empress Anna Ivanowna adopted him as her son and heir, but she dying soon after, and Elizabeth, the daughter of Peter I., seizing the throne, he was imprisoned during the remainder of his life; and by the orders either of the Empress Catharine II. or of her counsellors, was put to death by the officers of the garrison at Schlüsselburg, where he was confined, on 5th December 1764. Those Russian Ivans are sometimes differently numbered, the reckoning being made to begin further back, with those who were only Grand Dukes of Moscow.

IVES, Sr, a municipal and parliamentary borough of England, in the county of Cornwall, beautifully situated on the north-east shore of the bay of the same name, with an outlook on the Bristol Channel, about 10 miles north-north-east of Penzance. It is a very old and picturesque town; its church, a granite building of the early part of the 15th c., stands on the beach, and is reached by the spray in rough weather. Its harbour admits vessels of 200 tons. I. is the head-quarters of the pilchard-fishery. In the vicinity are several important tin and copper mines. Pop. (1861) of parliamentary borough, which returns one member to parl., 10,354. (1871—10,034.)

IVES, Sr, a small market-town of England, in Huntingdonshire, is situated on the left bank of the Ouse, 6 miles east of Huntingdon. A very large weekly cattle and corn market is held here. Brewing and malting are the chief branches of industry. Pop. (1871—3248.)

IVIZA (anc. *Ebusus*), one of the Balearic Isles (q. v.), lies about 50 miles south-west of Majorca. It is 23 miles long, and 12 miles broad; pop. 11,000. Iviza, the chief town, has a pop. of 5100. Salt, the principal article of export, is extensively manufactured on the shore.

IVORY was the name formerly given to the main substance of the teeth of all animals, but it is now restricted to that modification of *dentine* or tooth-substance which in transverse sections shews lines of different colours running in circular arcs, and forming by their decussation minute lozenge-shaped spaces. By this character, which is presented by every portion of any transverse section of an elephant's tusk, true ivory may be distinguished from every other kind of tooth-substance, and from every counterfeit, whether derived from tooth or bone. Although no other teeth, except those of the elephant, present this characteristic, many other animals, such as the walrus, narwhal, hippopotamus,

&c., possess teeth, horns, or tusks, which, from their large size and from their density, can be used for the same purposes in the arts as those for which true ivory is employed. The ivory of the tusks of the African elephant is held in the highest estimation by the manufacturer, on account of its greater density and whiteness. The tusks are of all sizes, from a few ounces in weight to more than 170 lbs. each. Holtzapffel states that he has seen fossil tusks from the banks of the rivers of Northern Siberia which weighed 186 lbs. each. There are various chemical processes by which it may be dyed of various colours, as black, blue, green, yellow, red, and violet.

Ivory articles can be made flexible and semi-transparent by immersion in a solution of phosphoric acid of sp. gr. 1.130, till they become translucent. They are then to be taken out, washed with water, and dried with a soft cloth, when they are found to be as flexible as leather. They harden on exposure to dry air, but resume their pliancy when immersed in hot water.

Much important information on the subject of ivory generally will be found in Holtzapffel's *Mechanical Manipulation*.

The tusks of the elephant have from very early periods constituted an important article of trade, in consequence of their great beauty as a material for ornamental manufactures, and even works in fine art. I. is frequently mentioned in the Old Testament. With the Greeks it became a most important material, and by the hands of the sculptor Phidias a statue was produced of the Olympian Jupiter, of such marvellous beauty and imposing majesty that it was considered a misfortune to die without having seen it. By the Romans, who were supplied from Africa, it was also extensively used, and by them its use was diffused over the whole of Europe. The art of working in ivory doubtless had its origin in India, where it has always been a much valued material, and formerly supplied indirectly much of the ivory sent to Europe. The value of ivory is in proportion to the size and soundness of the teeth. Below the weight of five pounds, they are called *scrivelloes*, and are of the least value, rarely reaching five shillings per pound; but double that price has been given for teeth of unusually large size. The quantity imported into Great Britain from all parts rather exceeds 500 tons per annum, the value of which is nearly £400,000.

The so-called ivory obtained from the hippopotamus is in especial favour with dentists for making false teeth, on account of its pure white colour and freedom from grain. The fossil ivory, which is found in considerable quantity in Siberia and the arctic regions, is uncommonly hard and brittle; it is also whiter, and wants its waxy softness. At present, the demand for ivory is rapidly increasing, owing to the great taste and skill of some of the artists who work in this material, and as the supply increases but very slowly, it is likely to become very dear. The works in ivory exhibited in the International Exhibition (1862) shewed a very extraordinary advance in the beautiful art of ivory-carving, and single specimens were shewn of the value of £500.

IVORY, VEGETABLE. This curious material is furnished by one of the most beautiful of all the palm tribe. It grows on the Andean plains of Peru, and on the banks of the river Magdalena, and other parts of South America. The stem of this palm (the *Phytelephas macrocarpa*) is short and procumbent, but it has, proceeding from its crown, a magnificent tuft of light-green pinnated leaves of extraordinary size and beauty; they are like immense ostrich-feathers rising from 30 to 40 feet in

height. The flowers are on a crowded spadix, and have neither calyx nor corolla. The fruit, which is as large as a man's head, consists of many 4-celled leathery drupes aggregated together, and contains numerous nuts of a somewhat triangular form, each nut being nearly as large as a hen's egg; they are called *Corrozzo nuts* in commerce. The kernels of these nuts when ripe are exceedingly hard and white, in fact they resemble ivory so completely that few names have ever been better applied than that of vegetable ivory. They have of late come into extensive use by turners, in the manufacture of buttons, umbrella-handles, and small trinkets, and so closely resemble true ivory as frequently to deceive competent judges. Two or three millions of these nuts are now imported annually, and are chiefly used by the London and Birmingham turners.

IVORY-BLACK. See BONE-BLACK.

IVRE'A, a town of Piedmont, and capital of a province of the same name, has a population of 9238, and is situated on the left bank of the Dora Baltea, partly on level ground and partly on an eminence exposed to the sirocco winds. The cathedral is supposed to have been a temple of Apollo, and contains an ancient sepulchral monument of the age of Augustus. The carnival of I. is famed for its picturesque allegorical pageants.

IVRY-SUR-SEINE, a manufacturing town of France, in the department of Seine, is situated on the left bank of the river of that name, three miles above Paris. Glass, earthenware, and chemical products are the chief manufactures. Pop. 8679.

IVY (*Hedera*), a genus of plants of the natural order *Araliaceæ*, consisting of shrubs and trees, mostly natives of tropical countries. The flowers have five or ten petals, and five or ten converging or consolidated styles. The fruit is a berry with five or ten cells.—The COMMON IVY (*H. helix*) is a well-known native of Britain, and of most parts of Europe, although it is more rare in the northern countries. Its long, creeping, branched stem, climbing on trees and walls to a great height, and closely adhering even to very hard substances by means of rootlets which it throws out in great abundance along its whole length, acquires in very aged plants almost the thickness of a small tree. Its 5-lobed, shining, stalked, evergreen leaves, clothing bare walls with green luxuriance, serve to throw off rain, whilst the rootlets of the stem suck out the moisture, so as to render damp walls dry, contrary to a common prejudice, that ivy tends to produce dampness in

walls. It injures trees, however, both by abstracting their sap and by constriction. The flowering branches of ivy have ovate, entire leaves, very different from the others. Its small greenish flowers are produced in the beginning of winter, and the small black berries are ripened in the following year. The berries are eagerly eaten by many birds, although they have a pungent taste, and

Ivy, shewing the Rootlets.

contain a peculiar bitter principle called *hederine*, and an acid called *hederic acid*; which are also found in a gummy exudation obtained by incisions from the stem, and occasionally used in medicine as a depilatory and a stimulant, and in varnish-making. An ointment made from the leaves is used in the Highlands of Scotland to cure burns. In Egypt, the ivy was sacred to Osiris, in Greece to Bacchus (*Dionysos*), whose thyrsus was represented as surrounded with ivy; the Romans mingled it in the laurel crowns of their poets.

There are several varieties of ivy often planted for ornamental purposes, of which that generally known in Britain as *Irish Ivy*, and on the continent as *English Ivy*, is particularly esteemed for its large leaves and luxuriant growth. It is said to be a native of the Canary Isles. Ivy grows readily from cuttings.—*H. umbellifera*, a native of Amboyna, is said to produce a finely aromatic wood; and *H. terebinthacea*, a Ceylonese species, yields a resinous substance which smells like turpentine.

J

THE tenth letter in our alphabet, has in Eng. the power of *dzh*; in Fr., of *zh*; and in Ger., of *y*. Both the sound and the character have sprung out of the original vowel *i*. When such a word as *Iulius* is pronounced rapidly, it naturally slides into *Yulius*. The Romans, though they had but one character for both, recognised this distinction between the vowel and the semi-vowel; and in the case of such words as *cuius*, *maius*, some writers doubled the *i*, and wrote one or both long, as *cuiIus* or *cuiIus*. There is little doubt that the original Roman sound of this semi-vowel was that of Eng. *y* (youth), still given to it in German. But as this sound has a tendency to convert the consonant preceding it into a sibilant (see letter C), so it has a tendency to become itself sibilant, and *Yul* slides into Fr. *zhul*, Eng. *dzhul*. This transition had already taken place in the later ages of the Latin, at all events, in the popular pronunciation, as appears from such inscriptions as *congiunta*, for *conjuncta*; *Zesu*, for *Jesu*.

It was the Dutch scholars of the 16th and 17th centuries that first introduced a regular distinction between the consonantal and vowel powers of *i*, and marked the former by the distinct character *j* (a long *i*, projecting below the line). The character has been adopted in the modern Teutonic and Romanic languages, with the exception of Italian, which represents the sound by *gi* or *ggi*, as *Giovanni*, from Lat. *Johannes*; *maggiore*, from Lat. *maior*. In Span., it has a guttural power, and is interchangeable with *x*, as *Xeres*, or *Jeres*.

JA'BIRU (*Mycteria*), a genus of birds of the same

widely distributed in South America, Africa, and Australia.

JABUTICABA. See **EUGENIA**.

JA'CANA (*Parra*), a genus of birds of the order *Grallæ*, commonly ranked in the family *Rallidæ*, natives of the warm parts of Asia and the Asiatic islands, Africa, and South America. In general appearance, they much resemble gallinules and coots. The feet, though not webbed, are adapted, by the great length of the toes and claws, for walking on the surface of weed-covered lakes and swamps, the native haunts of these birds, where they never fail to attract the attention of the traveller. The COMMON J. (*P. Jacana*) is a South American

Common Jacana (*Parra Jacana*).

Australian Jabiru.

species, abundant in Guiana and Brazil. It is about ten inches long; black, except the back and part of the wings, which are of a bright chesnut colour. The INDIAN J. (*P. Indica*) and the CHINESE J. (*P. Sinensis*) are also among the best known species. Both are found in India and other parts of the East.

JACARANDA WOOD, a very hard, heavy, brown wood, also called *Rosewood*, from its faint agreeable smell of roses. It is brought from South America, and is produced by several trees of the genus *Jacaranda*, of the natural order *Bignoniaceæ*. Several species of this genus are called *Caroba* in Brazil, and are there accounted anti-syphilitic.—Several species of the nearly allied genus *Tecoma* also have an extremely hard wood, as *T. pentaphylla*, a native of the Caribbean Islands. The Brazilian Indians make their bows of the wood of *T. toxiphora* or *Pao d'arco*.

family with storks and adjutants; the chief distinction from the storks being that the bill is a little curved upwards. The species are few, but are

JACK. 'The Jewish *Jacobus* was corrupted through Jacquemes to *Jakes* in France, and *James* in England; and *Jakes* being the commonest Christian name in the former country, was used as

a contemptuous expression for a common man. *Jacquerie*, an insurrection of the peasants. The introduction of the word in the same sense into England seems to have led to the use of Jack as the familiar synonyme of John, which happened to be here the commonest name, as Jaques in France. The term was then applied to any mechanical contrivance for replacing the personal service of an attendant, or to an implement subjected to rough and familiar usage.—Wegwood's *Dictionary of English Etymology*. This will be found to explain the very varied use of this word, whether single or in composition; as *boot-jack*, *jack-boots*, *black-jack* (a leathern jug for household service). *Jacket* (the diminutive of Jack) is a short coat for homely use.

JACK, JAK, or JACA (*Artocarpus integrifolia*), a tree of the same genus with the Bread-fruit (q. v.), a native of the East Indies. It is a larger tree than the Bread-fruit, and has undivided leaves. The fruit is very large, weighing from five to fifty, sometimes seventy pounds. The fruit, which is produced in very great abundance, resembles the bread-fruit, but is of very inferior quality, the pulp having a strong unpleasant flavour; yet it forms great part of the food of the natives in some parts of India, Ceylon, &c. The seeds, which lie immediately under the rind, are very palatable when roasted. The timber, which is yellowish, is used for almost every purpose, being both strong and ornamental, and is imported into Britain for making musical instruments, cabinet-work, the backs of brushes, marqueterie floors, &c. The J. is now much planted in many tropical countries of which it is not a native.

JACK-A-LANTERN. See *IGNIS FATUUS*.

JACKAL (corrupted from Sp. and Fr. *chacal*), the common name of a number of species and varieties of the dog genus, abounding in many parts of Asia and Africa, but not found in any of the other quarters of the globe, except that one of the kinds extends into Greece. They agree in all their most important characters with wolves and dogs, and many naturalists suppose that some of the domestic varieties of dog are of jackal parentage. The pupil of the eye is circular, as in the dog and wolf, although the form and tail are somewhat fox-like. The head is narrow, and the muzzle pointed. The ears are erect, and rather large. The tail is not so long as in foxes, but is almost equally bushy. All the jackals are of small size, as compared with

and their howlings are described by all who have heard them as peculiarly horrible. The notion that the J. is the *lion's provider*, and guides the royal beast to his prey, is one of the exploded fables of natural history, although it may have some foundation in the lion's occasionally following a troop of jackals in full cry, and appropriating 'the lion's share.' Jackals are not only ready to devour any animal which they can run down, but any carrion which they may meet with. They follow armies; they dig up the ill-buried dead; they rob hen-roosts and outhouses; but they are as omnivorous as domestic dogs, eating farinaceous or other vegetable food when it comes in their way; they are even said, like foxes, to enter vineyards, and devour the grapes. They have a very offensive smell, which, however, is said to diminish through domestication, and they are domesticated without difficulty. The name of *COMMON J.* is sometimes given to the species (*Canis aureus*) which is found in the western parts of Asia, and which is in general yellowish gray above, and whitish below, with yellow legs and thighs. But it is doubted if this animal was in ancient times plentiful, as it is now, in Syria and neighbouring parts of Asia. It is thought not improbable that it may have followed the track of armies from the farther east. It is pretty certain that it has, in comparatively modern times, become common in parts of Asia more northern than it formerly inhabited. It is not improbable, however, that it is included under the name *fox* in the Hebrew Scriptures.

JACKASS, LAUGHING (*Dacelo gigantea*), a bird of the Kingfisher family (*Halcyonidae*), and sometimes described in works on natural history as the Great Brown Kingfisher. It agrees very nearly with the kingfishers in its form and characters, but differs from them in its habits, not frequenting waters, nor feeding on fish, but preying on beetles, reptiles, and small mammalia. It is about eighteen inches long, and mostly of a brown colour. It is a common bird in Australia, and has received its English name from the colonists, on account of the peculiar sounds which it utters. The natives call it *Gogobera*, apparently in imitation of its cry. It is of great use in preventing the excessive multiplication of reptiles and other pests. Its bill is powerful enough to crush the heads of snakes. It is easily tamed, and is sometimes kept in gardens, from which it does not seek to escape.

JACK-BOOTS, tall boots of tough thick leather, reaching above the knee, and formerly worn by cavalry. In some instances, as an additional protection against sword-cuts, they were lined with thin plates of iron. The only regiments in the British service which still retain these handsome but cumbersome boots are the Life Guards and Royal Horse Guards. See *Boots*.

JACKDAW (*Corvus monedula*), a species of crow, smaller than the rook and carrion crow, its utmost length being only about fourteen inches. It is black, with dark-gray neck. It is a common British bird, and is plentiful also in some parts of continental Europe, Asia, and the north of Africa. It is not found in America. It builds its nest in holes of cliffs, ruins, &c. It frequents towns and villages, often making its nest in a chimney, by dropping down stick after stick till some of them become fixed in their oblique descent; and on these, others are piled, affording a firm base for a nest of wool or other soft substance. The J. lays from four to seven (usually five) bluish-white eggs, which are covered with dark-brown spots. Marvellous instances are recorded of the quantity of sticks employed to form a jackdaw's nest, in situations

Jackal (*Canis aureus*).

wolves, seldom exceeding 15 inches in height at the shoulder. Their colours are buff and tawny, more or less grizzled; the tip of the tail is always dark. They make holes for themselves in the ground by burrowing, or take possession of such as already exist among rocks or ruins; and in these they spend the day, not venturing abroad till the dusk of evening. They hunt during the night in troops,

where an unusual height of pile was required. In 1842, a pair of jackdaws, in seventeen days, made a pile ten feet high in the staircase of the bell-tower of Eton College. The J. is a social bird. It is easily domesticated, and becomes very pert and familiar. It has considerable powers of mimicry, and even imitates the human voice.

JACKSON, a town of North America, capital of the state of Mississippi, is situated on a plain on the right bank of the Pearl River, which becomes navigable here, forty miles east of Vicksburg, and about 180 miles north of New Orleans by railway. Being the capital, it is the seat of several important state institutions, as the lunatic asylum, institutions for the deaf and dumb, and the prison. Here, in average years, from 30,000 to 40,000 bales of cotton are shipped annually. Pop. (1860) 3199.

JACKSON, a flourishing city of North America, in the state of Michigan, is situated on the left bank of the Grand River, 76 miles west of Detroit, and 35 miles south of Lansing, with both of which it is connected by railway. In the vicinity, are numerous factories and mills of various kinds. Agricultural implements are extensively manufactured here, and there is a flourishing general trade. Within the city limits, there is a mine of bituminous coal—that material occurs also in the vicinity. Pop. (1860) 4799.

JACKSON, ANDREW, General, and seventh President of the United States of America, was born at Waxhaw settlement, South Carolina, March 15, 1767. His father, who was a Scotchman by birth, emigrated to America in 1765, and soon afterwards died, leaving to his widow a half-cleared farm in a new settlement, with no negroes to assist in its cultivation. When J. grew up, he was sent to study for the church, but on the breaking out of the American revolution, he and his brothers were summoned to the field, and the elder lost his life at Stono Ferry. Andrew, though but thirteen years old, fought with his remaining brother under Sumter, and remained with the army until the end of the war. The life of the camp had ruined him for the clerical office, so in 1784 he commenced the study of the law, and in 1787 was appointed solicitor for the western district of South Carolina, now the state of Tennessee. This frontier settlement had for its neighbours several powerful tribes of Indians, against whom J. fought with such success as to get from them the complimentary titles of 'Sharp Knife' and 'Pointed Arrow.' In 1796, he was a member of the convention which modelled the constitution and organised the state of Tennessee, and was elected to the legislature as representative, and then as senator, and appointed judge of the supreme court (an office he soon resigned), and major-general of the state militia. In 1813, at an outbreak of hostilities with the Creek Indians, he raised a volunteer force of two or three thousand men, and defeated them. When destitute of supplies, he is said to have set an example of endurance by feeding on hickory-nuts, and hence, according to some, to have acquired the popular sobriquet of 'Old Hickory.' J.'s final victory (March 27, 1814) at the Horseshoe peninsula, in the Tallahoosa, completely broke the power of the Indian race in North America. In consequence of his skill and energy in Indian warfare, he was appointed a major-general of the army of the United States; and in the contemporaneous war with England had command of the forces which captured Pensacola, and defended New Orleans (q. v.) against the attack of the British under General Packenham, December 1814. The result of this action, so flattering to the pride of Americans, gave General

J. a great and enduring popularity. After Spain had ceded Florida to the United States, he was made governor of the territory, and subsequently was chosen United States senator from Tennessee. In 1824, he received the highest vote of four candidates for the presidency of the United States, but by the influence of Mr Clay, John Quincy Adams was elected by the House of Representatives. He was, however, in spite of bitter and violent opposition, elected by the democratic party in 1828, and in 1832 re-elected by a still more overwhelming majority. His administration was marked by singular firmness. He vetoed important measures against large majorities, and after a long struggle, destroyed the Bank of the United States, and took the first steps towards a specie currency and independent treasury. But he manifested too much, perhaps, of a partisan spirit in removing nearly all his political opponents from office, and appointing his supporters—an example followed by his successors of both parties, and which has led to wide corruption. His administration, as a whole, was successful, and he retired with undiminished popularity, after witnessing the election of his favourite, President Van Buren. He died at his farm of the Hermitage, near Nashville, June 8, 1845.

JACKSON, THOMAS, an American Confederate general, better known as 'Stonewall Jackson,' was born in Virginia in 1826. In 1842, he entered the military academy at Westpoint as a cadet, and was breveted second lieutenant in the 1st corps of United States artillery in 1846. He was attached to Magruder's battery in the Mexican war, and was breveted captain for his gallant conduct in the battles of Contreras and Churubusco. He retired from the army in 1852, and became Professor of Mathematics and Military Science in the university of Virginia. At the outbreak of the War of Secession, he was appointed a brigadier-general in the Confederate army. His *nom de guerre* of 'Stonewall' was occasioned by the firmness of his brigade at the battle of Bull Run, July 21, 1861. He defeated the Northern forces at Ball's Bluff, and outgeneraled and defeated the Federal commanders in the Virginia campaign of 1862, after which he led the invasion of Maryland, and captured Harper's Ferry. He died of wounds received from his own men at Chancellorsville, May 9, 1863.

JA'COB (Heb. *Yaakob*, derived variously from 'heel,' Gen. xxv. 26, or from 'to deceive,' Gen. xxvii. 36), one of the three chief Hebrew patriarchs. He was the second son of Isaac and Rebekah, and on account of his docile, domestic character was the favourite of his mother. His conduct towards his brother in regard to the birthright (Gen. xxvii.) does not greatly redound to his credit. After an exile of 21 years in Padanaram, whither he had fled to escape the vengeance of Esau, he returned to Canaan with two wives (Rachel and Leah), two concubines (Bilhah and Zilpah), twelve sons (the fathers of the subsequent Hebrew tribes), and a daughter named Dinah, who was the unintentional cause of a vindictive massacre of the Shechemites by her brothers Simeon and Levi. In his 130th year, he and his family went down to Egypt, where his favourite son Joseph had become a great man under Pharaoh. Here he lived for 17 years longer in the land of Goshen, and died in his 147th year. His body was embalmed, carried back to Canaan with great pomp by his sons, and there buried near Hebron. Mention is frequently made of J. both in the Old and New Testaments, and there are also many legends about him in Rabbinical and Patristic, as well as in the Mohammedan literature.

JACO'BI, FRIEDRICH HEINRICH, a German philosopher, born at Düsseldorf, 25th January 1743. He was educated at Frankfurt, whence he proceeded to Geneva with a view to preparing himself for a mercantile career. In 1770, he was appointed councillor of finance for the duchies of Berg and Jülich, and having married a lady of fortune, was enabled to devote himself to literary pursuits. In 1804, he removed to Munich, where he had been appointed a member of the newly instituted Academy of Sciences, of which he became president in 1807. He died on March 10, 1819. His writings consist partly of romances, and partly of philosophical treatises. The principal are *Woldemar* (2 vols. Flensb. 1779), *Eduard Allwill's Briefsammlung* (Bresl. 1781), both philosophical romances; *Ueber die Lehre des Spinoza in Briefen an Mendelssohn* (Bresl. 1785), a polemic against logical methods of speculation in the search after the higher class of moral truths; and *David Hume über den Glauben, oder Idealismus und Realismus*, in which the same polemic is continued, but in which an attempt is also made to demonstrate that the mind or nature of man possesses another faculty—viz., faith, or moral intuition, by which the higher truths are as firmly grasped, as, by faith in the perceptions of the senses we, so to speak, lay hold on the phenomena of the material world. Herein lies the difference between Kant (and indeed the whole school of German idealists) and J.; the former appear to admit only the 'subjective' reality of such conceptions as God, the soul, immortality, &c.; the latter claims for them an 'objective' reality. Kant denies that the 'faculty of faith' gives us 'knowledge,' in the strict sense of the word; J. affirms that it does. One of his treatises, *Von den göttlichen Dingen und ihrer Offenbarung* (Leip. 1811), was the occasion of a rather sharp controversy between him and Schelling. J. is not a systematic thinker, and did not form a school. He is, as might be expected, deficient in the qualities he despised—method and logical sequence; but his style is remarkably good, possessing both warmth and clearness. It has been compared by his countrymen to that of Plato. His collected works appeared at Leipsic (6 vols. 1812—1824).

JACO'BI, KARL GUSTAV JAKOB, a celebrated mathematician, was born at Potsdam, in Prussia, 10th December 1804; studied at the university of Berlin, where he made great progress in philosophy, philology, and mathematics; and in 1829 became a professor at Königsberg. In 1829, he published his celebrated work *Fundamenta nova Theoriæ Functionum Ellipticarum*, for which he received the great medal of the Academy of Sciences of Paris; the work, however, only contains a portion of his researches on the subject of Elliptic Functions. In the same year, he made a tour through Northern Germany and France, forming the acquaintance of Gauss, Legendre, Fourier, Poisson, and other celebrated geometers. In 1842, he took a second journey, in company with his wife, to visit England and Scotland, and attend the meeting of the British Association. Soon after his return home, his health broke down, and he started for Italy. On his return, he was removed from Königsberg to Berlin, where he died of small-pox, 18th February 1851. Beside the work above mentioned, J. wrote a great number of memoirs on the different branches of the higher mathematics, chiefly Series and Definite Integrals, and was a regular contributor to the celebrated *Journal für reine und angewandte Mathematik* of Crelle.

JACOBI, the name by which members of the Dominican order were popularly known in France.

The name originated from the fact, that their mother-establishment was situated in the *Rue St Jacques*, in Paris; and it was thence extended to the entire order throughout France.

JACOBINS, the members of a political club which exercised a very great influence during the French Revolution. It was originally called the *Club Breton*, and was formed at Versailles, when the States-general assembled there in 1789. It then consisted exclusively of members of the States-general, all more or less liberal or revolutionary, but of very different shades of opinion. On the removal of the court and National Assembly to Paris, this club began to acquire importance. It now met in a hall of the former Jacobin convent in Paris, whence it received the name of the Jacobin Club, which was first given to it by its enemies; the name which it adopted being that of the *Society of Friends of the Constitution*. It now also admitted members who were not members of the National Assembly, and held regular and public sittings. It exercised a great influence over the agitation, of which the chief seat and focus was in the capital, and this influence was extended over the whole country by affiliated societies. Its power increased, until it became greater than that of the National Assembly. It formed branch societies or clubs throughout France, of which there were soon not less than 1200. When the National Assembly dissolved itself in September 1791, the election of the Legislative Assembly was mainly accomplished under the influence of the Jacobin Club. Almost all the great events which followed in rapid succession were determined by the voice of the club, whose deliberations were regarded with more interest than those of the Legislative Assembly. It reached the zenith of its power when the National Convention met in September 1792. The agitation for the death of the king, the storm which destroyed the Girondists, the excitement of the lowest classes against the *bourgeoisie* or middle classes, and the reign of terror over all France, were the work of the Jacobins. But the overthrow of Robespierre on the 9th Thermidor 1794, gave also the deathblow to the Jacobin Club. The magic of its name was destroyed; and the Jacobins sought in vain to contend against a reaction which increased daily both in the Convention and among the people. A law of October 16 forbade the affiliation of clubs, and on November 9, 1794, the Jacobin Club was finally closed. Its place of meeting was soon after demolished.—The term Jacobins is often employed to designate persons of extreme revolutionary sentiments.

JACOBITES, in Church History, is the common name of the oriental sect of Monophysites (q. v.), but it belongs more specially to the Monophysites of Syria, Mesopotamia, and Chaldea. The name is derived from a Syrian monk called Jacobus Baradæus (Bar-dai), who in the reign of Justinian formed the Monophysite recusants of his country into a single party. The J. at present number about 40,000 families, and are subject to two patriarchs, appointed by the sultan—one resident at Diarbekir, with the title of Patriarch of Antioch; the other at Saphran, under the style of Patriarch of Jerusalem.

JACOBITES (from *Jacobus*, the Latin form of James), the name given to the adherents of the male line of the House of Stuart in Great Britain and Ireland after the Revolution of 1688. Many of the most devoted royalists followed James II. into France; but the greater part of the J. remaining in their native land made a greater or less show of submission to the new government,

whilst they secretly supported the cause of the Pretender. Their intrigues and conspiracies were incessant till the middle of the 18th century. Their hostility to the House of Hanover broke out in rebellions in 1715 and 1745, in consequence of which not a few of them lost their lives upon the scaffold, titles were attained, and estates confiscated. After 1745, their cause became so obviously hopeless, that their activity in a great measure ceased; and it was not long till it ceased altogether, and those who still retained their attachment to the exiled family acquiesced in the order of things established by the Revolution. In Scotland, the hopes and wishes of the Jacobite party were expressed in many spirited songs, which form an interesting part of the national literature. See the *Culloden Papers* (Lond. 1815); Hogg's *Jacobite Relics* (2 vols. Edin. 1819); and Chambers's *Jacobite Memoirs* (Edin. 1824).—The J. of England were also called *Tories*. They were generally distinguished by warm attachment to the Church of England, as opposed to all dissent, if they were not members of the Church of Rome, and held very strongly the doctrine of *non-resistance*, or the duty of absolute submission to the king. The J. of Scotland were also generally Episcopalians and Roman Catholics. Macaulay, however, points out that the Highland clans which espoused the Jacobite cause did so on other grounds than the English J., and were far from having previously received the doctrine of non-resistance. In Ireland, the Jacobite cause was that also of the Celts as opposed to the Saxons, or the native race against the English *colonists*, and at the same time of the Roman Catholics against the Protestants. These diversities prevented a complete union, and greatly weakened the Jacobites. Further information will be found in a *History of the Rebellion in 1745*, by R. Chambers.

JACOB'S LADDER, in a large vessel of war, is the short rope-ladder, with wooden steps, which slopes inward from the lower portion of the main and fore shrouds to the upper deck. It gives easy access to the shrouds, and thence to the tops.

JACOB'S LADDER (*Polemonium ceruleum*), a herbaceous perennial plant of the natural order *Polemoniaceae*, a rare native of Britain, but more common in the centre and south of Europe, found also in the temperate parts of Asia and of North America. It has long been a favourite and very common plant in flower-gardens in Britain. It has pinnate leaves, with ovato-lanceolate leaflets, a smooth stem 1—2½ feet high, and a terminal raceme of bright blue (sometimes white) flowers, with wheel-shaped 5-lobed corolla. Great medicinal virtues were once ascribed to it, but the only quality which it seems to possess is a slight astringency. It is to be found in almost every cottage garden.

JACOTOT, JEAN JOSEPH, the inventor of the 'Universal Method' of education, was born at Dijon, in France, in 1770. He served for some time in the army, but in 1790 was appointed by Napoleon, first to the chair of mathematics in the Normal School, afterwards secretary to the Minister at War, and a director of the Polytechnic. He retired to Belgium in 1815, where he was appointed lecturer on French literature in the university of Louvain, and afterwards director of the military Normal School. He returned to Paris in 1838, and died there 30th July 1840. His system, propounded in general rules, which, however, without his own explanation, would have been quite unintelligible, appears to consist in directing the student's exertions to particular *subjects*, encouraging and inciting him in every possible manner to make use of his mental powers, and there leaving him; the teacher

is on no account to become an expounder, but after setting the student on the right track, is to leave him to explain away his own difficulties. J.'s method very much resembled that of Hamilton (see *HAMILTONIAN SYSTEM*), and, like it, was crude and one-sided. The valuable elements of it have been incorporated in the more rational and catholic methods of recent times. The wonderful results said to have been produced by J. are, so far as real, to be attributed to the exceptional zeal and energy that always characterise the apostle of a new system, as much as to the system itself.

JACQUARD LOOM, a loom fitted with the Jacquard apparatus for the purpose of pattern-weaving. This apparatus was the invention of M. Joseph Marie Jacquard, an ingenious Frenchman, a native of Lyon, who, being necessitated to carry on the weaving business of his father, for which he had a distaste, and, according to some accounts, still further stimulated by reading an account in an English newspaper of the offer of a premium for any person who should invent a machine for weaving nets, set his wits to work to improve the existing machinery for weaving. By his invention, he enabled an ordinary workman, with comparative ease, to produce the most beautiful patterns in a style which had only previously been accomplished with almost incredible patience, skill, and labour. Nevertheless, the reception of his great invention by the public was most dispiriting, for although rewarded with a small pension by Napoleon, the silk-weavers themselves offered such violent opposition to its introduction, that on one occasion he narrowly escaped with his life, and his machine was broken up by the body of men who, under the title of the *Conseil des Prud'hommes*, were appointed to watch over the interests of the Lyonnese traders, and it was destroyed in the public square of Lyon. To use Jacquard's own language: 'The iron was sold for iron, the wood for wood, and he himself was delivered over to universal ignominy;' nevertheless, on that same spot where the machine was publicly destroyed, a statue now stands, to shew the gratitude of a more enlightened generation.

Even after the partial adoption of his machine, which was patented, Jacquard had numberless annoyances to contend with; the workmen, as usual, opposed ignorant prejudice to its progress, and their masters, little better, took it up so lukewarmly, that it failed in many instances, and actions were entered against the patentee for injury done to material, &c. The value of the invention was, however, too great to admit of its being long suppressed, and when its value was once fairly recognised, it effected a complete revolution in the art of weaving, especially in the finer kinds of figured silk fabrics.

The Jacquard apparatus can be adjusted to almost every kind of loom, its office being merely to direct those movements of the warp threads which are required to produce the pattern, and which previously were effected by the weaver's fingers; its arrangements generally are very complicated, but its principles are remarkable for their extreme simplicity and certainty.

In ordinary weaving, the alternate threads of the warp, or longitudinal arrangement, are raised so as to enable the weaver to throw the shuttle containing the weft thread transversely across from his right to his left hand between the warp threads so raised and those left at rest. When the weft is so passed through, the raised warp threads are lowered, and the other set raised, the shuttle being then passed through from left to right. This is the most simple idea of plaiting or weaving. If, however, a pattern has to be produced either in plain materials or varied colours, it is necessary, instead of raising

and depressing the whole threads of the warp, in two sets, as above described, to raise only such as are required to develop the various parts of the figure, and this, of course, must be done with great exactness, as the position of every thread tells upon the formation of the pattern. The apparatus of Jacquard is for the purpose of regulating these movements, and its mode of action is as follows :

The warp threads are each (as in the common weaving process) passed through a small loop in the lifting thread, so as to be raised by means of the treadles, which act directly upon the lifting bars ; these lifting threads (fig. 1, *i, i, i, i, i*) are attached

Fig. 1.

to certain wires in the Jacquard apparatus, which form a rigid continuation ending in a hook, which, when nothing interferes, is caught and raised by each upward motion of the lifting bar ; thus, A is the lifting bar, and it has five projections (*k, k, k, k, k*), upon which the hooks of the wires catch when in a straight position, as at B, B, but which miss them if they be thrown out of the perpendicular, as at C, C, C. There are only five of these wires given, to prevent confusion, but practically there must be one for every thread of the warp—that is, one for every thread in the width of the cloth to be woven. Each of the lifting wires passes through a horizontal needle placed at right angles, D, D, D, D, D, which has a loop formed for the purpose, thus, at *f* (fig. 2). This needle passes freely through an

Fig. 2.

opening in the frame at *h*, and is so looped on to another rod, *g*, on the spring-box F, that it moves freely without fear of displacement, and if pushed back into the spring-box, is made to press upon one of the spiral springs E, which restores it to its place as soon as it is freed from pressure. In the diagram (fig. 1), this pressure is supposed to be exerted upon three of the lifting wires, C, C, C ; consequently, if the lifting bar A is simultaneously raised, those three wires are missed, whilst the other two, B, B, being in position, catch the projections

k, k on the bar, are drawn up with it, and thus raise the threads of the warp to which they are attached.

Now, the regulation of this pressure upon the horizontal needles is effected by a revolving square roller, which has holes of its four sides perforated with rows of holes, which, like the needles and lifting wires, correspond in number to the threads of the warp. This roller, when in its place, receives into one row of perforations the whole row of needles where they project through the frame at *h*, and it has a motion given by the machinery which brings each row on its four surfaces in regular order into the same position, and if no impediment is offered, all the needles are undisturbed, and the upright wires lift the entire set of warp threads to which they are attached. But in order to produce the necessary variations of motion required by the pattern, a set of cards are made each of the width of the square roller ; these also are so perforated that when placed on the surface of the roller their perforations correspond exactly with those on the roller immediately beneath them ; but the cards are perforated in exact accordance with the pattern, so that intervals occur in which there are no perforations to correspond with those on the roller ; hence, when the roller L (fig. 1) is brought up to the frame *h*, some of the needles will find entrance into the holes of the roller through the corresponding perforations in the covering card, seen in section M, fig. 1 ; but others will be prevented entering by the absence of such perforations, and the card, by the resistance it offers, will force the needles thus opposed back upon the springs E, E, E, removing thereby the hooks of the lifting wires from the action of the lifting bar. The cards are looped together at the corners, and move as an endless chain on the rollers, and the entire set of perforations on the whole chain of cards exactly represents the pattern to be produced ; the same as the notes represent the air in a piece of music. Of course, the simple operations here described require mechanical arrangements of great nicety to regulate them, and these are so complicated that mere verbal description would hardly help much to explain them ; indeed, even with the loom and its apparatus, and its cumbrous arrangement of hundreds, and even thousands of cards before us, the unpractised eye finds great difficulty in comprehending its movements.

A very wonderful simplification of the Jacquard apparatus was shewn in the International Exhibition (1862), by Eugenio Vincenzi of Modena, by which a saving of bulk alone is effected to the extent of two-thirds, and the toil of the artisan is lessened greatly by the corresponding lightness of the parts of the machine which he has to move. The most remarkable part of this new invention is the extreme delicacy of the needle action, so that there is no shock when the card offers resistance, hence the inventor has been enabled to substitute paper for thick cardboard, and can consequently perforate a dozen with the same ease as one, hence the pattern may be repeated without extra labour. This beautiful little loom will certainly displace the ordinary Jacquard, if it is not itself superseded by the wonderful invention of the electric loom by Signior Bonelli, for a description of which see WEAVING.

JACQUERIE (see JACK), the name given to the insurgent peasants in France in the middle of the 14th c., in the reign of John. The insurrection of the J. broke out in the year 1358, when the French king was a prisoner in England, and France in a state of the greatest disorder and anarchy. The immediate occasion of it was the enormities

perpetrated by Charles the Bad, king of Navarre, and his adherents; but it was really caused by long-continued oppression on the part of the nobles. Suddenly rising against their lords, the peasants laid hundreds of castles in ruins, murdered the nobles, and violated their wives and daughters, practising every enormity, and acting, as they said, on the principle of doing as had been done to them. The insurrection broke out in the neighbourhood of Paris, but extended to the banks of the Marne and the Oise. For some weeks this part of France was entirely at their mercy; but the magnitude of the danger induced the quarrelsome nobles to make common cause against them, and on the 9th of June the peasants were defeated with great slaughter near Meaux by Captal de Buch and Gaston Phebus, Count of Foix. This put an end to the insurrection.

JACTITATION OF MARRIAGE is a suit which was formerly competent in the English ecclesiastical courts, and now is competent in the English Divorce Court, to settle a question of disputed marriage. If a party boast or profess that he or she is married to another, the latter may institute the suit, and call upon the former to produce proof of the marriage. If this is not done, then a decree passes which enjoins the party to perpetual silence on the subject. This remedy is now scarcely ever resorted to, for, in general, since Lord Hardwick's Act (1766), there is sufficient certainty in the forms of legal marriage in England to prevent any one being in ignorance whether he or she is really married or not—a reproach which, however, is often made against the law of Scotland. The Scotch suit of a declarator of putting to silence, which is equivalent to jactitation of marriage, is often resorted to, the latest and most notorious instance of its use being that in the Yelverton marriage case.

JADE, a name somewhat vaguely applied to a number of minerals, not very dissimilar—nephrite, axestone, serpentine, &c. Nephrite and axestone appear to be the minerals of which *Jade* ornaments are generally made. But Yu, or Chinese J., of which very beautiful vases and other articles are made in China, is supposed to be Prehnite (q. v.). J. of all kinds has a greenish colour, and when polished, has a rather dull and greasy aspect.

JAEN, formerly an independent Moorish kingdom, is now a province of Spain, forming a portion of the old province or kingdom of Andalusia (q. v.). It lies wholly within the basin of the Guadalquivir. Area, 5184 square miles; pop. 345,879. Conquered by the Moors on their entrance into Spain, J. maintained its independence as a Moorish state till 1234, when it fell into the hands of Ferdinand III., and was added to the kingdom of Castile.

JAEN, a city of Spain, capital of the province of the same name, is most picturesquely situated in a mountainous district, at the foot of a rugged castle-crowned hill, on the Rio de Jaen, a tributary of the Guadalquivir, about 50 miles north of Granada. It is surrounded by old Moorish walls, surmounted by numberless towers and pinnacles. Though situated in the midst of plenty, in a fertile neighbourhood, the town is poor. The principal buildings are two cathedrals and several hospitals. Outside the walls are charming well-watered fruit-gardens. Pop. 22,938. In former times, the town was called *Jayyenu-l-harir*, 'Jaen of the Silk,' on account of its silk manufactures, for which it was, but is no longer, famous.

JA'FFA. See JOPPA.

JAFFNAPATA'M, a seaport in Ceylon, on a

peninsula at the north extremity of the island, with a pop. of 8000. The place is of Dutch origin, and a large proportion of the population of Dutch descent.

JAGELLONS, THE, the name of an illustrious dynasty which reigned in Lithuania, Poland, Hungary, and Bohemia. The name is derived from Jagellon, the last of a long line of hereditary grand dukes of Lithuania, who succeeded to his patrimonial possession in 1381, and was (1386) appointed successor to his father-in-law, Lewis the Great, king of Poland and Hungary, in the former of these kingdoms, after having embraced Christianity, and changed his name to Wladislas IV. He was engaged during the whole of his reign in repelling the attacks of the Teutonic Knights, whom he finally overthrew by the help of the Hussites of Bohemia. He made an unsuccessful attempt to wrest Hungary from the Emperor Sigismund, founded the university of Cracow in 1400, and died in 1434 at Grodek. His son, Wladislas V., king of Poland (1434—1444), was also elected king of Hungary on the death of Albert of Austria in 1439, mainly through the assistance of John Hunyady (q. v.), vaivode of Transylvania. After a war of two years' duration with the Emperor Frederick III., Wladislas turned his sword against the Turks, drove them repeatedly from Moldavia, Wallachia, and Bulgaria, and returned to his capital of Buda loaded with spoils. In 1444, Amurath II. sued for peace, which the warlike Wladislas granted, swearing a solemn oath by the Holy Evangelists; but the pope having, in defiance of all truth and equity, sent Cardinal Julian to cause a rupture of the treaty, and absolve Wladislas from perjury, that gallant prince summoned to his side John Hunyady, and being joined by Scanderbeg, at the head of an auxiliary force of Epirotes, invaded Turkey, but was totally defeated and slain at Varna (November 10, 1444); Cardinal Julian being also left dead on the field. He was succeeded in Poland by his brother Casimir IV. (1444—1492), whose three sons, John Albert (1492—1501), Alexander (1501—1506), and Sigismund (1506—1548), reigned in succession. Sigismund August (1548—1570), the son of this last, and one of the wisest of the Polish monarchs, added Livonia to his kingdom, and passed an edict of universal toleration. His sisters, Anne and Catherine, married respectively Stephen Bathory of Transylvania, and John III. of Sweden, and the Jagellon dynasty was continued on the Polish throne till 1668.

Wladislas, the fourth son of Casimir IV. of Poland, was elected king of Bohemia in 1471, on the death of George Podiebrad, and also succeeded Mathias Corvinus in Hungary in 1490. Wladislas died in 1516, and was succeeded in both kingdoms by his son, Lewis II., who was defeated and slain by the Turks at Mohacs (29th August 1526), and with whom terminated the Jagellons of Bohemia and Hungary.

JA'GER. See SKUA.

JA'GERNDORF, a small town of Austrian Silesia, is situated on the Oppa, 14 miles north-north-west of Troppau, has manufactures of cloth, hosiery, and linen. Pop. 6000.

JAGGERNAUT, or **JAGGERNAUT PURI**, or **PURI**, is the name of a town in Orissa (85° 54' long., and 19° 45' lat.), celebrated as one of the chief places of pilgrimage in India. It owes its reputation to a temple erected there in honour of Vishnu, and containing an idol of this Hindu god, called *Jagger-naut* (commonly *Juggernaut*), a corruption of the Sanscrit word *Jagannātha*, i. e., lord of the world. According to a legend related in the Ayee Akbery,

a king desirous of founding a city sent a learned Brahman to pitch upon a proper spot. The Brahman, after a long search, arrived upon the banks of the sea, and there saw a crow diving into the water, and, having washed its body, making obeisance to the sea. Understanding the language of the birds, he learned from the crow that if he remained there a short time, he would comprehend the wonders of this land. The king, apprised of this occurrence, built on the spot where the crow had appeared a large city and a place of worship. The Rajah one night heard in a dream a voice saying: 'On a certain day, cast thine eyes on the seashore, when there will arise out of the water a piece of wood 52 inches long, and $1\frac{1}{2}$ cubits broad; this is the true form of the deity; take it up, and keep it hidden in thine house seven days; and in whatever shape it shall then appear, place it in the temple, and worship it.' It happened as the Rajah had dreamed, and the image called by him Jagannātha became the object of worship of all ranks of people, and performed many miracles. According to another legend, the image arising from the water was an avatāra or incarnation of Vishnu; it was fashioned by Viswakarma, the architect of the gods, into a fourfold idol, which represented the supreme deity, and the temple itself was erected over it, and inaugurated by the god Brahmā and his divine court. The present temple was finished in 1198 A.D., under the government of the celebrated Rajah of Orissa, Anang Bhim Deo. Whether the worship of Jaggernaut was originally one in honour of Vishnu or not, may be doubtful. The notoriety it has gained is due especially to the fanaticism which induced, and still induces, thousands of Hindu believers to sacrifice their lives, in the hope of attaining eternal bliss, by throwing themselves under the wheels of the chariot which carries in procession the idol of the god. It is just, however, to state that this practice, which in former times prevailed to a fearful extent, is greatly abating in our days.

JAGGERY, the name given in the East Indies to the sugar obtained by inspissation from the sap (*nera* or *toddy*) of palms. The sap of many species of palm yields jaggery, and probably that of almost all species might be made to yield it. The cocoa-nut yields much of the jaggery of some parts of the East. It is, as generally sold and used in the East Indies, a coarse kind of sugar; chemically, it is the same with cane-sugar. The sap, which by inspissation yields jaggery, becomes also, by fermentation, palm-wine, and from it by distillation arrack is made.

JAGUAR (*Felis onca*), one of the largest of the cat tribe, and by far the most powerful and dangerous of the American beasts of prey. It is sometimes called the American Tiger. It is nearly equal to the tiger in size; the head is large, the body thick, and the limbs robust; the tail is long, and of equal thickness throughout. The colour varies considerably, but is usually a rich yellow, with large black spots and rings, small black spots generally appearing within the rings, a mark by which the skin of the J. may be readily distinguished from that of the other large spotted or ringed *Felidee*. A black or very dark-brown variety occurs, but the characteristic markings may be seen in certain lights, deeper in colour than the rest of the fur. The J. is strong enough to drag away a horse, and swift enough to capture horses on the open pampas. It is chiefly, however, an inhabitant of forests. It abounds so much in some districts, that settlements have been deserted on account of the destruction of domestic animals. It climbs trees, however smooth the stem, and moves about with great agility among the

branches, making even monkeys its prey. Instances of its attacking man, although they sometimes occur, are not frequent, but it is bold enough to

Jaguar (*Felis onca*).

approach enclosures, and even to enter villages in broad daylight, in quest of prey. The J. is often taken in traps; and it is sometimes hunted with dogs, when it generally at last takes refuge in a tree, and is there shot. The skins of jaguars are exported from South America in great numbers. The J. is found in almost all parts of South America, but its range does not extend north of the Isthmus of Darien. It is called OUNCE (*Onca*) in some parts of South America.

JAHN, JOHANN, a distinguished Roman Catholic orientalist and biblical critic, was born at Tassowitz, in Moravia, June 18, 1750, received his early education at Znaim and Olmütz, and in 1772 entered the Premonstratensian convent of Bruck, where he took his vows in 1774, and was appointed Professor of Oriental Languages and Biblical Criticism. On the suppression of this convent, in 1784, J. was transferred to the same professorship in Olmütz, and finally to the university of Vienna, where he also undertook the chair of Dogmatic Theology. So far as regards the Roman Catholic literature of Germany, J. may be regarded as the father of biblical criticism. But the boldness of some of his opinions having aroused the alarm of the ecclesiastical authorities, he was honourably removed from his chair in the university, by being promoted to a canonry of St Stephen's at Vienna, in 1803. He continued, however, to pursue the same studies with great reputation till his death in 1816, and published many works in both departments, the most important of which, passing over his grammars, lexicons, and elementary books of the Hebrew, Syriac, Chaldaic, and Arabic languages, are his *Introduction to the Old Testament*, 2 vols. 1792, and again in 4 vols. 1802—1803; *Biblical Archaeology*, 5 vols. 1797—1805, of both which works a compendium appeared in 1804, and again in 1814; a *Manual of General Hermeneutics*, 1812; an Appendix of Dissertations to this work, 2 vols., in 1813—1815; and an edition of the Hebrew Bible, 4 vols. 1806. Five years after his death, a collection of posthumous *Remains* was published at Tübingen, 1821, the genuineness of which, although seemingly without reason, has been called in question. His works have gone through many editions in Germany, and have been translated into several languages.

JAIL FEVER (known also as Putrid or Pestilential Fever) is now considered to be merely a severe form of Typhus Fever (q. v.), and not a distinct disease. At the present time, owing to improved sanitary regulations, this form of disease is almost unknown; but we learn from Howard's

Account of the State of Prisons, that, in his time, the disease was very frequent in the prisons of England, although unknown in those of the continental countries. In the celebrated Black Assize (q. v.), held at Oxford in 1577, there is no evidence that the disease prevailed amongst the prisoners, and yet it broke out among the persons present at the trial. It is little more than a century ago (May 1750) that the lord mayor, an alderman, two judges, most of the jury, and a large number of spectators, caught this disease from attending the assizes at the Old Bailey; and many of those who were infected died.

JAINAS is the name of a heterodox sect of the Hindus, numerous adherents of which are found in every province of Upper Hindustan, in the cities along the Ganges, and in Calcutta, but more especially to the westward; the provinces of Mewar and Marwar being apparently the cradle of the sect. They are also numerous in Guzerat, in the upper part of the Malabar coast, and are scattered throughout the peninsula. They form a large, and, from their wealth and influence, an important division of the population of India. The name of the sect means a follower of *Jina*, the latter being one of the denominations of their deified saints; and as another name of these saints is *Arhat*, their followers are also called *Arhatas*.

The tenets of the J. or Arhatas are in several respects analogous to those of the Buddhists (see *BUDDHA*), but they resemble in others those of the Brahmanical Hindus. With the Buddhists, they share in the denial of the divine origin and authority of the Veda, and in the worship of certain saints, whom they consider superior to the other beings of their pantheon. They differ, indeed, from them in regard to the history of these personages, but the original notion which prevails in this worship is the same. With the Brahmanical Hindus, on the other hand, they agree in admitting the institution of caste, in performing the essential ceremonies called *Sanskāras* (q. v.), and in recognising some of the subordinate deities of the Hindu pantheon, at least apparently, as they do not pay especial homage to them, and as they disregard completely all those Brahmanical rites which involve the destruction of animal life. It deserves notice, too, that though rejecting in general the authority of the Vedas, they admit it, and quote the Vedic texts, if the doctrines of the latter are conformable to the Jaina tenets.

According to their doctrine, all objects, material or abstract, are arranged under nine categories, called *Tattvas*, truths or principles, of which we need notice only the ninth and last, called *Moksha*, or liberation of the vital spirit from the bonds of action—i. e., final emancipation. In reference to it, the J. not only affirm that there is such a state, but they define the size of the emancipated souls, the place where they live, their tangible qualities, the duration of their existence, the distance at which they are from one another, their parts, natures, and numbers. Final emancipation is only obtained 'in the state of manhood (not in that of a good demon or brute), while in possession of five senses, while possessing a body capable of voluntary motion, in a condition of possibility, while possessing a mind, through the sacrament of the highest asceticism, in that path of rectitude, in which there is no retrogression, through the possession of perfect knowledge and vision, and in the practice of abstinence.' Those who attain to final liberation do not return to a worldly state, and there is no interruption to their bliss. They have perfect vision and knowledge, and do not depend on works. See J. Stevenson, *The Kalpa Sātra*, and *Nava Tattva*.

The principles of faith, as mentioned before, are

common to all classes of J., but some differences occur in the practice of their duties, as they are divided into religious and lay orders, *Yatis* and *S'rāvakas*. Both, of course, must place implicit belief in the doctrines of their saints; but the *Yati* has to lead a life of abstinence, taciturnity, and continence; he should wear a thin cloth over his mouth, to prevent insects from flying into it, and he should carry a brush to sweep the place on which he is about to sit, to remove any living creature out of the way of danger; but, in turn, he may dispense with all acts of worship; whilst the *S'rāvaka* has to add to the observance of the religious and moral duties the practical worship of the saints, and a profound reverence for his more pious brethren. The secular Jaina must, like the ascetic, practise the four virtues—liberality, gentleness, piety, and penance; he must govern his mind, tongue, and acts; abstain, at certain seasons, from salt, flowers, green fruits, roots, honey, grapes, tobacco; drink water thrice strained, and never leave a liquid uncovered, lest an insect should be drowned in it; it is his duty also to visit daily a temple where some of the images of the Jaina saints are placed, walk round it three times, make an obeisance to the image, and make some offerings of fruits or flowers, while pronouncing some such formula as 'Salutation to the Saints, to the Pure Existences, to the Sages, to the Teachers, to all the Devout in the world.' The reader in a Jaina temple is a *Yati*, but the ministrant priest is not seldom a Brahman, since the J. have no priests of their own, and the presence of such Brahmanical ministrants seems to have introduced several innovations in their worship. In Upper India, the ritual in use is often intermixed with formulas belonging more properly to the Saiva and Sākta worship (see *Hindu Sects under INDIA*), and images of S'iva and his consort take their place in Jaina temples. In the south of India, they appear, as mentioned before, to observe also all the essential rites or *Sanskāras* of the Brahmanical Hindu. The festivals of the J. are especially those relating to events in the life of their deified saints; but they observe also several common to other Hindus, as the spring festival, the *S'rīpanchami*, and others.

The J. are divided into two principal divisions, *Digambaras* and *S'wetāmbaras*. The former word means 'sky-clad,' or naked, but in the present day, ascetics of this division wear coloured garments, and confine the disuse of clothes to the period of their meals. *S'wetāmbara* means 'one who wears white garments;' but the points of difference between these two divisions are far from being restricted to that of dress: it is said to comprehend a list of 700 topics, of which 84 are considered to be of paramount importance. Amongst the latter are mentioned the practice of the *S'wetāmbaras* to decorate the images of their saints with earrings, necklaces, armlets, and tiaras of gold and jewels; whereas the *Digambaras* leave their images without ornaments. Again, the *S'wetāmbaras* assert that there are twelve heavens and sixty-four Indras; whereas the *Digambaras* maintain that there are sixteen heavens and one hundred Indras. In the south of India, the J. are divided into two castes; in Upper Hindustan, they are all of one caste. It is remarkable, however, that amongst themselves they recognise a number of families between which no intermarriage can take place, and that they resemble, in this respect also, the ancient Brahmanical Hindus, who established similar restrictions in their religious codes.

As regards the pantheon of the Jaina creed, it is still more fantastical than that of the Brahmanical sects, whence it is borrowed to a great extent,

but without any of the poetical and philosophical interest which inheres in the gods of the Vedic time. The highest rank amongst their numberless hosts of divine beings—divided by them into four classes, with various subdivisions—they assign to the deified saints, which they call *Jina*, or *Arhat*, or *Tirthakara*, besides a variety of other generic names. The J. enumerate twenty-four Tirthakaras of their past age, twenty-four of the present, and twenty-four of the age to come; and they invest these holy personages with thirty-six superhuman attributes of the most extravagant character. Notwithstanding the sameness of these attributes, they distinguish the twenty-four Jinas of the present age from each other in colour, stature, and longevity. Two of them are red, two white, two blue, two black; the rest are of a golden hue, or a yellowish brown. The other two peculiarities are regulated by them with equal precision, and according to a system of decrement, from *Rishabha*, the first Jina, who was 500 poles in stature, and lived 8,400,000 great years, down to *Mahāvira*, the 24th, who had degenerated to the size of a man, and was no more than 40 years on earth; the age of his predecessor, *Pārśwanātha*, not exceeding one hundred years. The present worship is almost restricted to the two last Tirthakaras; and as the stature and years of these personages have a reasonable possibility, H. T. Colebrooke inferred that they alone are to be considered as historical personages. As, moreover, amongst the disciples of Mahāvira there is one, *Indrabhūti*, who is called *Gautama*, and as Gautama is also a name of the founder of the Buddha faith, the same distinguished scholar concluded that, if the identity between these names could be assumed, it would lead to the further surmise that both these sects are branches of the same stock. But against this view, which would assign to the Jaina religion an antiquity even higher than 543 before Christ—the date which is commonly ascribed to the apotheosis of Gautama Buddha—several reasons are alleged by Professor Wilson. As to the real date, however, of the origin of the Jaina faith, as the same scholar justly observes, it is immersed in the same obscurity which invests all remote history amongst the Hindus. We can only infer from the existing Jaina literature, and from the doctrines it inculcates, that it came later into existence than the Buddhist sect.—The best essays on the tenets, mythology, observances, and literature of this sect are those by Colebrooke in his *Miscellaneous Essays*, and by Wilson in the first volume of his works (London, 1862).

JAKUTSK (*Yakootsk*), chief town of the territory of that name in Eastern Siberia (see **SIBERIA**). It is situated on the left bank of the river Lena, lat. 62° 1' N., long. 119° 44' E.; distance, from St Petersburg, 5751 miles; pop. in 1858, 3460 inhabitants. The whole industry of the town consists in candle-works, but it is, notwithstanding, the principal market of Eastern Siberia for traffic with the native hunting tribes of the Jakuts and Buriats. The former, mostly nomadic tribes, possessing large herds of cattle and horses, bring butter to the market, which is despatched on horseback to the port of Okhotsk. The latter, also a nomadic tribe, bring to Jakutsk great quantities of fur-skins, of sables, foxes, martens, squirrels, bears, hares, &c. The most animated periods of the year are the months of May and June; in the former, the goods are despatched to the sea-ports; in the latter, an important fair takes place annually, during which the quantity of merchandise sold, chiefly furs and mammoth tusks, amounts to £50,000 in value. Manufactured goods, hardware, &c., are brought from Irkutsk by the Lena, and

the passage, about 2200 miles, requires a whole month of navigation.

JALAP, a well-known purgative medicine, is the root of *Exogonium Purga*, a plant of the natural order *Convolvulaceæ*. It is found in Mexico, at an elevation of about 6000 feet above the level of the sea, in the neighbourhood of the town of Jalapa or Xalapa, from which the name jalap is derived. It is a perennial twining plant, with large flowers and a turnip-like root, varying from the size of a

Jalap (*Exogonium Purga*):
a, the root.

hazel-nut to that of a man's fist. The roots when fresh are white and fleshy, and abound in a milky juice. They are prepared for the market by drying. —Jalap was long erroneously referred to other plants, amongst others to *Mirabilis Jalapa*, known in our flower-gardens as *Mamel of Peru*.—The root known as *Male Jalap* or *He Jalap*, with which the true jalap of commerce is often adulterated, was recently declared by Mr Hartweg to be *Ipomœa batatoides*. Its properties are somewhat similar to those of true jalap, but it is very inferior.

Jalap seems to have been first introduced into this country as a medicine about 1609.

The dried roots are brown and wrinkled externally, and of a deep yellowish-gray colour internally; their odour is faint and disagreeable, and their taste is nauseous. The active ingredient is the resinous portion, which varies from about 10 to nearly 20 per cent, and which is composed of two distinct substances, *Jalapine* ($C_{42}H_{35}O_{24}$) and *Jalapic acid*. Jalap resin may be distinguished from common resin by its insolubility in volatile oils. Jalap is a valuable cathartic, but is seldom given alone. Its purgative action is increased by the addition of a little calomel, and its hydragogue action by bitartrate of potash, while its tendency to produce griping is obviated by the addition of a little ginger. It is extremely useful in those febrile affections of children which are associated with constipation; and in diseases of the brain it is a good purgative to select, in consequence of its derivative action. In the form of *Compound Jalap Powder*, which consists of one part of powdered jalap, two parts of bitartrate of potash, and a little ginger, it is of great service in some kinds of dropsy, in consequence of its hydragogue action.

The ordinary dose of powdered jalap for an adult varies from ten to thirty grains, a scruple generally acting smartly and safely; for children under a year old the dose is from two to five grains. The dose of the compound powder is double that of the ordinary powder. The *Tincture of Jalap*, in the dose of one or two drachms, is a useful addition to the ordinary black-draught when it is desired to increase its activity.

JALAPA, a city in the Mexican confederation, is second in importance among the towns of the state of Vera Cruz. It is on the grand route between the capital of the country and the seaport of Vera Cruz, and is about 60 miles west-north-west from the latter. Situated at an elevation of 4335 feet above the level of the sea, its climate may be said to be that of the temperate region, and it is a favourite resort of the invalids of the coast. Pop. about 10,000.

JAMAICA, aboriginally *Xaymaca*, or *Land of Wood and Water*, one of the West India Islands, and by far the most important of those belonging to Great Britain, is about 90 miles to the south of Cuba, and stretches in N. lat. between 17° 40' and 18° 30', and in W. long. between 76° 15' and 78° 25'. Area, 6,400 square miles (rather more than that of Yorkshire); greatest length, 150 miles; greatest breadth, 50 miles. It is traversed from east to west by a heavily-timbered ridge, called the Blue Mountains, which rises to about 7000 feet. From this range, at least 70 streams descend to the north and south shores, but owing to the shortness and declivity of their courses they are not navigable, with the exception of one, the Black River, which affords, for small craft, a passage into the interior for 30 miles. Excellent harbours are everywhere to be found. But incomparably the best of these is formed by a deep and capacious basin in the south-east quarter of the island, which washes the most spacious and fertile of the plains between the hill-country and the coast. Around this inlet, and within a few miles of each other, are all the considerable centres of population, Port Royal, Kingston, and Spanish Town.

The climate varies considerably—the torrid belt of the coast gradually passing into the temperate region of the central heights. The latter is said to be remarkably favourable to longevity; and, after having long been a retreat for the residents themselves, it has lately begun to attract invalids from the United States. To contrast two positions—the one near Kingston Harbour, and the other at the intermediate elevation of 4000 feet—their annual means are stated to be respectively 81° F. and 68° F. Earthquakes have occasionally occurred, one of them, in 1692, having almost overwhelmed Port Royal.

In 1861, the total population amounted to 378,433, of whom 13,816 were whites, and the remainder half-breeds or blacks. At the last census, that of 1871, the total population was 506,154, of whom only 13,101 were whites. It thus appears that in the preceding ten years there had been a falling off in the white population; while the blacks, or coloured men, had rapidly increased. On the productiveness and trade of the island, the emancipation of the slaves in 1834 had an unfavourable effect. But, even previously to the new order of things, the commercial crops had been steadily decreasing. To take by itself the grand staple of sugar, the last 3 years of the slave-trade, 1805—1807, had averaged fully 144,000 hogsheads; the 4 years before the commencement of the abolition of slavery, 1831—1834, under 91,000; the 4 years of gradual abolition, 1835—1838, nearly 70,000; the first 4 years of per-

fect freedom, 1839—1842, less than 42,000. That a revival of trade has set in appears from the last returns, according to which the values of sugar exported were, in 1869, £443,078; in 1870, £491,616; and in 1871, £592,163. In 1871, the chief exports were in value as follows: sugar, £592,163; rum, £271,267; coffee, £147,562; logwood, £115,423; while the chief imports were flour, £135,500, and salt-fish, £92,801. In the same year, the imports from the United Kingdom amounted to £1,331,185; the exports, to £1,248,685. In 1860, the revenue amounted to £262,239, and the expenditure to £235,239. In 1871, the revenue amounted to £434,564; the expenditure, to £430,154.

J. was discovered by Columbus during his second voyage in 1494, and was taken possession of by the Spaniards in 1509. So great was the inhumanity of the conquerors, that 50 years after the Spanish invasion of the island the native population is said to have entirely disappeared. On May 3, 1655, a British expedition, sent out by Oliver Cromwell, under Admirals Penn and Venables, assailed and captured the island, which was formally ceded to England by the treaty of Madrid in 1670. Under English rule, the chief events in the history of the island were, in 1795, the rebellion of the Maroons, a community of runaway slaves, who had obtained a tract of land on the north side of the island; in 1831, a negro insurrection; and on August 1, 1834, the emancipation of the slaves. The last event was followed by ill-judged concessions of representative and constitutional rights to the newly liberated blacks. The experiment proved a failure. The blacks considered it a grievance that offices in the magistracy were not more frequently conferred on them. They wished to suppress coolie immigration, which tended to keep down wages. They sought to obtain land without rent, and the more violent even suggested the expulsion of the whole white population of the island.

In 1865, the discontent was at its height. In October of that year, a decision of the local court at Morant Bay against a black squatter, led to a negro rising, and the massacre of 23 whites. Martial law was proclaimed by Governor Eyre, 1000 houses were burned, some rebels were hanged, others were flogged; but the rebellion was most effectually suppressed. For the course he had taken, Governor Eyre was thanked by the Jamaica Assembly; but in England a different view was taken of his conduct. (See EYRE in SUPP.) He was recalled, and the representative constitution was suspended. Sir P. J. Grant was appointed governor, with entire authority to manage the affairs of J., with the aid of advisers nominated as in the other West India Islands. A special correspondent of the *Times*, sent to the island in 1873, to report on its recent condition, in a letter published on 1st May, gives a very favourable account of its recent progress. He says that from the catastrophe of 1865, which proved so nearly fatal to the island, a new life has sprung. Crime has diminished; education has everywhere advanced among the black population, the sum devoted to the support of the schools having increased from £4622 in 1866, to £19,403 in 1872. New roads have been formed, harbours are being constructed, and an irrigation canal is in progress which will give fertility to 50,000 acres of the beautiful plain between Spanish Town and Kingston. Thanks to the Cuban refugees who have taken several of the long-forsaken sugar estates, property is looking up, and the official statements shew that the export trade is increasing. Although J. has not recovered its former commercial prosperity, the negroes cannot now be described as idle. They cultivate their provision grounds with care, and

produce for sale enough sugar and coffee to obtain a considerable supply of imported and manufactured articles. Extreme poverty is unknown among them, and under their present government they are described as a law-abiding and inoffensive community. The special correspondent, in concluding his article, strongly recommends energetic young Englishmen of the wealthier class, who contemplate emigration, to take their capital to the highlands of J., and to settle there rather than in the United States or in South America.

JAMBOS. See **EUGENIA.**

JAMES (Gr. *Jacobos*, and really the same word as Jacob) is the name borne by two or three persons in the New Testament. These are James the son of Zebedee, and James the 'brother' or 'cousin' of our Lord, who is considered by many to be the same as James the son of Alphaeus. **JAMES** the son of Zebedee, surnamed the *Elder*, was the brother of the apostle John, and before his call to the apostleship was a fisherman. After the ascension of Christ, he seems to have remained at Jerusalem, and was the first of the apostles to suffer martyrdom, being slain by Herod in the year 44 A. D. There is an incredible legend of his having planted the gospel in Spain, and he is the patron saint of that country.—**JAMES** the 'brother' or 'cousin' of our Lord, surnamed the *Less*, the other apostle of this name, appears to have resided, like James the *Elder*, chiefly in Jerusalem. From the glimpses of him which are obtained in the Acts of the Apostles and the Epistle to the Galatians, it is clear that he presided over the mother-church of Jerusalem. According to the tradition recorded by Hegesippus (who flourished about the middle of the 2d c.), he was considered a miracle of 'righteousness,' even by the unbelieving Jews, who gave him the name of the *Just*. The enmity of the more bigoted Jews, however, procured his condemnation, and the high-priest Ananus gave order that he should be stoned to death. According to Josephus, the execution of the sentence excited great dissatisfaction among the people of Jerusalem. The date of his death cannot be precisely fixed, but it was probably about 62 or 63 A. D. **THE EPISTLE GENERAL OF JAMES** is regarded by most theologians as a composition of his. The primitive church, however, placed it sometimes among the *antilegomena* (or scriptures of doubtful genuineness), and sometimes even among the *notha* (or spurious scriptures). In the 4th c., its authority increased; and the Council of Carthage (397 A. D.) pronounced it 'canonical.' This, of course, did not settle the question of its authenticity; and at the period of the Reformation, both its authenticity and religious teaching were attacked by Erasmus and Cajetan (in the Roman Catholic Church), by Lucar (in the Greek Church), and by Luther, who called it 'a downright strawy epistle,' the work of some unknown James, who misunderstood the doctrines of the Apostle Paul. Modern divines, generally, profess to see no discrepancy between the teaching of the two apostles, and imagine that they are looking at the same great verity from different but not contradictory stand-points (see **JUSTIFICATION**). The style is clear, polished, and poetical, very little disfigured with Hebraisms, and indicating that its possessor was a man of superior culture. Compare Alford's *Greek Test.* vol. 4 (Lond. 1859).

JAMES I., king of Scotland (1406–1437), was the second son of Robert III., by Annabella Drum-

mond, daughter of Sir John Drummond of Stobhall. His elder brother, the Duke of Rothesay, having been murdered by his uncle, the Duke of Albany, J. became heir to the throne. Fearing that he also might be sacrificed to the unscrupulous ambition of Albany, his father resolved to send him to France. Accordingly, in 1405, he set sail for that country, but he never reached it; the vessel in which he was embarked having been taken by the English. J. himself was carried to London, and sent to the Tower. In 1407, he was removed to Nottingham Castle. In 1417, he accompanied Henry V. in his expedition to France. On the death of Robert III., in 1406, the government devolved on the Duke of Albany. On his death, in 1419, his son Murdoch succeeded to the regency. In 1424, J.'s long captivity came to an end: on giving hostages for payment of £40,000, he was allowed to return to his kingdom. Previous to leaving England, he married Joanna, daughter of the Earl of Somerset, fourth son of John of Gaunt. To the excellent education which he had received in England, J. was indebted for the development of his very considerable powers of mind. His poems, *Christ's Kirk on the Green* (the authorship of which, however, is disputed), and *King's Quhair*, shew him to have been possessed of high poetic talent. With the acts of his first parliament, in 1424, the regular series of Scotch statutes may be said to begin. Many excellent laws were passed for the regulation of trade, and for the internal economy of the kingdom; while these were followed up by an executive vigour which Scotland had never known before. No sooner did J. feel himself firmly seated on the throne, than he resolved to execute vengeance on the Albany family. By a parliament held at Perth in 1425, the two sons of the late Regent Murdoch, and his father-in-law, the Earl of Lennox, were found guilty of certain crimes laid to their charge, and immediately beheaded. The next few years of J.'s reign are among the most really peaceful in the history of Scotland previous to the union of the crowns; the whole efforts of the king being directed to the repression of the internal disorders of the kingdom; especially of the Highlands, where scarcely any law except that of the strongest had hitherto been known. In 1436, J.'s eldest daughter, Margaret, was married to the Dauphin of France, afterwards Louis XI. Amongst those whom the wisely severe policy of the king had offended was Sir Robert Graham, uncle of the Earl of Strathearn. He had been imprisoned in 1425, on the impeachment of the Albany family. Owing to this cause, or to some real or imaginary injury done to his family, Graham was so irritated, that in 1435 he actually used treasonable language to the king himself when presiding in parliament. For this he was banished, and his possessions declared forfeited. He retired to the Highlands, to brood over a plan of revenge, which circumstances soon put it into his power to execute. In 1437, the court held the Christmas festival at Perth. The king was about to retire for the night, when the sound of men in armour was heard outside the gates. It was Graham, accompanied by 300 armed men. The locks of the chamber-door having been purposely spoiled, Catherine Douglas, with a spirit worthy of her name, thrust her arm into the staple, to make it serve the purpose of a bar; but her arm was broken, and the ruffians entered the chamber. The king, who had hidden himself in an aperture under the floor, was discovered, dragged out, and cruelly murdered in the 44th year of his age. Graham and the other ringleaders were afterwards seized, tortured, and put to death. J. was unquestionably the most able of the Stuart family. Both

his intellectual and practical ability were of a very high order.

JAMES II., king of Scotland (1437—1460), was the son of James I. and Queen Joanna, and was born in 1430. He was crowned at Edinburgh when only in the sixth year of his age. Sir William Crichton, the Chancellor, and Sir Alexander Livingston, contrived to keep possession of the person of the young king, and consequently to wield the royal authority until he had reached his fourteenth year. The power of the House of Douglas had now risen to so great a height as almost to overshadow that of the crown. In the hope of curbing it, Crichton had treacherously caused William, the young earl, and his brother to be put to death. The policy of the act proved to be as bad as its spirit, for by the marriage of the heiress of the murdered youth with her cousin, the family was restored to more than its former power. The young king, tired of the rule of Crichton, put himself under the control of Douglas. A parliament was held, by which Crichton and Livingston were declared rebels, and their estates forfeited. Under the rule of the earl, the kingdom fell into complete anarchy, and became one scene of violence and disorder. Douglas, however, maintained the warlike renown of his House; in 1448, the English having invaded Scotland, he gave them battle on the banks of the little river Sark, in Annandale, and defeated them with very considerable slaughter. In 1449, J. married Mary, daughter of Arnold, Duke of Gelderland. The character of the king appears to have been much strengthened after his marriage. Like most of the Stuarts, he possessed great animal courage; he seems also to have possessed much of his father's clearness of perception in framing laws, and of his energy in enforcing their observation. Chafing under the sway of Douglas, he resolved to assert his independence. Crichton, who had previously contrived to make terms for himself, was constituted the royal adviser. Douglas, driven from power, formed an alliance with the Earl of Crawford. By the union of these two powerful nobles, it seemed that the royal authority in Scotland had virtually become extinct. J. had recourse to treachery: he invited Douglas to visit him at Stirling Castle, where, picking a quarrel with him, he murdered the earl with his own hand. But the power of the Douglas family was not yet broken. Through the aid of the House of York, then dominant in England, and by the martial influence of his name, the heir of the murdered earl was enabled to raise the standard of rebellion at the head of an army of 40,000 men. But J., listening to the wise advice of his councillor Kennedy, soon succeeded in quelling this insurrection. Douglas was compelled to flee; and his lands were granted to the Earl of Angus. In 1460, from causes not clearly known, J. infringed an existing truce with England, by laying siege to the castle of Roxburgh, then in the hands of the English. While he was standing beside one of the rudely made cannons of that time, the gun burst, and a fragment striking him, produced almost immediate death. He died in the 29th year of his age, and 24th of his reign.

JAMES III., king of Scotland (1460—1488), was the son of James II. and Mary of Gelderland, and was born in 1453. On the death of his father, the government appears to have been conducted by his mother, guided by the wisdom of Bishop Kennedy. On the death of the latter in 1465, the young king fell into the hands of Lord Boyd and his family. In 1467, so great influence had they acquired, that J. gave his sister in marriage

to Sir Thomas Boyd, son of Lord Robert, Sir Thomas being at the same time created Earl of Arran. On the king's marriage, however, in 1469, with Margaret of Denmark, power changed hands: Lord Boyd was obliged to flee, and even Arran was driven into exile; in which condition he died. In 1474, his widow married Lord Hamilton; of which marriage were born James, created Earl of Arran in 1503, and Elizabeth, who married Matthew, Earl of Lennox. J. was all his life under the influence of favourites. Conspicuous among these was a man named Cochran, originally a mason. Through his means, the Duke of Albany, brother of J., was forced to flee from the kingdom, having been charged with witchcraft; while the Earl of Mar, also a brother of the king's, was actually put to death on the same absurd accusation. The rule of Cochran and other low-born favourites became intolerable to the haughty Scotch nobility. Disputes having arisen with England, and an English force having advanced on Berwick, J. put himself at the head of an army to oppose the invaders. Angus, Crawford, Argyle, and others resolved to profit by this opportunity to rid themselves of the obnoxious favourite. They met in council to deliberate upon their plans. It was on this occasion that Angus acquired his well-known sobriquet of 'Bell the Cat.' The result was, that Cochran and five other of the leading favourites were seized and summarily hanged. The king himself was imprisoned within the castle of Edinburgh. The banished Duke of Albany had joined the English army. On a treaty being made, he was, by some unknown means, restored to his brother's favour. He did not long hold it, however. In 1487, Margaret of Denmark died. J.'s love of pursuits which, for the age in which he lived, were intellectual, brought upon him the contempt of a warlike and illiterate nobility—a contempt on which the weakness of his moral character imposed no check. A conspiracy, whose origin is obscure, ended in a rebellion, having for its avowed object the dethronement of the king. Many of the peers, however, remained loyal, so that J. was enabled to put himself at the head of a considerable force. But, mainly through the cowardice of the king, the royal army was defeated at Sauchie, 18th June 1488. J. escaped from the field; but he was afterwards discovered by one of the rebels, and murdered. He died at the age of 36.

JAMES IV., king of Scotland (1488—1513), was the son of James III. and Margaret of Denmark, and was born March 17, 1472. A movement, headed by the Earl of Lennox, having for its object the subversion of the new government, was soon quelled; and the rule of the young king gave promise of being both vigorous and popular. The avarice of the preceding reign was followed by a profusion which conciliated the nobles; while the king's personal beauty and open manner won the hearts of the people. The naval exploits of Sir Andrew Wood of Largo, in the beginning of this reign, are worthy of note. With a greatly inferior force, he twice defeated the English; on one occasion, capturing as many as five of their ships of war. Instead of avenging this defeat by force of arms, Henry VII., then reigning in England, wisely resolved to endeavour to win Scotland by conciliation and policy. He proposed a marriage between J. and his daughter Margaret; but his wise schemes were for a long time frustrated by the gold and intrigue of the king of France. But at length the prudence of Henry prevailed, and in 1503, J. married Margaret of England. By a treaty then entered into between England and Scotland, the first peace since 1332 was established between the two countries.

The king of England saw what none of his predecessors had been able to see—that he could easily gain by policy what it was hopeless to attempt to seize by force. Had he lived longer, a lasting amity might have been established between the two countries; but his son and successor was even hotter and more headstrong than J. himself. The English treaty was followed by a period of almost unexampled peace and prosperity; but by the death of Henry VII., in 1509, all this fair prospect was destroyed. It was not, however, until Henry VIII. had been two years on the throne that a rupture took place between the two kings. J. had demanded reparation for an alleged outrage on the Scottish flag; Henry had returned a contemptuous answer. He had further irritated the Scotch king by countenancing certain English border chieftains who had been accessory to the murder of Sir Robert Ker; he had also declined to deliver a legacy of jewels bequeathed to Queen Margaret by her father. Long and angry negotiations followed, which ended in James's rash and fatal invasion of England in the summer of 1513. The disastrous battle of Flodden (q. v.) was fought on the 9th September of that year. The body of James was found on the field after the battle. He died in the 41st year of his age, and 26th of his reign.

JAMES V., king of Scotland (1513—1542), was the son of James IV. and Margaret of England. He was born at Linlithgow, 10th April 1512. The period of his long minority is one of the gloomiest in Scottish history. Such was the lawless state of the country, that it was impossible to pass from one place to another except in armed companies. The Duke of Albany was chosen regent by the parliament, but his government was almost powerless, owing chiefly to the jealousy and enmity of the Earl of Angus, who had married the queen-mother. Ultimately, Angus prevailed, and the duke retired to France. For a while, the Angus branch of the Douglas family ruled Scotland in the same manner as the elder branch had ruled it in the beginning of the reign of James II. When in his seventeenth year, the king, resolved no longer to brook the authority of the earl, escaped from his custody. Angus and his family were banished, and their estates declared forfeited. In 1536, J. visited the court of France; and on the 1st January 1537, he was married to Magdalen, daughter of Francis I. This amiable queen lived for but a few weeks; and in the same year, J. was again married. His second wife was Mary of Lorraine, daughter of the Duke of Guise. Henry VIII. having declared his independence of the pope, became desirous that his nephew should follow his example; but J. remained true to his ancestral faith. The king had two sons by Mary of Guise, but they both died in infancy, within a few days of each other—an event which seems to have greatly affected the mind of James. With the view of gaining his nephew over to his ecclesiastical views, Henry proposed that they should have an interview at York. He actually went to that city, and remained in it for six days, expecting the arrival of J., who never came. This piece of real or fancied neglect greatly enraged Henry. In 1542, the English having made an incursion across the border, were attacked and defeated with great loss by the Earls of Huntly and Home. To avenge this defeat, Henry sent the Duke of Norfolk into Scotland with an army of 20,000 men.

Negotiations for peace having failed, J. raised an army of 30,000 men to oppose Norfolk. The spread of the Reformation had now begun to divide the kingdom; the nobles being mostly on the reformed side, while the king sided with the clergy. When the Scottish army had reached Fala, news arrived of

Norfolk's retreat. The nobles, actuated either by disloyalty, or by thoughts of Flodden, declined to follow the king in an invasion of England, upon which he was bent. While this controversy was pending between J. and the nobles, a report arose that Oliver Sinclair, a royal favourite, had been appointed to the chief command. The army became a scene of tumult and disorder. While in this disorganised state, it was attacked by Dacre and Musgrave, two English leaders, at the head of 300 men. The Scotch were utterly routed. This dishonour to his arms seems quite to have broken the heart of James. He shut himself up in Falkland Palace, where he died, December 13, 1542, seven days after the birth of his unfortunate daughter Mary, in the 31st year of his age, and 30th of his reign.

JAMES I. OF ENGLAND AND VI. OF SCOTLAND (1567 [England 1603]—1625), only son of Mary, Queen of Scots, and Henry Lord Darnley, was born within the castle of Edinburgh, 19th June 1566. On his mother's forced resignation of the crown, J. was proclaimed king of Scotland, 29th July 1567. The direction of his childhood devolved principally on the Earl of Mar. His classical education he received from the famous George Buchanan. In 1578, the Earl of Morton, then regent, was driven from power, and J. nominally assumed the direction of affairs. But the new government was unpopular, and Morton soon succeeded in re-establishing himself. His fall was, however, ultimately effected by the united influence of the Duke of Lennox and of the Earl of Arran. Morton was condemned and executed on the charge of having been accessory to the murder of Darnley. After his death, Lennox and Arran ruled for some time without control. On the 12th of August 1582, however, a party of the nobles seized the king at Ruthven Castle; and by authority thus acquired, they imprisoned Arran, and banished Lennox. In 1583, a counterplot restored J. to freedom; he immediately restored Arran to power. The confederate lords were obliged to flee to England. In 1585, through the connivance of Queen Elizabeth, they returned, and with an army of 10,000 men, obliged J. to capitulate in Stirling Castle. Arran was again banished. In 1586, Queen Mary, then a prisoner in England, was condemned by the English court to be executed. Though J. remonstrated strongly, he nevertheless, after his mother's execution, concluded an offensive and defensive alliance with England. In the winter of 1589, J. went to Denmark, where he married the Princess Anne, daughter of Frederick II., king of that country. From 1591 to 1594, the kingdom was disturbed by various treasonable attempts by the Earls of Bothwell, Huntly, and other Roman Catholic lords. It was not till J. had marched against Huntly in person that these disturbances were suppressed. Long ecclesiastical disputes followed between king and clergy. In 1600, occurred the Gowrie Conspiracy (q. v.). By the death of Elizabeth in 1603, J. succeeded to the throne of England. He soon became unpopular with his new subjects. The anger of the Roman Catholics at the severities used towards them was the cause of the famous Gunpowder Plot (q. v.). The treason was discovered on the 5th of November 1605. Nor did time increase the popularity of J. with any class of his subjects. Weak and good-natured, he impoverished his exchequer to enrich parasites; he degraded the prerogative of the crown by the sale of titles of dignity; the title of baronet, which he originated, could be bought for £1000, a barony for £5000, and an earldom for £20,000. A Scotchman of the name of Carr became the royal favourite about the year 1607; honours and emoluments were showered

upon him, and in 1613 he was created Earl of Somerset. In his turn, Somerset gave place to Buckingham. Under these minions, the name and power of England, so formidable under Elizabeth, sunk to insignificance. In 1617, J. revisited Scotland; a visit which his angry disputes with the clergy did not give him much leisure to enjoy. In 1619, his eldest son, Henry, Prince of Wales, died, to the great grief of the nation. J. had set his heart upon effecting a marriage between his son Charles (now Prince of Wales) and a Spanish princess. For some time, it seemed as if his design would succeed; and in 1623, Charles actually went to the court of Spain, along with Buckingham, to prosecute his suit. Buckingham, however, having quarrelled with the leading men of the Spanish court, the negotiation ultimately failed through his pique. A war with Spain was the result. J. died on 27th March 1625. He was aptly termed by Sully 'the wisest fool in Christendom.' 'He was indeed,' says Macaulay, 'made up of two men—a witty, well-read scholar, who wrote, disputed, and harangued, and a nervous, drivelling idiot who acted.' His reign is interesting to the student of English constitutional history, as it was during it that parliament may be said to have taken its first decided stand in its long contest with the crown. The parliament of 1621 is especially memorable on this account.

JAMES II. OF ENGLAND AND VII. OF SCOTLAND (1685—1688), son of Charles I. and Henrietta Maria, was born 15th October 1633. In 1643, he was created Duke of York. In 1648, during the civil war, he made his escape to France. For some time he served in the French army under Turenne; but on peace being made with Cromwell, he was obliged to leave both the army and territory of Louis XIV. He then entered into the military service of Spain. At the Restoration, he was made Lord High Admiral of England, twice commanding the English fleet in the ensuing wars with the Dutch. In 1660, he married Anne, daughter of Lord Chancellor Hyde. On the death of the Duchess of York in 1671, J. avowed his conversion to popery. On the passing of the Test Act in 1673, he was obliged to resign office. On the 21st November 1673, he married Mary Beatrice, daughter of the Duke of Modena. During the great irritation against the Roman Catholics which arose in England on the publication of Titus Oates's supposed discoveries, the Duke of York resided for a short while on the continent. The bill for his exclusion from the throne was twice read before the House of Commons, and only prevented from passing by the prorogation of parliament, 26th May 1679. In 1680, the Exclusion Bill passed in the House of Commons, but was rejected in the House of Lords. On his return from abroad, and while the Exclusion Bill was before parliament, the duke was sent down to govern Scotland. On the death of Charles II., 6th February 1685, J. succeeded to the crown without opposition. He had scarcely been many hours a king when he violated the fundamental laws of the constitution by continuing the levy of customs, settled on the late king for life only, without the authority of parliament. At war with his parliament, in order to obtain money, J. was forced to become the pensioner of Louis XIV. In Passion Week 1685, the rites of the Church of Rome were openly celebrated at Westminster with full splendour. In the same year, the suppression of the Duke of Monmouth's rebellion in England, and that of the Earl of Argyle in Scotland, was followed by great severities. On the western circuit alone, well known as the Bloody Assize, presided over by the infamous Jeffreys, 320 persons were hanged. On the meeting

of parliament on the 9th November of this year, J. requested extra supplies to maintain a standing army, which was a favourite scheme of his. He noticed in his speech, that in some recent appointments he had thought fit to dispense with the Test Act. After a stormy debate, government was finally beaten on the question of supply. To aid his endeavours in favour of the Roman Catholics, J. resolved to try to conciliate the Puritans, much as he hated them. On the 4th of April 1687, appeared the memorable Declaration of Indulgence, in which he announced his intention of protecting dissenters in the free exercise of their religion; and the nation beheld the extraordinary spectacle of the House of Stuart leagued with republican and regicide sects against the old Cavaliers of England. The attempt to conciliate the Puritans was, however, unsuccessful; and in March 1687, it began to be evident that the war between king and church must soon reach a climax. At that time, a vacancy having occurred in the presidency of Magdalen College, Oxford, a royal letter came down recommending Anthony Farmer, a Roman Catholic, to the vacant place. For Farmer was afterwards substituted Parker, Bishop of Oxford. He was known to be a Roman Catholic, though not avowed; besides which, he laboured under other legal disqualifications. The Fellows of the college declined to elect him. A special ecclesiastical commission was then sent to Oxford, escorted by three troops of cavalry with drawn swords. Parker was installed, the Fellows expelled, and declared for ever incapable of holding any church preferment. On the 27th April 1688, J. published a second Declaration of Indulgence; this he ordered to be read in all the churches in the kingdom. The order was generally disobeyed by the clergy, and seven of the bishops having ventured on a written remonstrance, were committed to the Tower on a charge of seditious libel. On the 10th June of the same year, J.'s luckless son, known in history as *The Pretender*, was born. The history of the trial and acquittal of the seven bishops on the 29th June 1688, forms one of the most glowing passages in the splendid narrative of Macaulay. On the night of the same day, an invitation was despatched to William, Prince of Orange, signed by seven of the leading English politicians, to come over to England and occupy the throne. On the 5th of November, William landed at Torbay with 14,000 men. J. found himself deserted by the nobility, gentry, and army; even his own children turned against him. He retired to France, where he was hospitably received by Louis XIV., who settled a revenue upon him. Early in March in the following year, he made a hopeless attempt to regain his throne by invading Ireland with a small army, with which he had been furnished by the king of France; he was totally defeated at the battle of the Boyne, 1st July 1690. He returned to France, continuing to reside at St Germain's till his death, 6th September 1701. There is hardly a sovereign mentioned in history of whom one can find less good to say than of James II.

JAMES, GEORGE PAYNE RAINSFORD, a fecund and popular novelist, was born in London in 1801, and commenced the career of authorship at an early age. Before he reached the age of 17, he wrote seven eastern tales, entitled *The String of Pearls*; but the first work that bore the author's name was *Richelieu*, which appeared in 1825. From this period till his death, which happened 9th June 1860, in Venice, where he held (since 1858) the office of British consul, his publications were, we might almost say, incessant. The principal are—*Daruley*, *De L'Orme*, *Philip Augustus*, *Henry Masterton*, and *Mary of Burgundy*. He also composed

some poetry, and several historical works of a biographical kind, such as *Charlemagne*, *The Black Prince*, and *Richard Cœur de Lion*. J.'s writings are cheerful and pleasant in spirit, but his notions of the romantic, whether in scenery or character, are entirely conventional, and are apt to make quick-witted readers smile at the juvenility of the author's fancy.

JAMES, JOHN ANGELL, an eminent Congregationalist minister, was born at Blandford, Dorsetshire, June 6, 1785, studied for a short time at a dissenting college at Gosport, and was placed on the 'preaching list at seventeen.' He was highly popular, and when only twenty, was settled as pastor of the 'church meeting in Carr's Lane,' Birmingham, where he remained till his death, 1st October 1859. In the course of years, Angell James came to be considered the most important and influential public man in connection with his own denomination, and on account of his 'evangelical' views of religion, he was also much esteemed both by the Low-Church party in the English Establishment, and by dissenters generally in Scotland and America. He published a multitude of sermons, tracts, addresses, and small religious volumes (the best known being the *Anxious Inquirer*), which had—and some of them still have—a vast circulation.—See *Dale's Life and Letters of John Angell James* (Lond. 1862).

JAMES RIVER, an important river of North America, formed by the union of the Jackson and Cowpasture streams, rises near the middle of Virginia, and has its entire course in that state. It flows in an east-south-east direction, passing Lynchburgh and Richmond; and widening into an estuary for the last 60 miles of its course, it falls into the Atlantic at the southern extremity of Chesapeake Bay. It is 450 miles in length, and is navigable to Richmond, 150 miles from its mouth. Its chief tributaries are the Appomattox on the right, and the Chickahominy on the left bank, made historical by the battles of 1862. It was at Jamestown, 32 miles from the mouth of this river, that the first English settlement in America was formed, 1607. By the James River and Kanawha Canal, which extends westward along the upper course of the river, from Richmond to beyond the Blue Ridge, the navigation of the James is carried into the centre of Virginia.

JAMES TOWN, the chief place and only seaport of St Helena (q. v.).

JAMESTOWN, a village in New York, United States of America, 58 miles south-west of Buffalo, on Chataque Lake, and near Lake Erie. It has a large trade and considerable manufactures. Pop. about 10,000.

JAMES'S BAY, a southerly arm of Hudson's Bay, extends in lat. from 51° to 55° N., and in long. from 79° to 82° 30' W. It is so beset with islands, that its navigation is more dangerous than that of the other divisions of the same inland sea. Near its southern extremity is situated Moose Factory, the most important station, next to York Factory, of the Hudson's Bay Company on the coast.

JAMES'S PALACE, Sr, a large inelegant brick structure, fronting towards Pall Mall, succeeded Whitehall as the London residence of the British sovereigns, and remained as such from William III. to Victoria. It was reconstructed and made a manor by Henry VIII., having before been a hospital dedicated to St James; Henry also annexed to it a park, which he enclosed with a brick wall, to connect St James's with Whitehall, the then royal residence. Additions and improvements gradually

made, totally changed the original palace, so that at the present time little, if any, of the old structure remains. In 1837, the royal household was transferred to Buckingham Palace, and St James's is now used only for levees and drawing-rooms.—The Court of St James's is the usual designation of the British Court.

ST JAMES'S PARK lies southward from the palace, and extends over 87 acres. Within the last forty years, it has been greatly improved, and is now richly embellished with avenues of trees, and a fine piece of water in the centre, which is stocked with waterfowl. On the east side is the *Parade*, where the body-guards on duty are mustered, and where the regimental bands perform in fine weather. On the whole, this park is one of the greatest ornaments of London. On the outskirts are situated the Buckingham and St James's Palaces, Stafford House, Marlborough House, &c.

JAMES'S POWDER is a patent medicine discovered by a Dr Robert James, who was admitted as a licentiate of the College of Physicians in 1765, and died in 1776, aged 73. The fame that he might otherwise have acquired—for he was a man of considerable professional skill, and a voluminous medical writer—was tarnished by his patenting his 'fever powders,' and still more by his falsifying the specification to such an extent as to render it impossible to prepare the powder from his directions. Hence the *Compound Powder of Antimony* has been substituted for it in the British pharmacopoeias. From the analysis of the patent medicine, for which one or two London chemists assert that they have the true original prescription, it appears to consist of more than 50 per cent. of triphosphate of lime, which must be altogether inert as an anti-febrile medicine; of from 35 to 45 per cent. of antimonious acid, and a little antimonite of lime and teroxide of antimony. The pharmacopœial preparation very closely resembles it. Both James's Powder (prescribed under the title of *Pulvis Jacobi veri*) and antimonial powder are very uncertain in their operation, at one time possessing considerable activity, and at another being almost inert. Either may be prescribed in doses of about five grains, as a sudorific in fevers and rheumatic affections, and may be given alone, or in combination with a few grains of calomel.

JAMESON, REV. JOHN, D.D., a meritorious Scotch scholar, was born in Glasgow, March 3, 1759, studied for the ministry, and in 1781 was ordained pastor of a congregation at Forfar, in connection with the Antiburgher Secession body. In 1797, he was translated to Edinburgh, where he died July 12, 1838. J.'s reputation as a man of letters rests on his *Etymological Dictionary of the Scottish Language* (1808—1809), of which he published an abridgment in 1818, and to which he added a supplement in 1825. It is a work of great industry, and very considerable value as a collection of Scotch words, phrases, customs, &c.; but it possesses little critical merit, according to the present standard. Among J.'s other performances may be mentioned, *An Historical Account of the Ancient Culdees of Iona* (1811); *Hermes Scythicus, or the Radical Affinities of the Greek and Latin Languages to the Gothic* (1814); *An Historical Account of the Royal Palaces of Scotland*; an edition of Barbour's poem *The Bruce* (1820); and Blind Harry's *Sir William Wallace*. He also wrote several works of a professional nature, which do not call for special mention.

JAMESON, ROBERT, distinguished as a naturalist, was born at Leith, July 11, 1774, and died in Edinburgh, April 28, 1854. Although originally intended

for the medical profession, J.'s strongly manifested love for the study of animals and plants early led him to devote himself to various branches of natural history. After having given evidence of considerable ability and indefatigable industry in various able memoirs, he went in 1800 to Freyberg, to study under Werner. He was elected in 1804 to the chair of Natural History in the university of Edinburgh; and during the term of his professorship, numbered among his students many of the best naturalists of the present day. In 1808, he founded the Wernerian Society of Edinburgh; and in 1809, brought out his *Elements of Geognosy*, in which he gave a comprehensive exposition of the Neptunian theory as it had been modified by Werner. In 1819, he founded, in concert with Sir David Brewster, the *Edinburgh Philosophical Journal*, and in 1826 the *Edinburgh New Philosophical Journal*, of which he continued to be the editor till his death. His principal works, in addition to those we have already mentioned, are *A System of Mineralogy* (1804); *A Mineralogical Description of the County of Dumbarton* (1805), which was intended to have been the first of a series of similar works on all the counties of Scotland; *Manual of Minerals and Mountain Rocks*, &c. (1821); and *Elements of Mineralogy* (1837). The Natural History Museum of the university of Edinburgh was largely indebted to the care and skill of J., for, besides having carefully arranged its collections, which had been almost created by his own donations, and those of a few other scientific men, he obtained, by his representations to government, an annual grant for its maintenance. He was a fellow of almost all the learned societies of Europe.

JAMESON, or **JAMESONE**, **GEORGE**, an eminent Scotch portrait-painter, called by Walpole the *Van Dyck of Scotland*, was born at Aberdeen in 1586. Of his early history, nothing is known. He was at Antwerp in 1616, studying under Rubens, had Van Dyck as a fellow-pupil, and returned to Scotland in 1628. He was first patronised by Sir Colin Campbell of Glenorchy, for whom he painted many portraits of the kings and queens of Scotland; among others, 'Robert Bruce' and 'David Bruce.' His great talents being at once acknowledged, he was largely patronised by the nobility, and in 1633 Charles I. sat to him. He died at Edinburgh in 1644. Though the pupil of Rubens and associate of Van Dyck, his productions bear very little resemblance to those of either of these great masters; distinguished for their clearness of outline, delicacy and softness of shading, and beauty of colour, they have neither the richness of the former nor the vigour of the latter. Though celebrated only as a portrait-painter, he has left numerous historical, miniature, and landscape pieces. His productions are very numerous; the largest collection of them is in the possession of the Earl of Breadalbane; and many others of the Scotch nobility possess paintings by him; there are also several in the halls of the university of Aberdeen.

JAMESON, **MRS ANNA**, an English authoress, born in Dublin, May 19, 1797. She was the daughter of Mr Murphy, a painter, and was married in 1827 to a Mr Jameson, a barrister, but soon after separated from her husband, and devoted herself to literature. She died 17th March 1860. Her principal works are—*Diary of an Ennuyée* (1826); *Loves of the Poets* (1829); *Characteristics of Shakespeare's Women* (1832); *Memoirs of the Early Italian Painters*, &c. (1845); *Sacred and Legendary Art* (1848); *Legends of the Monastic Orders* (1850); *Legends of the Madonna* (1852); *Commonplace Book*

of *Thoughts, Memories, Fancies* (1854); and *The Scriptural and Legendary History of our Lord*, &c., as represented in *Christian Art* (1860).

In all her writings, Mrs J. evinces a fine fancy, a delicate, womanly perception of the beautiful, and a genuine poetic enthusiasm. She is regarded as one of the first art-critics England has produced.

JAMROSADE. See **EUGENIA**.

JAMU', a town and fort in the north of the Punjab, is in lat. 32° 44' N., and long. 74° 54' E. It stands, amid the more southerly mountains of the Himalaya, on both banks of an affluent of the Chenab, the town on the right side, and the fort on the left. It contains 8000 inhabitants.

JANESVILLE, a city in Wisconsin, United States of America, on both sides of Rock River, 45 miles south-south-east of Madison. It is built partly on a plain by the river, and partly on a bluff 100 feet above it, where the public buildings are seen to great advantage. It is connected with Chicago, Milwaukee, and the towns on the Mississippi by intersecting railways. There is a large water-power for many mills and factories, and a state asylum for the blind. Founded in 1836, it had, in 1870, a pop. of 8789.

JANIN, **JULES GABRIEL**, a very clever French critic, was born at St Etienne, in the department of Loire, December 11, 1804, studied at the college *Louis-le-Grand* in Paris, and addicted himself to journalism at an early period. His wonderful piquancy of style, his airy grace of sentiment and wit, and his dashing paradoxes of criticism, have been greatly relished by his countrymen; so much so, indeed, that J., without fear of ridicule, has been able to dub himself *le Prince de la Critique*. For many years he made and destroyed literary reputations in the columns of the *Journal des Débats*. He has also written a good many novels, tales, narratives of tours, &c., among which may be mentioned *L'Ane mort et la jeune Femme guillotinée*, *Contes fantastiques*, *Contes nouveaux*, *Voyage de Victor Ogier en Orient*, *Les Catacombes*, *La Normandie historique, pittoresque et monumentale*, *La Bretagne historique*, &c., *Voyage de Paris à la Mer*, and *Les Symphonies de l'Hiver*.

JAN'INA, a city of Turkey, capital of the eyalet of Janina (the ancient Epirus), is situated on the south-western bank of a lake of the same name, 40 miles inland from the shore opposite the island of Corfu. The lake of Janina, called by the ancients *Pambotis*, consists of two portions connected by two channels. Its extreme length is about 12 miles, its greatest breadth about 3 miles. At its southern end, stood the ancient city of Dodona. The city of J. stands in the midst of an extensive and fertile plain, which produces fruits and grain in abundance. Its chief buildings are 19 mosques, 6 Greek churches, a Greek college, and two synagogues. Gold brocade is here extensively manufactured by Greek workmen, as well as gold lace for the east, morocco leather, silk goods, and coloured linen. J. was long the head-quarters of the gifted but unscrupulous Ali Pasha (q. v.). It is now in part deserted; its population, which was 40,000 under Ali Pasha, is now 25,000. Little is known of its early history.

JANIZARIES (*Jeni-tsheri*, new soldiers), a Turkish military force, originally formed by the Osmanli sultan Orkhan, about 1330, of young Christian prisoners compelled to embrace Mohammedanism; and more perfectly organised by Sultan Amurath I., about 1362, when the number was raised to about 10,000, and especial privileges were conferred on them. They were for some time recruited from Christian prisoners; but their

privileges soon induced many young Turks to seek admission into their body. There were two classes of J., one regularly organised, dwelling in barracks in Constantinople and a few other towns, and whose number at one time amounted to 60,000, but was afterwards reduced to 25,000; and the other composed of irregular troops, called *Jamaks*, scattered throughout all the towns of the empire, and amounting in number to 300,000 or 400,000. At the head of the whole Janizary force was the *Aga* of the J., whose power was limited only by the danger of revolt, and extended to life and death. The J. were always ready to break out into deeds of violence if their pay or perquisites were withheld. In times of peace, they acted as a police force. They served on foot; generally formed the reserve of the Turkish army, and were noted for the wild impetuosity of their attack. The sultan's body-guard was formed of them. The J., however, soon began to be very unruly; and their history abounds in conspiracies, assassinations of sultans, viziers, agas, &c., and atrocities of every kind; so that, by degrees, they became more dangerous to the sultans than any foreign enemies. The attempts of the sultans to reform or dissolve them were always unsuccessful, till Sultan Mahmoud II., in 1826, being opposed in some of his measures by the J. in Constantinople, displayed the flag of the Prophet, and succeeded in arousing on his own behalf the fanatical zeal of other portions of his troops. The J., deserted by their aga, and other principal officers who remained faithful to the sultan, were defeated, and their barracks burned, when 8000 of them perished in the flames. A proclamation of June 17, 1826, declared the Janizary force for ever dissolved. All opposition was defeated with bloodshed. Not fewer than 15,000 were executed, and more than 20,000 were banished.

JAN MAYEN'S LAND, an island in the Arctic Ocean, named after a Dutch navigator by whom it was discovered in 1611. It lies between Iceland and Spitzbergen, and is the northernmost known volcanic land. Its highest point is the volcano of Beerenberg, 6640 feet high, a conical, snow-covered mountain, from which flames and smoke have been seen to proceed, and the sides of which exhibit immense glaciers and frozen waterfalls. Another volcano, called Esk, about 1500 feet high, was discovered by Scoresby in 1817. An interesting account of the island is to be found in Lord Dufferin's *Letters from High Latitudes*.

JANSEN, CORNELIUS, a celebrated divine, born of humble parentage in 1583, at Akkoi, near Leerdam, in Holland, from whom the sect of JANSENISTS derives its name. He was nephew of the well-known biblical commentator, and Bishop of Ghent, of the same name. The studies of J. were divided between Utrecht, Louvain, and Paris. Having obtained a professorship at Bayonne, he devoted himself with all his energy to scriptural and patristic studies, especially of the works of St Augustine. From Bayonne, he returned to Louvain, where, in 1617, he obtained the degree of Doctor, was appointed Lecturer on Scripture, and took a prominent part in the affairs of the university, especially in a contest with the Jesuits, on occasion of which he was sent upon a mission to the court of Madrid. In 1630, he was appointed to the professorship of Scripture; and having distinguished himself by a pamphlet on the war with France, *Mars Gallicus*, he was promoted, in 1636, to the see of Ypres. In this city he died of the plague, May 6, 1638, just as he had completed his great work, the *Augustinus*, which proved the occasion

of a theological controversy, the most important, in its doctrinal, social, and even political results, which has arisen since the Reformation. Its main object, in which it coincided with the scheme of doctrine already condemned in Bajus (q. v.), was to prove, by an elaborate analysis of St Augustine's works, that the teaching of this Father against the Pelagians and semi-Pelagians (q. v.), on Grace, Free-will, and Predestination, was directly opposed to the teaching of the modern, and especially of the Jesuit schools (see MOLINA), which latter teaching he held to be identical with that of the semi-Pelagians. In the preface, he submitted the work to the judgment of the Holy See; and on its publication, in 1640, being received with loud clamour, especially by the Jesuits, and at once referred to Rome for judgment, the *Augustinus*—together with the antagonist publications of the Jesuits—was prohibited by a decree of the inquisition in 1641; in the following year, it was condemned as heretical by Urban VIII. in the bull *In Eminenti*. This bull encountered much opposition in Belgium; and in France, the *Augustinus* found many partisans, who were animated by a double feeling, as well of doctrinal predilection as of antipathy to the alleged laxity of moral teaching in the schools of the Jesuits, with whom the opposition to the *Augustinus* was identified. See JESUITS. The most eminent of the patrons of the *Augustinus* were the celebrated association of scholars and divines who formed the community of PORT ROYAL (q. v.), Arnauld, Nicole, Pascal, &c. Nevertheless, the syndic of the Sorbonne extracted from the *Augustinus* seven propositions (subsequently reduced to five) which were condemned as heretical by Innocent X. in 1653. Hence arose the celebrated distinction of 'right' and of 'fact.' The friends of the *Augustinus*, while they admitted that in point of *right* the five propositions were justly condemned as heretical, yet denied that in point of *fact* these propositions were to be found in the *Augustinus*, at least in the sense imputed to them by the bull. A further condemnation was therefore issued by Alexander VII. in 1656, which was rigidly enforced in France, and generally accepted; and in 1668, peace was partially restored by Clement IX., at least all overt opposition was repressed by the iron rule of Louis XIV. The more rigid Jansenists, however, and at their head Antoine Arnauld, emigrated from France, and formed a kind of community in the Low Countries. On the death of Arnauld in 1694, the controversy remained in abeyance for some years; but it was revived with new acrimony by the well-known dispute on the so-called 'case of conscience,' and still more angrily in the person of the celebrated Quesnel (q. v.), whose *Moral Reflections on the New Testament*, although published with high ecclesiastical authority, at various intervals from 1671 till his death, 1710, was denounced to the pope, Clement XI., as a text-book of undisguised Jansenism. This pope issued in 1713, in the constitution 'Unigenitus,' a condemnation in mass of 101 propositions extracted from the *Moral Reflections*, which, however, met with great resistance in France. The death of Louis XIV. caused a relaxation of the repressive measures. The regent, Duke of Orleans, was urged to refer the whole controversy to a national council, and the leaders of the Jansenist party appealed to a general council. The party thus formed, which numbered four bishops and many inferior ecclesiastics, were called, from this circumstance, the Appellants. The firmness of the pope, and a change in the policy of the regent, brought them into disfavour. An edict was published, June 4, 1720, receiving the bull; and even the parliament of Paris submitted to

register it, although with a reservation in favour of the liberties of the Gallican Church. The Appellants for the most part submitted, the recusants being visited with severe penalties; and on the accession of the new king, Louis XV., the unconditional acceptance of the bull was at length formally accomplished, the parliament being compelled to register it in a *lit de justice*. From this time forward, the Appellants were rigorously repressed, and a large number emigrated to the Netherlands, where they formed a community, with Utrecht as a centre. The party still remaining in France persisted in their inveterate opposition to the bull, and many of them fell into great excesses of fanaticism. See CONVULSIONARIES.

In one locality alone, Utrecht, and its dependent churches, can the sect be said to have had a regular and permanent organisation, which dates partly from the forced emigration of the French Jansenists under Louis XIV., partly from the controversy about Quesnel. The vicar-apostolic, Peter Codde, having been suspended by Clement XI. in 1702, the chapter of Utrecht refused to acknowledge the new vicar named in his place, and angrily joined themselves to the Appellant party in France, many of whom found a refuge in Utrecht. At length, in 1723, they elected an archbishop, Cornelius Steenhoven, for whom the form of episcopal consecration was obtained from the French bishop Vorlet (titular of Babylon), who had been suspended for Jansenist opinions. A later Jansenist Archbishop of Utrecht, Meindarts, established Haarlem and Deventer as his suffragan sees; and in 1763, a synod was held, which sent its acts to Rome, in recognition of the primacy of that see, which the church of Utrecht professes to acknowledge. Since that time, the formal succession has been maintained, each bishop, on being appointed, notifying his election to the pope, and craving confirmation. The popes, however, have uniformly rejected all advances, except on the condition of the acceptance of the bull *Unigenitus*, and the recent act of the Holy See, in defining as of Catholic faith the dogma of the Immaculate Conception of the Blessed Virgin Mary, has been the occasion of a new protest. The Jansenists of the Utrecht Church still number about 5000 souls, and are divided over 25 parishes in the dioceses of Utrecht and Haarlem. Their clergy are about 30 in number, with a seminary at Amersfoort. So far as they can be said to possess a theological system, it may be described as a compound of Jansenist and ultra-Gallican principles.

JANSSENS, ABRAHAM, a celebrated Dutch painter, is supposed to have been born in Amsterdam about 1569. Of a thoughtless and excitable disposition, he made himself completely miserable by his marriage with a girl of extravagant tastes, and spent his latest years in extreme want. The year of his death is unknown. Many churches in Flanders possess pictures executed by him; the most famous are the 'Burying of Christ' and a 'Madonna and Child,' in the church of the Carmelites at Antwerp. There are also good specimens of his style in the galleries of Munich, Vienna, Dresden, and Berlin. J. displayed great vigour in drawing and designing; he was an admirable colourist, and he certainly ranks next, among the historical painters of the period—though at a considerable distance—to Rubens.—**CORNELIS J.**, probably born in Flanders, died in Amsterdam in 1665, acquired a reputation as a very fine painter of portraits and historical subjects.—Another eminent artist of this name was **VICTOR HONORIUS J.** (born at Brussels 1664, died there 1739).

JANTHINA, a genus of gastropodous molluscs

of the order *Scutibranchiata*, and of the same family (*Halitidae*) with ear-shells. The shell is very similar in form to that of a common snail, but thin

Common Oceanic Shell (*Janthina fragilis*).

Shell with the animal, the float expanded.

a, head; b, mouth; c, tentacles; d, eyes; e, border of the mantle at the entrance of the branchia cavity; f, foot, the posterior part, which is flat; g, lateral expansion of the mantle, provided for swimming; h, foot, anterior part forming a sort of pouch; i, l, bunch of aerated vesicles, serving to suspend the mollusc at the surface of the water; m, m, eggs suspended under the vesicular bunch; n, shell.

and beautifully pellucid. These molluscs are remarkable as inhabitants of the open ocean, in which they swim at the surface of the water by means of a float formed of vesicles containing air, and secreted by the foot. To the under-surface of this float, the egg-capsules are attached. The vesicular float has no more anatomical connection with the animal than the shell has. The *Janthinæ* abound in the seas of warm climates; are plentiful in the Mediterranean, but rare on the British coasts.

JANUARIUS, Sr, a martyr of the Christian faith under Diocletian, was a native of Benevento, or at least became bishop of that see in the latter part of the 3d century. According to the Neapolitan tradition, he was taken prisoner at Nola; and the place of his martyrdom, in 305, was Pozzuoli, where many Christians suffered the same fate. His body is preserved at Naples, in the crypt of the cathedral, and in a chapel of the same church are also preserved the head of the martyr, and two phials (*ampullæ*) supposed to contain his blood. On three festivals each year, the chief of which is the day of the martyrdom, September 19, and on occasions of public danger or calamity, as earthquakes or eruptions, the head and the phials of the blood are carried in solemn procession to the high-altar of the cathedral, or of the church of St Clare, where, after prayer of greater or less duration, the blood, on the phials being brought into contact with the head, is believed to liquefy, and in this condition is presented for the veneration of the people, or for the conviction of the doubter. It occasionally happens that a considerable time elapses before the liquefaction takes place, and sometimes it altogether fails. The latter is regarded as an omen of the worst import; and on those occasions when the miracle is delayed beyond the ordinary time, the alarm and excitement of the congregation rise to the highest pitch. Those who are curious as to the literature of the controversy regarding this celebrated legend, will find many documents in the sixth volume of the Bollandist *Acta Sanctorum* for September.

JANUARIUS, St, ORDER OF, an order of knighthood, founded by King Charles of Sicily (afterwards Charles III. of Spain), on the 6th July 1738. It was abolished after the French invasion of 1806, and reintroduced in 1814. The badge is a gold octagonal white and red enamelled cross, with gold lilies in the upper and side angles. The obverse represents St Januarius in episcopal robes,

with an open book. The round middle of the reverse shews a golden open book, and two phials partly filled with blood. The knights are either *Cavalieri di Giustizia*, who must count four noble generations, or *Cavalieri di Grazia*.

JANUARY, the first month of the year. It was, among the Romans, held sacred to Janus (q. v.), from whom it derived its name, and was added to the calendar along with February by Numa. It was not till the 18th c. that J. was universally adopted by European nations as the first month of the year, although the Romans considered it as such as far back as 251 B. C.

JANUS AND JANA, two very old Latin divinities, male and female, whose names are merely different forms of *Dianus* (probably the Sun) and *Diana* or *Luna* (certainly the Moon). The worship of the former held a high place in the regards of the Romans. In every undertaking, his name was first invoked, even before that of Jupiter, which is the more singular, as Jupiter was unquestionably the greatest of the Roman gods. Perhaps it may be taken as a verification of the tradition, that Janus was the oldest of them, and ruled in Italy before any of the others came thither. He presided not only over the beginning of the year, but over the beginning of each month, each day, and the commencement of all enterprises. On New-Year's Day, people made each other presents of figs, dates, honey-cakes, sweetmeats, &c., wore a holiday-dress, saluted each other kindly, &c. The pious Romans prayed to him every morning, whence his name of *Matutinus Pater* ('Father of the Morning'). He is represented with a sceptre in his right hand, and a key in his left, sitting on a beaming throne (probably a relic of the original, or at least very old worship of J. as the sun). He has also two faces (whence the expression applied to a deceitful person, 'Janus-faced'), one youthful, and the other aged, the one looking forward, and the other backward, in which some have professed to see a symbol of the wisdom of the god who beholds both the past and future, and others, simply of the return of the year. Numa dedicated to him the passage close by the Forum, on the road connecting the Quirinal with the Palatine. This passage (erroneously called a temple, but which was merely a sacred gateway, containing a statue of Janus) was open in times of war, and closed in times of peace. It is a striking commentary on the military habits of the Romans, that the place was shut only thrice in 700 years, first by Numa himself, again at the close of the first Punic war, and for the third time, under Augustus. It was also closed by Vespasian in 71 A. D.

JAPAN (native name, *Nipon*—or *Dai Nipon*, Great Nipon—i. e., the Land of the Rising Sun), a very ancient island-empire of Eastern Asia, long remarkable for the proud isolating policy of its rulers, and now claiming special consideration, both on account of its recent renewed relations with the civilised world, and the wonderful changes that during the last few years have been in progress in the country.

Japan Proper comprehends four large islands, viz., Nipon (the Japanese mainland), Sikok or Sikop, Kiusiu, and Yesso, and extends from 31° to 45° 30' N. lat. The empire of J.—the area of which has been estimated at 266,500 square miles—includes about 3800 small islands and islets besides the four larger ones, and is situated between 26°—52° N. lat., and 128°—151° E. long. It is bounded on the N. by the Sea of Okotsk, on the E. by the North Pacific Ocean, on the S. by the eastern Sea of China, and on the W. by the Sea of Japan. In 1871, the population of Japan was 32,866,161.

Physical Features.—The islands of J. appear to be of volcanic origin, and that part of the Pacific on which they rest is still intensely affected by volcanic action. Earthquakes occur very frequently in J., although certain parts of the country are exempt. The Japanese reckon that, on an average, some one of their cities is destroyed every seven years by this agency. J. has been called the land of mountains; but though these are very numerous, and many of them volcanic, they are of moderate elevation, and rarely attain the limits of perpetual snow. The country generally is of moderate elevation, with fertile valleys, picturesque landscapes, and a coast indented with magnificent harbours; the soil is productive, rich in mineral wealth, and teeming with every variety of agricultural produce. The great volcanic mountain Wunsentake, on a promontory of Kiusiu, reaches to the line of perpetual snow, and is both feared and worshipped by the Japanese. The celebrated and sacred Fusi-yama ('Rich Scholar Peak'), the Parnassus of J., is an extinct volcano, the highest peak of which reaches to the height of 14,177 feet. Springs, lakes, and rivers are numerous; but the last, being sand-choked and very impetuous, are valuable chiefly for the purposes of irrigation.

Our knowledge of the climate of J. is yearly increasing. June, July, and August are the months of rain, which sometimes descends in unceasing torrents. The months of October and November are the pleasantest and most genial of the twelve, when fine weather is enjoyed without the scorching heat of summer. The summers are very hot, and the winters in the northern parts almost Siberian; the thermometer rising to 96° in the shade in the former, and sinking to 18° below zero in the latter season. Alcock says: 'The thermometer in the shade (during the summer) ranges from 70° to 85°, and averages 80° between the morning and the evening, while it is sometimes below 70° at night.' Hurricanes and waterspouts are frequent; dense fogs hide the sun, sometimes for four or five days together; and about the change of the monsoons, typhoons and equinoctial gales frequently sweep the Japanese seas.

Vegetable Productions.—In Hodgson's *Japan* will be found a systematic catalogue of Japanese flora by Sir William Hooker. We can only mention a few of the most noteworthy trees and plants. Chestnut, oak (both deciduous and evergreen), pine, beech, elm, cherry, dwarf-oak, elder, sycamore, maple, cypress, and many other trees of familiar name abound. The evergreen oak and the maple are the finest of all Japanese trees. The grandest forests of pine, and oaks of prodigious size, grow in Yesso; but the *Rhus vernicifera* or lacquer-tree, the *Laurus camphora* or camphor-tree, the *Broussonetia papyrifera* or paper-mulberry—the bark and young twigs of which are manufactured by the Japanese into paper—and the *Rhus succedanea* or vegetable wax-tree of J., are among the remarkable and characteristic trees of the country. Bamboos, palms, including sago-palms, and 150 species of evergreen trees, likewise flourish. Thus, the vegetation of the tropics is strangely intermingled with that of the temperate or frigid zone; the tree-fern, bamboo, banana, and palm grow side by side with the pine, the oak, and the beech, and conifers in great variety. The Camellia, the Paulownia, and the Chrysanthemum are conspicuous amongst its indigenous plants. Nymphæas and Parnassia fill the lakes and morasses. The tobacco-plant, the tea-shrub, the potato, rice, wheat, barley, and maize are all cultivated. The flora of J. bears a remarkable resemblance to that of the North American continent.

Agriculture is the chief occupation of the Japanese.

They are very careful farmers, and their farms are models of order and neatness. They bestow great care upon manures, and thoroughly understand cropping and the rotation of crops. The cultivated land is chiefly a light friable loam of great fertility. It grows tea, cotton, rice (the staple production), wheat, maize, buckwheat, millet, potatoes, turnips, beans, and peas. The rice harvest commences in October. Wheat is sown in drills in November and December, and reaped in May and June. Flails and winnowing-machines, similar to those used in England, are common.

Animals.—Wild animals scarcely exist in J., in consequence of the universal cultivation of the soil. A few wolves, foxes, and wild boars still roam in the north of Nipon. Wild deer are protected by law. The principal domesticated animals are horses, of which there is an indigenous race; oxen and cows, used only as beasts of burden; and dogs, held in superstitious veneration by the people. Birds are very numerous, and include two kinds of pheasants, wild-fowl, herons, cranes, and many species common both to Europe and Asia. There are few reptiles; and of insects, white ants, winged grasshoppers, and several beautiful varieties of moth are conspicuous.

Mineralogy.—J. is very rich in minerals. The gold mines of Matsumai and the north-east part of Nambu have long been celebrated; but the north of Nipon is, according to the Japanese, one continuous bed of gold, silver, and copper. Silver also comes from the islands to the west of Matsumai, from the province of Shanday, and from the islands in the vicinity of Neagata. The iron mines of Yesso are sealed to Europeans. Both lead and copper mines are worked within a few miles of Hakodadi. The sulphur of Yesso and the adjacent isles is almost inexhaustible, and of wonderful purity. In its abundant supply of coal, J. resembles Great Britain; coal-beds extend from Nagasaki and Fizen to Yesso and Saghalien. Basalt, felspar, green-stones, granites red and gray, rock-crystal, agate, carnelian, amber, scoria and pumice-stone, talc, alum, and other minerals are found in greater or less quantities.

Inhabitants.—Ethnologists have referred the Japanese to different types of mankind: Latham classifies them as Turanians, a tribe of the Asiatic peninsular stock; Pickering, as Malays; Richiard, as belonging to the same type as the Chinese; and in the narrative of the United States' Expedition, they are ranked as a branch of the Tartar family. Physically, the Japanese is distinguished by an oval head and face, rounded frontal bones, a high forehead, slightly oblique eyes—the irides of a brown-black colour, the eyebrows heavy and arched. The complexion varies from a deep copper colour to the fairness of western nations, but is more frequently of a light-olive tint. The expression of the face is mild and animated. The Japanese 'are a people of great qualities and exaggerated defects. They are honest, ingenious, courteous, clean, frugal, animated by a strong love of knowledge, endowed with a wonderful capacity of imitation, with deep self-respect, and with a sentiment of personal honour far beyond what any other race has ever reached. But they are proud, absolute, revengeful, profoundly suspicious, hesitating, and mistrustful, and, in the lower classes, openly and radically immoral. Their organisation (until lately) was purely military; war was the only occupation (with the exception of the priesthood) which was considered worthy of a man; agriculture was left to serfs; while commerce was regarded as degrading. The fighting-classes had the utmost contempt for trade, and the entire people were deficient in the commercial aptitudes.' The town costume of the

Japanese gentleman consists of a loose silk robe extending from the neck to the ankles, but gathered in at the waist, round which is fastened a girdle of brocaded silk. Over this is worn a loose, wide-sleeved jacket or spencer, decorated with the wearer's armorial device. A cylindrical cap made of bamboo and silk, white stockings, and neat straw sandals, complete the attire. Trousers are only

The Japanese Ambassadors to Europe in 1862.

1, Take no Ouchi Shimodzu Kéno Kami; 2, Matsudaira Iwamino Kami; 3, Kiogoku Notono Kami.

worn by official persons on occasion of special ceremony. A head entirely shaven is the distinctive mark of priests and the higher class of medical practitioners; in others, the hair is shaved off about three inches in front, combed up from the back and sides, and glued into a tuft at the top of the head, where it is confined by pins of gold or tortoise-shell. The hair of the women is more abundant, but otherwise their dress very much resembles that of the men. In the country, a short cotton gown is often the only clothing, and the lower classes go almost in a state of nudity. The men are generally elaborately tattooed over the greater part of their body with figures of men and women, bright-blue dragons, lions, tigers, &c. The women have a mania for painting and powdering their skin.

Manners and Customs.—The most remarkable custom of the Japanese is that of *Harri-kari* or *Hara-kiru* (or *Hara wo Kiru*, i. e., 'belly-cut'), a legalised mode of suicide, by making two cross-cuts on the abdomen with a sharp-pointed knife. This custom, according to some recent accounts, is now less frequent, and the ceremonies with which it was once performed have become obsolete. There are still, however, professors of the art in most large cities. The curious custom of *nay-boen* or *naibun* consists 'in ostentatious secrecy as regards events, or *incognito* in reference to persons.' Well-known events are totally ignored, and individuality is unrecognised under shelter of the *nay-boen* privilege.

The social position of women is, in some respects, more favourable than in most pagan countries. The ladies of Japan, however, live in strict seclusion, and little is known about them. Female education is not neglected. Polygamy is not allowed, but the power of divorce is permitted to the husband by law. The laws against adultery on the part of the wife are severe, and death is the penalty, which may

be inflicted by the husband. He, on the contrary, may take as many concubines as he pleases or can afford. The marriage ceremony is an important part of social etiquette; the families of both bride and bridegroom meet and celebrate the event. Saki flows abundantly, and great feasting and hilarity prevail. When a maiden marries, her teeth are blackened, her eyebrows plucked out, and artificial ugliness is henceforth cultivated to the greatest possible extent. The Chinese custom of affiancing children is followed by the upper classes, and aristocratic usage interdicts a personal interview to the bride and bridegroom previous to marriage; but this rule is now much relaxed. Prostitution is a legalised custom, and a father may sell his daughter, for this purpose, for a term of years; whilst the Japanese gentleman, notwithstanding his high notions of honour, often chooses his wife from amongst the inmates of those houses of ill-fame, which are at once supported and controlled by government. The bath is a great institution in J., and forms a kind of people's parliament. It is the general custom throughout the country for men and women to bathe together, with a total absence of decorum, but without sense of immodesty. In J., the social position of every man is fixed by his birth, and the line that separates class from class is not only clearly defined, but impassable. Daimios and samios, priests and soldiers, are considered to belong to the higher classes, and in the others are included medical men, inferior government officials, merchants, retail dealers, and labourers. There are eight classes of society, half of which belong to the upper, and the other half to the lower ranks of society. Men of rank only can enter a city on horseback; but these distinctions will now be greatly modified, if they do not pass away altogether, with the double sovereignty, and the feudal power of the daimios. The ordinary vehicle in J. is a description of palanquin; the common sort, made of bamboo, is called a *cango*; the better kind, made of lacquered wood, a *norimon*. The Japanese manifest great regard for the dead. The ancestral tablet (*wei-pae*) is fashioned on the Chinese model, and is placed in the family shrine with the household gods. In a Japanese cemetery, the solid and elaborately carved granite monuments are beautiful specimens of architectural taste. Each body is buried in a sitting posture, with the hands folded in the attitude of devotion; and the coffins are all circular. The Japanese observe many holidays, and celebrate the opening of the year in the Chinese fashion. There are, too, many holidays of a religious character, but the great national festivals are five in number. The Japanese are a theatre-loving people, and inveterate gamblers. They delight in wrestling—their national sport—perform wonderful feats in spinning tops, are very expert jugglers, and excel in archery. Fish and rice are the staple food of the people, and tea and saki (a spirit distilled from rice) their beverages.

Government, Institutions, and present Condition.—To understand something of the government and institutions of J., past and present, it will be necessary to glance at its history and political landmarks. Here we find an emperor, whose dynasty began to reign 2532 years ago, or 660 B.C. Its founder, Zinmu, or Zen Mou, was contemporary with Nebuchadnezzar; and in 1688, after a duration of twenty-five centuries, it threw off the oppression and decrepitude of 676 years, and in the person of Moutz Hito, the present Mikado or emperor (the 122d of his race), entered upon a new and promising career. The principal landmarks of Japanese political history are briefly as follows: A time of anarchy and faction on the one side, and a succession of

feeble sovereigns on the other, enabled Yoritomo, the Shogun or generalissimo (from *Ta-tsiang-kiun*, the Chinese term for 'the great chief or commander of the army')—or Tycoon (Chinese *Tai Koon*, i.e., 'Great Lord'), as he is called in recent treaties—to usurp the supreme authority. This occurred in 1192 A.D.; but the creation of a Shogun by the Mikado dates from 85 B.C. This high officer was subsequently known to Europeans as the temporal emperor, and to the Mikado they assigned purely spiritual functions; but the Japanese themselves recognised one sovereign only, viz., the Mikado, who held his court at Miako, while his rival in Yeddo acted as real sovereign, at the safe distance of 300 miles; and the Shogunate became henceforward a permanent institution. It might now be said that the Shogun governed, but did not reign; while the Mikado reigned, but did not govern; though three times a year he received the homage of his all-powerful subject. He even continued nominally the sole temporal emperor, though pensioned by the Shogun, and deprived of all real authority. In 1603 the Shogun Tokugawa Iyeyas (the 'illustrious') organised a government which secured to the empire a peace of 200 years. He founded likewise a permanent succession, and his descendants reigned at Yeddo till 1868. His system was perfected by Iyemits, the third Shogun of the Tokugawa dynasty. It was his policy 'to preserve unchanged the condition of the native intelligence,' 'to prevent the introduction of new ideas,' and to effect this he not only banished foreigners, interdicted all intercourse with them, and extirpated Christianity, but introduced that 'most rigid and cunningly devised system of espionage' that was in full activity at the time of the Earl of Elgin's mission, as amusingly described by Mr Oliphant. 'This espionage,' says a recent Japanese writer, 'held every one in the community in dread and suspicion; not only the most powerful daimio felt its insidious influence, but the meanest retainer was subject to its sway; and the ignoble quality of deception, developing rapidly to a large extent, became at this time a national characteristic. The daimios, who at first enjoyed an honourable position as guests at the court of Yeddo, were reduced to vassalage, and their families retained as hostages for the rendition of a biennial ceremonial of homage to the Shogun. Restrictions surrounded personages of this rank until, without special permission, they were not allowed to meet each other alone.' In 1549 St Francis Xavier introduced the Roman Catholic religion into J., and the Portuguese (who first landed in Japan in the year 1543) carried on a lucrative trade; but by-and-by the ruling powers took alarm, ordered away all foreigners, and interdicted Christianity (1624), believing that foreigners impoverished the country, while their religion struck at the root of the political and religious systems of Japan. The converts to that form of Christianity introduced by Xavier, were found to have pledged their allegiance to a foreign power; while their conduct is said to have been offensive towards the Sinto and Buddhist temples; so that in time they came to be regarded as a dangerous and anti-national class whose extirpation was essential to the well-being of the nation, and to the success of the political system then being organised or perfected by Iyemits. The Portuguese continued to frequent J. till 1638, when they and their religion were finally expelled; Christianity was suppressed with every cruelty, and at the cost of some 50,000 lives; its professors were murdered, and the ports closed to foreign traffic. From this date the Japanese government maintained the most rigid policy of isolation. No foreign vessels might touch at Japanese ports under any pretence. Japanese sailors wrecked on any foreign shore were

with difficulty permitted to return home; while the Dutch, locked up in their factory at Decima, might hold no communication with the mainland; and the people lived like frogs in a well, till 1853, when they were rudely awakened from their dream of peace and security by Commodore Perry steaming into the harbour of Yokohama, with a squadron of United States war-vessels. He extorted a treaty from the frightened Shogun (31st March 1854), and J., after a withdrawal of 216 years, entered once more the family of nations. Other countries slowly followed the example of the United States: Russia and the Netherlands in 1855; our own treaty followed in 1858; that with France in 1859; with Portugal in 1860; with Prussia and the Zollverein in 1861; with Switzerland in 1864; with Italy in 1866; and with Denmark in 1867. By these the seven Japanese ports of Yokohama, Nagasaki, Kanagawa, Niigata, Hiogo, Osaka, and Hakodadi have been opened to foreign commerce.

It will thus be seen that 'the history of the empire of the Rising Sun is divisible into four distinct periods: the first, which ends with the landing of the Portuguese in 1543, is purely local; the second, which extends from 1543 to 1638, includes the story of St Francis Xavier, the trade with Portugal, the persecutions, and the final expulsion of Europeans; the third, from 1638 to 1854, is distinguished by the Dutch monopoly, and the resolute exclusion of all foreigners; in the fourth, since 1854, J. has once more become accessible to everybody.'

In the J. of 1854, we went back to Europe of the 12th century—to the feudalism of England under the Plantagenets. An aristocratic caste of a few hundred nobles—the *Daimios* or territorial princes of J. (278 in number)—ruled large provinces with despotic and almost independent authority; their incomes reaching in one or two instances to £800,000. The Shogun gave deep offence, both to the Daimios and the nation, by signing the Perry treaty at all; but especially by signing it without the sanction of the Mikado, and for ten years a policy of assassination and deadly hatred to foreigners (whom the government could not protect) was carried out. This resulted in the two bombardments of Kagoshima Chioshiu, by the English and combined fleets, which opened the eyes of the Japanese to the power of the western nations, and awakened in their minds an intense desire to raise their country to an equality with them. A complete reaction in favour of the despised foreigners set in; and a desire for a strong central government—the unification of the nation in the hands of the Mikado—who was urged by the most powerful of the daimios to suppress the Shogunate. The Shogun tendered his resignation; but, notwithstanding, a *coup d'état* appears to have been necessary for the complete extinction of the Shogun and his party. This was carried out in the winter of 1867—1868, and after a short but sharp civil war of some six months' duration, the Shogun, with his partisans, were defeated, and the Shogunate (or 'government under generalissimo') became a thing of the past. The daimios decided upon a grand act of self-sacrifice, and suppressed themselves. 'Two hundred and seventy-eight military princes, possessing regal powers, vast wealth, and separate armies, abdicated from purely patriotic motives, the station which their families had held for twenty centuries!'

The Japanese government is now organised partly upon the French imperial system, and presents the following features: (1.) The Mikado is supreme in temporal and spiritual matters; (2.) An executive ministry divided into eight departments, viz.—Foreign Affairs, War, Navy, Finances, the Interior,

Justice, Public Instruction, and Ecclesiastical Affairs; (3.) A Senate (*Sain*) of thirty members, and a Council of State (*Shoin*), members unlimited; (4.) A 'Great Council'—by which the government is really carried on—divided into three sections, viz., the Centre, composed of the Prime Minister, Vice-Prime Minister, and five advisers; the Right, which includes the Ministers and Vice-Ministers of the eight departments; the Left, formed entirely of the Council of State, whose functions correspond to the French *Conseil d'Etat*. All matters of high importance are decided by the Great Council and the Mikado; but ordinary questions are left to the ministers, individually or in cabinet. An elective parliament is in contemplation. In 1871 the provincial administration was taken from the ex-daimios; and 'prefects,' with extensive powers, have been appointed, one to each of the 75 districts into which J. is now divided.

Great progress is being made in finance, education, and public works, as well as the reconstruction of both army and navy. The budget for 1872 shews a revenue of £12,229,531, and an expenditure of £11,420,385. This interesting document (for which we are indebted to an article in *Blackwood's Magazine* for September 1872) we here give in a condensed form, premising only that the dollars of the original have been converted into English money at an exchange of 4s. 3d.:

RECEIPTS.

Rice, at 4½ dollars per koku,	£11,444,556
Customs,	293,350
Internal revenue (excise duties, &c.),	225,675
Miscellaneous,	260,950
Total of receipts,	£12,229,531

EXPENDITURE.

Imperial household,	£113,050
Ministry of foreign affairs,	112,200
Army,	1,790,000
Navy,	382,500
Colonisation of Yezo,	418,833
Justice,	16,150
Education,	73,312
Finance department (including cost of collecting taxes),	369,962
Public works,	1,763,112
Municipal and provincial governments,	1,386,987
Miscellaneous,	452,412
Cost of manufacturing new bank-notes, and of establishing the Mint,	210,375
Pensions to daimios and retainers,	4,024,112
Balance of indemnity to European powers on the Simonosaki affair,	318,750
Interest on the English loan,	73,625
Total of expenditure,	£11,420,385

Surplus, £809,146.

It will be seen that the bulk of the revenue is derived from the rice-tax, which is a very certain and productive import; but as the principle of taxing the staple food of the people is radically wrong, and in this instance it weighs very unfairly upon the agricultural population (absorbing one-third of the entire annual crop), the newly inaugurated government is considering how gradually to diminish, and to replace it 'by other duties less objectionable, and more in harmony with the spirit which now guides the country.'

A Ministry of Instruction was created in 1871, and public primary schools are being established in towns. Lighthouses, dockyards, the buoying of harbours, and the construction of roads and railroads, have all been in progress during the last three years. A railway from Yeddo to Yokohama has been made, and telegraphs are in course of erection. Newspapers and printing-presses have

started into existence, and books are eagerly read. The government has engaged foreign professors of languages, and sent some 500 state students to Europe and America. The army is being armed and organised on the French model, and instructed by French officers. On the standing establishment are 70,200 men, besides the Mikado's body-guard of 8312 picked soldiers. The navy has at present 19 vessels of all classes. The western calendar (excepting only the names of the month, which are represented by numbers) has, by a recent decree, been adopted; and a national code of laws, based on the Code Napoleon, is being drawn up.

Religions of Japan.—The two principal and national religions of J. are Sintoism or Sin-syuism (from *sin*, the gods, and *syu*, faith), the ancient

finish by striking a bell, to intimate that their religious duties are over.

2. In J., Buddhism, which was introduced 552 A.D., has been modified by its contact with Sintoism, with which it has to a certain extent amalgamated. No less than eight Buddhist sects exist in Japan. Buddhism has properly no priests, but here the monks appear to have assumed the functions of that order. Dr Smith has given an interesting description of a Buddhist service he saw at one of the temples in that country (see his *Ten Weeks in Japan*, p. 34). 'Amongst the services which I ever witnessed,' he says, 'I seldom beheld in a pagan country an assemblage of native worshippers so nearly approaching the appearance of a Christian assembly, and the details of an ordinary Christian service.' Amongst the more

educated classes, the same sceptical indifference to the religious observances of the multitude that prevails in China is observed.

The Japanese Written Language.—The principle of duality, which pervades the life of the Japanese, extends to their mode of writing, for two distinct alphabets and kinds of writing are in use. There is, 1st, the ideographic system of Chinese hieroglyphic symbols, which dates from the 3d c. A.D.; and 2dly, the phonetic syllabarium, of more recent invention, consisting of 47 characters, and a few supplementary monosyllabic sounds. Prior to either of these, some antique form of writing, now consigned to oblivion, is supposed to have existed.

The phonetic alphabet, invented about the year 810 A.D., is known as the *Hiragana* form of character. In process of time, this system was rendered more complex by the addition of variations, and this led, apparently, to the introduction of another and simpler alphabet, entirely without variants, and known as the *Kata-gana* character. Both these phonetic systems are written in perpendicular columns. It is not a little remarkable that the Chinese ideographic symbols retain their ascendancy over the indigenous alphabets, and are adopted almost exclusively for diplomatic documents and the higher class of books. In common life, the Chinese written language is in familiar and constant use.

There is no similarity whatever between the spoken languages of China and J.; the latter—one of the softest tongues out of Italy—is not very difficult of acquisition, and is without the Chinese system of intonations; it is not monosyllabic, but what Dr Latham calls agglutinate.

The literature of J. is abundant and various, and includes works on history and science, encyclopædias, poetry, prose fiction, and translations of European works. Besides original writings, the Japanese have adopted the whole circle of Chinese Confucian literature; the Chinese classics indeed form the basis of their literature, system of ethics, and type of thought.

In the *mechanical arts*, the Japanese have attained to great excellence, especially in metallurgy, and in the manufacture of porcelain, lacquer ware, and silk fabrics; indeed, in some of these departments, works of art are produced, so exquisite in design and execution as to more than rival the best products of Europe. The Japanese have long understood lithocromie-printing. Their drawings of animals and figures

creed of the country, and Buddhism, which is exotic and comparatively modern. The doctrine of Confucius, as held by the literati of China, has also considerable influence under the name of Sooto, or 'the way or method of philosophers;' but it is less a religion than a system of morals and philosophy. 1. Sintoism. The hierarchy of Sin-syu is composed of the Mikado, two ecclesiastical judges, together with the monks and priests. The chief object of Sinto worship and belief is *Ten-sio dai-sin*, the Great Sun-goddess. The spiritual emperor, Mikado, is held to be the direct descendant of the sun-goddess, and, as such, unites in his person all the attributes of the deity. The minor deities of Sintoism are very numerous, for every hero, warrior, patriot, or public benefactor receives a regular apotheosis and canonisation at his death, and is henceforth reckoned among the *kami* or demi-gods. Every district has its patron saint or *kami*; and the shrines erected to the popular divinities are innumerable. Sinto temples are usually built on elevated ground, and surrounded by groves; no idols are visible in them: but above and around, written sentences are inscribed. A mirror, as an emblem of the purity required in the worshippers, is placed on the altar. The chief doctrines of this indigenous religion of J. are—1. Inward purity of heart; 2. A religious abstinence from whatever makes a man impure; 3. A diligent observance of the solemn festival and holy days; 4. Pilgrimages to holy places; and 5. According to some, chastising and mortifying the body. The form of worship is simple: the worshippers first wash themselves in the font, pray opposite the mirror, throw a few cash into the money-box, and

generally are wonderfully graphic, free, and true to nature; but in landscapes they fail, from erroneous

perspective; and of the art of painting in oils they are entirely ignorant.

The commercial intercourse of J. is now carried on mostly with Great Britain, and the United States of America.

The following table shews the extent of the trade by exhibiting the value of the total exports from Japan to Great Britain, and of the total imports of British and Irish produce and manufactures into Japan during the five years 1867—1871:

Years.	Exports from Japan to Great Britain.	Imports of British Home Produce into Japan.
1867,	£317,799	£1,545,386
1868,	188,222	1,112,804
1869,	167,308	1,442,104
1870,	96,173	1,609,367
1871,	109,224	1,584,517

The principal items of export from J. to Great Britain are tea and unmanufactured tobacco, valued respectively at £40,539 and £37,668, for the year 1871. The staple British import into J. is cotton goods, valued at £1,049,701 for the same year.

The national coins of J. are—the *ichibu* (silver), average rate of exchange, 1s. 4½d.; the *riu* or *tael*, 5s. 10d.; the *koban* (gold), £1, 9s. 2d. A mint, manufactured in England, was set up at Osaka in the year 1870. The new coins issued from it are: 10, 5, and 2½ dollar gold-pieces; 50, 20, and 5 cent silver-pieces; besides iron and copper coins of small value.

For the latest information on J., see *Education in Japan*, with an Introduction by Arinori Mori, Minister or Envoy from Japan to the United States of America (New York, 1873); article 'Japan,' *Blackwood's Magazine*, Sept. 1872; *The Merchant's Handbook*, by W. A. Browne (Lond. 1872); *Japan*, being a sketch of the history, government, and officers of the Empire (Lond. 1869); *Japan in Our Day*, by B. Taylor (New York, 1871); *The Statesman's Year-book*, by F. Martin (Lond. 1873); and for general reference, see *The Capital of the Tycoon*, by Sir Rutherford Alcock, K.C.B., &c. (Lond. 1863); *A Residence at Nagasaki and Hakodati* in 1859—1860, by C. P. Hodgson (Lond. 1861); *First Elements of Japanese Grammar*, &c., by R. Alcock, Esq.; *Narrative of the Earl of Elgin's Mission to China and Japan in the years 1857, 1858, and 1859*, by Lawrence Oliphant (Lond. 1859); *The History of Japan*, by Engelbert Kämpfer, M.D. (Lond. 1727).

JAPANNING is the art of giving a coating of varnish and other materials to certain manufac-

tures, by which a resemblance is produced to the beautiful lacquered wares of Japan and China. The term is more generally applied in this country to metal-works upon which a dark-coloured varnish is applied with heat, but the process is quite as extensively applied to papier-mâché works. See LACQUERING. The japanned works of our manufacturers are chiefly iron and tin, such as coal-boxes, tin canisters, and other articles, which are thereby made more ornamental, and are at the same time protected from rust.

The japanning material consists of anime or copal varnish, alone, or mixed with ivory-black, to produce a black japan; or with asphalt, to produce a dark or light brown, according to the quantity used. For very cheap tinned wares, a single coating is all that is usually given. After being varnished, they are put into a heated oven for a time, after which they are ready for use; but in the case of more valuable articles, such as the handsome coal-boxes of iron which are now extensively manufactured, and which are still further ornamented by gilding and painting, several coats of black japan varnish are applied, each being dried in the oven previous to the application of the next, so that a coating of sufficient substance to bear polishing is thus obtained. Rotten-stone and Tripoli powder are used by the polisher, and a beautiful surface is obtained, in no respect inferior to that of polished jet. The polishing powders are at first applied with leather, but the finishing is done by women, who use the palms of their hands only with small quantities of Tripoli.

The beautiful black surface thus produced is admirably adapted for decoration by gilding; and much taste is now shewn in these matters by our manufacturers, who surpass all others in the high finish and cheapness of japanned wares. Under LACQUERING will be given the Japanese process, which is thus imitated on metal, under the name of japanning, in Europe.

J'APHET, in Heb. *Yepheth*, a word apparently derived in Genesis from *pathah*, 'to open,' trop. perhaps 'to stretch forth,' and hence supposed to mean 'widely dispersed.' Gesenius and other scholars, however, suggest a derivation from *yaphah*, 'to be fair' or 'beautiful,' in allusion to the fair complexions of the Japhetic or European races. According to the Hebrew record, J. was the second son of Noah, whose descendants peopled first the north and west of Asia, after which they proceeded to occupy 'the isles of the Gentiles,' i. e., all the region about the Levant and the Ægean Sea. J. has at a later period, in Talmud and Midrash—not merely from its similarity to the Greek name *Jaetus*, the supposed founder of the human race—been used as a typical expression for 'Greek.' Cf. *Meg.* 71, b.; *Ber.* R. 40, b. &c.

JAPURA, or CAQUETA, a river of South America, and tributary of the Amazon, rises in the Granadian Andes, in lat. 1° 26' N., long. 76° 50' W., and joins the Amazon about 65° 50' E. long. Its entire length is upwards of 1000 miles; the navigation is impeded by cataracts.

JARGONISING is a phenomenon observed chiefly in acute mania; it consists in the utterance of uncouth and unintelligible sounds, which may resemble articulate words, or be little more than harsh ejaculations and bellowings. This symptom must not be confounded with those imitations of foreign tongues or provincial idioms, or the perversions of the faculty of language characteristic of mania and other forms of alienation, as these sounds are not intended to be, nor to appear, the vehicles of thought or manifestations of feeling. They stand

in the same relation to the excitement and violence, as the rapid motion, the furious gesticulation, and the tendency to injure and destroy everything that is seemly and harmonious. The tone in which they are uttered is generally harsh and defiant, because intense passion thrills through every muscle, through those of the vocal apparatus as well as of the arm raised to strike. Jargonising is, in all probability, involuntary. It occurs at the commencement or crisis of mania, when the power to control the ideas and to regulate motion is most impaired. It may, however, be the result of volition, so far as that the individual desires and determines to speak, but fails from the rapidity or intensity of his emotions to call into action, and co-ordinate the organs engaged in articulation. Such utterances may be heard in soliloquy, if the phrase may be used, and during sleep. The feature has been accepted as pathognomonic of mania. It has, however, been noticed in the delirium of certain stages of fever and of drunkenness, which are mental states depending upon blood-poisons. During periods of profound abstraction, similar sounds are said to have proceeded from the lips of sane and healthy men. In all these instances, the natural operation of the will would appear to be enfeebled or suspended.

JARNAC, BATTLE OF, was fought at the town of that name, in the department of Charente, France, March 13, 1569, between 26,000 Catholics under the Duke of Anjou, afterwards Henri III., and 15,000 Huguenots under Louis, Prince of Condé. The latter were completely routed. See CONDÉ.

JA'ROSLAV, GOVERNMENT OF, one of the central provinces of European Russia; area, about 14,000 square miles; pop. in 1864, 969,642. The soil is generally not fertile; it hardly supplies the wants of the inhabitants, and forces them to be industrious, so that the province furnishes nearly the whole of Russia with the best carpenters, masons, smiths, &c. The staple industry is dressing, spinning, and weaving flax, which occupies more than 25,000 hands, mostly near Jaroslav, Uglich, and Velikoe-Selo. In the northern districts of Mologa and Poshekhonje the whole population of many villages manufacture nails, springs, and other articles of hardware. The inhabitants of the Rostof district have the reputation of being the best kitchen-gardeners and fowl-breeders of the empire. The Volga crosses the government from west to east, and gives a special impulse to its industry. The inhabitants are remarkably handsome both as to form and feature. The government is divided into nine districts.

JAROSLAV (pron. Yaroslaf), capital of the government of that name, in European Russia, is a large and fine town, situated on the right banks of the Volga, and its affluent, the Kotorosl, in lat. 57° 37' N., long. 39° 53' E., at a distance of 164 miles from Moscow. It is one of the most ancient Russian towns, and is said to have been founded by Jaroslaw the Great in the 10th century. During the feudal period, it was the seat of powerful feudal princes, and several times suffered from the invasions of the Mongols. The town has a vast *gostinoidcor*, or market-place, nearly as lively as that of Moscow. Though possessing large stores of linen fabrics, flax, iron, flour, and grain, J. is but a second-rate commercial place on the Volga, the principal trade being concentrated at Rybinsk, 54 miles up the river, and at Rostof. Chemical works, principally of white lead and minium, constitute a sort of speciality of the town and its staple industry; next come several tanneries, extensive flour-mills on the Kotorosl, and a recently built cotton-mill of 40,000 spindles. The once celebrated silk, and especially linen and damask factories, are at present on the

decline. The population of J. in 1863 amounted to 27,741 inhabitants, and is constantly increasing with the wealth of the town, owing to the development of steam-navigation on the Volga and the Kama. The extensive trade on these rivers occupies at present no less than 150 steam-boats.

JA'SHER, BOOK OF (Heb. *Sepher ha-ya-shar*, 'the Book of the Upright'; translated by the LXX. *Biblion tou Euthous*, and by the Vulgate, *Liber Justorum*; but the Peshito [Syriac version] has *Sepher Hashir*, 'Book of Praises or Hymns'), is one of the lost books of the ancient Hebrews, which is quoted twice (Joshua x. 13; 2 Samuel i. 18). Regarding its character and contents, there has been much speculation. Talmudic and later Jewish authorities identified it variously with Genesis (sometimes called 'the Book of the Upright'), Deuteronomy, Judges, &c., to all which notions there is the obvious and fatal objection, that the two quotations from it which survive are not to be found in any of these books, and could not possibly be found in the first two, as they refer to incidents which occurred at a subsequent period in the national history. The conjecture of the Syriac and Arabic translators has been adopted by Dr Lowth, Herder, and other scholars, viz., that the Book of J. was a collection of national ballads—a Hebrew minstrelsy, in short—recording the warlike deeds of the national heroes, or singing the praises of otherwise celebrated men. Gesenius is inclined to adopt the same view, and suggests that it may have acquired its name, 'the Book of the Upright,' from having been written chiefly in praise of upright men. Donaldson, in his recent work, *Jashar, or Fragmenta Archetypi, Carminum Hebraicorum in Masorethico Veteris Testamenti Textu passim tessellata*, contends for its being a composition of the age of Solomon, and a work of Nathan and Gad. He conceives that it originated in the desire of the more religious of the community to possess a record of the national history which should chiefly set forth the righteousness of the true Hebrews, and he attempts to extract from the so-called canonical books of the Old Testament such passages as he believed to have originally formed part of it. It must be added, however, that Dr Donaldson's theory has met with little favour either from the mass of German scholars or from the few in England who are competent to consider the question.

JASMIN, JACQUES, the most eminent modern patois poet of France, and, in the words of his ardent admirers, 'the last of the troubadours,' was born at Agen in 1798. He has given in his *Soubenis* a humorous account of his early life. According to it, he was of very humble birth, and was set to learn the trade of a hair-dresser, which agreed well with that of poet, as he himself says, because both are a kind of head-work. His poetry is full of beauty and power; the pathos of his serious pieces, and the wit and poignancy of his comic productions, are unequalled, and both have been received with great enthusiasm in France, and even in other parts of Europe. He was made a Chevalier of the Legion of Honour in 1846, and died in 1864. J.'s principal works are, *Me cal Mouri* (1825); *Lou Chalibari* (The Charivari, 1825), a comic poem; *L'Abaglio de Castel-Cuille* (The Blind Youth of Castel-Cuille, 1836), translated by Longfellow; and *Las Papillotes de Jasmin* (The Curls of Jasmin), of which the first part appeared in 1835, and the second in 1843.

JA'SMINE, or JESSAMINE (*Jasminum*), a genus of plants of the natural order *Jasminaceæ*. This order is allied to *Oleaceæ*, and contains about 100 species of shrubs, some of them climbing, and many of them having exquisitely fragrant flowers. They

are chiefly natives of the warm parts of Asia. Many belong to the genus *J.*, which has its calyx and corolla each 5 or 8-cleft, two stamens attached to and included within the tube of the corolla, and a two-lobed berry, one of the lobes generally abortive. The name *J.* is from the Arabic *Yasmeen*. The Common *J.* (*J. officinale*) is a native of the south of Asia, but now naturalised in the south of Europe, and as far north as the Tyrol and Switzerland. In more northern regions, it is much cultivated in gardens, but does not easily endure very severe winters. It is a shrub from six to ten feet high, with evergreen pinnate leaves, the terminal leaflet the largest, and very fragrant white flowers. The flowers were formerly employed in medicine, for strengthening the nervous system, but are now only used for preparing *Oil of Jasmine*, a delicious perfume. The commercial oil of jasmine, however, is not the pure essential oil, but merely oil of ben flavoured with it, and is prepared by placing layers of the flowers alternately with layers of cotton soaked in oil of ben.—*J. grandiflorum*, a native of the East Indies, has flowers still more fragrant, from which, and from those of *J. Sambac*, oil of jasmine is also made. The flowers of *J. Sambac* are often scattered about in houses and temples in the East Indies, to diffuse their fragrance.—Several other species, some with erect, and some with twining stems, are not uncommon in gardens and green-houses. Some have white, and some have yellow flowers.—Oil of jasmine cannot be obtained from *J.* flowers by distillation.

JA'SON. See ARGONAUTS.

JASPER (Gr. *iaspis*), a mineral generally regarded as one of the varieties of Quartz (q. v.), and distinguished by its opacity, owing to a mixture of clay or other substances with the silica of which it is chiefly composed. There are many kinds of *J.*, some of them of one colour, as brown, red, yellow, green, white, blue, or black, and some variously striped, spotted, or clouded with different colours. *J.* is a very abundant mineral; it is found in veins and embedded masses in many rocks, sometimes appears as a rock of which whole hills are formed, and is very common in the shape of pebbles. It has been prized from the most ancient times for ornamental purposes, as it takes a high polish. Many kinds of it are very beautiful; and it can often be obtained in pieces of large size, so that it has been much used not only for rings, seals, and other small articles, but for the decoration of palaces. One of the best known kinds of *J.* is found in Egypt, and is therefore called *Egyptian Jasper*. It is generally yellow, prettily mixed with brown.—*J.* with very distinct stripes is called *Ribbon Jasper*.—The kind called *Porcelain Jasper* is rather rare. It is often full of minute holes, or is cracked in all directions. It is regarded as a kind of natural porcelain, formed by the action of fire.

JA'SSY, the chief town of Moldavia, one of the provinces of Roumania, is picturesquely situated on the slope of the Kopoberg Mountains, near the borders of Bessarabia, and about ten miles west of the Pruth. It is irregularly built and dirty, and in its crooked streets the palatial mansion of the Bojar—the Moldavian noble—alternates with huts of the most inferior description. It contains about 90 ecclesiastical edifices, one of which dates from the 14th century. On a height is the Prince's Court, formerly the residence of the governor of Moldavia. The streets are covered with dust in summer and with mud in winter, on which account, conveyances are here in great requisition, and every one except the Jew and the mendicant employs a drosky. In *J.*, there are 1300 private carriages, 5000 droskies, and 12,000 horses. The manufactures

of the town are few; there is, however, considerable trade in agricultural produce. Pop. 90,000, of whom about 30,000 are Jews.

JASZBERENY, a considerable town of Hungary, in the county of Jasygia and Kumania, is situated on both banks of the Zagvyva, 42 miles east of Pesth. Pop. 19,000, who are employed in agriculture and in the trade in corn, cattle, and horses.

JĀTAKA (literally, 'relating to birth') is with the Buddhists the name of a work or a series of books containing an account of 550 previous births of Śākya Muni, or the Buddha. Several tales that pass under the name of Æsop's fables are to be found in this collection of legends.

JATI'VA, or XATIVA, SAN FELIPE DE, a town of Spain, in the province of Valencia, 22 miles south of the city of that name. Its climate is delicious, and the well-watered plain on which it stands is luxuriant in fruits and flowers. Its trade and manufactures are unimportant. Pop. 13,200.

JAU'ER, an interesting old town in Silesia, Prussia, situated on the Neisse, 10 miles south-south-east of Liegnitz. The town is famous for its sausages; and there is a weekly corn-market, which has been regularly held since 1404, and is the most important in Silesia. *J.* was formerly a very prosperous town, being the only market for the linen-trade of Silesia; but the Thirty Years' War did much to reduce its extent and prosperity. Pop. 7680.

JAUNDICE, a yellow colour of the skin and conjunctiva of the eye, arising from the presence of the colouring matter of the bile in the blood and tissues, is a symptom of various disordered conditions of the system, rather than a special disease.

With this colouring of the skin and eyes the following symptoms are associated: the fæces are of a grayish or dirty-white tint, in consequence of the absence of bile, and the urine is of the colour of saffron, or is even as dark as porter, in consequence of the presence of the colouring matter of the bile. There is sometimes, but not in the majority of cases, an extreme itching of the skin. It is a popular belief, as old as the time of Lucretius—

Lurida præterea sunt quæcunque tuentur arquati—
that to a jaundiced eye everything appears yellow. This, however, like the preceding, is only an occasional symptom.

The most obvious cause of jaundice is some obstruction in the gall-ducts, preventing the normal flow of bile into the intestine. This obstruction may arise in any of the following ways: 1. It may be caused by the impaction of a gall-stone in the common hepatic duct. See LIVER. In this case, the jaundice is usually of short duration, and disappears soon after the gall-stone has passed into the intestine. 2. Another cause of jaundice is the obstruction of the gall-ducts by cancerous disease of the head of the pancreas, by tumours in the liver, or by a diseased condition of the duodenum, the portion of small intestine into which the common hepatic duct opens. In these cases, the obstruction is usually permanent, and causes a persistence of the jaundice. 3. Obstruction or closure of the gall-ducts sometimes occurs in the inflammation of the liver that is brought on by spirit-drinking, and sometimes may be caused by inflammation originating in the ducts themselves, which, from their small size, may be readily closed up by inflammatory swelling of their mucous membrane. 4. The jaundice that occasionally arises from constipation, or that occurs during the advanced stage of pregnancy, is probably caused by pressure upon the common hepatic duct.

But although jaundice is frequently caused by some of these mechanical impediments to the flow of bile into the intestine, it results primarily and solely in a great number of cases from the secretion of bile being suppressed or deficient. The secretion may be suppressed so as to cause jaundice by a sudden mental shock or by continued anxiety. Various poisons in the blood, may also suspend the secretion of bile to such an extent as to cause jaundice. It may be produced in this way by the salts of copper and of mercury, by opium, and by the poison of serpents; and it often occurs, from the poisoned state of the blood, in the course of fevers, especially the virulent fevers of tropical climates.

The prognosis in jaundice is generally favourable, except when it depends upon structural disease of the liver, or on mental shock or anxiety. The treatment must be chiefly guided by reference to the conditions which give rise to it in any particular case, and should never be attempted without professional advice.

JAVA, 'the Queen of the Eastern Archipelago,' a most valuable colonial possession of the Netherlands, is situated in lat. 5° 52'—8° 46' S., and long. 105° 10'—114° 35' E. It is washed on the N. by the Sea of Java, on the E. by the Strait of Bali, on the S. by the Indian Ocean, and on the W. by the Strait of Sunda. The extreme length from east to west is 666 miles, the breadth varies from 56 to 136 miles, and the superficial area is reckoned at 52,000 square miles. The island is hilly, and cut in many parts by deep gorges and rushing streams. The mountains rise to a height of from 4000 to 10,000 feet, and are clothed to their summits with luxuriant foliage. Thirty-six of the lofty mountains are volcanoes, of which eleven are still active.

In 1869, the population of J. and Madura (q. v.) amounted to 15,573,000, having more than doubled in 30 years. The census of 1862 gave 20,523 Europeans, 139,960 Chinese, and 24,451 Arabians and other Orientals. The native Javanese belong to the great Malay (q. v.) race, and are mostly Mohammedans; the remainder being 'heathen,' whose religion is a degraded superstition. In moral habits and civilisation, the Javanese are superior to the inhabitants of Sumatra and Celebes. There are 29 Dutch Protestant, and 10 Roman Catholic clergymen, all paid by the government, which fixes their sphere of labour, and strictly prohibits the proselytising of the natives. They chiefly labour among the Europeans, half castes, and intermediate races at the ports, and the natives of the interior are neither made acquainted with the Christian religion nor with European education. The Javanese are much addicted to the smoking of opium, which is not permitted to be grown on the island, the government importing the quantity considered necessary, and granting licences for its sale, realising therefrom an average annual revenue of £800,000 sterling.

For upwards of thirty years, J. has been steadily advancing in prosperity. Its producing power is only limited by the amount of available labour, and notwithstanding the energy which the Dutch have displayed in increasing the breadth of cultivated land, the greatest part of the island is still in a state of nature. Rice is grown extensively for native consumption and exportation; sugar, coffee, indigo, tea, tobacco, &c., for export. The trade of J. has fluctuated during a few years past. In 1860 the imports amounted to £5,778,333, and the exports to £8,705,000. In 1865 the imports had declined to £4,906,666, and the exports amounted to £9,501,666. See SUPPLEMENT, Vol. X.

The countries which trade most extensively with J. are the Netherlands, Great Britain, China, and Japan. In the trade reports for 1860, Holland is set down as having imported into J. merchandise to the value of

£1,864,740, and specie to the value of £1,511,854; while Great Britain sent goods to the value of £991,155. In the same year the exports from J. to Holland amounted to £6,403,553, and those to G. Britain to £58,135. This difference arises from the largest proportion of the products of the island being the property of the government, and being managed, stored, shipped (exclusively in Dutch ships), and sold in Holland by the Netherlands Trading Company, whose profits arise from the commission allowed on the transactions. In 1866, the exports of British home-produce to J. amounted to £1,726,136, but in 1867 had fallen to £1,345,413. The exports from Java to G. Britain, in 1866, amounted to only £8152, and in 1867, to £13,262—less than in 1864. The chief exports from J. to the U. States are coffee, sugar, rattan, pepper, and tin. The American ice and California flour trades are flourishing, and there exists a steady demand for several articles of American production. In 1867, the U. States exported to J. 8280 bbls. of flour, 4169 tons of ice, 121,830 galls. of petroleum. The imports to California were 676 tons of copper, 515 tons of sugar; and to the Atlantic ports, 173 tons of coffee, 1754 tons of sugar, and 129 tons of tin.

The island is divided into East, West, and Middle Java, containing 22 subdivisions, called Residencies, over which a superior European official, the Resident, exercises general control, and acts as judge, collector, and magistrate. The Resident has European assistants, who perform the same functions in districts of the residency, and native agency is also extensively employed in the government service, all the chiefs being either present or expectant salaried servants of the colonial government, actually engaged, under European superintendence, in ruling the masses. The chief native official of a district is the Regent, selected from the family of the former local prince, and retained in office so long as he promotes the interests of the government.

The material prosperity of J. is owing in a great measure to the energy with which the Dutch government has extended the growth and manufacture of those articles which form its staple exports. By an elaborate and skilfully worked out system of culture, introduced in 1830, the growth and preparation of the staples for exportation have advanced with amazing rapidity. The cultivators of the soil, the native chiefs, the European officials, and the government all share in the profits, and work harmoniously together in developing the capabilities of the land. In carrying out the extensive mercantile transactions which the culture-system involved, the government has been ably assisted by the Netherlands Trading Company, and the result has been the changing a burdensome colony into a mine of wealth. Between 1824 and 1833, the expenditure exceeded the income. From that time, the finances of J. have been prosperous, and the colony has transmitted to the Netherlands, since 1833, a sum not short of £30,000,000 sterling. In thirty years, the revenue has risen from an average of £2,500,000 sterling, to £9,500,000 in 1857, in which year the net surplus was £3,500,000.

Climate.—With the exception of some marshy districts on the north coast, the climate of J. is healthy and pleasant. On the coasts, the thermometer seldom indicates more than 93° F. during the dry, and 84° in the rainy season. The average is 80° at noon, and 70° in the evening. The heat is moderated by the sea-breezes, which constantly blow across the island. During the rainy season, which begins in November and continues till March, the west wind prevails; in the dry season, it blows from the north and east. Along the high lands of the interior the air is not only breezy, but sometimes cold, the thermometer frequently falling to 45°;

and as the entire island is intersected with excellent roads, it is not difficult to reach the most beautiful and salubrious districts. Inland of Semerang, at an elevation of 4000 feet, Europeans enjoy a pleasant retreat during the dry season.

History.—The history of J., previous to the 14th c., is involved in fable and obscurity. It appears, however, that the Javanese, from a very early period, possessed a considerable degree of civilisation, which was probably the result of the labours of Brahmanical teachers from Hindustan. It is impossible to say precisely when Hindu civilisation and religion were introduced into J., though it must have been very early in the Christian era. Buddhism was superadded about the 10th c.; and there are many old Buddhist temples scattered throughout the island, memorials of the former prevalence of that religion. The most famous is that called Boro Buddor (q. v.). Towards the close of the 14th c., Mohammedanism found a footing in the eastern provinces; and in 1475, the Hindu empire was overthrown, and Mohammedanism became the faith of the country; yet as late as 1511, when the Portuguese first visited J., they found a Hindu king in Bantam. In 1595, the Dutch sent out an expedition under Houtman, who, on arriving at Bantam, found the king at war with the Portuguese, and offered him assistance, obtaining in return permission to build a factory. In 1677, after many contests with the native princes, the Dutch obtained extensive territories and important trading concessions. In 1811, when Holland became incorporated with France, the British took possession of J., which, after five years' occupation, was restored to the Dutch. A long and bloody war ended in the whole island becoming virtually a Dutch province in 1830, though two states are still nominally ruled by native princes. Slavery was abolished by a law which took effect Jan. 11, 1860, by the legislature of Holland.—See Sir Stamford Raffles's *History of Java*; Crawford's *Eastern Archipelago*; *Java, or How to Manage a Colony*, by J. W. B. Money, Lond., 1861; A. Bickmore, *E. I. Archipelago*, Lond., 1868; W. B. d'Almeida, *Life in Java*, Lond., 1864.

J'AVELIN, a short and light spear used for darting against an enemy. In the Roman legion, the first and second lines (the Hastati and the Principes) were both armed with two javelins to each man. Each javelin (Lat. *pilum*) was in all about 6½ feet in length; the shaft 4½ feet long, of tough wood, an inch in diameter; and the remainder given to the barbed pyramidal head. In action, the legionary hurled one javelin on the enemy at the first onset; the second he retained as a defence against cavalry. The Goths and other barbarians used a javelin.

JAXARTES, now called SHIH'N, or SIR-DARIA (i. e., Yellow River), a river of Turkestan, which rises in the high plateau south of Lake Issikul, in the Thian Shan Mountains, flows in a westerly direction through the valley of Khokan, receiving in its course numerous accessions; after passing Otrar, it divides into two branches; the largest and most northerly retaining the name Sir-Daria, flows west-by-north, separating the Russian territory from the steppes of Turkestan, and, after a course of 1150 miles, falls into the Sea of Aral; the lesser branch, called Kuvan-Daria, flows westward, supplying some small lakes in the line of its old channel, but for several years back has not reached the Sea of Aral, though sixty years ago it had a greater volume of water than the Sir-Daria.

JAY, JOHN, an American statesman and jurist, and first chief-justice of the supreme court of the United States, was born in the city of New York,

December 12, 1745. He graduated at King's, now Columbia College, New York, in 1764, and was admitted to the bar in 1768. He took a moderate and conciliatory part in the American Revolution, was a member of the Congress of Philadelphia, was president of Congress in 1778, and minister to Spain in 1779. He was very influential in negotiating the treaty of peace, and it was, according to Lord St Helens, 'not only chiefly, but wholly by his means that it was brought to a successful conclusion.' He wrote a portion of the *Federalist*. His services to the Federal party were deemed so great, that Washington offered him his choice of the offices in his gift, and he selected that of chief-justice. He resigned, and became governor of New York, and in 1794, minister to England, and was accused by the Democratic party of having sold his country to England against France. On the defeat of the Federal party, he retired from public life, and lived in great seclusion, only taking part in religious, peace, temperance, and anti-slavery movements. He died at Bedford, New York, May 17, 1829.

JAY (*Garrulus*), a genus of the Crow family (*Corvidæ*), differing from magpies chiefly in the rather shorter bill, and in the shorter and rounded, or sometimes almost even tail. They are inhabitants of forests and wooded districts, chiefly in the temperate parts of Europe, Asia, and North America; and feed more on fruits and seeds than crows and magpies generally do; but they have the omnivorous character of the rest of the family, and often rob the nests of other birds, whether containing eggs or young.—The EUROPEAN J. (*G. glandarius*) is a well-known native of England and of the south and middle of Scotland, although less common than it once was, in consequence of the incessant war which has been waged against it, both by gamekeepers and by the legislature itself; an English statute of the 17th year of George II. having empowered grand juries to offer threepence

European Jay (*Garrulus glandarius*).

for the head of each jay, on account of alleged injury done to young trees. It is rather smaller than a jackdaw; the plumage is mostly ash-gray, finely tinged with red or purple, the quill-feathers and tail mostly black, a beautiful mottled patch on each wing rayed with bright blue, a broad moustache-like stripe of black extending for an inch from the base of the lower mandible on each side; the head is furnished with a crest of erectile feathers, each of which has a streak of black in the middle. Jays are most frequently seen solitary or in pairs. They build in thick trees or bushes, and their nest is a basket-like structure of small sticks, lined

with fine roots and grasses; the eggs, five or six in number, are yellowish-white, minutely and thickly speckled with light brown. When taken young, the J. is very easily tamed, becomes very familiar and amusing, and perhaps excels all other British birds in its power of imitating voices and sounds.—The BLUE J. (*Cyanura cristata*) of N. America, a species abundant from the Gulf of Mexico to Canada, is smaller than the Common J.; it has a similar crest or tuft on the head, and a longer and more rounded tail. The general colour of the upper parts is bright purplish blue; the wings and tail white, barred with black; the neck surrounded with a curved black collar. It is more gregarious than the common J., and partially migratory.—The CANADA J., or CARRION BIRD (*Perisoreus Canadensis*), is a more northern American species.—Other very beautiful species are found in the north-west of America, Mexico, and the Himalaya Mountains. They generally resemble the Common J. in their habits and manners.

JAYADEVA, the name of a celebrated Hindu poet, who, according to some, lived about the middle of the 11th, according to others, about the middle of the 16th c. after Christ. His most renowned work is the *Gita Govinda*, an erotic poem in honour of Krishna, an incarnation of Vishnu, and his wife Rādhā; it is interpreted both in a literal and mystical sense.

JEDBURGH, an old town, and royal and parliamentary burgh of Scotland, capital of the county of Roxburgh, is beautifully situated on the left bank of the Jed, 14 miles east-south-east of Selkirk, and 40 miles south-east of Edinburgh. The most interesting architectural feature of the town is the remains of the magnificent abbey of Austin Canons, founded by King David I. about 1130. Of this structure, the church (230 feet long) alone remains. The abbey was rifled and burned in 1523 by the Earl of Surrey, and again by the Earl of Hertford in 1544. The present jail occupies the site of an old castle in which Malcolm the Maiden died, and William the Lion, Alexander II., and other early Scottish kings frequently resided. The principal manufactures of J. are blankets, flannels, shawls, plaids, and hosiery. Pop. (1871) 3322.

Jedburgh appears in record as early as the 9th century. Between the years 829 and 854, Egred, Bishop of Lindisfarne, whose diocese then extended to the north of the Tweed, built two towns at Jedburgh. One of these is now represented by the hamlet of Old Jedburgh; the other by the town of Jedburgh, which was made a royal burgh in the reign of David I. Situated on the border, its inhabitants were a warlike race, whose slogan, 'Jeddart's here!' was seldom long silent. Their chief weapon was the 'Jeddart axe,' or 'Jeddart staff,' a stout pole about four feet long with a steel head.

JEDDAH. See JIDDAH.

JEEJEEBHOY, SIR JAMSETJEE, a Parsee merchant-prince and philanthropist, was born of poor parents at Bombay, 15th July 1783. At an early period, he shewed a great aptitude for mercantile pursuits, and in consequence, his father-in-law, Framjee Nusserwanjee, a Bombay merchant, took him into partnership. While still a young man, he visited most of the maritime countries of Asia, besides Egypt, Syria, and England. After he had become chief partner in his father-in-law's firm, the wealth of which rapidly and prodigiously increased, J. kept his eye on the progress of political events in Europe; and when peace was restored there after the fall of Napoleon, the Indian trade was so much

benefited that, from 1814 to 1819, the value of the imports from Europe rose from £870,000 to £3,052,000—in which increase, we are informed, 'the house of Sir Jamsetjee and his father-in-law enormously participated.' By the year 1820, when he had completed his 20th year of business, he had amassed an immense fortune, and was universally acknowledged to be the first merchant in the East. He now began to exhibit, on a magnificent scale, his liberality of spirit and love of his fellow-creatures. His contribution to the Jamsetjee Jeejeebhoy Hospital was 160,500 rupees; his endowment of the Parsee Benevolent Institution, 440,000 rupees; the Mahim Causeway, built by him, cost 150,500 rupees; the Dhurumsalla, or Poor Asylum, 150,000 rupees; the water-works constructed by him at Poona cost 180,000 rupees; and the endowment of the Jamsetjee School of Industrial Arts, 100,000 rupees. Altogether, between the years 1822 and 1858, Sir Jamsetjee J. spent 'upwards of a quarter of a million pounds sterling in founding, endowing, or supporting undertakings of a purely benevolent character.' Parsee and Christian, Hindu and Mussulman, were alike the objects of his splendid and magnanimous beneficence. At length the fame of his munificence reached the ears of Queen Victoria, who conferred on him the honour of knighthood—the first occasion on which that dignity had been bestowed on an Eastern. Other honours followed; and in 1857 he was made a baronet of the United Kingdom. He died 15th April 1859, and was succeeded in the baronetcy by his eldest son, Cursetjee Jamsetjee Jeejeebhoy, who, in accordance with the provisions of his father's will, took his father's name.

JEFFERSON, THOMAS, third President of the United States of America, was the son of a planter, and was born at Shadwell, Albemarle County, Virginia, April 2, 1743. He studied at William and Mary's College, Williamsburg; and after leaving college, was engaged for some years in the practice of law. In 1769, he was elected to the Virginia House of Burgesses, where he joined zealously with the revolutionary party. In 1773, as a member of the Assembly, he took a prominent part in the measures which resulted in the calling of the Continental Congress, to which he was sent as a delegate, where he drew up the celebrated Declaration of Independence. During the war in defence of this Declaration, he was governor of Virginia, and in 1784 was sent minister to France, where his manners, accomplishments, and more solid qualities did much to secure to America the powerful alliance that insured her success. Returning in 1789, he was appointed, by Washington, Secretary of State, a post due to his abilities, his influence, and his distinguished services. The Federal constitution had been adopted, and the two parties which soon divided the country began to develop themselves. Washington, John Adams, Jay, and Hamilton were in favour of a strong centralised government; J. led the party in favour of states' rights, and a Federal government of restricted and carefully defined powers. The first party took the name of Federalists; the latter were first called Anti-Federalists, then Republicans, and finally adopted the title first given them as a reproach, of Democrats. When Washington retired, after eight years of office as president, and a new election took place, the two highest candidates, as leaders of the opposing parties, were John Adams and Jefferson. Adams, having the largest vote, was declared president, while J. having the next highest number, became the vice-president, 1797. The strife of these parties culminated in 1800, when J. and Aaron Burr were elected president and vice-president, against John Adams, the Federal candidate. On entering upon the presidency, he

reduced the government to a republican simplicity, made few removals, and resolutely refused to appoint any of his own relatives to office, saying that he 'could find better men for every place than his own connections.' The most important act of his administration was the purchase of Louisiana from France. At the end of eight years, he retired to his residence at Monticello; but he did not retire to a repose of idleness; he kept up an immense correspondence, dispensed the hospitalities of his mansion to visitors from every part of the world, and founded the university of Virginia, of which he was for many years the rector. Though born and educated in the first rank of colonial life, he was a democrat in theory and practice; he held that the 'world is governed too much,' and that 'that government is best which governs least.' Though a large slaveholder, he laboured for the prohibition of the slave-trade, and of slavery in the territory beyond the Ohio River, and advocated emancipation in Virginia. His writings consist mostly of state papers and letters. His only literary work was his *Notes on Virginia*, published in 1782. He had one child, a daughter, and has numerous descendants. His death was very remarkable; it occurred on the 4th of July 1826, while the nation was celebrating the fiftieth anniversary of the Declaration of Independence, which he had written. On the same day, and almost at the same hour, John Adams, the second president, who had signed with him the Declaration, died in New England.

JEFFERSON CITY, capital of Missouri, United States of America, on the south bank of the Missouri River, 125 miles from St Louis, with which it is connected both by the river and the Pacific Railway. It has a brisk trade with the hunters, and overland emigrants to California and Utah. The city has a state-house, governor's residence, state penitentiary, &c. Pop. in 1870, 4470.

JEFFREY, FRANCIS, LORD, a celebrated Scottish critic and lawyer, was born in Edinburgh, 23d October 1773; studied classics, logic, and belles-lettres at Glasgow and Oxford, and law at the university of his native city. In 1794, he was called to the bar. Two years before this, he had become a member of the Speculative Society (in connection with the university). J. soon became prominent among the members by the keenness and liveliness of his intellect, and the elegance of his literary taste, but his progress at the bar was slow, partly on account of the antipathy which then existed to literary lawyers, and partly on account of his political opinions. Meanwhile he and several other young men then residing in Edinburgh, ambitious of finding a wider outlet for their talent than the discussions in the Speculative Society or the practice of the bar afforded, conceived the idea of starting a critical journal. The first proposer of the scheme was the Rev. Sydney Smith. The result was the establishment of the *Edinburgh Review* (q. v.), of which J. became editor, an office he retained till 1829. His own contributions were generally the most brilliant and attractive that appeared in its columns. On ethics, politics, and many of the questions affecting the social wellbeing of man, he has written with much clearness, penetration, and force; but the thing on which he is said to have placed the highest value was his *Treatise on Beauty* (see *ÆSTHETICS*), a charming melange of criticism, description, and sentiment, but of doubtful philosophic worth. After some years, J.'s practice at the bar began to increase; in jury trials, he shone to great advantage, and particularly in the trials for sedition between 1817 and 1822. In 1830, he became Lord Advocate for Scotland; and after the passing of

the Reform Bill, he was returned to parliament for the city of Edinburgh, which he continued to represent till 1834, when he gladly exchanged the turmoil of party politics for the duties of a judge of the Court of Session. During the latter years of his life, J. resided at Craighcrook Castle, in the vicinity of Edinburgh, where he died, January 26, 1850. A selection of his Essays, in 4 vols., appeared in 1844. A biography of J., by his friend, Henry, Lord Cockburn (q. v.), a brother-judge of the Court of Session, was published in 2 vols. (Edin. 1852).

JEHO'VAH (Heb. *Yehovah*; more correctly, *Yahve*, *Yahveh*, or *Yahvân*; in poetry, *Yâh*; generally believed to be derived from the verb *haya*, 'to be,' though scholars are far from unanimous in regard to its etymology) is one of the names of God employed in the Old Testament. Its meaning—if the root be *haya*—is, 'He that is,' 'the Being'; or, since the word contains all the forms of the past, present, and future tenses, 'the eternal One.' It is generally employed to express a different conception of the Deity from that which is contained in the word *Elohim* (q. v.). The latter appears to be the older term, in use before the Hebrews had attained a national existence, while *Jehovah* exclusively seems to denote the national God, supreme over all other deities, and who, under this name, had, according to Exodus vi. 3, not 'made himself known' to the patriarchs before the time of Moses. That J. is specifically the God of the Hebrews is clear from the fact, that the heathen deities never receive this name; they are always spoken of as *Elohim*. Moreover, the altars, the sacrifices, the festivals, the tabernacle, the temple, the priesthood, and the prophets, all belong emphatically to Jehovah. Gideon shouts, 'The sword of Jehovah and of Gideon,' as a Roman warrior would have invoked the aid of Jupiter. In one sense, the term J. is less broad and universal in its application than *Elohim*, who, in the first verse of the Bible, appears as the creator of heaven and earth, and who is God over all, irrespective of nations; but in another sense, it clearly indicates an advance in religious conception. While *Elohim* is introduced more as an Almighty Creative Power than a 'Being,' J. is God in full personal relation to man—He speaks to his creatures, makes covenants with them, becomes their lawgiver, and desires their homage and worship. The Hebrew writers even run their representations of the Divine personality into what seem to us the extremest forms of anthropomorphism.—Deep reverence for the Deity and the Divine name has led the Jewish church to the substitution of Adonai (*Lord*) in the pronunciation of J., the latter being vowelless by the Masoreths like the former.

A very nice and difficult controversy with respect to the authorship and unity of the Pentateuch, has long been carried on among scholars in connection with these two names. See *GENESIS* and *PENTATEUCH*.

JELALABA'D, a town of Afghanistan, stands near the Cabul, in a fertile plain, which is separated from Peshawur by the famous Khyber Pass. It thus occupies a commanding position on the grand route between India and Central Asia. Pop. about 3000. The place acquired an historical interest during the Afghan wars, having been heroically held by Sir Robert Sale (1841–1842), notwithstanding the fatal disasters of the first expedition, till it was relieved by the triumphant advance of the second. See *AFGHANISTAN*.

JELATO'M, JELATI'NA, or **ELA'TMA**, a town of Russia, in the government of Tambov, is situated 158 miles north of the town of that name, on the

left bank of the Oka. Woollen cloths, vitriol, and sulphur are here manufactured. Pop. 6600.

JELETZ, a town of Russia, in the government of Orel, is situated 110 miles east-south-east of the town of that name, on the Sosna. In the vicinity are extensive iron-mines, and the town has become famous for its wheat flour, which is exported throughout the whole of Russia. Pop. 1863, 26,505.

JELLACHICH VON BUZIM, JOSEPH, BARON, a distinguished Austrian general, and Ban of Croatia, was born at Peterwardein in 1801. His father, the descendant of an old Croatian family, was a general in the Austrian service, and attained some celebrity in the Turkish wars, and in those of the French Revolution. Von Jellachich was early employed in military service on the Turkish frontier, and distinguished himself by his courage and skill. He succeeded also in winning in a high degree the confidence of the Croats, so that in 1848 the court of Vienna was glad to appoint him Ban of Croatia, in order to secure the support of the Slavonian Croats against the Magyars of Hungary, and he took a very active part in the suppression of the Hungarian rebellion. He not only displayed talents for government and military command, but also for poetry. His poems were published in 1850, and his death occurred in 1859.

JE'LUM. See **JHELUM**.

JEMA'PPES, a village (pop. about 6000) not far from Mons, in the Belgian province of Hainault, which has acquired an historic celebrity from the victory won here by the French republicans, 40,000 strong, under Dumouriez, on 6th November 1792, over the Austrians, who were in nearly equal force. By this victory, the way into Belgium was opened to the French, and the spirits of the army and of the people greatly elevated by the first great victory of their raw levies over the disciplined and experienced Austrian troops.

JENA, a town in the grand duchy of Saxe-Weimar-Eisenach, and formerly the capital of the duchy of Saxe-Jena, is most beautifully situated in a romantic valley at the confluence of the Leutra with the Saale. Pop. 6984. It derives its celebrity chiefly from its university, but also from the great battle fought here between the French and the Prussians. The *University of Jena* was founded about the year 1547 by the Elector John Frederick of Saxony, who intended it to supply the place of Wittenberg as a seat of learning and of evangelical doctrine. It soon acquired a high reputation. The imperial authorisation was obtained, after some delay and difficulty, in 1558. It is the university of all the Saxon states, and is supported by contributions from them all. Its revenues amount to 40,000 thalers (£5793 sterling). The most flourishing period of the university was that of Duke Karl August, a zealous patron of art and science, 1787—1806 A.D. To have obtained academic honours in J. is no small recommendation to employment in other German universities, and many of the most distinguished ornaments of other universities have been students of this. Some of its professors were among the first and most successful supporters of the philosophy of Kant. Fichte founded a new school of philosophy here in 1794, and the names of Schelling and Hegel are also connected with Jena. The brothers Schlegel, Voss, Fries, Krause, and Oken, have added to its celebrity in literature and science. The faculty of medicine, as well as those of theology and law, has reckoned many distinguished names. The most eminent theologians, however, have been of the most extreme rationalistic school; the name of *Aulus* may be mentioned as a sufficient example.

In 1855, the number of professors and teachers was 67; of students, 380; and there are about 24 ordinary professors.

The great battle of Jena was fought in the neighbourhood of the town on 14th October, 1806. The Prussian army, numbering about 70,000 men, was under the command of the aged Duke of Brunswick; while the French, commanded by Napoleon, amounted to 90,000. The former were completely defeated. On the same day with the battle of Jena, Davoust won the battle of Auerstädt, with 30,000 French defeating 60,000 Prussians, and these two battles decided for a number of years the fate of the Prussian kingdom and of the north of Germany. The loss of the Prussians on that eventful day and in the conflicts of the preceding days amounted to 50,000 killed, wounded, and prisoners, besides the loss sustained by the Saxons, their allies. The French gave out their loss to be 7000, including 270 officers.

JENNER, EDWARD, the discoverer of vaccination, was born at Berkeley, in Gloucestershire, on the 17th of May 1749, and was the third son of the Rev. Stephen Jenner, vicar of the parish, and rector of Rockhampton. His scholastic education being finished, he was removed to Sodbury, near Bristol, in order to be instructed in the elements of surgery and pharmacy by Mr Ludlow, an eminent surgeon there; and on the expiration of his term with this gentleman, he went to London, in the 21st year of his age, to prosecute his professional studies under the direction and instruction of the celebrated John Hunter (q. v.), in whose family he resided for two years. Under Hunter's superintendence, he became an expert anatomist, a sound pathologist, a careful experimenter, and a good naturalist. The influence of the master exerted a lasting effect on the pupil; and Hunter's letters, which J. carefully preserved, evince the affectionate feeling and community of tastes which subsisted between them. On leaving London, J. settled at Berkeley, where his sound professional knowledge and kindly disposition soon acquired for him a large amount of practice. In 1788, his well-known memoir, *On the Natural History of the Cuckoo*, appeared in the Transactions of the Royal Society, containing the results of investigations begun at the request of Hunter. A few years afterwards, the fatigues of general practice having become irksome to him, he resolved to confine himself to medicine, and with that view he obtained the degree of M.D. from the university of St Andrews.

The discovery of the prophylactic power of vaccination, by which the name of J. has become immortalised, was the result of a prolonged series of observations and experiments. His attention, whilst he was yet a youth, was forcibly attracted to the nature of cow-pox in the following manner. He was pursuing his professional education in the house of his master at Sodbury, when a young country-woman came to seek advice. The subject of small-pox being mentioned in her presence, she observed: 'I cannot take that disease, for I have had cow-pox.' This was before the year 1770. It was not till 1775 that, after his return to Gloucestershire, he had an opportunity of examining into the truth of the traditions respecting cow-pox; and it was five years later before he began clearly to see his way to the great discovery that was in store for him. In the month of May 1780, while riding with his friend Edward Gardner, on the road between Gloucester and Bristol, he went over the natural history of cow-pox; stated his opinion as to the origin of this affection from the heel of the horse [when suffering from the grease]; specified the different sorts of disease which attacked the milkers

when they handled infected cows; dwelt upon that variety which afforded protection against small-pox; and with deep and anxious emotion, mentioned his hope of being able to propagate that variety from one human being to another, till he had disseminated the practice all over the globe, to the total extinction of small-pox.'—Baron's *Life of Jenner*, p. 128. Many investigations regarding the different varieties of cow-pox, &c., delayed the actual discovery for no less than 16 years, when at length the crowning experiment on James Phipps (see INOCULATION) was made on the 14th of May 1796, and J.'s task was virtually accomplished. This experiment was followed by many of the same kind; and in 1798 he published his first memoir, entitled *An Inquiry into the Causes and Effects of the Variolæ Vaccinæ*. Although the evidence accumulated by J. seemed conclusive, yet the practice met with violent opposition until a year had passed, when upwards of 70 of the principal physicians and surgeons in London signed a declaration of their entire confidence in it. His discovery was soon promulgated throughout the civilised world. Honours were conferred upon him by foreign courts, and he was elected an honorary member of nearly all the learned societies of Europe. Parliament voted him, in 1802, a grant of £10,000, and in 1807, a second grant of £20,000; and during the last few years, a public statue in his honour has been erected in the metropolis. His latter days were passed chiefly at Berkeley and Cheltenham, and were occupied in the dissemination and elucidation of his great discovery. He died of apoplexy at Berkeley in February 1823.

JERASH. See GERASA.

JERBA. See GERBIL.

JERBOA (*Dipus*), a genus of rodent quadrupeds, of the family *Muridæ*, remarkable for the great length of the hind-legs, and kangaroo-like power of jumping. The fore-legs are very small, hence the ancient Greek name *dipous* (two-footed). The tail is long, cylindrical, covered with short hair, and tufted at the end. The jerboas are inhabitants of sandy deserts and wide grassy plains in Asia and the east of Europe, Africa, and Australia. They are burrowing animals, nocturnal, very destructive to grain and

Jerboa (*Dipus Egyptius*).

of hind-legs and power of leaping, inhabitants of the warm and sandy portions of the Old World.

JEREMI'AH (Heb. *Yirmiyahu*), a Hebrew prophet, was the son of Hilkiah, a priest of Anathoth, a place about three miles north of Jerusalem. He prophesied under the reigns of Josiah, Jehoahaz, Jehoiakim, Jehoiachin, and Zedekiah (630—590 B.C.), and even later. His character and fortunes are clearly discernible in his writings. To him, a man of an emphatically spiritual, truthful, self-sacrificing nature, it was given to predict in the midst of the, both politically and religiously, rotter state of the commonwealth, under the successive weak kings, its speedy destruction. Fearless yet hopeless, he delivers his mournful messages from year to year, and battles with despairing heroism against the inevitable. His life thus became one long martyrdom. We read of his enduring 'reproach and derision daily' (xx. 8); his townsmen of Anathoth threatened to slay him, if he did not stop prophesying woe (xi. 21); his own brethren, the house of his father, 'dealt treacherously' with him (xii. 6); so that his spirit at times failed him. There were two political parties in Judah at this time—in favour of a Chaldean and an Egyptian alliance respectively. Like the earlier patriotic prophets, J. repudiated both at first. The course of events, however, had necessitated a compromise, and the religious party—gradually decreasing in numbers and influence—had declared against Egypt, and in favour of Chaldaea. King Josiah, who belonged to it, perished at Megiddo, in the valley of Esdraelon, in an attempt to stop the progress of Pharaoh-Necho (609 B.C.). After this, things grew worse. The Egyptian party became predominant, and J. was now forced to take a side, and become a partisan as well as a prophet. He speaks of the king of Babylon as God's servant, and prophesies the destruction of the temple. A cry arose from the priesthood and the prophets for his life, and he escaped with difficulty (xxvi.). At last came the judgment. The best portion of the people were carried into captivity; and J. urged his countrymen to wait for the period of deliverance with religious fortitude and patience. A sudden irruption of the Egyptians drove the Chaldeans out of Judah, and J. was again exposed to persecution, thrown into a pit to die, and only rescued by the kindness of an Egyptian eunuch. The capture of Jerusalem by Nebuchadnezzar rendered the prophet's position more tolerable. J. had always preached submission to the Chaldeans. He was even patronised by the conqueror, and offered a home at Babylon, but he preferred to reside among the wretched remnant of the people left in Judah (xl.). Intestine strifes, however, soon drove some to take refuge in Egypt. J. was carried off along with the exiles, and here he is believed to have died, and his grave was long shewn at Cairo. According to others, however, he came back to Judaea. The writings of this prophet, dictated by him to Baruch, have been arranged with little regard to order, and the text is in a state of great confusion, notwithstanding that J. himself undertook two distinct redactions. They exhibit great tenderness and elegiac beauty of sentiment, but lack the sublime grandeur of Isaiah. He often borrows largely from his poetic predecessors. Several of the Psalms have been attributed to him, especially by modern critics. Hitzig numbers 34, which he believes to be the composition of Jeremiah. There is no reason to doubt that the Lamentations are properly ascribed to him, while the apocryphal work of his, mentioned by Jerome (Matth. 27), deserves little notice. Among commentators may be mentioned Origen, Jerome, Theodoret, Oecolampadius, Sanctius, Venema,

other crops, laying up hoards for their winter use. They take prodigious leaps when alarmed; the fore-feet are then not used at all, but by means of the hind-feet and the tail, they leap, although they are small animals, several yards. Their flesh is said to resemble that of the rabbit.—Closely allied to the jerboas are the *Gerbils* (*Gerbillus*), small quadrupeds, also distinguished by great length

Michaelis, Umbreit, Henderson, Dahler, Knobel, Ewald, Hengstenberg, and Bunsen.

JERICHO, once one of the most flourishing cities of Palestine, two hours' journey westward from the Jordan, and six hours north-east from Jerusalem. Westward from J. lies a waste tract of limestone mountains, rising in stages; but, the immediate vicinity is well watered and fruitful, yielding dates, raisins, balsam, and honey, yet a favourite abode also, in early times, of poisonous snakes. The capture of J. by the Israelites on their first entry into Canaan, its destruction, and the rebuilding of it by Hiel the Bethelite in the reign of Ahab, about 918 B. C., are found recorded in Josh. vi.; 1 Kings xvi. 34. It appears to have been afterwards the seat of a school of prophets (2 Kings ii. 4, &c.). Herod the Great resided in J., and beautified it. It was destroyed in the reign of Vespasian, and again rebuilt under Hadrian. In the time of the Crusades, it was repeatedly captured, and at last completely destroyed. At the present day, its place is occupied by a miserable village called Richa, or Ericha, with scarcely 200 inhabitants.

JERKED-BEEF, beef preserved by drying in the sun. It is properly called *charqui*, and, like its name, is of Chilian origin, although now made in large quantities in Monte Video, Buenos Ayres, and other places in South America, where the vast droves of cattle on the prairies are available for the purpose. The beasts are slaughtered when in good condition, and the fleshy parts are dexterously pared off in such a manner as to resemble a succession of skins being taken from the same animal. These sheets of flesh, which are rarely more than an inch in thickness, being exposed to the sun, dry before decomposition commences, and in that state can be kept almost any length of time. Sometimes the *charqui* is dipped into brine, or rubbed with salt, before being dried. It is largely imported to Cuba, where it is called *tasajo*, for feeding the slaves. The manufacture of *charqui*, or jerked-beef, has been introduced into Australia, and in 1862, shipments of it were made from Victoria to the mother-country, but with what success is not known.

As it contains all the nutritive matter of animal food, and only wants proper cooking to make it palatable, it may become an important article of consumption. The price is about three-halfpence or two-pence per pound.

JERKIN-HEAD, a form of roofing which is half-gable, half-hip. The gable generally goes as high as the ties of

Jerkin-Head.

the couples, above which the roof is hipped off.

JEROME, St (EUSEBIUS HIERONYMUS SOPHRO- NITUS), was born at Stridon, a town whose site is now unknown, on the confines of Dalmatia and Pannonia, at some period between 331 and 345—probably nearer to the latter year. His parents were both Christians. His early education was superintended by his father, after which he studied Greek and Latin rhetoric and philosophy under Ælius Donatus at Rome, where he was also admitted to the rite of baptism. After a residence in Gaul, he seems to have revisited Rome; but in the year 370, he had settled in Aquileia with his friend Rufinus. For some unknown reason, he suddenly went hence to the East; and after a dangerous illness at Antioch, which appears to have still further added to the

religious fervour of his disposition, he retired, in 374, to the desert of Chalcis, where he spent four years in penitential exercises and in study, especially of the Hebrew language. In 379, he was ordained a priest at Antioch, after which he spent three years in Constantinople in close intimacy with Gregory of Nazianzus; and in 382 he came on a mission connected with the Meletian schism at Antioch (see MELETIUS) to Rome, where he resided, until 385, as secretary of the pope Damasus, and where, although already engaged in his great work of the revision of the Latin version of the Bible, he attained to great popularity and influence by his sanctity, learning, and eloquence. Many pious persons placed themselves under his spiritual direction, the most remarkable of whom were the Lady Paula, and her daughter Eustochium. These ladies followed him to the Holy Land, whither he returned in 384. He permanently fixed his residence at Bethlehem in 386, the Lady Paula having founded four convents, three for nuns, and one for monks, the latter of which was governed by J. himself. It was in this retreat that J. pursued or completed the great literary labours of his life; and it was from these solitudes, all peaceful as they might seem, that he sent forth the fiery and vehement invectives which marked not only his controversy with the heretics Jovinian, Vigilantius, and the Pelagians (q. v.), but even with his ancient ally, Rufinus (q. v.), and, although in a minor degree, with St Augustine. His conflict with the Pelagians rendering even his life insecure at Bethlehem, he was compelled to go into concealment for above two years; and soon after his return to Bethlehem in 418, he was seized with a lingering illness, which terminated in his death, September 30, 420. His original works, consisting of letters, treatises, polemical and ascetical commentaries on Holy Scripture, and his version and revision of former versions of the Bible, were first published by Erasmus, 9 vols. folio (Basel, 1516), and have been several times reprinted. The best editions are that of the Benedictines, 5 vols. folio (Paris, 1693—1706), and, still more, that of Vallarsi, 11 vols. (Verona, 1734—1742). St J. is universally regarded as the most learned and eloquent of the Latin Fathers. His commentaries on the Bible are especially valuable for the learning which they display; but his opinions are often exaggerated and fanciful, and through his controversial writings there runs a strain of violent invective, which contrasts unfavourably with the tone of his contemporary St Augustine. See VULGATE.

JEROME OF PRAGUE, the companion of John Huss, whom he surpassed in learning and eloquence, though he was inferior in judgment and moderation, was born at Prague in the latter half of the 14th century. After attending the university of his native town, he continued his studies at Paris, Cologne, Oxford, and Heidelberg, and in 1399 took out his degree as Master of Arts and Bachelor of Theology. His reputation for learning was so great, that his advice was taken by Ladislas II., king of Poland, with respect to the founding of the university of Cracow in 1410; and Sigismund, king of Hungary, invited him to preach before him at Buda. He entered with his whole soul into the contest carried on by his friend Huss against the abuses of the hierarchy and the profligacy of the clergy. His zeal, however, carried him too far; he publicly trampled the relics under his feet, committed to prison the monks who did not share his opinions, and even ordered one of them to be thrown into the Moldau. When Huss was arrested at Constance, J. hastened to defend him; but receiving no satisfactory answer to a letter in which he had demanded a safe-conduct from the council, he set out on

JERROLD—JERSEY; THE CHANNEL ISLANDS.

his return to Prague, when he was arrested at Hirschau, in April 1415, by the orders of the Duke of Sulzbach, and conveyed in chains to Constance. Here he was cast into a dungeon, and placed on trial. After some months' imprisonment, he recanted his opinions, but subsequently abjured his recantation with horror, and went to the stake with great firmness. He was burned alive, 30th May 1416. J.'s life has been written by Heller (Tübingen, 1835) and by Becker (Nördlingen, 1858).

JERROLD, DOUGLAS, dramatist, journalist, and miscellaneous writer, was born in London on the 3d January 1803. His early efforts in literature were directed to the theatre, and some of his pieces—*Black-eyed Susan* (1829), for instance—still hold possession of the stage. At a later period, he produced several five-act comedies, the best known of which are *Time Works Wonders*, and *The Bubbles of a Day*. J.'s reputation stands more securely on his novels, sketches, and essays than on his dramatic works. His *Men of Character* was originally published in *Blackwood*. He joined the staff of *Punch* (1841), and contributed to that periodical *A Story of a Feather*, *Punch's Letters to his Son*, and the world-famous *Caudle Lectures*. Later appeared *The Chronicles of Clovenook*, the kindest and most delightful of all his books, and *St Giles and St James*, his most elaborate novel. For several years before his death, he edited *Lloyd's Weekly Newspaper*. He died from disease of the heart, at Kilburn Priory, at the age of 55.

J. was a brilliant rather than a great man of letters. His plays are sparkling, but they want body and substance, and uninteresting matter had never perhaps so epigrammatic a setting as in his novels and tales. His reputation as a social wit stands higher than his reputation as a writer. He was greater in society than in his closet. Like a flint, every stroke brought fire from him. See *Life and Remains of Douglas Jerrold*, and *Douglas Jerrold's Wit and Humour*; both by his son, William Blanchard Jerrold (Lond. 1858).

JERSEY—THE CHANNEL ISLANDS. J. is the chief of the group called the Channel Islands (q. v.). The other inhabited islands of this group are Guernsey, Alderney, Sark, Herm, and Jethou, and there are numerous uninhabited islets and rocks. The coast is very dangerous, but light-houses are placed on most of the island headlands, and on the dangerous rocks called the Casquets, west of Alderney, a triple light is exhibited. The Chausses Islands belong to France. The following table exhibits the area and population of the principal islands:

Name of Island.	Acreage.	Acreage Cultivated.	Population.	
			1851.	1861.
Jersey, . . .	39,580	25,000	57,020	56,078
Guernsey, . . .	15,560	10,000	29,733	29,780
Alderney, . . .	2,500	1,500	3,333	4,343
Sark, . . .	1,700	600	581	60
Other islands,			480	230

Physical Geography—Description.—J., which lies 17 miles south-west of Guernsey, and 16 miles from the coast of France, is of an oblong form, about 10 miles in length and 6 in width. The land is high on the north coast, and slopes to the south and east. It is intersected by several small streams. The coast is indented by large open bays on the west, south, and east; but on the north, by small rocky inlets. The interior is mostly table-land, well wooded, especially in the valleys along the winding streams. J. is divided into 12 parishes. The churches have little architectural pretension, but are generally picturesquely situated. The principal

town is St Helier (q. v.). The small neat town of St Aubin lies at the western extremity of the bay of that name. It possesses a diminutive harbour and castle, a good grammar-school, and extensive vineries. Mont Orgueil Castle is a grand and imposing mediæval fortress, looking over Gorey Harbour. Some parts of it are said to be of the time of Julius Cæsar. It was the prison of Prynne and the Parliamentarians, and has been used as a barrack. A good view of the island may be obtained from *Hougue Bie*, or Prince's Tower, a building raised on a mound of legendary interest.

ALDERNEY and GUERNSEY are described elsewhere (see those heads).

SARK (*Sercq*, *Gers*). Great and Little Sark are one island, connected by a natural causeway called the *Coupée*. They are lofty table-lands, with precipitous sides. The total length of the islands and rocks is about five miles; the greatest width, including Brechou and the Burons, about three miles. Sark is eight miles from Guernsey. The principal objects of interest are the pierced rocks, caverns, and fissures. The caves are very rich in zoophytes. The seigneur is the Rev. W. Collings, who resides on the island. There is one parish church, and a lodging-house for visitors, &c. The coast is very difficult of access, the only entrance to the interior being through a *creux* or tunnel cut in the rock.

Geology.—Most of the islands are composed of primary or granitic rocks. Alderney is a mass of syenite, with hornblende, porphyry, and occasional sandstone. The structure of Guernsey is hard syenite to the north, and gneiss to the south. The geology of Jersey is more varied, presenting a mixture of metamorphic rocks, conglomerates, and sandstones, with syenites and quartzites. Shale and blown sand are also prevalent. Sark is composed of very hard syenite, with veins of greenstone and felspar. Granite is quarried from all the islands, especially from Guernsey, Herm, and Mount Mado in Jersey, both for home use and exportation.

The scenery of the Channel Islands is exquisitely varied and beautiful; probably in no other area of similar size could be found such a combination of savage rocks and pleasing landscapes.

The climate of the Channel Islands is agreeable and suitable to invalids. The prevailing winds are from north and north-west. The mean annual rainfall is 35 inches in Guernsey; but the climate is not overmoist, the soil being porous and evaporation rapid. The mean annual temperature of Jersey is 50°·8; of Guernsey, 51°·5, or 2°·5 warmer than Greenwich. The range of temperature is very moderate; but the climate of Guernsey is rather more equable than that of Jersey. August is the hottest month; February, the coldest. Frost and snow are rare. The autumns are very beautiful; and a second summer, called the *Petit Été de Saint Martin*, generally sets in about the 10th of October, and lasts till the middle of December. Flowering plants and shrubs are a fortnight earlier in the spring than in England.

The produce of the islands is principally agricultural; but horticulture and floriculture are successfully followed—the latter especially in Guernsey. The soil is generally light, deep, and fertile. The system of cultivation is very primitive. The principal manure is sea-weed, which is gathered in vast quantities from the shores, at certain seasons, under strict regulations. Its annual value to Guernsey alone is estimated at £30,000. A great quantity is burned for the manufacture of kelp and iodine.

The land is held in small parcels ranging from five to twenty English acres. The principal crops are hay, wheat, turnips, potatoes, mangel-wurzel,

JERSEY; THE CHANNEL ISLANDS.

parsnips, and carrots. The yield of wheat is upwards of 30 bushels to the acre—the average of England being 24. The Channel Islands possess an excellent breed of horned cattle, usually known as Alderneys, remarkable for their small size and symmetry, and for the quantity and quality of the milk which they yield. A large number of choice cows from the island of Jersey have been recently imported into the U. States. Fruit is much cultivated in Jersey, especially the vine, and the peach, apricot, plum, apple; and the pear, particularly the *Chau-montel*, attains extraordinary size and flavour in Guernsey. About 30,000 bushels of table-fruit are annually exported from the islands to London and Paris. Shrubs and flowers flourish abundantly. The Acclimatisation Society of London receive favourable accounts from the Guernsey branch of the successful cultivation of the Brazilian arum, for the manufacture of arrow-root, the produce being very large and profitable. Vegetables are plentiful; and the cow-cabbage grows to the height of ten or twelve feet. The other products of the islands are principally fish, viz., turbot, red mullet, John Dory, conger, *laoucons* or sand-eels, also lobsters and oysters, large quantities of which are exported. A considerable traffic is carried on in granite from all the islands; the blue granite from Guernsey for macadamising, and the pink syenite from Mount Mado, in Jersey, for paving purposes, are highly esteemed, and largely imported into London. In 1861, 731 vessels left the harbour of St Sampson in Guernsey, carrying 142,866 tons of stone.

History.—The early history of the Channel Islands is mythical and legendary; but it is probable that the earliest inhabitants were Bretons. The islands were under Roman occupation during the 3d and 4th centuries, the name of *Cæsarea* or Jersey (*Cæsar's Isle*) occurring in the Itinerary of the Antonines. Christianity was probably introduced by missionaries from Ireland about 460 A. D.—St Helerius being the traditional apostle of Jersey, and St Sampson of Guernsey. Probably a mixed population of Saxons, Danes, Goths, and Gauls betook themselves to these islands during succeeding centuries, as the Franks possessed the continent. The islands were taken possession of by Rolf or Rollo previous to his invasion of Normandy. After the Norman Conquest, the islands were alternately English, under William the Conqueror; Norman, under Rufus; English, under Henry I.; and Norman again, under Stephen. With Henry II., the allegiance of the islands reverted to the king, as sovereign of Normandy as well as England; and after the loss of Normandy, the islands still remained faithful to England.

John is said to have given a constitution to Guernsey. The islands still belonged ecclesiastically to Normandy, the Bishop of Coutances being their diocesan. Edward III. and Henry V. materially weakened the papal bond; but it was not wholly severed till the Reformation, after which (in 1658) they were attached to the see of Winchester. In Henry VI.'s time, the French held Jersey for six years. During the civil war, Jersey was loyal and Episcopal; Guernsey, republican and Presbyterian; and traces of this divergence are still to be found. In 1781, during the first American war, a French expedition, under the Baron de Rullecourt, landed in Grouville Bay, and marched into the market-place of St Helier, but was repulsed with loss by the garrison and militia. During the French and American wars, the islanders fitted out many privateers, and obtained rich prizes. Smuggling was finally suppressed in 1800. Since the peace, the Channel Islands have thriven and prospered by commerce and agriculture, and especially by becoming

the resort of numerous families from England, who have been attracted thither by the beauty of the scenery or the salubrity of the climate.

Antiquities.—Formerly, there were many cromlechs in the islands; the largest remaining are those near Mont Orgueil in Jersey, and at L'Ancrese Bay in Guernsey. A few old chapels of Norman architecture remain. The oldest church in Jersey is that of St Brelade, said to have been built in 1111.

Language.—The vernacular language of the islands is the old Norman-French. It retains its peculiarities of spelling and pronunciation in Guernsey more than in Jersey, where the French, and in Alderney, where the English element predominates in the dialect. French, however, is the language used in the law-courts of all the islands; but English suitors may address the court or examine witnesses in English. The church services are performed in French in the country parishes, but an English service takes place in most of the town churches.

Inhabitants.—The proportion of strangers in Jersey is very large, British being about 13,000, French 2000; the native population about 41,000, nearly all of whom live in the country. The natives are generally frugal and independent. Society is much divided into cliques; the 'sixties' and 'forties' in Guernsey are a marked division.

Government and Laws.—Though belonging to the British crown, the islands have a certain independent status and action. The principal officer in each island is the *lieutenant-governor*, who is a general officer in the army, and supreme in all military matters; but he has also certain civil and municipal duties. In Jersey especially, his civil jurisdiction is very extensive. He continues in office five years.

The *baillif* or judge is the first civil officer in each island. He is also appointed by the crown, generally for life. He presides at the royal court, and has a casting vote in civil and criminal cases. He originates all measures proposed to the states, and represents the crown in all civil matters. The jurats are twelve in number, elected in Jersey by suffrage of ratepayers, for life. They sit in all the courts, and have a voice in all deliberations: in Guernsey, they are elected by the elective states. The rectors of the different parishes have also a seat in all councils: in Guernsey, however, only eight out of ten have a vote. Besides these officers, there are an attorney and a solicitor general in each island, and a high-sheriff, called in Jersey the *vicomte*, and in Guernsey, the *prévôt*.

The other members of the 'states' or assemblies are, in Jersey, the *constables* of the 12 parishes and the 14 *deputies* of the *vingteniers*, who are elected from the *vingtaines* of each parish. The royal court on each island consists of the baillif and jurats. The 'states,' not convenable without the consent of the governor, pass *ordonnances*, which are in force for three years; laws intended to be permanent must be submitted to the sovereign. The lieutenant-governor has a *veto* on all questions deliberated.

In Guernsey, the 'Deliberative States' consist nearly of the same body, but there are also the 'Elective States,' a more popular assembly, amounting to 222 persons—the great majority being 200 *douzaniens*, elected by the ratepayers of the various parishes. The douzaniens (originally 12 from each parish) are the managers of all parish matters, and elected for life. The baillif presides. The lieutenant-governor has no veto, and *ordonnances* passed take effect without the royal approbation. The proceedings of the states relate to the internal administration of the islands.

Alderney and Sark, though possessing courts of their own, and jurisdiction in petty offences, are,

with the smaller adjacent islands, under the bailiwick of Guernsey.

The laws of the islands are very peculiar, being mainly derived from the ancient customary law of Normandy. The laws relating to property are singular: arrest takes place in Jersey without proof or affidavit. Until recently, the Queen's writ had no power in the islands, and the Act of *Habeas Corpus* has only lately been admitted. Encroachments on property are sometimes met by a curious appeal called *Ha! Ro! à l'aide, mon Prince!* repeated thrice. It is considered to be the remains of an old appeal to Rollo, Duke of Normandy, and is still a valid form of injunction.

Ecclesiastical State.—There is a dean in each island. The livings are in the gift of the crown, and of small value. The principal educational establishments are Victoria College in Jersey, and Elizabeth College in Guernsey. In both, a first-class education is given on very moderate terms, by an excellent staff of teachers, and they have various exhibitions at the universities of Oxford and Cambridge.

There is regular steam-communication between England and the Channel Islands, also between Jersey and the French ports of Granville and St Malo; and in summer there is generally an excursion-boat once a week to Sark and Herm.

The islands are protected by numerous forts, especially about the harbour of refuge in Alderney.

Books of Reference.—The principal historical authorities are the Rev. P. Falle's *History of Jersey*; Mr Duncan's and Mr F. B. Tupper's *Histories of Guernsey*, and Mr Dally for the agriculture of the islands. The most recent and comprehensive work is *The Channel Islands*, by D. T. Ansted, M.A., F.R.S., and R. C. Latham, M.A., M.D., F.R.S., &c. (Lond. 1862).

JERSEY CITY, a city in New Jersey, United States of America, on the west bank of the Hudson River, opposite New York, of which it is, in fact, though in another state, an extension, and to which it is united by large and powerful steam ferry-boats, lighted with gas, which ply night and day. It is the entrepôt of the Cunard steamers, and the terminus of the New York and Philadelphia, Erie, Easton, Morris and Essex, and Northern Railways, and of a canal for coal-transport. It has manufactories of locomotives, machinery, glass, crucibles, &c.; and about twenty churches, the finest of which once stood in Wall Street, New York, but was removed, and built up, stone by stone, in this city. Pop. in 1850, 11,473; in 1860, 29,226; in 1870, 82,546.

JERUSALEM (Heb. *Yerushalem*, Gr. *Hierousalem*, Lat. *Hierosolyma*; called also in Arabic *El-Khulds* or *El-Kods*, 'the Holy'), the Jewish capital of Palestine. Its origin and early history are very obscure. Josephus (*Antiq.* i. x. 2) identifies it with the 'Salem' of which Melchizedek (Gen. xiv. 18) is called king; but St Jerome doubts the correctness of this view. Critics are better agreed as to the identity of J. with Jebusi, the city of the Jebusites (Josh. xviii. 28), and we know that the Jebusites retained possession of the strong positions of the hill of Zion for a considerable time after the conquest of Canaan, and even after the storming of J. (Jud. i. 8), while the tribes of Judah and Benjamin occupied the lower city. They were finally dispossessed by David (2 Kings v. 7). The name J. is first mentioned in Joshua x. 1. It lies upon the original border of Judah and Benjamin, the line of which runs through the valley of Hinnom; so that Zion and the northern city lay within the territory of Benjamin. Its historical importance dates from the time of David, who there fixed his residence, calling it

by the name of the 'City of David,' transporting to it the ark of the covenant, and building in it an altar to the Lord, on the place of the apparition of the angel by which the plague was stayed (2 Kings xxiv. 25). The building of the temple under Solomon was the consummation of the dignity and holiness of J., which was further enlarged, strengthened, and beautified by this king and by his successors. It suffered a diminution of political importance through the revolt and secession of the Ten Tribes, from which date its history is identified with that of the kingdom of Judah. It was pillaged (973 B.C.) by Sesac (Shishak) king of Egypt (2 Chron. xii. 9), by Joash king of Israel (4 Kings xiv. 13, 14); and finally (588 B.C.), it was taken, after a siege of three years, by Nabuchodonosor who razed its walls, and destroyed the temple and palaces by fire (4 Kings xxv.). Having been rebuilt after the Captivity (536 B.C.), it was again taken and pillaged under Ptolemy Lagos (320 B.C.), and under Antiochus Epiphanes (161 B.C.), after the well-known and mysterious repulse of Heliodorus (176 B.C.); and Pompey (63 B.C.) took the city on the anniversary of its capture by Nabuchodonosor, put 12,000 of the inhabitants to the sword, and razed the walls to the ground, sparing at the same time the treasures of the sanctuary. However, a few years later, they were pillaged (51 B.C.) by Crassus; and from these beginnings dates the continued series of Roman aggressions, which terminated in the complete destruction of the city and dispersion of the Jewish race, under Vespasian and Titus (70 A.D.). From the description of the contemporary historian Josephus, we learn that at this period, J., which occupied the four hills Zion, Acra, Moriah, and Bezetha (separated from each other by deep valleys or gorges), consisted of three distinct regions—the Upper City, with the citadel of Zion; the Lower City, which lay to the north, on the hills of Acra and Moriah; and the New City, still further to the northward. The temple stood on the hill of Moriah, and John Hyrcanus built, on the north-western angle of this hill, a fortress called Baris, which was strengthened and beautified by Herod, and called 'Antonia,' in honour of Mark Antony. Herod's own palace stood at the northern extremity of the Upper City, and on the eastern angle was an open place called Xystus, surrounded by galleries, and communicating by a bridge with the temple. The environs of the city were adorned with gardens, parks, ponds, and tombs. In the progress of ages, ancient J. was surrounded by three walls, the direction of which, in some portions of their course, is difficult to be determined, although it is upon this that the controversy as to the authentic site of the Holy Sepulchre (q. v.) mainly turns. (A plan of the city will be given along with the map of PALESTINE, q. v.) The first and most ancient wall surrounded the Upper City on the hill of Zion, and joined on its northern side the prodromum of the temple. The second wall, or the wall of Ezechias, enclosed the hill Acra, around which stood the Lower City. It was connected at the south-western angle with the first wall, from which it ran in a semicircle to the north and north-east, surrounding the Upper City till it joined the fortress Antonia, described above. The third wall, built by Herod Agrippa, which enclosed the hill Bezetha and the so-called New City, appears to have started from the north-western angle of the first wall, probably at the tower called 'Hippicus,' and to have taken a northerly and north-easterly direction around the New City till it met the north-eastern angle of the temple wall. It thus, for a part of its course, was external to the second wall. The site of the Church of the Holy Sepulchre and the Hill of Calvary are thus supposed, by the

defenders of their authenticity, to have been without the wall of J. as it stood in the days of our Lord—that is, the second wall, although they were taken in by the subsequent extension of the city a short time afterwards, when the third wall was built, at some distance to the west of the second, by Herod Agrippa. The investigation of the exact direction of the second wall has long been an object of desire with biblical antiquaries, and it is probable that the excavations now projected or in progress will remove all uncertainty.

The city destroyed by Titus was rebuilt by Hadrian; but only as a heathen and Roman city, under the name *Ælia Capitolina*, with a temple of Jupiter; not as the capital of the Jewish race, who were forbidden, under pain of death, to visit it. Constantine, under the inspiration of his mother Helena, took measures to consecrate and perpetuate its Christian memories by ascertaining the sites of the various events in the Passion of our Lord, and erecting on them churches and other suitable memorials of those scenes of the redemption of the world, which thenceforward became an object of pious veneration to pilgrims from every part of the church. On the contrary, Julian the Apostate, with the design, according to the contemporary Christian account, of falsifying the prediction of our Lord, that 'not one stone should be left upon another,' encouraged and assisted the Jews to return and rebuild their ancient capital; an enterprise which, as the same writers—supported, in most respects, by the pagan historian Ammianus Marcellinus (xxiii. 1)—affirm, was frustrated by an earthquake or eruption, which the Christians ascribed to divine interposition.

J. again fell under foreign domination in 614, when it was stormed by the Persian king, Chosroes II. It was restored to the Emperor Heraclius in 628; but in 637 it fell into the hands of the Calif Omar, and in 1077 passed under the Turkman domination. During this long period, the practice of pilgrimages to J. was never entirely interrupted. In consideration of a tribute paid by each Christian visitor, a contemptuous permission was accorded for the purpose; but the cruelties practised on the pilgrims by the Turks being reported in the West, and especially by the fiery enthusiast Peter the Hermit, aroused the piety and chivalry of Europe, and led to that extraordinary succession of holy wars which for a time restored the tomb of our Lord and the holy city to Christian hands. On the 15th July 1099, J. was taken by assault, and was declared the capital of a Christian kingdom. Through a rapid succession of undistinguished names, with the exception of the first, the celebrated Godfrey of Bouillon, the new sovereignty was precariously maintained until 1187, when it fell once more before the arms of the great Saladin, since which time—if we except the brief and empty pageant in which Frederick II., emperor of Germany, having assumed the title by a collusive treaty with the sultan, entered into J. in March 1229—the city can hardly be said to have known other than Moslem rulers. It was retaken by the Sultan of Damascus in 1239; and although it was given up in 1241 to the Knights Hospitallers, they were driven out in the year 1244 by the Chorasmian Turks, by whom the ascendancy of the Crescent was finally established. It was captured from the Saracens by the Mamelukes in 1382, but recovered in 1517 by the Sultan Selim, whose son, the celebrated Soliman, built the wall which at present encloses the city. J. is now the seat of a pasha, with the ordinary powers of a Turkish viceroy.

It remains to describe the present condition of the city. It is situated in 31° 46' 43" N. lat., 35° 13'

E. long., on an elevation of 2000 feet above the level of the Mediterranean, from the nearest point of which it is distant 29 miles east. In its present shape, it is an irregular square, and is still surrounded by the embattled wall, about 2½ miles in circumference, erected by the Sultan Soliman. The modern enclosure, however, is far from coinciding with that of the Jewish period. In addition to the changes produced by the rebuilding of the city under Hadrian, by which the greater part of the region anciently called the New City was excluded, the stream of population in the Christian period having flowed towards the Holy Places, the modern city has extended considerably towards the west. The four hills on which the ancient city stood are enclosed within the modern precincts; but the portion of the old city which lay north of Bezetha is now excluded, and the valleys between the hills having been filled up by accumulation of ruins, but little inequality of surface is now observable. The streets are narrow, unpaved, and irregular, and the houses gloomy and unsymmetrical; although, owing to its striking position, especially when viewed from the east, and to the number of minarets and domes which rise above the level of the flat-roofed houses, the general appearance of the city, seen from without, is picturesque and pleasing. There are seven gates, of which the principal are the Jaffa Gate, the Damascus Gate, the Stephen's Gate, and the Zion Gate. If lines be drawn between these four gates, the city will be divided into four parts, which almost coincide with the four quarters into which the population—Christian, Armenian, Jewish, and Moslem—is divided; the Christians occupying the north-west, the Armenians the south-west, the Jewish the south-east, and the Mohammedans the north-east portions of the space within the wall. Of the population—which is about 25,000—one-half is Mohammedan; of the remaining half, 7500 are Christians of the various rites, the rest being Jews. To all alike, the city is the seat of many sacred associations. The Jews have seven small and mean synagogues. The Mohammedans, since the days of the first occupation, have held possession of the site of the Temple of Solomon, on which the so-called Mosque of Omar now stands; and the pasha's Seraiyah, or official residence, occupies the site of the Tower Antonia. The Church of the Holy Sepulchre (see HOLY PLACES), with its enclosure, which is occupied by all the Christian communities in common, has been already described. The Latins possess, for their own worship, the Church of St Saviour; it is attached to the Franciscan convent, in which Europeans of all denominations receive ready hospitality. In like manner, the Greeks, Armenians, Syrians, Copts, and Abyssinians have convents or hospitals appropriated to their several communions. That of the Armenians on Mount Zion is said to be one of the richest in the East; and the same communion possesses another convent on the reputed site of the house of Caiaphas. The street leading from the Eastern or Stephen's Gate to the Holy Sepulchre is called the *Via Dolorosa*, and is believed to follow the route of our Lord's sorrowful procession from the Hall of Judgment to Mount Calvary. In other parts of the city or its immediate environs, are shewn the reputed sites of the Mount of Olives, the Tomb of the Virgin, the Pool of Bethesda, the Potter's Field, and the sites of almost all the events of the Passion of our Lord or of scenes connected therewith. The authenticity of these sites has been the subject of considerable controversy in later times. See HOLY PLACES. Beyond its religious associations, the modern city possesses few advantages. It is

entirely without commerce; and its only branch of industry is the manufacture of beads, crucifixes, and sculptured shells, or tablets of mother-of-pearl. In these objects, an active traffic is practised with the pilgrims, who number about 10,000 annually; and considerable quantities are exported to Spain, Italy, and France. The beads are either berries or are manufactured either from date-stones or from a species of hard wood called Mecca fruit. For the use of the Mohammedan pilgrims—for whom the Mosque of Omar is only inferior in sacredness to Mecca and Medina—a considerable manufacture is carried on of amulets of black stone, which are reputed to be a protection against the plague.

In ecclesiastical history, J. has not filled the space which might at first sight be expected. When the city was rebuilt after its destruction under Titus, the new city *Ælia* was so inconsiderable as a Christian community, that it became a suffragan see of the metropolitan of Cæsarea. The Council of Nice recognised a precedence of honour; but it was not till the Council of Chalcedon that the church of J. was raised to the rank of a patriarchate, with jurisdiction over all the bishops of Palestine. J., however, ranked last among the eastern patriarchates. In common with the other eastern churches, J. followed in the train of Constantinople in its secession from the West. The patriarch of J. was a party to the decree of union in the Council of Florence; but his flock soon fell back into schism; and although the titular rank of patriarch of J. has been maintained in Rome, the church remained under the care of the Franciscan community, and the Latin patriarch had never resided in J. until the accession of the present pope, Pius IX., by whom the duty of residence was re-established. In the year 1841, the governments of England and Prussia united for the establishment of a Protestant bishopric in J., the appointment to which rests alternately with England and with Prussia.—See Robinson's *Biblical Researches*, Stanley's *Sinai and Palestine*, Williams's *Holy City*, Richardson's *Travels along the Mediterranean*, Ritter's *Erkunde*, Sepp's *Forschungen eines Deutschen Reisenden*; and on the Patriarchate, Wiltch's *Kirchliche Geographie*, Le Quien's *Oriens Christianus*, Mosheim's *Church History*, Barclay, J.T., *City of the Great King*, Phila., 1858.

JERUSALEM ARTICHOKE, or **TOPINAM-BURI** (*Helianthus tuberosus*), a plant of the natural order *Compositæ*, and of the same genus with the common sunflower (q. v.), is a native of Brazil. The word *Jerusalem*, in the English name, is a corruption of the Italian *girasole*, sunflower; the name *artichoke* is merely from a supposed similarity of flavour in the eatable part—the tuber—to the artichoke. The J. A. has straight simple stems from eight to twelve feet high, and many rough ovate acute stalked leaves; and in the end of autumn, but rarely in Scotland, produces yellow flowers resembling those of the common sunflower, but smaller. The thick, fleshy, and knotted perennial root produces, pretty closely around it, oval or roundish tubers, sometimes thirty or fifty in number, which are reddish on the outside, and whitish within, in appearance very similar to potatoes. They have a sweetish, mucilaginous taste when boiled, and are much more watery and less nourishing than potatoes. They are, however, very palatable, when properly prepared with sauce, and make very good soup. The plant is also useful for fodder for cattle, yielded by its leaves and the more tender parts of the stems. The fibre of the stems may probably be found valuable for paper-making. The stems and leaves contain much nitre, and have been used for making potash. The J. A. is scarcely an agricultural crop in Britain, although it is to some extent in some

parts of Europe. It is common, however, in gardens, and was known in our gardens before the potato, to which it in some measure gave place. It is

Jerusalem Artichoke (*Helianthus tuberosus*).

generally propagated by small tubers, or cuttings of tubers, like the potato; and its cultivation is in most respects similar, although the aspect of the plant is very different.

JERVIS, JOHN, Earl of St Vincent, a British admiral, was born January 9, 1734. He obtained a commission in the navy as lieutenant in 1755, and in 1769 commanded the *Alarm* frigate in the Mediterranean. When she was paid off, he made a tour of inspection to the naval arsenals of France and Northern Europe. He was then appointed to the *Foudroyant*, the finest two-deck ship in the British navy, and engaging the *Pegase*, 74, off Brest, he took her without the loss of a man. For this gallant exploit, he was made K.C.B. In 1787, he was made rear-admiral; in 1793, he commanded the naval part of the expedition against the West India Islands, Sir C. Grey commanding the troops; and so successful was this expedition, that although the French were well prepared, and fought desperately, every island fell in succession into the hands of the British. In 1795, he received the command of the Mediterranean fleet; and here, for the first time, he made the acquaintance of Nelson, Hood, Collingwood, Hallowell, Troubridge, &c. On the 14th Feb. 1796, with only fifteen sail of the line, he fell in, off Cape St Vincent, with the Spanish fleet of twenty-seven sail. Without a moment's hesitation, J. determined to engage the enemy; and the battle of St Vincent was fought. The genius of Nelson, however, contributed greatly to the success of the day. For this victory, the king created J. Earl St Vincent, and parliament settled upon him a pension of £3000 a year. After having, by great firmness, repressed a mutiny off Cadiz, which threatened the loss of the whole fleet, he was compelled by ill health to return home. He was soon applied to by government to subdue the spirit of sedition which had openly manifested itself in the Channel fleet; and his endeavours were eminently successful. After having held the appointment of First Lord of the

Admiralty, and for a second time commanded the Channel fleet, he retired into private life, and died March 13, 1823. A public monument was erected to his memory in St Paul's Cathedral. History has enrolled the name of St Vincent in the first rank of the eminent naval commanders who broke the maritime power of France and Spain, and established the naval supremacy of Great Britain.

JESSAMINE. See **JASMINE**.

JÉSSANT, in Heraldry, springing forth, a term frequently used as synonymous with *Issuant*, rising, as a demi-lion is often represented doing, from the bottom line of a field, or upper line of an ordinary. Jessant is sometimes used improperly for *naissant*, or rising from the middle of an ordinary. The phrase *jessant-de-lis* is used with respect to a strange heraldic device representing a leopard's head affronté with a fleur-de-lis passing through it. The family of Moreley, Hants, bears sable, a leopard's head argent jessant-de-lis; and gules, three leopards' heads jessant-de-lis or, are the arms of the family of Cantelupe.

Jessant-de-lis.

JÉSSO. See **YESSO**.

JESSO'RE, a town of Bengal Proper, capital of a district of the same name, is 77 miles to the north-east of Calcutta, in lat. 23° 10' N., and long. 89° 10' E. Here, in 1838, was erected, by the zemindars of the neighbourhood, a handsome and commodious school, in which instruction is given in English, Persian, and Bengali.—The district of Jessore contains 3512 square miles, and about 400,000 inhabitants. Salt is obtained from the southern frontier; and sugar and rum are largely prepared from the sap of the palm-tree.

JESSULMERE, a fortified city of Rajpootana, capital of the protected state of the same name, contains about 35,000 inhabitants. It is in lat. 26° 56' N., and long. 70° 58' E., being 1290 miles to the north-west of Calcutta. It has several Jaina temples, and various tanks and wells, the only sources of water-supply.—The state of Jessulmere contains an area of 12,252 square miles, and about 75,000 inhabitants. The country is poor and sterile, and the public revenue is under £9000.

JESUITS, or **SOCIETY OF JESUS**, a celebrated religious order of the Roman Catholic Church, which has filled a large space in the ecclesiastical and even the political history of the world. It was founded in 1554, by the well-known Ignatius of Loyola (see **LOYOLA**), in concert with five associates—Peter Le Fevre, a Savoyard; three Spaniards—James Lainez, Francis Xavier, and Nicholas Bobadilla; and a Portuguese named Rodriguez. The original object of association was limited to a pilgrimage to the Holy Land, and a mission for the conversion of infidels; but as all access to the Holy Land was precluded by the outbreak of a war with the Turks, the associates turned their thoughts to a more comprehensive organisation, specially designed to meet those more modern requirements which had arisen since the Reformation. With this view, Ignatius of Loyola, with Lainez and Le Fevre, having meanwhile recruited several new associates, repaired to Rome in 1559, and submitted to the pope, Paul III., the rule of the proposed order, the great aim of which was expressed in their adopted motto: *Ad maiorem Dei Gloriam* (To God's greater glory); and the vow of which, in addition to the threefold obligations common to all Catholic religious orders, of chastity, poverty, and obedi-

ence, comprised a fourth, whereby the members bound themselves unreservedly to go as missionaries to any country which the pope might indicate to them. The new rule was approved by a bull dated September 27, 1540; and in the following year, the association was practically inaugurated at Rome, by the election of Ignatius of Loyola as its first general.

The constitution of the society, as originally framed, has undergone so few subsequent modifications that it may be described, at the outset, without specifying these changes. Although it is commonly described as absolutely monarchical, yet it is, in many respects, strictly limited. It is true that the general—who is elected by a general congregation, consisting of professed members selected for the purpose by the whole body of professed members in the various provinces—holds his office for life; and although he is aided in his government by a council of five assistants from the five chief provinces, he is not obliged to follow their voice, even when unanimous. But, on the other hand, he is strictly bound by the constitutions of the order; nor, although he may dispense in particular cases, is he competent, of his own authority, to annul or to alter any of their constitutions. In like manner, although no instance of deposition has ever occurred, he is liable to be deposed by the sentence of a general congregation, in certain contingencies which are specifically pointed out by the constitutions.

The body over which this general presides consists of four classes: 1. Professed, who, having passed through all preparatory stages, which commonly extend over ten or twelve years, or even a longer period, have solemnly taken the vows described above, including that of obedience to the pope. It is from this class alone that the general and all the higher officials of the society are chosen. 2. Coadjutors, spiritual and temporal: the former—who have completed their studies, and have (seldom before their thirty-second year, or even later) been admitted to holy orders—being designed to assist the professed in preaching, teaching, and the direction of souls; the latter being lay-brothers, to whom the minor and menial offices of the society are assigned. 3. Scholastics, who, having passed through the novitiate, are engaged for a long series of years, either in pursuing their own studies, or in teaching in the various schools of the order. 4. Lastly, novices, who, after a short trial as 'postulants' for admission, are engaged for two years exclusively in spiritual exercises, prayer, meditation, ascetic reading, or ascetic practices, and generally in a course of disciplinary training. The administrative and executive government of the society, throughout the various provinces or countries into which it is divided, is intrusted, under the general, to provincials, who are named by the general, and hold office, as do all the other officials, for three years. In each separate province, there are three kinds of communities—professed houses or residences, colleges, and novitiates. Not only the superiors of these houses—who are called by different names—but also all the various office-bearers in each, are appointed by the general, who receives at stated intervals—monthly from provinces, quarterly from colleges and novitiates—a detailed report of the character, conduct, and position of each member of the society. In all these gradations the subordination is complete, and the obligation of obedience is immediate and unreserved; and one of the most familiar accusations against the society is, that this duty of blind and implicit obedience makes the superior the sole and final arbiter of conscience for all his subjects, the judge of good and evil, of virtue and of vice. Nevertheless, whatever may be said of the practical

tendency of this relation, the J. and their apologists plead that, both in the rules of St Ignatius and in the so-called 'examen' of the candidate, there is contained, in the duty of obedience to a superior, an explicit reservation for the subject, 'unless where the superior should command what is sinful.'

Such is the internal organisation of this extraordinary association. The system of training applied to the formation of its members exhibits the most profound knowledge of the human heart, and the most correct appreciation of the religious instincts and impulses of mankind. The long exercises of the novitiate were designed by Ignatius to form the individual character in habits of personal holiness, and practices of personal piety. It was the business of the school and college to form the social character of the future teachers of men, and directors of the destinies of society. To learning carefully adapted to the actual condition and progress of knowledge, they sought to add manners and habits calculated to inspire confidence, and to disarm prejudice and suspicion. Unlike the older orders, they made no parade of a special calling, whether by a peculiar habit, or by peculiar exterior indications of austerity or asceticism. They enjoyed, indeed, in these respects, some exemptions from the more austere practices of other orders. Their churches were but designed as supplementary to those of the parish clergy (whose ordinary costume they adopted as their own conventual dress), without the canonical services, without much imposing or attractive ceremonial, being chiefly appropriated for religious instruction, and for the duties of the confessional. Their casuistry avoided all harsh and excessive rigour; and it cannot be doubted that many members carried it to the opposite extreme. But above all, they addressed themselves to the great want of their time—education; and through the mastery which they soon obtained in this important field, as well as their eminence in every department of learning, divinity, philosophy, history, scholarship, antiquities, and letters, they attained to unbounded influence in every department of society. It may be added that to their extraordinary success in thus drawing to themselves, for education, the youth of every country into which they were introduced, the historians of the society ascribe much of the opposition which they encountered from the universities and collegiate bodies whose monopolies they invaded.

The organisation of the society is settled, in every important particular, by the original rules and constitutions of St Ignatius. The opponents of the J., however, allege that, in addition to these public and avowed constitutions, there exists in the society, for the guidance of their hidden actions, and for the private direction of the thoroughly initiated members, a secret code, entitled *Monita Secreta* (Secret Instructions), which was meant to be reserved solely for the private guidance of the more advanced members, and which was not only not to be communicated to the general body, but was to be boldly repudiated by all, should its existence at any time be suspected or discovered. This singular code, a master-piece of craft and duplicity, was first printed at Cracow in 1612, and has been repeatedly reprinted by the enemies of the J.; but it is indignantly disclaimed by the society. The accounts of the time and circumstances of its discovery are suspicious and contradictory. It has been repeatedly condemned, both at Rome and by other ecclesiastical authorities, and its apocryphal character is now commonly admitted (see Barbier, *Dictionnaire des Anonymes*).

The history of the society is so varied in the different countries, that it is necessary, although

very briefly, to allude to each separately, dividing it into three stages—the rise, the suppression, and the restoration of the order.

In Italy, its early career was brilliant and unclouded. Before the death of the first general, Ignatius, in 1556, the Italian J. had swelled to 1000 in number, and the order was established in twelve provinces. Their first check in Italy occurred in Venice. In the contest of this republic with Paul V. (q. v.), the J., taking the side of Rome, accepted, in 1606, the alternative, proposed by the senate, of leaving the Venetian territory; nor was it till 1656 that they were re-established in Venice, from which time they continued to enjoy undisturbed influence in Italy until the suppression of the order.

The earliest settlements of the J. outside of Italy were in Portugal and Spain. In 1540, Rodriguez—who was a Portuguese nobleman—and Francis Xavier opened colleges in Portugal, at the invitation of the king. Francis Borgia, Duke of Gandia, in Spain, was equally well received in his native country, where the order flourished so rapidly, that, at the time of the suppression, the Spanish J. numbered above 6000.

In France, although a house for novices was founded in Paris by St Ignatius in 1542, the university opposed their introduction as unnecessary, and irreconcilable with its privileges. They were distasteful to supporters of the Gallican liberties, and still more to the Huguenots. The jurists, the parliament, and the partisans of absolutism, were alarmed by the free political opinions which had found expression in some of the Jesuit schools. On the other hand, the democratic party attributed to them a sinister use of their influence with courts. And thus their progress was slow, and their position at all times precarious. It was with much difficulty that the parliament of Paris consented to register the royal decree which authorised their establishment. In more than one instance, the university protested against their schools as invading its privileges. In the wars of the League, they did not fail to make new enemies; and at length, the assassination of Henry III. by Clement (although no evidence of any connection with the J. appeared in his case), and the circumstance, still more industriously urged against them, that Chatel, who attempted the life of Henry IV., had at one time been a pupil in their schools, led to their expulsion from France in 1594. They were reinstated, however, in 1603; but on the assassination of Henry IV. by Ravalliac, the outcry against them was renewed. Although it seems quite certain that this clamour was utterly without foundation, yet the opinions held by one of their order, Mariana (q. v.), on the right of revolt, although condemned by the general, gave a colour to this and every similar imputation. A less deep but more permanent and formidable movement against them was gradually stirred up at a later period, by a combination of all the causes of unpopularity already described, to which new point was given by the well-known Jansenist controversy, and by the questions as to the imputed laxity of the moral teaching of the J., and their alleged corrupt and demoralising casuistry. What the ponderous and indignant prelections of the Sorbonne, and the learned folios of the Dominican and Augustinian schools had failed to accomplish, the wit and brilliancy of the celebrated *Lettres Provinciales* of Pascal (q. v.) effectually and triumphantly achieved. The intolerable laxity of some of the Jesuit casuists was mercilessly exposed by this brilliant adversary as the authorised teaching of the order, and the crafty maxims and practices popularly ascribed to the society were placed before the world in a light at once exquisitely amusing

and fatal to the reputation of the body. The attempts at rejoinder on the part of the J. but served to fix the ridicule more firmly. Of the thousands who laughed at the happy humour, or sympathised with the vigorous railery, of Pascal, few, indeed, could plod through the heavy and pointless scholasticism of his adversaries. In vain the J. insisted that the obnoxious casuists had been condemned by the society itself; in vain they shewed where their opinions differed from those imputed to them. The wit of Pascal remained unanswered; and whatever were the logical merits of the controversy, no doubt could be entertained as to its popular issue. The bitter pleasantries, too, of the *Provincial Letters* were but a foretaste of the acrimony of the later Jansenist controversies, in which the J. stored up for themselves an accumulation of animosities in the most various quarters, the divines, the lawyers, the courtiers, which were destined to bear bitter fruit in the later history of the society in France. Nevertheless, after a long conflict, they enjoyed a temporary triumph in the last years of the Regency and the beginning of the reign of Louis XV.

In Germany, the Jesuit institute was received with general and immediate favour. In the Catholic territories, Austria, Bavaria, and the Rhenish principalities, they not only founded colleges and other establishments of their own, but they were appointed at Ingolstadt and other universities to hold important professorships, and received in many dioceses the charge of the episcopal seminaries then newly established. Before the death of the first general, St Ignatius, the order could reckon in Germany 26 colleges and 10 professed houses; and Lainez, the second general, was able to say that there was scarce a German town of note which had not a Jesuit college. In the mixed states, their career was not so unclouded. Their great learning and ability, and thorough devotion to the church, made them at once eager and formidable polemics. In Hungary and Transylvania, much bitterness arose out of their introduction; the same may be said of Bohemia and Moravia; and through the whole course of the Thirty Years' War, the J., though in many instances wrongfully, were regarded by the belligerent Protestants as the soul and centre of the Catholic camp.

In the Netherlands, they encountered some opposition at first; but in 1562, Lainez, the second general of the order, came to the Low Countries, and a college was opened at Louvain, which eventually became one of the greatest colleges of the order. In the Netherlands, the Jansenist party was less numerous and less influential than in France, and the conflict with them was less permanently prejudicial to the Jesuits. In the Protestant kingdoms, the J. obtained entrance only as missionaries, and in some, as in England, Scotland, and Ireland, under circumstances of great difficulty and peril. From England they were excluded by the penal laws under pain of death; nevertheless, with a constancy and devotedness which it is impossible not to admire, they maintained through the worst times an unbroken succession of missionaries in many parts of England. They often resorted to the most singular disguises, and generally bore false names; and several of the old Roman Catholic mansions still shew the 'Priest-hole,' which was contrived as a retreat for them in cases of sudden emergency. Into Ireland they effected an entrance almost at the first foundation, and after many vicissitudes, towards the close of the reign of Charles II., they had more than one considerable college for the education of youth.

But a still more fertile field for the enterprise of

the order was that of the missions to the heathen, in which, from their very origin, they engaged, and in which they soon attained to a success which outstripped all the older orders in the church. In the Portuguese colonies of India, the successes of Francis Xavier (q. v.) are well known. The results of their missions in China and Japan (see RICCI, SCHALL), though more checkered by the conflict with other missionaries, were, from the character of the people, even more extraordinary. In Northern and Central America, also, the J. had extensive and highly successful missions. Above all, their establishments in the southern continent, in Brazil, in Paraguay, and Uruguay, upon the Pacific coast, in California, and the Philippine Islands, were missions of civilisation as much as of religion; and Sir John Bowring recognises in the condition of the native population of the Philippines to the present day, the results of the sound and judicious culture of which the early Jesuit fathers laid the foundation.

Such in its various branches was this great and wonderfully organised association in the first stage of its history. At the celebration of their first centenary jubilee, they already numbered 13,112, distributed over 32 provinces. At the date of their suppression, a century later, they had increased to 22,589, and were possessed of 24 professed houses, 669 colleges, 176 seminaries, 61 novitiates, 335 residences, and 275 missionary stations in infidel countries, or in the Protestant states of Europe.

The decline in the fortunes of the J., although its origin dates far back into the 17th c., was rapid and decisive in its consummation. The first blow which they sustained was in Portugal. An exchange of colonial territory having been effected between that kingdom and the crown of Spain, the so-called 'Reductions' of Paraguay (q. v.), in which the Jesuit missionaries possessed an authority all but sovereign, were transferred to Portugal. The native Indians having resisted this transfer, the Portuguese ascribed their disaffection to the J. missionaries. The Portuguese minister, Pombal de Carvalho, to whom the J. allege that their possessions in Portugal had long been an object of desire, instituted a commission of inquiry; and while it was still pending, an attempt on the life of the king, Joseph, which, as in the similar attempts on Henry III. and Henry IV., was laid to the charge of the J., furnished him with a fresh ground of impeachment; and without waiting any juridical proof of either accusation, he issued, in September 1759, a royal decree, by which the whole order was definitively expelled from the kingdom. This example was followed in other kingdoms. In France, under the ministry of the Duke de Choiseul, the immediate occasion of the disgrace of the J. was a trial in the civil courts. Father Lavalette, as procurator of the order in the island of Martinique, had consigned to a commercial house in Marseilles two large and valuable cargoes. These cargoes having been seized by English cruisers, and Lavalette being unable to meet the bills which he had drawn upon the credit of their delivery, the Marseilles merchants proceeded against the order. The provincial parliament having decided in favour of the merchants' claim, the J. pleaded that Lavalette acted not only without the authority of the order, but against the positive constitutions, and appealed to the parliament of Paris against the provincial sentence. The inquiry thus raised presented an opportunity of which the ancient enemies of the order in the parliament eagerly availed themselves. A report on the constitutions of the society, highly damnable, was speedily drawn up, and a demand was made for the suppression of the order, as irreconcilable, in its

constitution and practice, with the interests of the state and of society. A strong effort was made by the French bishops, and by Pope Clement XIII., to arrest the proceeding; but a powerful court-faction, aided by the secret influence of the royal mistress, Madame de Pompadour, who was irritated by the refusal of absolution by her Jesuit confessor unless on condition of her separating from the king, and supported in the public press by the then rising philosophic party, carried all voices, public and private, against the Jesuits. An attempt at compromise was proposed to the general, Father Ricci, by which the obnoxious constitutions might be abolished or modified; but his unbending reply, 'Sint ut sunt, aut non sint' ('Let them be as they are, or let them cease to exist'), cut short all negotiation; and a royal edict was published in 1764, by which the society was suppressed in the French territory. This example was followed by Spain, under the ministry of Aranda, in 1767, in circumstances of great harshness and severity; and by the minor Bourbon courts of Naples, Parma, and Modena. The court of Rome had zealously but vainly interposed in their behalf, and during the pontificate of Clement XIII., they received from him a support only the more warm because of the hostility which they encountered elsewhere. But his successor, Clement XIV. (q. v.), inclining in this and all other questions of church and state to the side of peace, having in vain endeavoured to procure from the courts by which they were condemned a relaxation of the severity, and being pressed by the ambassadors of France and Spain, at length issued, July 21, 1773, the celebrated bull, 'Dominus ac Redemptor Noster,' by which, without adopting the charges made against the society, or inquiring into the question of their justice, acting solely on the motive of 'the peace of the church,' he suppressed the society in all the states of Christendom. The bull was put into execution without delay. In Spain and Portugal alone, the members of the society were driven into exile. In other Catholic countries, they were permitted to remain as individuals engaged in the ministry or in literary occupations; and in two kingdoms, Prussia under Frederick the Great, and Russia under Catherine, they were even permitted to retain a quasi-corporate existence as a society for education.

What was meant, however, to be the suppression of the society, proved but a temporary suspension. The ex-members continued in large numbers, especially in the Papal States and Northern Italy; and soon after the first storm of the Revolution had blown over, measures began to be taken for the restoration of the society. The first overt reorganisation of them was in 1799, in the duchy of Parma, at an inconsiderable town called Colorno, in which one of the earliest novices was the afterwards celebrated Angelo Mai. This proceeding on the part of the Duke of Parma was barely tolerated by the pope; but in 1801, Pius VII. permitted the re-establishment of the society in Lithuania and White Russia, and with still more formality in Sicily in the year 1804. It was not, however, until after the restoration, and the return of Pius VII. from captivity, that the complete rehabilitation of the Jesuit order was effected, by the publication of the bull *Sollicitudo Omnium Ecclesiarum*, August 7, 1814. In the same year, they opened a novitiate at Rome; and in 1824, their ancient college, the Collegio Romano, was restored to them. In Modena, Sardinia, and Naples, they were re-established in 1815, as also in Spain, where their ancient property and possessions were restored to them. They were again suppressed by the Cortes in 1820, and again restored in 1825; but at the final change of public affairs in Spain in 1835,

the J. shared the fate of the other religious establishments, which fell under the double influence of revolution and retrenchment. In Portugal, they have never obtained a firm footing. Dom Miguel, in 1832, issued a decree for their restoration; but almost before they had entered into possession, the order was reversed by Dom Pedro in 1833. Their position in France has been one of sufferance rather than of positive authorisation; nevertheless, they are very numerous and influential, and their educational institutions hold the very highest rank. In Belgium, they established themselves after the revolution, and they now possess many large establishments, professed houses as well as colleges, which are very numerous attended by the Catholic youth, as well of Belgium as of other countries. In Holland, also, they possess several considerable houses, as well as in England, Ireland, the United States, and, within a recent period, Scotland. In Switzerland, they opened in 1818 a college at Fribourg, which became a most flourishing establishment, and subsequently they extended themselves to Schwytz and Lucerne; but the war of the Sonderbund (one of the main causes of which arose from the Jesuit question) ended in their expulsion from the Swiss territory. Of the German states, Bavaria and Austria tolerated their re-establishment for educational purposes. In the Italian provinces of the former, as also in the Tyrol, they had enjoyed a certain freedom until the revolution of 1848. In Russia, they were placed under sharp restrictions in 1817; and a few years later, 1820, in consequence of their successful efforts at proselytism, they were banished by a final ukase from the Russian territory, whence they still remain excluded. The Italian revolution has seriously affected their position in that country: in 1848, Pius IX. found it expedient to permit, and it is supposed even to counsel, the breaking up of the college and other houses in Rome. They returned, however, with the pope himself, and still remain in possession of their ancient establishments. From Sardinia, Naples, Sicily, and the annexed territories of the kingdom of Italy in general, they withdrew at the first indication of the change, the members of these provinces being now distributed through the houses of the order in different parts of the church. The literature of the history of the J., whether hostile or friendly, is almost endless in extent and variety; we shall only refer to the two most recent works on either side, Gioberti's *Il Gesuita Moderno*, 1847, and Cretineau Joly's *Histoire de la Compagnie de Jesus*, 1845.

JESUITS' BARK. See CINCHONA.

JESUS, the Greek form of the Hebrew word *Joshua*, *Jehoshua*, 'Jehovah, the Saviour,' is the name given to the son of the Virgin Mary by the angels who announced his approaching birth (Matt. i. 21; Luke i. 31). The reason of the name was at the same time declared: 'for he shall save his people from their sins.'

The date of the birth of J. is now generally fixed a few years—at least four years—before the commencement of the Christian era. The reasons of this opinion we cannot here state, but it may be observed that the reckoning of dates from the birth of Christ did not begin till the 6th c., when error on such a point was very probable. The precise date of the birth of J., however, cannot be determined, nor can the year of his death be much more confidently stated. The common computation fixes his death in 33 A.D., or when he was probably at least 37 years of age. As to the month or day of the birth of J., nothing is known, although the circumstance, that shepherds were watching their flocks by night, makes it very certain that it did

not take place at that time at which the festival of Christmas (q. v.) is held.

With the accounts given by the Evangelists of the birth of J., his ministry, death, resurrection, and ascension into heaven, every one may be supposed familiar.

The opponents of Christianity have not, in general, disputed the historic truth of the gospel narrative of the life of J.; the miracles of course excepted. Celsus and other heathen writers admitted even the truth of the miracles, but alleged them to have been wrought by magic, or to have been too few and inconsiderable to attest the claims of Jesus. Their modern successors have, of course, rejected these views. Some of them have endeavoured to shew that J. was ambitious of earthly power, but this has not been a prevalent theory. More generally, they have regarded him as merely adapting his conduct and teaching to the notions common among the Jews, and in particular to their expectation of the Messiah; whilst they admit the unequalled excellency of the religious and moral system taught by him. The inconsistency of this scheme is held to be obvious by orthodox theologians. They allege that it represents the noblest and purest system of morality as based on imposture. The character of J., as displayed both in his life and in his teaching, is one of the great arguments relied on by the advocates of Christianity.

The correspondence of J. with Abgarus, king of Edessa, although we have it in Eusebius, can only be ranked with monkish legends. Of no greater value are descriptions of the personal appearance of J., and pictures of him. See CHRIST, PICTURES OF.

JESUS, COLLEGE OF, Oxford. In 1571, Queen Elizabeth, on the petition of Dr Hugh Ap-ric, or Price, granted a charter for the foundation of Jesus College, in which there were to be a principal, eight fellows, and eight scholars. In 1622, King James I. granted the college a new charter, including a code of statutes. These original foundations were set on a new footing in 1685 by the will of Sir Leoline Jenkyns, who added considerable endowments to the college, but arranged that the greater part of the fellowships, scholarships, and exhibitions should be confined to Wales. The endowments were subsequently increased to 19 fellowships and 18 scholarships. The commissions under 17 and 18 Vict. c. 81, converted five of the fellowships into scholarships, and entirely suppressed one fellowship. Of the remaining fellowships, one moiety was confined to the Principality, and the other thrown open. Four may be lay fellows; the others must take orders within one year after they shall be of sufficient standing to be masters of arts. The scholarships are confined to Wales, with the exception of King Charles I.'s scholarships (confined to Jersey and Guernsey), and two others, which are open. There are nearly thirty exhibitions in this college, of about £40 per annum. This college presents to about 20 livings; in 1862, there were about 160 names on the books. This was the first Protestant college, and in its statutes the Protestant religion was asserted and guarded by many enactments.

JESUS COLLEGE, Cambridge, was founded by John Alcock, Bishop of Ely, in 1496, to whom the king granted for the purpose the nunnery of St Radegund, which was suppressed for the dissolute conduct of its inmates. The appointment of the master rests with the Bishop of Ely. There are sixteen foundations, and three bye-fellowships, and numerous scholarships. Amongst the distinguished members of this college are to be noted Richard Fox, Bishop of Winchester in the reign of Henry VII.;

Archbishop Cranmer; and Fisher, Bishop of Rochester in the reign of Henry VIII.

JESUS, SON OF SIRACH. See ECCLESIASTICUS.

JET, a bituminous mineral of a perfectly black colour, not harder than ordinary coal, but capable of being easily cut and carved, and of receiving a very beautiful polish. It takes its name from a river of Lycia, from the banks of which it was obtained. In the time of Pliny, the name of the river and a small town on its bank was Gages, and the pieces of jet obtained from thence were called gagates, afterwards successively corrupted into gagat and jet. It is now found in many parts of the world. In Great Britain, it is obtained chiefly at Whitby, in Yorkshire, where it is found mixed with fragments of bituminised wood of coniferous trees in the Upper Lias or Alum Shale of that district. Jet is only a peculiar form of pitch-coal, containing about 37½ per cent. of volatile matter, like the Albertite of New Brunswick and some of the cannel coals. It is electrical when rubbed, hence it has been called black amber by the Prussian amber-diggers, when it occurs in sand and gravel beds.

Very large quantities are obtained in France in the department of Aude, where it gives employment to numerous artisans, who form it into rosary beads, crosses, and other trinkets, which are extensively sold in Roman Catholic countries. Spain also supplies fine jet, which, like that of the French workings, is found in irregular veins in the lower marls of the cretaceous series, corresponding with the Sussex gault. The Spanish jet is found at Villaviciosa, in the province of the Asturias, and is principally manufactured at Oviedo. As a material for mourning ornaments, jet is admirably adapted, and for that purpose is used largely in this and other countries.

JETSAM means goods cast into the sea, which sink and remain under water. They belong to the Crown until the owner appear and claim them. See FLOTSAM. The subject is now chiefly important from its effects on the owners, and is treated under the head of Jettison (q. v.).

JETTISON is, in the law of the United Kingdom, the throwing overboard of a ship's cargo, either in whole or in part, in cases of necessity, so as to lighten the vessel in a storm, or to prevent capture, or for other justifiable cause. It is obvious that great discretion is required, so as to judge when the proper time arrives for resorting to this desperate expedient; and in case of part only of the cargo being sacrificed, to select which part. Each case must depend on its own circumstances; and the master of the vessel is the authorised agent so as to bind all parties in such a situation. It often happens that the goods belong to different owners, and therefore, in order to compensate the owner of the particular goods thrown overboard, the doctrine of general average is resorted to. See AVERAGE. In case of a storm, the several persons interested in the ship, freight, and cargo in general contribute rateably to the loss; but there are exceptions when the goods were carried on deck. When the goods sacrificed by jettison have been insured, the insurer has the benefit of this contribution or average *pro tanto*.

JEW, THE WANDERING. The legend of the Wandering Jew, who cannot die, but, as the punishment of his sin, is obliged to wander over the face of the earth till Christ shall pronounce his doom at the last day, seems to have originated in that passage of the gospel of St John (xxi. 22) where Jesus says of John: 'If I will that he tarry till I come, what is that to thee? follow thou me. Then went

this saying abroad among the brethren, that that disciple should not die.' It arose, probably, in the 13th c., when it is first related by Matthew Paris, and may be supposed to indicate the Jewish people, scattered throughout the world, and nowhere finding a home. According to the current legend, the Wandering Jew is Ahasuerus, the shoemaker at Jerusalem, who, when the Saviour wished to rest before his house, on his way to Golgotha, drove him away. Another legend states him to be Pilate's door-keeper, Kartaphilus, who struck Jesus on the back, as he led him out of his master's judgment-hall. So recently as the last century, impostors took advantage of the belief in this legend, and gave themselves out for the Wandering Jew; and people were not wanting who, from time to time, maintained that he had appeared to them under different forms. A popular book relating in detail the history of the Wandering Jew has been repeatedly printed in the German, French, Dutch, and Latin languages. The legend has likewise been frequently worked up in a poetical form, as by A. W. von Schlegel in the romance entitled *Die Warnung*; by Schubert in his poem of *Ahasuer*; by Goethe in *Aus meinem Leben*; by Mrs Norton in *The Undying One* (Lond. 1842); and by Eugène Sue in his *Le Juif errant*. Compare Grässe, *Die Sage vom Ewigen Juden*.

JEWEL (Ital. *gioiello*, from *gioia*, joy), a personal ornament, usually understood to mean a decoration in which one or more precious stones are set. Popularly, there is much confusion between the terms gem and jewel; the former belongs especially to precious stones, and the latter to ornaments formed of the precious metals with or without the aid of gems. The word is derived from the Italian *gioia*, joy, whence *gioiello*, a jewel, such ornaments being indicative of pleasure.

JEWELLERY. The manufacture of jewels has in all times been a test of the artistic powers of a nation; for, being intended only for personal adornment, the genius of the jeweller has been directed to the production of the largest amount of beauty in the most limited space. It is probable that the wearing of ornaments of gold and silver is almost as early as the discovery of those metals. A mere hole drilled through the small pieces of gold or silver, to enable them to be strung round the waist or neck, would be the first stage; then, when the ductility of the metals became known, they would be beaten probably into bands or rings, giving rise to ring-money; these rings, when increased in size, would become torques for the waist, neck, arms, or ankles, labrets for the lips, and rings for the ears and fingers. As refinement increased, these articles would be made more and more ornamental; and the original object, of mere convenience and safety in carrying the much-valued metals, would be lost in the secondary one of personal adornment; the art of the goldsmith would be called into play, and the taste of the nation would be marked by the good or bad designs in demand for this purpose. Jewels being mere articles of luxury and taste, their possession always indicates to a certain extent the wealth of nations, and we are as much impressed with the advanced state of the ancient Egyptians by the nice art and refined taste exhibited in the jewellery found in their tombs, as by the vast architectural works of which they have left so many remains; indeed, modern art, with all its wondrous advances, cannot do more than equal the exquisite workmanship of those elegant golden jewels sent by the late viceroy of Egypt and M. Mariette to the International Exhibition, which were taken from the

tombs of ladies of distinction, whose mummies they were found decorating. There is an essential difference between the jewellery of ancient and modern times. Our goldsmiths depend very much upon the processes of casting, drawing, stamping, and other metallurgical operations, and produce thereby great accuracy of outline and high finish. The ancients wrought by hammering, chasing, and *repoussé*, depending entirely upon the taste and skill of the artist, instead of the perfection of his tools and mechanical arrangements; consequently, their works bear the stamp of artistic productions, whilst modern works, however beautiful, have usually the character of mere manufactures executed with mechanical precision rather than artistic taste; and what they gain in nicety of finish is more than counterbalanced by what is lost in richness of effect. See DIAMOND.

JEWELS, USE OF, IN HERALDRY. By an egregiously absurd and unnecessary complication of nomenclature, introduced by way of adding dignity to the science of Heraldry, the tinctures of the arms of peers have sometimes been designated by the names of precious stones: argent is pearl or crystal; or, topaz; gules, ruby; azure, sapphire; sable, diamond; vert, emerald; and purple, amethyst.

JEWISH LITURGY. See LITURGY.

JEWISH SECTS, a term generally applied (after Josephus) to certain divergent schools which grew up in the midst of Judaism, subsequently to the Syrian wars. So far, however, from forming, as the world would seem to imply, separate communities with places of worship and a religious law of their own, antagonistic to that of their brethren, the disciples of the different 'sects' belonged to the same religious community, adhered to the same practical religious Law, and consequently could not well look upon each other as, in a manner, heretics. The chief points at issue were certain abstract doctrines, in connection with the peculiar manner in which this Law, as far as it is contained in the Scriptures, was interpreted and further developed. While the *Pharisees* (q. v.) claimed for certain time-hallowed observances and doctrines not found in the Bible a divine origin, drawing them back through tradition—orally transmitted from generation to generation—to Moses and the Sinai itself, and while they, by peculiar rules of an exegesis of their own, proved these same doctrines to be often latent, as it were, in the very letters of the Bible—the *Sadducees* (q. v.) rejected the divine origin of the 'oral law,' as well as certain spiritual dogmas not distinctly set forth in the Sacred Record. An advanced or exalted class of Pharisees were the *Essenes* (q. v.), who formed a kind of brotherhood, far away (with only solitary exceptions) from the corruption of cities, chiefly intent upon the exercise of practical virtues, and ruled by a severe code of morals. The tenets of each of these three 'sects' will be found treated separately under the headings indicated.

At a later period, shortly before and after Christ, numerous divergent religious doctrines, for the most part the result of a confused mixture of Judaism and Hellenism, or rather Alexandrianism (see Gnostics), were promulgated, and found adherents both within and without the pale of Judaism. Many and obscure are the names of these 'sects' recorded by the early fathers of the church, but very little is known respecting their history and dogmas. Mention is made of *Hellenians* (Hillelites?), not to be confounded with the large body of the Hellenists (q. v.) and *Meristes* (antagonistic school of Shamai?), *Galileans* (Christianising Jews?), *Herodians* (adherents of the foreign government?), *Gaulanites* (Rabbinists

of exaggerated tendencies?), *Masbotheans* (strict Sabbatarians?), *Hemerobaptists* (Essenes?), &c.

In the 8th Christian c. (761 according to Munk), the Sadducean doctrine of the invalidity of the 'oral law'—a doctrine which had died out after a brief existence—was revived again by Anan ben David, who is supposed to have held a high spiritual office (Resh Gelutha? Gaon?) at Bagdad at the time of Calif Abu Giafar Al-Mansor (754—775 A.D.), and who, rejecting the Talmud and Midrash as the work of man, only allowed such laws and ordinances to be binding upon the community which resulted immediately from a simple and natural Scriptural exegesis. He thus became the founder of the most important sect of the *Karaites*, who, within an astonishingly brief period, spread over Palestine, Egypt, Greece, Barbary, Spain, Syria, Tartary, Byzantium, Fez, Morocco, and even to the ranges of the Atlas. They are now, however, found only in small numbers in Poland, Galicia, Odessa, the Crimea, Constantinople, Jerusalem, and Alexandria. Abrogating the 'rabbinical' traditions, they erected a new traditional system of their own, to be altered and freely developed by each of their successive spiritual heads. Prayer, fasting, pilgrimages to Hebron, are the points of religious practice to which they pay the greatest attention. Their general conduct is even by their antagonists allowed to be of the highest moral standard. They have produced an extensive special Hebrew literature of their own, chiefly consisting of works on theology, philosophy, mathematics, astronomy, &c. The greatest number of these is now found in the Imperial Library at St Petersburg. Some of their principal authors are Anan, Shalmon b. Jeruhim, Joseph b. Noah, Jeshua, Jehudah Hadassi, Aron b. Joseph, Aron b. Elijah, Elijah Beshitzi, Kaleb, Moses Beshizi, Mardochai b. Nissan, &c.

Another rather curious sect, known as the *Sheb-sen*, was that founded by Sabbathai Levi from Smyrna (1625—1677), who proclaimed himself the Messiah, and found numerous followers throughout Germany, Poland, Italy, and Holland. Sultan Mohammed IV., however, put an end to his mission by imprisoning him, and making him adopt Mohammedanism. Many of his disciples followed his example, others turned Roman Catholics—adhering, withal, to their former doctrines and tenets, consisting chiefly of the belief in the Messiahship of their master, a distinct leaning to the dogma of the Trinity, and the abandonment of the hope of a final return to Jerusalem under the guidance of 'Messiah ben David.' They put a thoroughly mystical interpretation upon the Bible, rejected unconditionally the Talmud, and extolled their special Kabbalistic gospel, the Zohar, above all things created. This sect did not die out until the end of the last century, Jakob Frank, their last supreme pontiff (whose more intimate friends and followers called themselves by his name, *Frankists*), dying in a debtor's prison on the Rhine (1791).

We have finally to mention the modern *Chasidim*—not to be confounded with the ancient Chasidim (q. v.)—or *Beshiters* (Baal Shem Tob), a side branch of the former sect, taking its stand like this on the Kabbala, but remaining ostensibly within the province of rabbinical Judaism. They are chiefly remarkable by their wild mode of praying, their supreme contempt for any but mystical and religious science, by their belief in the miracles wrought by their temporary chiefs or saints (*Zaddik Baal Shem*), who rule their community unconditionally, are supposed to be invested with divine powers, and who also cure all their bodily ailments. The grandeur and pomp with which these are surrounded, contrasts most strikingly

with the simple mode of life of their flock. Constant repentance, joyfulness, disinterestedness, benevolence, peacefulness, with intrepidity, cleanliness, and temperance, are some of the chief points of the practical doctrine of this sect. One of the great reproaches, however, brought against them is, that their 'joyfulness' often leads them into transgression; that, in fact, they are rather given to sensuality. They are very numerous in Poland, Galicia, Russia, and Palestine.

The modern 'Reformers,' aiming chiefly at a simplification of the ceremonial, and abrogation of what they consider to be abuses and late additions in the divine worship, cannot well be called a sect—although, for the most part, they have synagogues and prayer-books of their own—since they belong, to all other intents and purposes, to the great body of the Jewish community. As the chief promoters of this movement may be considered Zunz, Geiger, Chorin, Creizenach, Holdheim, Hess, Stern, &c.

JEWS (corrupted from *Yehudim*), the name given, since the Babylonish captivity, to the descendants of the patriarch Abraham, who, about 2000 years B.C., emigrated from Mesopotamia, on the east side of the Euphrates, to Canaan or Palestine. They were originally called HEBREWS (q. v.). Monotheism, or a belief in one God, the practice of circumcision, and the expectation of ultimately possessing the land in which they then sojourned, were the three distinguishing peculiarities transmitted by Abraham to Isaac, and from Isaac to Jacob and his descendants. The picture of patriarchal life presented to us in the book of Genesis is marked by an exquisite beauty and simplicity, and bears traces of a great antiquity. In consequence of a famine in Canaan, Jacob, on the invitation of his son Joseph, who had become chief minister of the king of Egypt, went down thither with all his family, which numbered seventy 'souls,' and obtained from Pharaoh permission to settle in the land of Goshen. Here the Hebrews resided, according to Exod. xii. 40, 430 years; [Bunsen (Exodus) calculates *fourteen* centuries]; according to the genealogical table of the Levites, in Exod. vi. 16—25, however, their sojourn would not have lasted longer than 210 or 215 years; most of the commentators, therefore, take, with Josephus, the 430 years to indicate the period from Abraham to the Exodus (cf. Galat. iii. 17). During the lifetime of Joseph, and probably for some generations afterwards, they were well treated, and prospered; but a new dynasty, supposed by some—with little shew of reason—to have been that of the Hyksos (q. v.) arose, and they were reduced to relentless slavery. A deliverer at length appeared in the person of Moses (q. v.), a man of grave and heroic character, who, though brought up by the daughter of Pharaoh as her son, and trained in all the learning of the Egyptians, was nevertheless filled with an intense and indignant patriotism, that acquired an additional elevation from the ardour of his religious feelings. The circumstances that preceded and characterised the exodus (about 1600 B.C.)—such as the ten plagues and the crossing of the Red Sea—are a source of continual controversy between the Rationalistic and the Supranaturalistic schools of biblical criticism; but the *fact* of an exodus would be disputed only by the wildest scepticism. The entire history of the people is pervaded by the memory of this grand event, upon which, as it were, their whole national existence is based; it inspires their poetry, and consecrates their religion; and the Passover, with all its ceremonials and mementoes, was instituted expressly to remind them of that wondrous night of sudden liberation; while the Feast of Tabernacles was to

recall to the memory of the latest generations the wanderings through the desert; and Pentecost, the act of the legislation on Sinai. Whether, however, in 215, or even in 430 years, the seventy 'souls' could have increased to 600,000 adult men, or, including wives and children, to between 2,000,000 and 3,000,000 souls, is a point to be determined rather by physiologists than by theologians.

The wandering in the wilderness of the Sinaitic peninsula is said to have lasted forty years, though a record of the events of two years only has been preserved. These, however, are obviously the most important, as they contain an elaborate account of the giving of the law (Exod. xix. *et seq.*), which is represented as a direct revelation made to Moses by Jehovah himself, who descended upon Mount Sinai in fire, amid the roar of thunders and the quaking of hills. The antiquity, however, of the priestly or ecclesiastical portions of the Pentateuch is keenly disputed by many modern scholars of the highest reputation, who endeavour to shew the probability of such passages having been composed and inserted subsequent to the great organisation of the priesthood by David; and in proof of this, point, among other evidences, to the Book of Judges (q. v.), which narrates the history of the Hebrews for 300 years after the conquest of Canaan, and which yet contains scarcely a single trace of the existence of a religious institution among them. Yet it is allowed almost on all hands, that the *foundations*, at least, of the Jewish theocracy, and probably also a large part of the superstructure, were the direct work of Moses himself, who indeed appears to have been pre-eminently fitted for the task of a legislator:—not to mention the fact that the ritualism of the Hebrews has many striking points of contact with that of the ancient Egyptians, with which he was well acquainted. This view, of course, does not interfere with the theory of a later composition of the Pentateuch (q. v.), in its present shape and its successive redactions and enlargements. But whatever period be allowed for the sojourn in the desert, the rough nomadic life, the frequent fighting with the fierce Beduin tribes, through whose territories they passed—besides the lofty influences of a stern religion—had transformed the runaway slaves of Egypt, by the time they approached the eastern borders of Canaan, into a nation of high-spirited and irresistible warriors.

Before proceeding further, it behoves us to trace a general outline of the Mosaic legislation. The laws promulgated under the 'Covenant' were, as we said, not entirely new. Many were merely the solemn confirmation of ancient patriarchal tenets, such as the worship of One Supreme Being through sacrifices, prayer, vows; circumcision; the government by heads of tribes and families, &c. Others must have been adaptations of Egyptian institutions. Others, again, owed their existence to the altered circumstances of the community; and it is undeniable that some of the ordinances contained in the Pentateuch were never carried into practice. The fundamental features of the religious as well as political constitution—both closely interwoven with each other—are the following: God is Creator and Lord of the universe. The universe is His own, and to man the use of all created things has been intrusted by His will. God is therefore the King of the people. By the priests He is visibly represented. No man has the right to dispose of his own liberty. The soil is only given to the people for the *usufruct*: man has no further individual right of possession over it. Every seventh year it is to be left to itself. The sale of land is prohibited; and after seven times seven years, every lease and mortgage of it is null and void, and it is to return to the heirs of those

to whom it was originally assigned at the first division of the land.

The office of the Priests (q. v.) was in the hands of the tribe of Levi (q. v.), more especially the descendants of Aaron (q. v.). The Levites assisted in the management of the sanctuary and the holy rites, copied and expounded the Books of the Law, kept the genealogical lists, and had the care of the general instruction of the people. Together with the priests, they had administrative and judicial functions, and they gave their judgment always in the name of God. The High-Priest (q. v.) constituted the highest court, and his was the oracle (Urim and Thummim). Periodical Feasts (q. v.) were instituted, in order that the dependence from the Divine King should always be kept in view by the people. Every seventh day the body should rest from labour (Sabbath), as every seventh year the soil was to rest (Sabbatical year); and every fiftieth (7 × 7) year (Jobel) was the great year of Remission. Three annual feasts, partly of an agricultural, partly of an historical character, were the Passah (q. v.), the Feast of Weeks (q. v.), and the Feast of Tabernacles (q. v.). No less was the first of the seventh month to be kept holy. The tenth of the same month was instituted a day of atonement and forgiveness of sin.

The form of government was at first a theocratical one. The people was divided into 12 tribes, which formed small republics, but were all united under the invisible rule of Jehovah. General national assemblies decided upon war and peace, and the like. Special provisions are also found for the contingency of the election of a king. After the conquest of Palestine, every city had a judge, chosen by the heads of the families and tribes. The punishments were either death, flagellation, or fines. Three Levitical cities were named by Moses as asylums or places of refuge for man-slayers whose guilt was not yet fully established. Every free citizen was bound, from his 20th year, to military service in case of war. To the besieged city, terms of capitulation were first to be offered; were these rejected, the city was to be taken, and the males were to be put to the sword. In all other cases, the virtues of charity, justice, and kindness, even towards animals, are repeatedly impressed upon the people. How far these fundamental rules were either further developed or neglected, we cannot shew in this place.

The 'land of promise' became theirs at last (about 1430 B.C.), under Joshua (q. v.), the successor of Moses. Tribe after tribe was swept from its ancient territory, and for the most part either annihilated or forced to flee. Yet the whole bulk of the native inhabitants was not extirpated or wholly expelled, nor even subdued till a much later period: a circumstance fraught indeed with the most disastrous consequences to the new commonwealth. The country was now divided among the tribes. The magnificent pastoral region to the east of the Jordan had before been chosen by the tribes of Reuben, Gad, and the half-tribe of Manasseh at an earlier period, because they 'had a very great multitude of cattle' (Numb. xxxi. 1); but they now for the first time entered on possession of it. The land west of the Jordan was parcelled out to the remaining—Judah, Simeon, Dan, Benjamin, Ephraim, the second half-tribe of Manasseh, Issachar, Zebulon, Naphtali, and Asher. The tribe of Levi received, instead of a province, 48 cities scattered throughout Canaan and the tenth part of the fruits of the field, and were allowed generally to settle individually throughout the land where they chose (LEVITES, PRIESTS, HIGH-PRIEST).

After the death of Joshua (about 1350 B.C.), the

want of a chief to the young state became sadly palpable. Little regard was paid to the 'Mosaic' institutions; the single tribes pursued their own individual interests; intermarriages with the idolatrous natives weakened the bond of union still further; and the next consequence was, that the tribes were singly subdued by the surrounding nations. At this juncture there arose at intervals valiant men and women—Shofetim—Judges, who liberated the people from their oppressors, the Moabites, Philistines, Ammonites, Amalekites, &c. Fifteen of those are named, some of whom appear to have been contemporary with each other, and to have exercised authority in different parts of the country. This period constitutes the 'heroic' age of Hebrew history. Among these Judges, the prophetess Deborah (q. v.), Gideon (q. v.), Jephthah (q. v.), the herculean Samson (q. v.), and the prophet Samuel (q. v.), are especially notable; the last mentioned was, in every sense of the word, the greatest Hebrew that had as yet appeared since the days of Moses. With him begins a new and higher stage in the development of the national character, chiefly through the instrumentality of the priestly order, whose spiritual, for the most part well-directed and humanising, influence was by him first exalted and most distinctly brought to bear upon the commonwealth. Samuel, the first of the prophets, was also the last of the republican chiefs of the confederate tribes. Worn out by their intestine feuds, harassed by the incursions of their predatory neighbours, chiefly, however, goaded by the characteristic desire 'to be like all the other nations' (1 Sam. viii. 5), the people compelled him, when he had become 'old and gray-headed' (1 Sam. xii. 2)—while the behaviour of his sons, whom he had made judges, unfitted them to be his successors—to choose for them a king (1080 B.C.).

The first who exercised regal authority was Saul (q. v.), the Benjamite. But though a distinguished warrior, and a man of royal presence, he appears not to have possessed the mind of a statesman; and his wilfulness, and the paroxysms of insanity, brought on chiefly, as it would seem, by the openly-expressed dissatisfaction of Samuel, finally alienated from him many of the bravest and best of his subjects. After his death on Mount Gilboa, David (q. v.), his son-in-law, was proclaimed king. This monarch was by far the greatest that ever sat on the throne of Israel. He ruled, as is commonly computed, 1058—1018 B.C. His reign, and that of his equally famous son, Solomon (q. v.), are regarded as the golden time of Hebrew history. The remaining aborigines of Canaan and its borders—viz., the Philistines, Edomites, Amalekites, Moabites, &c.—were thoroughly subdued; the boundaries of the Hebrew kingdom were extended as far as the Euphrates and the Red Sea; Jerusalem was captured by escalade, and made the capital of the conqueror; the priesthood was reorganised on a splendid scale; the arts of poetry, music, and architecture were cultivated; schools of prophecy (first established, probably, by Samuel) began to flourish; a magnificent temple for the worship of Jehovah was built in the capital; and commercial intercourse was carried on with Phœnicia, Arabia, Egypt, with India and Ceylon, and perhaps with even Sumatra, Java, and the Spice Islands. But there was a canker at the root of all this prosperity. The enormous and wasteful expenditure of Solomon forced him to lay heavy taxes on the people. His wealth did not enrich them; it rather made them poorer; and although gifted with transcendent wisdom and the most brilliant mental powers, towards the end of his life he presents the sad spectacle of a common eastern despot, voluptuous, idolatrous,

occasionally even cruel, and his reign (1018—978 B.C.) cannot but be regarded, both politically and financially, as a splendid failure. After his death (978), the Hebrew monarchy, in which the germs of dissension—chiefly jealousy against the influence of Judah—had been silently growing up for many a year, split under Rehoboam into two sections (975 B.C.): the kingdom of Judah, under Rehoboam, son of Solomon; and the kingdom of Israel, under Jeroboam, the Ephraimite. The former of these countries comprised the two tribes of Judah and Benjamin, together, probably, with some Danite and Simeonite cities; the latter, the remaining ten. After 19 kings, of different dynasties, among whom Jeroboam, Ahab, Joram, Jeroboam II., Pekah may be mentioned, had reigned in Israel, few of whom succeeded to the throne otherwise than by the murder of their predecessors, the country was finally conquered by Salmanassar, king of Assyria; its sovereign, Hoshea, thrown into prison; the mass of the people carried away captive (720 B.C.) into the far east, the mountainous regions of Media, and their place supplied by Assyrian colonists, brought from Babylon, Persia, Shushan, Elam, and other places by Asnappar. These, mingling and intermarrying with the remnant of the Israelites, formed the mixed people called Samaritans (q. v.). Among the twenty kings of the House of David who ruled over Judah, Jehoshaphat, Uzziah, Hezekiah, and Josiah distinguished themselves both by their abilities as rulers, and by their zeal for the worship of Jehovah. Yet even they were, for the most part, unable to stay the idolatrous practices of the people, against which the prophets' voices even could not prevail. Other kings were, for the most part, more or less unfaithful themselves to the religion of their fathers, and unable to withstand the power of the Egyptians, Assyrians, and Babylonians, to each of whom they in turn became tributary, until at last Nebuchadnezzar stormed Jerusalem (586 B.C.), plundered and burned the temple, put out the eyes of King Zedekiah, and carried off the most illustrious and wealthy of the inhabitants prisoners to Babylon. The Israelites, who had been exiled 134 years before the inhabitants of Judah, never returned. What became of them has always been, and we presume, will always remain, matter of vaguest speculation. See BABYLONISH CAPTIVITY.

All that we know of the condition of the Hebrews during the captivity, relates exclusively to the inhabitants of the kingdom of Judah. And so mild, especially during the later years, was the treatment which they received in the Babylonian empire, that when liberty was announced to the whole body of the captives, only the lowest of the low returned, together with the Levites and Priests (cf. Talm. Kidd. iv. 1). The Book of Esther likewise bears testimony to the vast numbers that had remained scattered over the vast empire. See BABYLONISH CAPTIVITY.

The influence of this exile, however, was of a most striking and lasting nature. Babylon henceforth became and remained, up to about 1000 A.D., the 'second land of Israel'—in many respects even more highly prized than Palestine. To this brief period of the captivity must be traced many of the most important institutions of the synagogue in its wider sense. Common religious meetings, with prayer, were established; many of the Mosaic laws were re-enforced in their primitive rigour; and the body of the 'oral law' began to shape itself, however rudely, then and there. Besides, there began to grow up and unfold itself the belief in a Messiah, a Deliverer, one who should redeem the people from their bondage. The writer of the last

27 chapters of Isaiah, who is usually called by modern scholars the 'Younger Isaiah,' is held to belong to this period, and expresses in glowing language the hopes of the exiles; no less do many of the Psalms belong to this time. 'From this period, likewise, the immortality of the soul, and the belief in another life, appear more distinctly in the popular creed, in which, if they had existed at all, they had been obscured by the more immediate hopes and apprehensions of temporal rewards and punishments revealed in the law. But in the writings of the Babylonian prophets, in the vision of dry bones in Ezekiel, and in the last chapter of Daniel, these doctrines assume a more important place; and from the later books, which are usually called the Apocrypha, these opinions appear to have entered fully into the general belief. In other respects, particularly in their notions of angels, who now appear under particular names, and forming a sort of hierarchy, Jewish opinions acquired a new and peculiar colouring from their intercourse with the Babylonians' (Dean Milman's *History of the Jews*, Lond. 1829, vol. ii. pp. 13, 14). Compare articles DEMONS and DEVIL.

The exile is generally computed to have lasted seventy years. This is not strictly correct; it lasted seventy years, if reckoned from the appearance of Nebuchadnezzar in Anterior Asia (606), but only fifty-two counting from the destruction of Jerusalem. When Cyrus, the Persian king, had overthrown the Babylonian kingdom (538 B.C.), the condition of the Hebrews improved considerably. The new monarch must have felt that he could rely on them, as being really strangers in the land, and necessarily more or less hostile to their conquerors, the Babylonians. Daniel rose higher and higher in dignity and power, and finally became 'supreme head of the pashas to whom the provinces of the vast Persian empire were committed.' Through his influence, Cyrus was prevailed upon to issue an edict permitting the exiles to return home. A minute account of the circumstances attending this joyous event is given in the Books of Ezra and Nehemiah. Upwards of 40,000 persons, including four of the twenty-four courses of priests, set out under the leadership of Zerubbabel, a descendant of their old kings.

Notwithstanding the many and harassing obstacles raised by the Samaritans, the mixed people of Assyrians and Israelites, against whom the scrupulous exiles entertained strong religious and national objections, the rebuilding of the 'Temple of the Lord' was at last commenced in the first year of Darius, and in the sixth year of his reign it was finally completed. [HAGGAI; ZACHARIAH.] The waste cities were likewise rebuilt and re-peopled. During the long reign of Darius, the J. were blessed with a high degree of material prosperity. Under his successor, Xerxes, probably occurred the incidents recorded in the Book of Esther. In the seventh year of Artaxerxes, the successor of Xerxes, Ezra the priest, invested with high powers, and accompanied with a great retinue of his professional brethren, headed a second migration. Thirteen years later, during the reign of the same monarch, Nehemiah, his cup-bearer, but a man of Jewish family, was ordered to proceed to Jerusalem, and, aided by Ezra and others, succeeded in secretly fortifying the city, notwithstanding the continuous opposition from Samaritans, Ammonites, and Arabians. The strictest observance of the 'written law,' even of those of its parts which had been for some reason or other disregarded, was now rigorously enforced, and many 'oral ordinances' were put into practice, which do not seem to have been much heard of previously. The supreme spiritual authority

was vested in a society of pious and pre-eminently learned men, founded by Ezra, out of which grew the 'Great Synagogue,' of whose existence modern scholars no longer see any reason to doubt. The compilation and transcription of the sacred records began, periodical public readings and expoundings of the law were instituted, and the vast Targumic, as well as the so-called rabbinical literature, generally dates—in its earliest beginnings—from this point. During the life of Nehemiah, the breach between the J. and Samaritans became final, by the erection on Mount Gerizim (near Samaria) of a rival temple to that at Jerusalem, and the creation of a rival priesthood. For more than a hundred years, the J. lived quietly under the Persian yoke, too insignificant to excite any attention from the Greeks, then in the full meridian of their political and literary greatness; and scanty are the accounts which, as yet, have out of the mazes of ancient Jewish literature been brought to light, with respect to the inner intellectual life of the J. during that period. That, although silent, it must have been extremely active and rich, is amply evidenced by the sudden appearance, immediately afterwards, of a vast number of literary productions.

Alexander the Great, on his way to conquer the whole East, did not deem it necessary to storm Jerusalem. The inhabitants submitted, and he even deigned to have sacrifices offered on his behalf to the national god of his new subjects, a great number of whom, and of Samaritans, he carried away to Egypt (where J. were supposed to have immigrated as early as the time of the last kings of Judah, and later under Artaxerxes Ochus), and peopled a third of his newly-founded city Alexandria with his Jewish captives. After him, Ptolemy the son of Lagos, surnamed *Soter*, one of Alexander's generals, who had become king of Egypt, invaded Syria, took Jerusalem (301 B.C.), and carried off 100,000 of its inhabitants, whom he forced to settle chiefly in Alexandria and Cyrene. The Egyptian (Alexandrian) 'Dispersion' (Golah)—destined to be of vastest importance in the development of Judaism and Christianity—gradually spread over the whole country, from the Libyan desert in the north, to the boundaries of Ethiopia in the south, over the Cyrenaica and part of Libya, and along the borders of the African coasts to the Mediterranean. They enjoyed equal rights with their fellow-subjects, both Egyptian and Greek, and were admitted to the highest dignities and offices: so that many further immigrants followed of their own free-will. The free development which was allowed them, enabled them to reach, under Greek auspices, the highest eminence in science and art. In Greek strategy and Greek statesmanship, Greek learning and Greek refinement, they were ready and brilliant disciples; even their artisans and workmen were sent for by distant countries. From the number of Judeo-Greek fragments, historical, didactic, epic, &c. (by Demetrios, Malchos, Eupolemos, Artapan, Aristæos, Jason, Ezechielos, Philo, Theodot, &c.), which have survived, we may easily conclude what an immense literature must have sprung up here within a few centuries in the midst of the Judæo-Egyptian community. To this is owing, likewise, the Greek translation of the Bible, known as the Septuagint (q. v.), which, in its turn, while it estranged the people more and more from the language of their fathers, the Hebrew, gave rise to a vast pseudo-epigraphical and apocryphal literature (Orphica, Sybillines, Pseudophoclea; poems by Linus, Homer, Hesiod; additions to Esther, Ezra, the Maccabees, Book of Wisdom, Baruch, Jeremiah, Susannah, &c.), not to mention the peculiar Græco-Jewish philosophy, which sprang from a mixture of Hellenism and

Orientalism, of which we have spoken at some length in the art. Gnostics.

For a hundred years, Judæa herself remained under Egyptian rule. During the reigns of the first three Ptolemies, Soter, Philadelphus, and Euergetes, it prospered, but after the accession of Ptolemy Philopator, a change for the worse came over the fortunes of the Jews. Their fate became harder still under his son, Antiochus Epiphanes, or Epimanes (the Madman). With every means a cruel and foolhardy policy could devise, this king outraged the religious feelings of the nation, and endeavoured to tear out every root of the sacred creed. At different periods he sent his generals to Jerusalem to pillage and burn, and to force the Jews into the Greek religion. The temple at Jerusalem was finally dedicated to Jupiter Olympius; idol altars were built in every village, and the people forced to offer swine daily. Some yielded, many fled, the greater part preferred martyrdom in some shape or other.

At this juncture the heroic family of Matathia, a priest of the house of the Asmoneans, rose, together with a few patriots, against the immense power of the Syrians. The national cause quickly gathered strength, and after the death of Matathia (166), Judas Maccabæus (q. v.) led the national hosts to victory against the Syrians. After his death (161 B.C.), his brothers Jonathan and Simon completed the work of deliverance, and re-instituted the Sanhedrim (145 B.C.). During their rule, alliances were twice formed with the Romans, and the country once more began to prosper. Under Simon more especially, Syrian rule became a mere shadow: his was an almost absolute power. So much so, that in the year 170 of the Seleucidian era (142 B.C.), a new Jewish era was commenced, and public documents bore date, 'In the first year of Simon, high-priest and chief of the Jews.' Simon's son, John Hyrcanus, after a brief period of vassalage to the Syrians, extended his authority over Samaria, Galilee, and Idumæa—his grand triumph, in the eyes of his countrymen, being the destruction of the Samaritan temple on Mount Gerizim (129 B.C.); but in reality his most surprising success was the subjugation of the Idumæans, and their conversion to the Jewish religion. His son, Aristobulus, added Iturea—a district at the base of the Anti-Libanus—to his dominions, but died, after a short reign, of remorse for the murder of his mother, Salome Alexandra, to whom the secular dominion had been bequeathed by Hyrcanus, but whom Aristobulus had cast into prison, and caused there to die of hunger. The son who succeeded him was Alexander Jannæus. Constantly fighting, and generally beaten, this king yet, strange to say, contrived to enlarge his territories; restless and enterprising as he was cruel and sanguinary, he gave his opponents no rest, and his opponents were all his neighbours in turn, excepting Cleopatra, queen of Egypt. Attached to the Sadducees (q. v.), like his father, and probably something of a pagan, he was disliked by the mass of his countrymen, and a civil war of six years' duration ensued. After a brief period of peace, he died (78 B.C.), recommending, however, his wife, Alexandra, to throw herself into the arms of the very party who had thwarted him all his life, the Pharisees (q. v.), as the best way of retaining her authority. This she did; and governed, on the whole, prudently for nine years. The Pharisaic party, however, abused the power which fell into their hands, and a reaction took place. Aristobulus, youngest son of the queen, and a prince of great spirit, placed himself at the head of the movement, marched to Jerusalem, took possession of the city, and ejected his elder brother, Hyrcanus II., from the sovereignty.

Afterwards, however, the latter, at the instigation of Antipater, the Idumæan, and father of Herod the Great, fled to Aretas, king of Northern Arabia, who was induced, by the promise of a cession of the territory which had been acquired by Alexander Jannæus, to take up arms on his behalf. This led to the interference of the Romans, who were then fighting both in Syria and Armenia. After several vicissitudes, Jerusalem was captured (63 B.C.) by Pompey, who had decided in favour of Hyrcanus, and Judæa made dependent on the Roman province of Syria, and Hyrcanus appointed ethnarch and high-priest. Aristobol, however, with his two sons, Alexander and Antigonus, and two daughters, were carried captive to Rome.

In 54 B.C., Licinius Crassus plundered the temple, which Pompey had piously spared; his ill-gotten gains are said to have amounted to £2,000,000. He fell shortly afterwards in the war against the Parthians, and his companion, Cassius Longinus, succeeded in completely routing Aristobol's army.

Meanwhile, the war between Cæsar and Pompey broke out. In Syria, the partisans of the latter were numerous, and contrived to poison Aristobulus, and execute his son Alexander, who were Cæsareans (49 B.C.). After the death of Pompey, however, things changed; and Hyrcanus, or rather Antipater the Idumæan (who was both his minister and master), saw the necessity of securing the favour of Cæsar. With Hyrcanus II. ended the line of *Asmonean* princes: they exercised (nominally) supreme authority both in the civil and religious affairs of Palestine, i.e., they were both sovereigns and high-priests; but, as we have already indicated, the real religious authority had passed into the hands of the priesthood, and especially of the Sanhedrim (q. v.). The *Idumæan* dynasty, which succeeded the *Asmonean*, virtually commenced with Antipater, who prevailed on Cæsar to restrict Hyrcanus to the high-priesthood, and obtained for himself the office of procurator of Judæa, while his eldest son Phazael was appointed governor of Jerusalem, and his younger son Herod governor of Galilee. The Jewish or national party took the alarm at this sudden increase of Idumæan power; strife ensued; and ultimately Antipater perished by poison; but Herod, by the assistance of the Romans, finally entered Jerusalem in triumph (37 B.C.), caused Antigonus, the last male representative of the *Asmonean* line, and his most dangerous enemy, to be put to death, and commenced the difficult task of governing a people who were growing more and more unruly every day. The political events which occurred during the government of the Herods, are briefly touched upon under the heads *HEROD* (q. v.), *AGRIPPA* (q. v.), and *ANTIPATER* (q. v.).

After Herod's death (3 B.C.), Archelaus, one of his sons, ruled Judæa and Samaria; but his arbitrariness, and still more his constant attacks upon religion, made him hateful to the people; and Augustus, listening to their just complaints, deprived him of his power, and banished him to Vienne (6 A.D.). Judæa was now thrown together with Syria, and was ruled by Roman governors.

In the year 38 A.D., the Emperor Caligula issued an edict ordering divine honours to be paid to himself. Everywhere throughout the Roman dominions the J. refused to obey. At Alexandria, a frightful massacre took place, and for a moment it seemed as if the whole of the inhabitants of Judæa, too, were doomed to perish; but Herod Agrippa I. (q. v.), tetrarch of Northern Palestine, and a friend of Caligula's, dissuaded the emperor from carrying out his barbarous design. About the same time, the Babylonian J. became involved in a quarrel with the Parthians, and were slaughtered in vast

numbers. The accession of Claudius, on the assassination of Caligula, seemed, however, the dawn of a brighter day for them. Herod Agrippa, a loyal friend and favourite of the new emperor, obtained anew the dominion over all the parts once ruled by his grandfather Herod, and many privileges were through his influence granted to his Jewish subjects, and even to foreign Jews. They received the rights of Roman citizenship (41 A. D.), and Herod even tried to conciliate their religious prejudices by the strictness with which he observed their law (a circumstance, we may say, in passing, that will account for his persecution of the Christians); yet the national party remained malcontent, and in an almost permanent state of mutiny. After the death of Herod Agrippa I. (his son being but a youth of seventeen) the country was again subjected to Roman governors. The confusion soon became indescribable. The whole land was overrun with robbers and assassins, some of whom professed to be animated by religious motives (such as the Sicarii), while others were mere ruffianly freebooters and cut-throats; the antipathy between J. and Samaritans waxed fiercer and fiercer, and the latter waylaid and murdered the orthodox Galileans as they went up to worship at Jerusalem; all sorts of impostors, fanatics, and pretenders to magic made their appearance; the priesthood was riven by dissensions; the hatreds between the populace and the Roman soldiery (mostly of Græco-Syrian origin), and under the commands of cruel procurators, such as Albinus and Gessius Florus, increased; frightful portents (according to Josephus) appeared in the heavens, until, in 66 A. D., in spite of all the precautionary efforts taken by Agrippa, the party of Zealots, i.e., the Sicarii or Assassins, burst into open rebellion, which, after a horrible carnage (Josephus calculates the number killed at 1,356,460), was terminated (70 A. D.) by the conquest of Jerusalem by Titus, the destruction of the temple, and the massacre and banishment of hundreds of thousands of the unhappy people, who were scattered among their brethren in all parts of the world. The defence of Jerusalem (as narrated by Josephus) is one of the most magnificent and melancholy examples of mingled heroism and insanity that the world affords. Still, very considerable numbers were allowed to remain in their native country, and for the next thirty years, although both hated and treated with rigour, they appear, on the whole, to have flourished. The Emperor Nerva was as lenient to them as to the rest of his subjects; but as soon as they had attained some measure of political vitality, their turbulent and fanatical spirit broke out anew. Their last attempts to throw off the Roman yoke, at Cyrene (115 A. D.), Cyprus (116 A. D.), Mesopotamia (118 A. D.), and Palestine, under Bar-Cochba (q. v.), (130 A. D.), were defeated after enormous and almost incredible butchery. The suppression of Bar-Cochba's insurrection (135 A. D.) marks the final desolation of Judæa, and the dispersion of its inhabitants. Talmud and Midrash (especially *Midrash Echa*) appear to exhaust even eastern extravagance in describing what followed the capture of Bithur—the great stronghold of the Jews. The whole of Judæa was made like a desert, about 985 towns and villages lay in ashes, 50 fortresses were razed to the ground; the name of Jerusalem itself was changed into *Elia Capitolina*, and a heathen colony settled in the city, from entering which every Jew was strictly debarred. The hardships to which the unfortunate race were subjected, were again alleviated in the reign of Antoninus Pius, whom the Jewish writers represent as secretly attached to their religion (see Jost's *Geschichte der Israeliten*, &c.), and better times seemed in store

for the homeless exiles. Alexander Severus also placed Abraham on the same divine level as he did Christ, and obtained from the grateful people the title of 'Father of the Synagogue.' Heliogabalus, among his many senseless whims, patronised various Jewish practices, such as circumcision and abstinence from swine's flesh; and generally speaking, from the close of the 2d c. till the establishment of Christianity under Constantine (330 A. D.), when their hopes were once more dashed to the ground, the J. of the Roman empire appear to have thriven astonishingly. In this period falls the redaction of the chief code and basis of the 'Oral Law,' the Mishna (q. v.) completed by Jehuda Hanassi (the Prince), or *Hakkadosh* (the Saint), president of the great school at Tiberias (220); upon which code were grafted subsequently the two gigantic commentaries or complements, the Palestinian and the Babylonian Gemaras (q. v.). The Babylonian J. were even more fortunate than their western brethren, though they did not perhaps attain the meridian of their prosperity till the revival of the Persian, on the downfall of the Parthian empire. Their leader was called 'The Prince of the Captivity' (*Resh Gelutha*), and was chosen from among those held to be descended from the House of David. He lived in great splendour, assumed among his own people the style of a monarch (though extremely submissive to the Parthian or Persian ruler), had a bodyguard, counsellors, cup-bearers, &c.; his subjects were, many of them, at least, extremely wealthy, and pursued all sorts of industrial occupations. They were merchants, bankers, artisans, husbandmen, and shepherds; and in particular had the reputation of being the best weavers of the then famous Babylonian garments. In fact, his government was quite an *imperium in imperio*, and possessed a thoroughly sacerdotal or at least theocratic character. The reputation for learning of the Babylonian schools, Nahardea, Sura, and Pumbeditha, was very great. What was their condition at this time further east, we cannot tell, but it seems quite certain that they had obtained a footing in China, if not before the time of Christ, at least during the 1st century. They were first discovered by the Jesuit missionaries of the 17th century. They did not appear ever to have heard of Christ, but they possessed the Book of Ezra, and retained, on the whole, a very decided nationalism of creed and character. From their language, it was inferred that they had come originally from Persia. At one time, they would appear to have been highly honoured in China, and to have held the highest civil and military offices.

Reverting to Europe, the ascendancy of Christianity, as we have already said, was baneful to the Jews. Imperial edicts and ecclesiastical decrees vied with each other in the rigour of their intolerance towards this unhappy people. They were prohibited from making converts, from invoking (in Spain at least) the divine blessing on the country, from marrying Christian women or holding Christian slaves; they were burdened with heavy taxes; yet no persecution apparently could destroy the immortal race. About this time, they are found in large numbers in Illyria, Italy, Spain, Minorca, Gaul, and the Roman towns on the Rhine; they are agriculturists, traders, and artisans; they hold land; their services, in fact, cannot be dispensed with; Constantine, during whose reign a fierce revolution, incited by his co-regent, Gallus, broke out among the Arians and Jews (353), terms them, in a public document, 'that most hateful of all people'; yet in spite of this, they fill important civil and military situations, have special courts of justice, and exercise the influence that springs from the possession

of wealth and knowledge. The brief rule of Julian the Apostate even shed a momentary gleam of splendour over their destinies, and the transport which they manifested on obtaining his permission to rebuild the temple at Jerusalem, is one of the most sublime spectacles in their history. The death of this emperor, however, frustrated their labours, and the rapid increase of ecclesiastical power was, of course, hurtful to them in a variety of ways, although the emperors now began, in the decline of their authority, to protect them as far as they could. In 418 A.D., they were excluded from the military service; and in 429 A.D., the patriarchate at Tiberias was abolished. After the fall of the West Roman empire, their fortunes were different in different countries. In Italy, Sicily, and Sardinia, they were for a time almost unmolested; in the Byzantine empire, they suffered many oppressions; while in the 6th and 7th centuries, the Franks and Spanish Visigoths inflicted on them frightful persecutions.

The sudden volcanic outburst of Mohammedanism in the Arabian peninsula, was at first disastrous to the J. in that part of the world. For several centuries, a Jewish kingdom had existed in the south-west of Arabia. It was called Himyaritis or Homeritis, and was in a flourishing condition 120 years before Christ. About 230 A.D., the Jewish religion even mounted the throne of Yemen. Twice, however (by the Ethiopian kings, Aidog and Ez-Baha), were the Jewish kings driven from it, and the Christian religion was introduced in that part in 530 A.D. At first, Jewish tribes around Mecca and Medina entertained opinions favourable to Mohammed as an Arabian chief, but when Islam began to threaten their own faith, and even existence, they rose in arms against its founder. Mohammed proved the stronger: he subdued the Chaibar tribes in 627 A.D., and the Arabian J. were finally dispossessed of their territories, and removed to Syria. The spread of Mohammedanism through Asiatic Turkey, Persia, Egypt, Africa, and the south of Spain was, nevertheless, on the whole advantageous to the Jews. Excepting accidental persecutions, such as those in Mauritania (790 A.D.) and in Egypt (1010 A.D.), they enjoyed, under the califs and Arabian princes, comparative peace. In Moorish Spain their numbers greatly increased, and they became famous for their learning as well as for trade. They were counsellors, secretaries, astrologers, or physicians to the Moorish rulers; and this period may well be considered the golden age of Jewish literature. Poets, orators, philosophers of highest eminence arose, and not isolated, but in considerable numbers; and it is a well-established fact, that to them is chiefly due—through the Arab medium—the preservation and subsequent spreading of ancient classical literature, more especially philosophy, in Europe. There are some medical works belonging to ancient Greece even now extant only in their Arabic translations, the originals being probably lost for ever. Different from their fate under Moslem rule was that which they had to endure in Christendom about this period. Only few and far between were those Christian monarchs who rose above the barbarism of the churches. About the beginning of the 11th c., the Byzantine emperor, Basil II., renewed the persecution; from quite different causes, the same thing had already begun in Babylonia, where the califate had passed into the hands of rulers hostile to the J.; and before the close of the 11th c., the Prince of the Captivity had perished on the scaffold, the schools were closed, the best of the community had fled to Spain, and those that remained were reduced to an abject condition, from which they have never risen.

In Italy, their position was made tolerable by considerable pecuniary sacrifices. Here and there, at intervals, a spirit of Christian intolerance might break out, but they enjoyed for the most part the protection of the popes.

More favourable was their lot during the 8th and 9th centuries in France, especially in Paris, Lyon, Languedoc, and Provence. At the court of *Louis le Débonnaire*, they were actually all-powerful. After 877 A.D., however, when the weak Carolingians had begun to rule, and the church was advancing with imperious strides, a melancholy change ensued—kings, bishops, feudal barons, and even the municipalities, all joined in a carnival of persecution. From the 11th to the 14th c., their history is a successive series of massacres. All manner of wild stories were circulated against them: it was said that they were wont to steal the host, and to contemptuously stick it through and through; to inveigle Christian children into their houses, and murder them; to poison wells, &c. They were also hated for their excessive usury, though there can be no doubt that more blame is attachable to those whose tyranny, by depriving them of the right to possess land, had compressed their activity into the narrower channels of traffic. Occasionally, however, their debtors, high and low, had recourse to what they called Christian religion as a very easy means of getting rid of their obligations. Thus, Philippe Auguste, under whose rule the Jews seem to have held mortgages of enormous value on the estates of church and state dignitaries, simply confiscated the debts due to them, forced them to surrender the pledges in their possession, seized their goods, and banished them from France; but the decree appears to have taken effect chiefly in the north; yet in less than 20 years, the same proud but wasteful monarch was glad to let them come back and take up their abode in Paris. Louis IX., who was a very pious prince, among other religious acts, cancelled a third of the claims which the J. had against his subjects, 'for the benefit of his soul.' An edict was also issued for the seizure and destruction of their sacred books; and we are told that, at Paris, twenty-four carts filled with copies of the *Talmud*, &c., were consigned to the flames. In the reign of Philippe the Fair, they were again expelled from France (1306 A.D.) with the usual accompaniments of cruelty; but the state of the royal finances rendered it necessary, in little more than a dozen years, to recall them; and they were allowed to enforce payment of the debts due to them, on condition that two-thirds of the whole should be given up to the king! But a religious epidemic, known as the Rising of the Shepherds, having seized the common people in Languedoc and the central regions of France (1321 A.D.), they signalled themselves by horrible massacres of the detested race; so horrible, indeed, that in one place, Verdun, on the Garonne, the J., in the madness of their agony, threw down their children to the Christian mob, from the tower in which they were gathered, hoping, but in vain, to appease the demoniacal fury of their assailants. In the following year, the plague broke out, and the wildest crimes were laid to their charge. One shudders to read of what followed; in whole provinces, every Jew was burned. *At Chinon, a deep ditch was dug, an enormous pile raised, and 160 of both sexes burned together!* Yet Christianity never produced more resolute martyrs; as they sprung into the place of torment, they sang hymns as though they were going to a wedding. Finally, in 1395, they were indefinitely banished from the middle of France.

Their first appearance in England dates from the period of the Saxons. They are mentioned in the

ecclesiastical constitutions of Egbricht, Archbishop of York, 740 A.D.; they are also named in a charter to the monks of Croyland, 833 A.D. William the Conqueror and his son, William Rufus, favoured them; the latter, on the occasion of a public debate between them and the Christians, even swore with humorous profanity, that if the rabbins beat the bishops, 'by the face of St Luke,' he would turn a Jew himself. The same reckless monarch carried his contempt for the religious institutions of his kingdom so far, that he actually farmed out the vacant bishoprics to the J.; and at Oxford, even then a seat of learning, they possessed three halls—Lombard Hall, Moses Hall, and Jacob Hall, where Hebrew was taught to Christians as well as to the youths of their own persuasion. As they grew in wealth, they grew in unpopularity. On the day of the coronation of Richard the Lion Heart (1189 A.D.), some foreign J. being perceived to witness the spectacle, from which their nation had been strictly excluded, a popular commotion against them broke out in London; their houses were pillaged and burned; and though Sir Richard Glanville, the chief-justiciary of the realm, acting under the orders of the indignant king, partially succeeded in arresting the havoc, and even in bringing some of the mob to justice (three were hanged), yet the barbarous bigotry of priests and people prevented anything like just or salutary punishment. Similar scenes were witnessed at Norwich, Edmundsbury, Stamford, and York; in the last of these towns, most of the J. preferred voluntary martyrdom (*Kiddush Hashem*) in the synagogue to forced baptism. When Richard returned from Palestine, their prospects brightened a little; though still treated with great rigour, yet their lives and wealth were protected—for a consideration! John Lackland at first covered them with honour, but the popular and priestly hatred only became the stronger; and on a sudden, the vacillating and unprincipled king turned round on his protégés, after they had accumulated great wealth, and imprisoned, maltreated, and plundered them in all parts of the country. Under Henry III., they were mulcted enormously. Accused of clipping the coin of the realm, they had, as a penalty, to pay into the royal exchequer (1230 A.D.) a third of their movable property. To this reign belongs the now exploded story of the crucifixion of the Christian boy, *Hugh of Lincoln*. The accession of Edward did not mitigate their misery; some efforts, indeed, were made to induce them to give up their profession of usury, as was also done in France and elsewhere during the same period, but the fact is, that they were so heavily taxed by the sovereigns or governments of Christendom, and at the same time debarred from almost every other trade or occupation—partly by special decrees, partly by the vulgar prejudice—that they could not afford to prosecute ordinary avocations. The attempt made by the Dominican friars to convert them, of course, failed utterly; and in 1253, the J.—no longer able to withstand the constant hardships to which they were subjected in person and property—begged of their own accord to be allowed to leave the country. Richard of Cornwall, however, persuaded them to stay. Ultimately, in 1290 A.D., they were driven from the shores of England, pursued by the execrations of the infuriated rabble, and leaving in the hands of the king all their property, debts, obligations, and mortgages. They emigrated for the most part to France and Germany. Their number is estimated at about 16,000.

In Germany, they were looked upon as the special property of the sovereign, who bought and sold them, and were designated his *Kammerknechte*

('chamber-servants'). As already said, they made their appearance in that region almost as early as the time of Constantine. About the 8th c., they are found in all the Rhenish towns; in the 10th c., in Saxony and Bohemia; in the 11th, in Swabia, Franconia, and Vienna; and in the 12th, in Brandenburg and Silesia. The same sort of treatment befell them in the empire as elsewhere; they had to pay all manner of iniquitous taxes—body-tax, capitation-tax, trade-taxes, coronation-tax, and to present a multitude of gifts, to mollify the avarice or supply the necessities of emperors, princes, and barons. A raid against the J. was a favourite pastime of a bankrupt noble in those days. The Crusades kindled a spirit not in Germany only, however, but through all Christendom, hostile to the 'enemies of Christ.' Treves, Metz, Cologne, Mainz, Worms, Spire, Strasbourg, and other cities, were deluged with the blood of the 'unbelievers.' At such epochs, the passions of the populace and of the lower clergy could not be restrained. The word *Hep* (said to be the initials of *Hierosolyma est perdit*, Jerusalem is taken) throughout all the cities of the empire became the signal for massacre, and if an insensate monk sounded it along the streets, it threw the rabble into paroxysms of murderous rage. The J. were expelled—after being plundered and maltreated—from Vienna (1196 A.D.), Mecklenburg (1225 A.D.), Breslau (1226 A.D.), Brandenburg (1243 A.D.), Frankfurt (1241 A.D.), Munich (1285 A.D.), Nürnberg (1390 A.D.), Prague (1391 A.D.), and Ratisbon (1476 A.D.). The 'Black Death,' in particular, occasioned a great and widespread persecution (1348—1350 A.D.). They were murdered and burned by thousands, and many even sought death amidst the conflagrations of their synagogues. The race almost disappeared from Germany; only, however, to return, for their services were indispensable. Only here and there, however, they possessed the rights of citizens, or were allowed to hold unmovable property; in general, they were permitted to prosecute only commerce and usury, and the law turned on them its harshest aspect. Repeatedly, too, the emperors gratified at once their piety and their greed by cancelling their pecuniary claims. In many places, they were compelled to live in certain parts of the town, known as the *Judenstrasse* (Jews' Streets).

Switzerland, whither they came at a comparatively late period, commenced to persecute them about the middle of the 14th century. In the course of the 15th c., they were expelled from Schaffhausen, Zürich, Geneva, Thurgau, and other places.—Their treatment was more humane in Poland and Lithuania. As early as 1264 A.D., they enjoyed in these countries certain important privileges. Favoured by Casimir III., their numbers were swelled, after 1348 A.D., by fugitives from Germany and Switzerland.—Russia and Hungary, like most other countries of Christendom during the middle ages, received, persecuted, and banished them.

In Spain, the condition of the J. was long highly favourable. The horrible persecutions of the Gothic princes in the 6th and 7th centuries, made it, of course, absolutely inevitable that the first gleam of a Moorish scimitar on the coast would turn them into allies of the invaders. During the whole of the brilliant period of Moorish rule in the Peninsula, they enjoyed, indeed, what must have seemed to them, in comparison with their common fate, a sort of Elysian life. They were almost on terms of equality with their Mohammedan masters, rivalled them in civilisation and letters, and probably surpassed them in wealth. The Spanish J. were consequently of a much higher type than their brethren in other parts of Europe. They were not reduced to the one degrading occupation of usury, though

they followed that too; on the contrary, they were husbandmen, landed proprietors, physicians, financial administrators, &c.; they enjoyed special privileges, and had courts of justice for themselves. Nor was this state of things confined to those portions of Spain under the sovereignty of the Moors; the Christian monarchs of the north and middle gradually came to appreciate the value of their services, and we find them for a time protected and encouraged by the rulers of Aragon and Castile. But the extravagance and consequent poverty of the nobles, as well as the increasing power of the priesthood, ultimately brought about a disastrous change. The estates of the nobles and (it is also believed) those attached to the cathedrals and churches, were in many cases mortgaged to the J.; hence it was not difficult for 'conscience' to get up a persecution, when goaded to its 'duty' by the pressure of want and shame. Gradually, the J. were deprived of the privilege of living where they pleased; their rights were diminished, and their taxes augmented. In Seville, Cordova, Toledo, Valencia, Catalonia, and the island of Majorca, outbursts of priestly and popular violence took place (1391—1392 A.D.); immense numbers were murdered, and wholesale theft was perpetrated by the religious rabble. Escape was possible only through flight to Africa, or by accepting baptism at the point of the sword. The number of these enforced converts to Christianity is reckoned at 200,000. The fate of the J. in Spain during the 15th c., however, beggars description. Persecution, violent conversion, massacre, the tortures of the inquisition—we read of nothing but these! Thousands were burned alive. 'In one year, 280 were burned in Seville alone.' Sometimes the popes, and even the nobles shuddered at the fiendish zeal of the inquisitors, and tried to mitigate it, but in vain. At length the hour of final horror came. In 1492 A.D., Ferdinand and Isabella issued an edict for the expulsion, within four months, of all who refused to become Christians, with the strict inhibition to take neither gold nor silver out of the country. The J. offered an enormous sum for its revocation, and for a moment the sovereigns hesitated; but Torquemada, the Dominican inquisitor-general, dared to compare his royal master and mistress to Judas; they shrank from the awful accusation; and the ruin of the most industrious, the most thriving, the most peaceable, and the most learned of their subjects—and consequently of Spain herself—became irremediable. This is perhaps the grandest and most melancholy hour in their modern history. It is considered by themselves as great a calamity as the destruction of Jerusalem. 300,000 (some even give the numbers at 650,000 or 800,000) resolved to abandon the country, which a residence of seven centuries had made almost a second Judea to them. The incidents that marked their departure are heartrending. Almost every land was shut against them. Some, however, ventured into France; others into Italy, Turkey, and Morocco, in the last of which countries they suffered the most frightful privations. Of the 80,000 who obtained an entrance into Portugal on payment of eight gold pennies a head, but only for eight months, to enable them to obtain means of departure to other countries, many lingered after the expiry of the appointed time, and the poorer were sold as slaves. In 1495 A.D., King Emanuel commanded them to quit his territories, but at the same time issued a secret order that all Jewish children under 14 years of age should be torn from their mothers, retained in Portugal, and brought up as Christians. Agony drove the Jewish mothers into madness: they destroyed their children with their own hands, and threw them into wells and rivers, to prevent

them from falling into the hands of their persecutors. The miseries of those who embraced Christianity, but who, for the most part, secretly adhered to their old faith (*Onssim, Anussim*—'yielding to violence, forced ones'), were hardly less dreadful, and it was far on in the 17th c. before persecution ceased. *Autos da Fé* of suspected converts happened as late as 1655 A.D.

The wanderers appear to have met with much better treatment in Italy and Turkey than anywhere else. During the 15th and 16th centuries, they are to be found—except at intervals, when persecution applied its scourge—in almost every city of Italy; pursuing various kinds of traffic (nearly the whole trade of the Levant, for instance, was in their hands), but chiefly engaged in money-lending, in which they rivalled the great Lombard bankers. Abrabanel, perhaps the most eminent Jewish scholar and divine of his day, rose to be confidential adviser to the king of Naples. In Turkey, they were held in higher estimation than the conquered Greeks; the latter were termed *Teshir* (slaves), but the Jews, *Monsaphir* (visitors); they were allowed to re-open their schools, to establish synagogues, and to settle in all the commercial towns of the Levant.

The invention of printing, the revival of learning, and the Reformation, are generally asserted to have been beneficial to the J., but this can be regarded as true only in a certain sense. When the J. began to use the presses at their earliest stage for their own literature, sacred and otherwise, the Emperor Maximilian was urged—chiefly by converts—to order all Hebrew writings to be committed to the flames; and but for the strenuous exertions of Reuchlin (q. v.), ignorance, treachery, and bigotry might have secured a despicable triumph. Luther, in the earlier part of his career, at least, looked with no unfavourable eye on the adoption of violent means for their conversion; and, on the other hand, we find at least one distinguished Roman Catholic, Pope Sextus V., animated by a far more wise and kindly spirit towards them than any Protestant prince of his time. In 1588, he abolished all the persecuting statutes of his predecessors, allowed them to settle and trade in every city of his dominions, to enjoy the free exercise of their religion, and, in respect to the administration of justice and taxation, placed them on a footing with the rest of his subjects. That the Reformation itself had nothing to do with subsequent ameliorations in the condition of the J., is only too plain from the fact, that in many parts of Germany, Protestant as well as Catholic, their lot became actually harder than before. They were driven out of Bavaria (1553 A.D.), out of Brandenburg (1573 A.D.), and similar treatment befell them elsewhere. They also excited numerous popular tumults (as late even as 1730 A.D. in the Protestant city of Hamburg); and, in fact, during the whole of the 17th and the first part of the 18th c., the hardships inflicted on them by the German governments positively became more and more grievous. What really caused the change in their favour was the great uprising of human reason that marked the middle of the 18th century. Among the writers who distinguished themselves in Germany by pleading the cause of the J., we may specially mention Lessing (q. v.), Mendelssohn (q. v.), and Dohm.

Holland, as we know, was one of the first countries in modern times to rise out of the barbarism of the middle ages. Its active, energetic, intelligent inhabitants appreciated the business qualifications of the J., and as early as 1603 A.D., permitted them to settle and trade, though they did not acquire the rights of citizenship till 1796 A.D. In England,

the edict of Edward I. remained in force for more than 300 years; and the first attempt made by the J. to obtain a legal recognition in that country was during the Protectorate of Cromwell in 1655 A.D. Cromwell himself was favourable to their admission; so were the lawyers; but the nation generally, and particularly the emphatically religious portion of it, were strongly hostile to such a proceeding; and the wearisome, controversial jangling of the divines appointed to consider the question, prevented anything from being done till the reign of Charles II., who, standing much and frequently in need of their services, permitted them quietly to settle in the island. In 1723 A.D., they acquired the right to possess land; in 1753 A.D., they obtained the right of naturalisation. Since 1830, civic corporations, since 1833, the profession of advocates, and since 1845, the office of alderman and of lord-mayor, have been opened to them. Recently (1858), the last and crowning triumph of the principle of toleration was achieved by the admission of J. into parliament.

Some of the relics of that mighty host of exiles that left Spain and Portugal found their way into France, where they long lingered in a miserable condition. In 1550 A.D., they were received into Bayonne and Bordeaux; they were also to be found in considerable numbers in Avignon, Lorraine, and Alsace. In 1784, the capitation-tax was abolished. In 1790, while the French Revolution was still in its pristine vigour, and animated by a sincere humanitarianism, the J. presented a petition to the national representatives claiming equal rights as citizens. Mirabeau was among their advocates, and their cause could not, therefore, be unsuccessful. From this time, their technical designation in France has been *Israélites*. In 1806, the Emperor Napoleon summoned a 'Sanhedrim' of J. to meet at Paris, to whom a variety of questions were put, mainly with a view to test their fitness for being French citizens. Their answers were satisfactory, and they were allowed to reorganise their religious institutions in the most elaborate manner. Since then, no material change has taken place in the laws regarding them; and they are since then found not only in the highest offices of the civil administration—very frequently in the ministry (e.g., Crémieux, Gondchaux, Fould)—but they also fill some of the chief places in the army and navy. We may add here, that their surpassing bravery in the field has been the subject of frequent remark, more especially since among the vices with which a brutal prejudice loved to brand them, in spite of all historical evidence, was also that of cowardice.—In Denmark, since 1814 A.D., they have been on a footing of equality as citizens with native Danes.—In Sweden, they did not obtain admission till 1776 A.D., and then only into Stockholm and three other towns. Citizenship is still conferred as a favour.—Norway forbade them to touch its soil till 1860 A.D.—Admitted into Russia Proper by Peter the Great, they were expelled—to the number of 35,000—by the Empress Elizabeth in 1743. Readmitted by the Empress Catharine II., they were further protected by the Emperor Alexander I., who in 1805 and 1809 issued decrees, insuring them full liberty of trade and commerce; but of the liberties which he conferred upon them, they were deprived by the late emperor, Nicholas. Since 1835, a scheme of gradual emancipation has been under contemplation.—Poland, however, has become their principal residence. There they are more numerous than in any other part of the world. They owed their first humane reception in the 14th c. to the love which King Casimir the Great bore for a Jewish mistress. For many years, the

whole trade of the country was in their hands. During the 17th and the greater part of the 18th century, however, they were much persecuted, and sank into a state of great ignorance, and even poverty; but education—in spite of the severity and barbarism of Russian intolerance—has, since the French Revolution, made progress among them.—Frederick the Great, king of Prussia, shewed himself singularly harsh towards the J.; in fact, his legislation, it has been said, almost throws us back into the middle ages. All manner of iniquitous and ridiculous taxes were laid upon them; only a certain number were allowed to reside in the country, and these were prohibited both from the most honourable and the most lucrative employments. This shameful state of matters was ended by the Prussian edict of toleration (1812 A.D.), by which J. were placed almost in an equal position as citizens with other Prussians. Since then, the tendency, on the whole, had been to enlarge their 'liberties'—until the Revolution of 1848 finally gained them their full emancipation, although, owing to the subsequent periods of reaction, it has not as yet been entirely carried out.—In the smaller German states, their full rights have likewise—gradually and grudgingly—been conceded to them at last; and the first German National Assembly held in Frankfurt in 1848 and 1849 contained many prominent Jewish members, among whom was the vice-president, Riesser.—In Austria, the Emperor Joseph II. distinguished himself by passing an act of toleration, 1782 A.D. This act was extraordinarily liberal in its provisions for the Jews. Not till 1860, however (and even then under certain restrictions), did they acquire the right to possess land.—In Hungary and Transylvania, they have long enjoyed important privileges, and have been protected by the nobility. As a consequence, in the late Hungarian insurrection, they were patriotic to a man.—Spain began to tolerate them again in 1837 A.D., and they can follow trade or agriculture like other Spaniards; but few J. have as yet cared to venture back to a land that fills them with the most mournful recollections.—Portugal, where they enjoy no civic rights, has only a few German Jews.—Switzerland long treated them harshly, and only of late years have a few cantons taken a step in the right direction.

In other countries, their condition must be merely referred to. In Turkey, they are very numerous, and have thriven in spite of the exactions of pashas, the insolence of Janizaries, and the miseries of war. Their communities in Constantinople, Adrianople, Saloniki, Smyrna, Aleppo, and Damascus, are considerable; in Palestine, their ancient home, they are said to be rapidly increasing, but they are still, in spite of the many efforts on the part of their European brothers to ameliorate their condition, very poor. Their numbers in Arabia are not very large, yet they enjoy some independence. Those in Persia have sunk into ignorance through oppression, yet it is touching to find that they are not hopeless. 'Heavy,' they say, 'is our slavery; anxiously we wait for redemption.' They exist in Afghanistan, and carry on a trade between Cabul and China; in India and Cochín-China, where they are both agriculturists and artisans; in Surinam, there is a flourishing colony; in Bokhara, where they possess equal rights with the other inhabitants, and are skilled in the manufacture of silks and metals; in Tartary and China, where, however, they are very insignificant both in numbers and position. They are also found all along the North African coast, where, indeed, they have had communities for perhaps more than a thousand years, which were largely reinforced in consequence of the great

Spanish persecutions. They are numerous in Fez and Morocco, though they are not always free from the perils of Mohammedan fanaticism. In Egypt and Nubia, they are few; in Abyssinia, more numerous; and it is ascertained that they have even made their way into the heart of Africa; they exist in Sudan, and are also found further south. America, too, has invited their spirit of enterprise. In the United States, as in Great Britain, they enjoy absolute liberty. They have been in Brazil since 1625, and in Cayenne since 1639, and are also settled in some parts of the West Indies.

The entire number of J. in the world is reckoned variously between $3\frac{1}{2}$ and 15 millions. Taking the former estimate, about 1,700,000 belong to Russian, Austrian, and Prussian Poland; about 600,000 to Germany; about 240,000 to Hungary and Transylvania; about 200,000 to Galicia; about 300,000 to Turkey; about 47,000 to Italy; about 30,000 to Great Britain; Asia, about 138,000; Africa, about 504,000; and America, about 30,000. The whole of Europe is supposed to contain about $2\frac{1}{2}$ millions.

LANGUAGE AND LITERATURE.—*Language.* Among the Semitic family of languages, the Hebrew (called in the Old Testament, the speech of Canaan; in the later portions of the same book, the speech of Judæa; and first in the Chaldee targums, the Sacred Language, or rather the language of the Sanctuary and things connected with it—as the law [Mishna], the prayers, &c.) is one of the oldest, and in regard to strength, refinement, and elaborate completeness of grammatical structure, one of the most remarkable. (Its chief characteristics will be found noticed under SEMITIC LANGUAGES.) Yet it is neither the oldest of Semitic dialects, nor, as was long believed, the first of all human languages. Once identical with the Phœnician, it was adopted by Abraham and his family in Palestine. The peculiar religious and moral notions of the Hebrews could not but impress upon it by degrees a distinct character, and thus Hebrew became a distinct dialect. Although the Sacred writings are the oldest Semitic works which we possess, there is yet, except a few archaisms, hardly any trace of the primitive state of the Hebrew language preserved in them; they belong to periods when it was nearly as fully formed and developed as in the time of the exile. The differences in style, manner, and idiom in the different books, must rather be traced to the individualities of the various writers. In general, we distinguish two distinct periods—the golden age, up to the Babylonian exile, when, except a few Egyptian words, no foreign admixture mars the purity of the language; the second from the exile downwards, when Persian and Aramaic elements had largely been introduced. As we find it in the Bible, the Hebrew is a poor language enough; yet there is a sublime grandeur, and, in the provinces of religion and agriculture, also a richness inherent in it which surpasses almost every ancient and modern language. It is hardly to be presumed, in the absence of distinct traces, that there should have been, within the small compass of Palestine, room for several dialects. The different pronunciation of the *Shin* alluded to in Judges xii. must have been only a solitary peculiarity of the Ephraimites, as, at a later period, the Galileans, and also the inhabitants of Jerusalem, were known for their faulty pronunciation, as shewn in several passages of the New Testament and the Talmud. The Hebrew character still universally employed in writing, and called *square*, Assyrian or Babylonian character, first takes the place, at an uncertain period after the exile, of the older national alphabetic character, which was common

in the age of Moses, and in any case was similar to the old Phœnician.

A grammatical treatment of Hebrew first commenced after the language ceased to be spoken by the people. The vocalisation and accentuation of the text originated in the 6th and 7th centuries after the time of Christ (see MASORA). The J. made the first attempt at a system of grammar about the dawn of the 10th c., after the example of the Arabians, and originally even in the Arabian language. Rabbi Saadia Gaon (died 942 A.D.), Jehuda Chajug (*circa* 1050 A.D.), Abraham-ben-Esra (*circa* 1150 A.D.), and David Kimchi (*circa* 1190–1200) are held in classic repute as grammarians. The Hebrew dictionary of the latter was long considered the best that had been executed. The founder of the study of Hebrew among Christians was the famous Johann Reuchlin (died 1522 A.D.), who, however, like the grammarians of the next age, Buxtorf and others, strictly adhered to the Jewish tradition and method. A new era began when the study of the other members of the Semitic family of languages, the Syriac, the Arabic, and the Ethiopic, enlarged the Hebraist's field of view; the heralds of this era were the German scholars, Alb. Schultens (died 1750) and Nik. W. Schröder (died 1798), who sought to remedy the one-sided defective method into which the so-called Dutch school fell by its too exclusive regard for Arabic. Gesenius, especially, along with a comprehensive and due consideration of all the allied languages, devoted his attention to the critical observation and exposition of the individual grammatical facts, and a more just and harmonious explanation of them. Since then, Ewald (q. v.), who treats the Hebrew language as an organism after the historico-genetic method, has carried the study still further, and in some measure superseded Gesenius. Ewald's *Grammatik der Hebr. Sprache* (Leip. 1844); Gesenius, *Hebräische Grammatik* (Leip. 1813), the 16th edition by Rödiger (Leip. 1851); are the best known grammars. The most comprehensive Hebrew dictionary is that by Gesenius, entitled *Thesaurus Lingvæ Hebræicæ* (Leip. 1829–1842); the best of the smaller lexicons are Gesenius's *Hebr. und Chald. Handwörterbuch über das Alte Testament* (2 vols. Leip. 1810–1812; 4th ed. 1834); Winer's *Lexicon Manuale Hebræicum et Chaldaicum* (Leip. 1828); and Fürst's *Hebr. und Chald. Handwörterbuch* (Leip. 1857–1861).

Literature.—The extraordinary influence which the religion of the Hebrews has exercised on Christian and Mohammedan nations, has given a universal significance to their ancient literature. In antiquity and credibility, in the religiousness of its form and the vigour of its poetry, it surpasses the literature of any other pre-Christian people, and thus constitutes both the most remarkable monument and the most authentic source of the early history and spiritual development of the human race. It is true, however, that only a comparatively scanty portion of it has come down to the present day, and even the contents of what is extant have by no means remained unaltered in the lapse of ages. It is quite certain that the Hebrews, in the earliest times, only engraved or cut out on stone, metal, or wood what is said to have been executed *in writing*; nor is there any trace of a material adapted for the record of lengthened compositions before the period of David, and even then the writing of books was still a matter of rare occurrence. Besides, several writings of the Hebrews, held to be of ancient date, are believed to betray a later origin than is assigned to them by their contents, their mode of representation, and the character of the language; so that, in truth, we possess nothing which, in its original shape, reaches further back than the

above-mentioned age. Such being the case, we must recognise not only the internal arrangement, but a good deal also of the contents of the Hebrew writings, as a later elaboration. That criticism has discovered, as it believes, here and there traces of much later hands than those to whom tradition ascribes the authorship of the particular works, does not necessarily always throw discredit on the incidents narrated, nor destroy the value of that peculiar spirit by which they are characterised.

The composition of the extant works in *Hebrew Literature* proper would, on this view, extend over a period of nearly 900 years—viz., from the times of David to those of the Maccabees. This period was preceded by a preparatory one of sagas, songs, fragmentary historical notices, inscriptions, laws, and probably also priestly registers. The nature and contents of the particular writings are determined by the changing fortunes of the people, who were at first strong and flourishing; then disrupted and weakened; then held in subjection by Assyrian, Egyptian, Babylonian, Persian, Greek, and Syrian rulers; and, finally, once more independent under native princes. Nevertheless, the prevalent idea—the basis, so to speak, of the whole Hebrew literature, looked at from the merely human point of view—is a passionate enthusiasm for independence, and for the preservation of a nationality founded on their law and history; hence its patriotism is of a profoundly religious character. The law and the doctrine are the ‘word of God,’ the Hebrews are the ‘people of God,’ his ‘chosen people;’ their fortunes are, in quite a special sense, ‘providences;’ and their poetry has God or the nation for its constant theme. In a certain sense, therefore, as we might expect, all the productions of the Hebrew muse shew a marked similarity to each other; still they can be arranged, according to form and contents, under the five heads—law, prophecy, history, lyric poetry, and speculation. (For a special account of these, see the articles on the separate books of the Old Testament; also *BIBLE, PENTATEUCH, &c.*) The same epoch in which took place the transition from Hebraism to Judaism—the epoch of the captivity—was also that which marked the commencement of *Jewish literature*, properly so called. Founded on the earlier and more creative Hebrew, and for the most part written in the same language, it is yet qualified by the presence of religious conceptions borrowed from the Persians, of Greek wisdom, Roman law, and, at a later period, of Arabic poetry and philosophy, and of European science; though everything is strictly subordinated to the great ideas of the ancient faith. Since the return from exile, the Jewish—also, but erroneously, called the *Rabbinical*—literature has, without the slightest external encouragement, actively taken part in the cultivation of the human mind; and in the results of this activity, which are still far from being duly appreciated, there lie concealed the richest treasures of centuries. Jewish literature has been divided chronologically into nine periods.

The *first* period extends to 143 B.C. After the return from exile, the Jewish people naturally enough became animated by an intense nationality of feeling: they had nearly lost name, country, life; and now that these were restored again, they strenuously resolved never more to place them in jeopardy. Guided by Ezra, the intellect of the nation began to exhibit surpassing reverence for the Pentateuch and the Prophets. Expositions and additions to the earlier history (*Midrashim*), as well as Greek translations, were executed, and several of the Hagiographa—such as particular psalms, the so-called Proverbs of Solomon, Ecclesiastes, the Books of Chronicles, portions of Ezra and Nehemiah

—were written. To this period also, if to any, must belong the uncertain performances of the *Great Synagogue* (q. v.), a body the existence of which has, as indicated above, been doubted by some early critics, but which is now established beyond any doubt. To this the work of completing the canon of the Old Testament is chiefly ascribed. Towards its close (190—170 B.C.), several writers appear *in propria persona*, as, for instance, Sirach and Aristobulus. The doctors of whom the Great Synagogue chiefly consisted were called *Soferim* (Scribes), and the Aramaic finally became the popular dialect of Palestine.

The *second* period extends from 143 B.C. to 135 A.D. The *Midrash* (q. v.), or the inquiry into the meaning of the sacred writings, was divided into *Halacha* (q. v.) and *Hagada*: the former considered the improvement of the law, with a view to practical results; the latter, the essence of the religious and historical interpretations. At first, both were the oral deliverances of the Soferim, but gradually written memorials made their appearance. The public interpretation of the Scripture in schools and synagogues, the independence of the sanhedrim, the strife of sects, and the influences of Alexandrian culture, furthered this development. To this period also belong various Greek, but not, as is still erroneously supposed by some, the *unwritten* Targums or Aramaic Versions of the Bible (see *TARGUMS*), which sprang at a much later period from oral translations of the Pentateuch in the synagogues instituted after the return from the exile; further the whole of the Apocrypha (q. v.), and the earliest Christian writings, which are at least the productions of men nurtured in the principles of Judaism, and which contain many traces of Judaistic culture, feeling, and faith. It was also characterised by the drawing up of prayers, scriptural expositions, songs, and collections of proverbs. The poet (not the prophet) Ezekiel, the author of the first book of the Maccabees, Jason, Josephus, Philo, Johannes (see above), are names specially worthy of mention; so also are the doctors of the oral law—Hillel (q. v.), Shammai, Jochanan-ben-Saccas, Gamaliel, Eleazar-ben-Hyrcan, Joshua-ben-Chananja, Ishmael, Akiba, and others of like eminence. *Rabbi* (Master), *Talmid* (*Chacham* (Disciple of Wisdom), were titles of honour given to those expert in a knowledge of the law. Besides the Maccabean coins, Greek and Latin inscriptions belonging to this period are extant.

The *third* period reaches from 135 to 475 A.D. Instruction in the Halacha and Hagada now became the principal employment of the flourishing schools in Galilee, Syria, Rome, and since 219 A.D., in Babylonia; the most distinguished men were the masters of the *Mishna* (q. v.) and the *Talmud* (q. v.)—viz., Eleazar-ben-Jacob, Jehuda, Jose, Meir, Simeon-ben-Jochai, Jehuda the Holy, Nathan, Chija, Rab, Samuel, Jochanan, Hunna, Rabba, Rava, Papa, Ashe, and Abina. Besides expositions, additions to Sirach, ethical treatises, stories, fables, and history were also composed; the prayers were enriched, the Targum to the Pentateuch and the Prophets completed, and the calendar fixed by Hillel the second, 340 A.D. After the suppression of the academies in Palestine, those of Persia—viz., at Sura, Pumbeditha, and Nehardea—became the centre of Jewish literary activity. On Sabbaths and festal days, the people heard, in the schools and places for prayer, instructive and edifying discourses. Of the biblical literature of the Greek J., we have only fragments, such as those of the versions of Aquila and Symmachus. With this period terminates the age of direct tradition.

The *fourth* period (from 475 to 740 A.D.). By this time, the J. had long abandoned the use of

Hebrew, and instead had adopted the language of whatever country they happened to dwell in. During the 6th c. the Babylonian Talmud was concluded, the Palestinian Talmud having been redacted about a hundred years before. Little remains of the labours of the Jewish physicians of the 7th c., or of the first *Geonim* or presidents of the Babylonian schools, who first appear 589 A.D. On the other hand, from the 6th to the 8th centuries, the Masora was developed in Palestine (at Tiberias); and, besides a collection of the earlier Haggadas (e.g., *Bereshith rabba*), independent commentaries were likewise executed, as the *Pesikta*, the *Pirke of Eliezer* (700 A.D.), &c. See MIDRASH; HAGGADA.

In the fifth period (from 740 to 1040 A.D.), the Arabs, energetic, brilliant, and victorious in literature as in war, had appropriated to themselves the learning of Hindus, Persians, and Greeks, and thus excited the emulation of the oriental J., among whom now sprung up physicians, astronomers, grammarians, commentators, and chroniclers. Religious and historical Haggadas, books of morality, and expositions of the Talmud, were likewise composed. The oldest Talmudic compends belong to the age of Anan (*circa* 750 A.D.), the earliest writer of the Karaites Jews. The oldest prayer-book was drawn up about 880 A.D.; and the first Talmudic Dictionary about 900 A.D. The most illustrious *Geonim* of a later time were Saadia (died 941 A.D.), equally famous as a commentator and translator of Scripture into Arabic, a doctor of law, a grammarian, theologian, and poet; Scherira (died 998), and his son Hai (died 1038), who was the author, among other things, of a Dictionary. From Palestine came the completion of the Masora and of the vowel-system; numerous *Midrashim*, the Hagiographical Targums, and the first writings on theological cosmogony, were also executed there. From the 9th to the 11th c., Kairwan and Fez, in Africa, produced several celebrated Jewish doctors and authors. Learned rabbins are likewise found in Italy after the 8th c.—e.g., Julius in Pavia, &c. Bari and Otranto were at this time the great seats of Jewish learning in Italy. After the suppression of the Babylonian academies (1040), Spain became the central seat of Jewish literature. To this period belong the oldest Hebrew codices, which go back to the 9th century. Hebrew rhyme is a product of the 8th, and modern Hebrew prosody of the 10th century.

The sixth period (from 1040 to 1204 A.D.) is the most splendid era of Jewish medieval literature. The Spanish J. busied themselves about theology, exegetics, grammar, poetry, the science of law, astronomy, mathematics, philosophy, rhetoric, and medicine. They wrote sermons, and ethical and historical works. The languages employed were Arabic, Rabbinical Hebrew, and ancient or classical Hebrew. We can only mention here the great doctor, Samuel Halevi (died 1055), &c.; and lastly, the renowned *Maimonides* (q. v.), whose death closes this epoch. The literature of the French rabbins was more national in its character, and kept more strictly within the limits of the Halacha and Haggada. In Provence, which combined the literary characteristics of France and Spain, there were celebrated Jewish academies at Lunel, Narbonne, and Nîmes, and we find Talmudists, such as Berachja Halevi, Abraham-ben-David, &c. The fame of the Talmudists of Germany, especially those of Mayence and Ratisbon, was very great. Among the most illustrious Jewish writers of this period, belonging to that country, are Simeon, the compiler of *Yalkut*, Joseph Kara, Petachja, &c. Only a few names belong to Greece and Asia; still the Karaites J. had a very able writer in Juda Hadassi (1148).

The greatest part of the Feast Day prayers was completed before Maimonides. Many of the works, however, produced between 740 and the close of this period are lost.

The seventh period (from 1204 to 1492 A.D.) bears manifest traces of the influence exercised by Maimonides. Literary activity shewed itself partly in the sphere of theologico-exegetic philosophy, partly in the elaboration of the national law. With the growth of a religious mysticism, there also sprung up a war of opinions between Talmudists, Philosophers, and Cabbalists. The most celebrated J. of this period lived in Spain; later, in Portugal, Provence, and Italy. To Spain belongs (in the 13th c.) the poet Jehuda Charisi, &c. In the 15th c., a decline is noticeable. Books written in Hebrew were first printed in Spain at Ixar in Aragon (1485), at Zamora (1487), and at Lisbon (1489).—During this epoch, the chief ornaments of Jewish literature in Provence were Moses-ben-Abraham, David Kimchi, Jeruham, Farissol, Isaac Nathan, the author of the Hebrew Concordance.—In Italy, Jewish scholars employed themselves with the translation of Arabic and Latin works. Works of an æsthetic character were written by Immanuel-ben-Solomon, the author of the first Hebrew sonnets; Moses de Rieti, who wrote a Hebrew *Divina Commedia*, &c.—While France could shew only a few notable authors, such as the collectors of the Tosafot, Moses de Coucy, and Jehiel-ben-Joseph, the poet and exegete Berachja, Germany produced a multitude of writers on the law, such as Eleazar Halevi, Meyer from Rothenburg, Asher, Isserlin, Lippmann. The most of the extant Hebrew MSS. belong to this period; but a great part of mediæval Jewish literature lies unprinted in Rome, Florence, Parma, Turin, Paris, Oxford, Leyden, Vienna, and Munich.

The eighth period (1492 to 1755 A.D.) is not marked by much creative or spiritual force among the Jews. In Italy and the East (1492), in Germany and Poland (1550), in Holland (1620), Jewish scholars worked printing-presses, while numerous authors wrote in Hebrew, Latin, Spanish, Portuguese, Italian, and Judæo-German. Some of the most eminent theologians, philosophers, jurists, historians, mathematicians, poets, commentators, lexicographers, grammarians, &c., of this period were Isaac Abravanel, Elia Misrach, I. Arama, J. Chabib, Elia Levita, Obadio Seferno, Joseph Cohen, Gedaliah Jahia, Sal. Usque, Asaria de Rossi, David de Pomi, David Gans, Isaac Troki, I. Luria, J. Karo, M. Alshech, M. Jafe, J. Heller, J. Aboab, Manasse b. Israel, Dav. Conforte, Leo de Modena, B. Musaphia, J. Eybeschütz, D. Oppenheimer, J. Emden, M. C. Luzzatto, &c.

The ninth period extends from 1755 A.D. to the present time. Encouraged by the spirit of the 18th c., Moses Mendelssohn (q. v.) opened, to his co-religionists, a new era, which, as in the middle ages, first manifested itself in the national literature. Its character, contents, expression, and even its phraseology, were changed. Poetry, language, philology, criticism, education, history, and literature have been earnestly cultivated. The sacred books have been translated by them into the languages of modern Europe, and foreign works into Hebrew; and many of this once proscribed and detested race have taken an important part in the public and scientific life of Europe. Among the many illustrious names of this last period we can select only a few, like Ezechiel Landau, Elia Wilna, J. Berlin, Mendelssohn, Maimon, Bendavid, Mendez, Beer, Euchel, Bense, S. Dubno, Creizenach, Zunz, Jost, Geiger, Rappoport, Dukes, Zedner, Fürst, Sachs, Steinschneider, Munk, Salvador, Reggio, &c.

—chiefly cultivators of literature, with reference to their own creed and nationality.

To enumerate names of those who were and are illustrious in general literature, in law, philosophy, medicine, philology, mathematics, belles lettres, &c., we cannot even attempt, since there is not one country in Europe which does not count J. among the foremost and most brilliant representatives of its intellectual progress. Of Germany—considered to be in the vanguard of European learning—Bunsen says that the greater part of the professors at its universities and academies are Jews or of Jewish origin (Neander, Gans, Benary, Weil, Benfey, Stahl, Dernberg, Valentin, Lazarus, Herz, &c., &c.)—certainly a most startling fact. Another extraordinary and well-authenticated fact is, that the European press, no less than European finance, which means the freest development of all the resources of soil and science for the gigantic enterprises of our day, are to a great extent in their power; while, on the other hand, names like Heinrich Heine, B. Börne, R. v. Ense, Berthold Auerbach, Henrik Herz, Jules Janin; Felix Mendelssohn-Bartholdy, Halévy, Meyerbeer, Moscheles, Joachim, Ernst, Rubinstein, Wieniawski, Grisi, Braham, Giuglini, Czillag, Costa; Rachel, Davison, Rott, Dessoir; Bendemann, &c.; besides hosts of others less familiar to English ears, who shine in all branches of art: music, sculpture, painting, the drama, &c., shew plainly how unjust is the reproach of their being an 'abstract' people, without sense for the bright side of life and the arts that embellish it. Briefly—they are, by the unanimous verdict of the historians and philosophers of our times, reckoned among the chief promoters of the development of humanity and civilisation. What has been their reward we have seen. Terrible has been the punishment for sins and shortcomings, real or imaginary, over which both Christians and Mohammedans have thought good, at different periods, to constitute themselves judges; and the most hideous spot in the history of the last 2000 years is the systematical but futile endeavour to sweep the 'chosen race' from off the face of the earth. 'If there is a gradation in sufferings, Israel has reached the highest acme; if the long duration of sufferings, and the patience with which they are borne, ennobles, the Jews defy the high-born of all countries; if a literature is called rich which contains a few classical dramas, what place deserves a tragedy lasting a millennium and a half, composed and enacted by the heroes themselves?' With these grand words of Zunz (*Synagogue Poesie*) we conclude our brief sketch: proudly pointing to the final triumph of humanity which belongs to our own day and generation.

JEWS, in point of law, are now, if natural-born subjects, on nearly the same footing as English subjects, the following peculiarities only being noticeable. By the 8 and 9 Vict. c. 52, they were allowed to hold offices in municipal corporations, on condition of signing a declaration (in place of the usual oaths) not to exercise their influence so as to injure or weaken the Protestant Church. By the statute 9 and 10 Vict. c. 59, they were placed, as regards their schools and places of worship, of education and charities, on the same footing as Protestant dissenters. Before 1845, doubts had prevailed whether the marriages previously celebrated in England among the J., according to their own usages, were valid, and the statute 10 and 11 Vict. c. 59 put an end to such doubts, by declaring all such marriages valid, provided both the parties married had been persons professing the Jewish religion. But now, as then, though it is competent for J., like other dissenters, to superadd any

religious ceremony they please to their marriages, there must in all cases be notice given to the registrar of the district of such marriage being about to take place, the only exemption being that the marriage may be celebrated in the synagogue, and not, as in the ordinary case, in the superintendent registrar's office, or a registered building. A licence may also be procured from the superintendent registrar, and the secretaries of the respective synagogues are recognised as the persons to keep the register books of the Jewish marriages. In Scotland, there is no peculiar legislation affecting Jewish marriages. Lastly, by the statute 21 and 22 Vict. c. 48, s. 5, which substituted one oath for the oaths of allegiance, supremacy, and abjuration, an extension of the 8 and 9 Vict. c. 52 was made, to suit the case of the J. in all cases where the declaration set forth by 9 Geo. IV. c. 17 requires to be taken. The result is, that not merely as regards municipal offices, but all other offices where the same declaration is required, a Jewish subject is entitled to be admitted on making the declaration substituted by 8 and 9 Vict. c. 52. Moreover, the complete emancipation of the J. may be said to have been attained by the statute 21 and 22 Vict. c. 49, which enables either House of Parliament, when a Jew would be entitled, but for the oath of allegiance, to sit and vote in the House, to modify that oath by omitting the words, 'and I make this declaration upon the true faith of a Christian.' When these words are omitted, a Jew has no longer any conscientious objection to take the oath, and so is practically admitted, like other subjects, to become a member of either House of Parliament. It is, however, still in the discretion of either House to refuse to make the resolution to omit those words, so that J. have not an absolute right to admission, though practically it is not likely that the admission will in future be refused, at least by the House of Commons. The same act specially excludes J. from holding or exercising the office of guardians and justices of the United Kingdom, or of Regent of the United Kingdom, or of Lord High Chancellor, Lord Keeper or Lord Commissioner of the Great Seal of Great Britain or Ireland, or the office of Lord Lieutenant or deputy, or other chief governor or governors of Ireland, or Her Majesty's High Commissioner to the General Assembly of the Church of Scotland. Whenever a Jew holds any office in the gift of Her Majesty, to which office shall belong any right of presentation to any ecclesiastical benefice, such right of presentation shall devolve upon the Archbishop of Canterbury for the time being.

JEWS-HARP (Fr. *jeu*, a toy?), a very simple musical instrument, made of metal. When played on, it is held between the teeth, and the sound is produced by the inhaling and ejecting of the air from the lungs, while at the same time an elastic tongue or spring, which is fixed in the middle of the frame, is set into vibration by being twitched by the finger. It is a pretty old invention, and is mentioned by Prætorius in his *Organographia*, in 1619, under the name of *Crembalum*. The best Jews-harps are made in Riva, a town in the Italian Tyrol. The first performer of any celebrity on the Jews-harp was a Prussian soldier, under Frederick the Great, called Koch. In modern times, Kunert, Amstein, and others, were famous for using a variety of harps, all differently tuned; and their performances were so wonderful, that, like other artists, they travelled over Europe, and appeared at public concerts with great success.

JEWS' MALLOW. See CORCHORUS.

JEWS' THORN. See JUJUBE and PALIURUS.

JEYPOO'R, capital of the protected state of the same name, and perhaps the handsomest and most

regularly built of the native towns of India, stands about 850 miles to the north-west of Calcutta, in lat. $26^{\circ} 56' N.$, and long. $75^{\circ} 55' E.$ The place is a rectangle of two miles by one, being subdivided by parallel streets in both directions into small rectangular blocks, the palace and gardens occupying the centre. Besides numerous temples and mosques, there are an arsenal and an observatory.—The state of Jeypoor is situated in Rajpootana, contains 15,251 square miles, and nearly 2,000,000 inhabitants.

JHA'NSI, a fortified town in Bundelcund, stands in lat. $25^{\circ} 28' N.$, and long. $78^{\circ} 38' E.$ It carries on a considerable trade, being on the main route between the Deccan and the Doab. During the revolt of 1857, the native garrison murdered all the Europeans, men, women, and children, not leaving one to tell the tale. In the following April, the place was recovered, with enormous loss on the part of the insurgents, by a detachment of the Bombay army under Sir Hugh Rose.—The state of Jhansi has an area of about 2500 square miles, and a pop. of 200,000.

JHE'LUM, the ancient Hydaspes, one of the rivers of the Punjab. It rises in Cashmere, which forms its upper basin, and is navigable within that country for about 70 miles. On emerging from the Himalaya through the Baramula Pass, it again becomes practicable for small craft. After a course of 490 miles, it joins the Chenab, in lat. $31^{\circ} 10' N.$, long. $72^{\circ} 9' E.$, and forms with it what is sometimes called the Trimah or Trimab. The banks of this river were the scene of the battle between Alexander the Great and Porus. The river waters the towns of Islamabad, Shahabad, Srinagur, Jelalpur, and Pind Dadun Khan.

JIB, a triangular sail borne in front of the foremast in all vessels. It has the bowsprit for a base in schooners and vessels of a smaller class, and the jib-boom in larger vessels, and exerts an important

Jib :

- 1, fore-topmast staysail, set on fore-topmast stay; 2, jib; 3, flying jib; 4, bowsprit; 5, jib-boom; 6, flying jib-boom; 7, martingale, or dolphin-striker; 8, fore-course.

effect, when the wind is a-beam, in throwing the ship's head to leeward. The flying jib has the flying jib-boom for a base. When a fore-course is not used, an additional jib-shaped sail, called the foresail, is spread on the fore-stay.

JIB-BOOM, an extension of the bowsprit of a ship towards the front, running out beyond it, by a cap and irons, as does the topmast above the lower-mast. It gives greater spread for jib-sails, and a more extended base for the top-gallant-mast-stay. In large vessels, a flying jib-boom is run out in a similar manner beyond the jib-boom.

JIBING. See GYBING.

J'IDDAH, or **JEDDAH**, a trading town of the Hedjaz, Arabia, is situated on an eminence rising from the eastern shore of the Red Sea, about 60 miles west of Mecca, of which city it is the port. J. is an unhealthy town; it suffers greatly from want of water, and is surrounded by a desert. It has, however, long been the great commercial centre of Arabia. It imports corn, rice, butter, and other natural productions from Egypt and Abyssinia, manufactures from India, and slaves from the Malay Archipelago. Coffee is largely exported. It is inhabited by a fanatical population, and its religious enthusiasm is never allowed to wane, owing to the numbers of pilgrims to Mecca who are constantly pouring through it. On the 15th June 1858, the inhabitants rose against the Christians resident among them, and massacred a considerable number of them. In August of the same year, the town was bombarded by the British, and satisfaction rendered. The population fluctuates between 10,000 and 20,000 and upwards.

JIG. See GIGG.

JIGGER. See CHIGOE.

JIGGER, on board ship, an apparatus consisting of a strong rope with a block at one end, and a sheave at the other, used in maintaining the tension of—or, technically, in 'holding on' to—the cable as it is thrown off from the capstan or windlass, round which it only takes two or three turns.

JIHUN. See OXUS.

JI'NA. See JAINAS.

JITOMI'R, chief town of the government of Volhynia, in European Russia, is situated on the river Teterev, an affluent of the Dnieper, in lat. $50^{\circ} 15' N.$, long. $28^{\circ} 40' E.$; distance from St Petersburg, 802 miles; pop. in 1858, 33,717. Its foundation is traced back as far as the 10th c., and it was at one time an important stronghold against the invasions of the Cossacks. In 1642, it was nearly destroyed by the Cossack chief Khmelnitzky. In 1793, it was annexed to the Russian empire, as chief town of the government of Volhynia. The town carries on a trade in leather, wax, honey, and tallow, has four annual fairs, carries on iron and glass works, and extensive cloth manufactures.

JOAN, **POPE**, the name of a supposed female occupant of the papal chair in the 9th century. The popular story represents this singular personage as of English parentage, but educated at Cologne, Rome, and ultimately Athens, in all which places in the assumed character of a man, and under the name of *Joannes Anglicus*, 'John of England,' she is alleged to have attained great distinction as a scholar. The narrative adds, that having come in the end to Rome, she had ability and adroitness enough to carry the deception so far as to obtain holy orders, and to rise through various gradations to the papal sovereignty itself; but that being nevertheless of immoral life, the fraud was at length discovered, to the infinite scandal of the church, by her becoming pregnant, and being seized with the pains of childbirth on occasion of a public procession. The story had obtained currency, certainly, in the latter part of the 13th century. It was inserted, though discredited, by Platina in his *Lives of the Popes*, but the statement does not appear to have been much discussed until the 16th c., when the commentator of Platina, Panvinus, inserted a note in refutation of it. Later Roman Catholic historians of course have published replies to the objections against the papal succession which their adversaries drew from the story of the female pope; but it is curious that the most complete and

elaborate investigation of the question was that of a Calvinist divine, Blondel, who demonstrated the historical groundlessness of the story. He was followed on the same side by Leibnitz; and although attempts have been made from time to time by a few writers to maintain the tale, it has been all but universally discarded, its latest patron being Professor Kist of Leyden, who, but a few years since, devoted an elaborate essay, *Verhandeling over de Pausin Joanna*, to the subject. A few words will suffice to explain the state of the historical evidence. The place assigned to the supposed papess is between the historical popes Leo IV. and Benedict III., the latter of whom died March 10, 858. It is alleged that the Joan of the story occupied the papal chair for two years and five months. Now, according to all the chroniclers, with the doubtful exception of Marianus Scotus, Leo IV. did not die till July 10, 855, so that the interval between his death and that of Nicholas I., the successor of Benedict III., would be entirely filled up by the two years and five months of the papess, and no room would be left for the undoubted pontificate (of two and a half years) of Benedict III. Further, Hincmar of Rheims, a contemporary, in his 26th letter to Nicholas I., states that Benedict III. succeeded Leo IV. immediately. It is proved, moreover, by the unquestionable evidence of a diploma still preserved, and of a contemporary coin which Garampi has published, that Benedict III. was actually reigning before the death of the Emperor Lothaire, which occurred towards the close of 855. The earliest authorities for the story of Pope J., not reckoning a more than doubtful MS. of Marianus Scotus, are Martinus Polonus, a writer of the latter part of the 12th c., and a writer named Stephen de Bourbon, who wrote about 1225.—See Gieseler's *Kirchengeschichte*, th. ii. b. ii. s. 5; also Wensing, *Over de Pausin Joanna*—in reply to Kist—(S'Gravenhage, 1845); and Bianchi Giovini's *Esame Critico degli atti relativi alla Papessa Giovanna* (Milan, 1845).

JOAN OF ARC (Fr. JEANNE D'ARC), the MAID OF ORLEANS, was the daughter of respectable peasants, and was born in 1412, in the village of Domremy, in the department of Vosges, France. She was taught, like other young women of her station in that age, to sew and to spin, but not to read and write. She was distinguished from other girls by her greater simplicity, modesty, industry, and piety. When about thirteen years of age, she believed that she saw a flash of light, and heard an unearthly voice, which enjoined her to be modest, and to be diligent in her religious duties. The impression made upon her excitable mind by the national distresses of the time, soon gave a new character to the revelations which she supposed herself to receive, and when fifteen years old, she imagined that unearthly voices called her to go and fight for the Dauphin. Her story was at first rejected, as that of an insane person; but she not only succeeded in making her way to the Dauphin, but in persuading him of her heavenly mission. She assumed male attire and warlike equipments, and with a sword and a white banner, she put herself at the head of the French troops, whom her example and the notion of her heavenly mission inspired with new enthusiasm. On 29th April 1429, she threw herself, with supplies of provisions, into Orleans, then closely besieged by the English, and from the 4th to the 8th of May, made successful sallies upon the English, which resulted in their being compelled to raise the siege. After this important victory, the national ardour of the French was rekindled to the utmost, and Joan became the dread of the previously triumphant English. She conducted

the Dauphin to Rheims, where he was crowned, 17th July 1429, and Joan, with many tears, saluted him as king. She now wished to return home, deeming her mission accomplished; but Charles importuned her to remain with his army, to which she consented. Now, however, because she no longer heard any unearthly voice, she began to have fearful forebodings. She continued to accompany the French army, and was present in many conflicts, till, on 24th May 1430, she threw herself, with a few troops, into Compiègne, which the Burgundian forces besieged; and being driven back by them in a sally, was taken prisoner, and sold by the Burgundian officer to the English for a sum of 16,000 francs. Being conveyed to Rouen, the headquarters of the English, she was brought before the spiritual tribunal of the Bishop of Beauvais as a sorceress and heretic; and after a long trial, accompanied with many shameful circumstances, she was condemned to be burned to death. She recanted her alleged errors at the stake, and expressed penitence, in the hope of having her punishment commuted into perpetual imprisonment. But this did not accord with the views of those in whose power she now was. Words which fell from her when subjected to great indignities, and her resumption of male attire when all articles of female dress were carefully removed from her, were made grounds of concluding that she had relapsed, and she was again brought to the stake, on 30th May 1431, and burned. Her family, who had been ennobled upon her account, obtained, in 1440, a reversal of her trial; and in 1456, she was formally pronounced to have been innocent.

Few facts in history seem better authenticated than the death of 'the Maid' at Rouen in 1431, and yet grave doubts have been raised on the point. There was a popular belief at the time that some one had been executed in the place of Joan; and many pretended Maids appeared, who, however, were punished as impostors. But a Father Vignier, in the 17th c., found among the archives of Metz a paper purporting to be written at the time, and giving an account of the arrival at Metz, on the 20th May 1436, of the Maid Jeanne, who was at once recognised by her two brothers, and was subsequently married to a Sieur de Hermoise. Vignier afterwards found in the family muniment-chest of a M. des Armoise, in Lorraine, a contract of marriage between 'Robert des Armoise, Knight, with Jeanne D'Arcy, surnamed the Maid of Orleans.' In addition to this, there was found, in 1740, among the archives of the Maison de Ville of Orleans, under the dates 1435, 1436, a record of certain payments to a messenger bringing letters from Jeanne the Maid, and also to her brother John du Lils or Lys. (De Lys was the name by which the family of Darc was ennobled.) A subsequent entry, 1st August 1439, records a gift on the part of the council of the city for services rendered by her at the siege. M. Delepierre, who has discussed the subject in his *Doute historique* (privately printed, 1855), adduces various other facts tending to the same conclusion.

JOB [Heb. *Jyob*, derived by Gesenius from *ayab*, 'to be an adversary;' hence (passive) 'one who has an adversary,' or 'a persecuted one'], the leading personage in one of the canonical books of the Old Testament, which is called after him. He is said to have lived in the land of Uz (Sept. *Ausitis*, cf. Ptol. v. 19. 2), a locality somewhere between Idumea, Palestine, and the Euphrates. Whether Job was a real or a fictitious personage, has been discussed with superfluous animation by critics. The Talmud (Baba Bathra, xv. 1) holds that 'Jjob never was, and never was created, but is an allegory.'

The belief of most scholars at present is, that the Book of Job is a great dramatic poem, built on a basis of historical tradition. Job is a real person in precisely the same sense as the Hamlet of Shakspeare is a real person; i. e., for each there is a certain genuine groundwork of antique fact; but some of the incidents, together with the sentiments and speeches recorded, are purely imaginative. Who was the author, and when he lived, cannot be, or at any rate has not been, determined with exactitude. Some critics make him anterior to Moses; the LXX. identifies him with 'Jobab, king of Edom' (Postscr. to Job); others, among whom are many of the Talmudical authorities, regard Moses himself as the author. The Mosaic period is claimed for it by Saadia, many of the church fathers, Michaelis, Jahn, Hufnagel, &c. A nearer approximation to what would seem to be the truth is the view held by Gregory Nazianzen, Luther, Döderlein, and others, who assign the work—which shews a certain affinity with the Proverbs—to the age of Solomon, when Hebrew poetry was in its full bloom, and a broad catholic spirit pervaded the nation; some have even given Solomon himself the credit of its composition. The reference to the gold of Ophir seems at least conclusive against any hypothesis that would place its composition earlier; and while certain passages in Ezekiel, Jeremiah, Isaiah, Amos, which point to an acquaintance with it, go far to prove its comparatively early existence, Rénan, a recent French critic, considers that it belongs to the first half of the 8th c. B.C.; Ewald pronounces for a later period, and assigns the poem to the beginning of the 7th century. This date is also advocated by Dr Samuel Davidson in his *Introduction to the Old Testament* (Lond. 1862). Others, again—among whom Clericus, Grotius, Gesenius, Umbreit, Knobel, De Wette, &c.—place it in the period of the exile; Hartmann, Vatke, Reier, and others, in the 5th Christian century.

The earlier German scholars, Herder, Eichhorn, &c., looked upon the author as an Edomite—not a Hebrew at all; but this view is now generally, if not entirely, abandoned. The poem is a genuine product of the Hebrew muse, not, however, standing on narrow national ground—the very scene being laid in a foreign country—but on the broad ground of a universal humanity—it is the attempt of a Hebrew thinker, of enlarged mind, to vindicate the Divine government of the world.

Our space will not allow us to enter minutely into a consideration of the design of the poem, or to discuss the various theories which have been advanced. According to Dr Davidson, it was 'to demonstrate the insufficiency of the current doctrine of compensation.' It condemns the notion that there is a necessary connection between sin and suffering, and without explaining the cause of the latter in the case of a good man, displays the most sublime trust in the wisdom of the Divine Providence. It exhibits a noble spirituality; and in several places, the mysterious contradictions of life seem to awaken in the soul of the writer thoughts of another life beyond the grave, in which God will vindicate the righteousness of His ways. As a work both of genius and art, it occupies well-nigh the first rank in Hebrew literature, and is unsurpassed in sublimity of imaginative thought by any poem of antiquity. The language is elaborate and artificial in the highest degree, yet grandly simple withal, betokening not a primitive period in Jewish history, but one highly advanced. The dramatic construction of the poem indicates the same thing. It has a prologue and epilogue; the dialogues are arranged into three series, or, as they may be termed, *acts*; each of these, again, consists

of three speeches by Job's friends, with three replies by Job himself, which, by a little stretch of fancy, we may describe as separate *scenes*. The poem (properly so called) opens and closes with a monologue by the author of the piece. The different character of the persons introduced is skilfully observed; their words have a rhythmic flow; and the dialogues are even strophically divided (see Ewald, *Das Buch Jjob übersetzt und erklärt, Zweite Auflage*, 1854). The integrity of the poem in its present form has been strongly questioned by many critics; the inferiority (in a literary and poetic point of view) of the passages containing the speeches of Elihu (xxxii.—xxxvii.), no less than the nature of the prologue and epilogue, are thought to indicate that these passages are the work of a later hand. Compare the commentaries of Schultens, Bertram, Eichhorn, Rosenmüller, Ewald (with translation), Umbreit, De Wette, Hirzel, Stickel, Schlottmann, Rénan (with an admirable translation into French), Lee, &c.

JOB'S TEARS (*Coix lachryma*), a corn-plant of India. It is a grass, sometimes rising to the height of eight feet, with the stout habit of maize, to which also it is botanically allied; but the male and female flowers grow close together in spikelets, which are produced in axillary clusters. The name is derived from the tear-like form of the hard, shining, bluish-white seeds, which are sometimes made into bracelets and necklaces, and are also an article of food. This plant is cultivated to some extent in many parts of India, but it is one of the worst of the cereals. It has become almost naturalised in Spain and Portugal, and flour made from it is there used, but it is chiefly a resource of the poor in times of scarcity.

JODELN, a peculiar manner of singing with the falsetto voice in harmonic progressions, which exists only among the Tyrolese and the Swiss.

JO'EL (Jehovah is God), the son of Pethuel, one of the twelve Minor Prophets, who delivered his predictions, according to some, in the days of Joash; others, however, place him variously, in the time of Hezekiah, Manasseh, Josiah, Uzziah, &c. Concerning the circumstances of his life, absolutely nothing is known. The occasion of his prophecy was an extraordinary plague of locusts, accompanied by an extreme drought, which consumed the land. After describing these judgments, the prophet calls upon his countrymen to repent, and assures them that God is ready to forgive. Extraordinary warmth and tenderness of feeling, together with an enthusiastic belief in the glory of the future destiny of the people, run through the whole of the book. Some of the passages have been understood by theologians as predictive of the blessings of the Messianic age, and one is actually applied by the apostle Peter to the events which transpired on the day of Pentecost (Acts, ii. 16—21). The style of J., always vivid and eloquent, sometimes sublime, is perhaps the very finest of any of the writers of the Old Testament. One of the most elaborate works on J. is Credner's *Der Prophet Joel*. Compare also Ewald, Umbreit, Henderson, &c.

JO'GGLE, in Masonry, is a notch or curve in the

Fig. 1.

Fig. 2.

joints, adopted in fitting stones together, so as to prevent them from slipping. Fig. 1 is a common

form. The joggle-joint is commonly used in straight arches for this purpose, as in fig. 2. Joggles are also used where very tight joints are required to resist water, &c. Sometimes the joggle consists of a piece of hard stone let into a groove cut in both the stones forming the joint (see fig. 3).

Fig. 3.

JOHANNA, one of the Comoro Islands (q. v.).

JOHN, the Apostle and Evangelist, was the son of Zebedee, a fisherman of the Sea of Galilee, and of Salome. He was born at Bethsaida, and, till he was called by Jesus to be his disciple, seems to have followed his father's occupation. The events of his life, from this time to the ascension of Christ, are to be learned from the gospels. After the outpouring of the Spirit on the day of Pentecost, he appears to have laboured for the spread of the Gospel first in Jerusalem and Samaria, and afterwards to have had his residence chiefly in Ephesus. During the reign of the Emperor Domitian, he was driven by persecution to the isle of Patmos, but returned to Ephesus under Nerva, and died there at a great age. The dates assigned to this event range from 89 to 120 A.D., and in any case he must have long survived his brother apostles. It is believed that he was the only one of our Lord's apostles who died a natural death. Tradition accounts for this by representing his life as miraculously preserved. He is represented in Scripture as of a peculiarly affectionate nature, 'the disciple whom Jesus loved;' and tradition makes his last words to have been, 'Little children, love one another.' The works attributed to him are the Gospel, the three Epistles of St John, and the book of Revelation. The first is generally believed to have been written by the apostle at Ephesus about 78 A.D., but attempts have been made by modern writers to disprove both its Johannine authorship and its early origin. The Tübingen school, headed by Baur, place its composition in the middle of the 2d c., and assert that it obviously rose out of the conflicts of opposing teachers. This view, however, is rejected by the greatest critics and scholars of Germany, and its Johannine origin is now admitted. The three so-called Epistles of St John do not stand on exactly the same footing. It is highly probable that the First proceeded from the same writer who composed the Gospel. In style, language, and doctrine, it is identical with it, and from the earliest times it was quoted as a work of the Apostle John's; but the Second and Third are classed by Eusebius among the *Antilegomena* (Scriptures of doubtful genuineness), and were suspected by the most learned and critical of the early Fathers. For an account of the Book of Revelation, see REVELATION, BOOK OF.

JOHN, the name of a long line of popes, the number of whom is variously stated by different historians, owing to some uncertainty as to the designation of two of the popes in the series—John VIII. (872–882), who is styled the IX. by some writers, who, accepting the story of Pope Joan (q. v.), reckon her as John VIII.; and John XV. (985–996), who is also called XVI. by those who place before him another John who died within a few days of his election. Without entering into this question, it will suffice to say that the last of the line of popes called John is John XXIII. The following appear to deserve some special notice.—JOHN XII. was the son of Alberico, and grandson of the notorious Marozia, who, during the pontificate of John X. (913–927), ruled with almost supreme power at Rome. John was origin-

ally named Octavianus, and on the death of Pope Agapitus, in 956, being elected pope through the lawless intrigue or violence of the dominant party, when only in his 19th year, was the first in the papal line to originate the now familiar practice of changing his name. His life, according to accounts which it is impossible to discredit, was what might be expected from such antecedents, scandalous and disorderly; and although he had crowned Otho emperor and king of Italy in 962, that monarch, in 963, in a synod of the clergy, overstepping all the ordinary rules of canonical procedure and legal precedent, caused sentence of deposition for scandalous life to be pronounced against John, and Leo VIII. to be elected in his stead. John, however, re-entered Rome in the following year with a strong party, and drove out Leo; but his career was cut short by a dishonourable death. He was killed, according to Luitprand, while prosecuting an unlawful intrigue in 964. In his effeminacy or licentiousness, Panvinius and other historians find the origin of the fable of Pope Joan.—JOHN XXII. is one of the most celebrated of the popes of Avignon. His family name was James de Cahors, and he was elected pope in 1316, on the death of Clement V. Attempting to carry out, in very altered circumstances, the vast and comprehensive policy of Gregory VII. and Innocent III., John interposed his authority in the contest for the imperial crown between Louis of Bavaria and Frederick of Austria, by not only espousing the cause of the latter, but even excommunicating his rival. The public opinion, however, and the political relations of the papacy founded upon it, had already begun to change. The diet of Frankfurt refused to obey, and a long contest ensued, not only in Germany, but also in Italy, where the Guelph or papal party was represented by Robert, king of Naples, Frederick of Sicily being the chief leader of the Ghibellines. The latter was placed by John under the same ban which had already been proclaimed against Louis; but in 1327, Louis came to Italy in person, and having been crowned at Milan with the iron crown, advanced upon Rome, expelled the papal legate, and was crowned emperor in the church of St Peter's by two Lombard bishops. Immediately on his coronation, he proceeded to hold an assembly, in which he caused the pope, under his original name of James de Cahors, to be thrice summoned, to answer a charge of heresy and breach of fealty; after which he caused him to be deposed, and Peter de Corvara, a monk, to be elected pope, under the name of Nicholas V. These measures, however, were attended with little result. Louis returned to Germany, and the Guelphic predominance at Rome was restored, the papal representative resuming his authority. But John XXII. never personally visited Rome, having died at Avignon in 1334, when, although without incurring the suspicion of personal aggrandisement, he had accumulated in the papal treasury the enormous sum of 18,000,000 florins of gold. This pope is remarkable in theological history as the author of that portion of the canon law called the *Extravagantes*, and also as having held the singular opinion, that the just will not be admitted to the beatific vision until after the general resurrection. This opinion he formally retracted before his death.

JOHN, surnamed LACKLAND, king of England, and the youngest of the five sons of Henry II. by his wife, Eleanor of Guienne, was born at Oxford, 24th December 1166. His father having obtained a bull from the pope authorising him to invest one of his sons with the lordship of Ireland, J. was appointed in a council held at Oxford in 1178, and in March 1185 he went over to take the reins of

government, but governed so badly that he was recalled in the following December. J. latterly united with his brothers in their rebellions against their father, and it was the sudden communication of the news of his having joined his brother Richard's rebellion that caused the death of Henry.

When Richard I. succeeded to the crown, he conferred upon his young brother earldoms which amounted to nearly one-third of the kingdom. This did not, however, prevent J. endeavouring to seize the crown during Richard's captivity in Austria. J. was, however, pardoned, and treated with great clemency, and is said to have been nominated his successor by his brother on his death-bed. J. hastened, at his brother's death, to obtain the support of the continental barons, and then started for England, and was crowned at Westminster on 26th May 1199. Arthur, the son of his elder brother Geoffrey, was lineally the rightful heir to the crown, but at this time the law of primogeniture was but imperfectly established. The claims of Arthur were supported by Anjou and the king of France, but J. bought off the latter influence. J. now obtained a divorce from his first wife, Hadwisa of Gloucester, and married Isabella of Angoulême. In the war which ensued, Arthur, who was again assisted by France, was taken prisoner, and confined in the castle of Rouen, where there is every reason to believe that he was privately put to death; but the English monarch lost Normandy, Touraine, Maine, and Anjou.

J. now quarrelled with the pope, and the kingdom was placed under an interdict; while J., in return, confiscated the property of the clergy who obeyed the interdict, and banished the bishops. Otherwise, too, he displayed considerable activity. He compelled William, king of Scotland, who had joined his enemies, to do him homage (1209), put down rebellion in Ireland (1210), and subdued Llewellyn, the independent prince of Wales (1212). The pope now, in 1213, solemnly deposed J., and absolved his subjects from their allegiance, and commissioned Philippe Auguste to execute his sentence. J., denounced by the church, and hated for his cruelty and tyranny by his subjects, found his position untenable, and was compelled to make abject submission to Rome, and hold his kingdom as a fief of the papacy. Philippe proceeded with his invasion scheme, though no longer approved by Rome; but the French fleet was totally defeated in the harbour of Damme, 300 of their vessels being captured, and above 100 destroyed. Subsequent events, however, proved more favourable to France, and at length the English barons saw the opportunity to end the tyranny of J.: they drew up a petition, which was rejected by the king, and this was the signal for war. The army of the barons assembled at Stamford, and marched to London; they met the king at Runnymede, and on the 15th June 1215 was signed the Great Charter (*Magna Charta*), the basis of the English constitution. The pope soon after annulled the charter, and the war broke out again. The barons now called over the dauphin of France to be their leader, and Louis landed at Sandwich on 30th May 1216. In attempting to cross the Wash, John lost his regalia and treasures; was taken ill, and died at Newark Castle, on 19th October 1216, in the 49th year of his age.

JOHN, BAPTIST JOSEPH FABIAN SEBASTIAN, Archduke of Austria, a distinguished Austrian prince and general, was born 20th January 1782, and was the sixth son of the Emperor Leopold II. His mother was the Infanta Maria Louisa, daughter of Charles III. of Spain. He early gave proof of considerable talent for military affairs; and in

1800, he received the command of the defeated Austrian army, formerly under Kray. His military career was not brilliant. He was defeated at Hohenlinden in 1800, and at Austerlitz in 1805. In the war of 1809, he advanced with an Austrian army into Italy, defeated the viceroy Eugène at Sacile, and made his way as far as the Adige, when the reverses of the Austrian forces at Landshut, Eckmühl, and Ratisbon compelled him to retire. His love of natural science, for which he manifested an early predilection, continued undiminished amidst all the vicissitudes of his life; and Austria is indebted to him for many valuable scientific institutions and enterprises. Living in political retirement, he shewed a warm interest in every improvement and public work, and became exceedingly popular; so that when the German national congress assembled after the commotions of 1848, he was called by a great majority of voices, on the 29th of June of that year, to be Vicar or Regent of the Germanic empire. The fall of Metternich had also, in the meantime, released him from his political isolation in Austria; and the Emperor Ferdinand had placed him at the head of affairs there, and intrusted to him the opening of a constitutional assembly in Vienna. In his high office as Regent, the archduke acted on strictly constitutional principles; but the progress of events being unfavourable to the Austrian interests, he resigned his office on 20th December 1849, and returned to Grätz, where he lived, as formerly, in retirement till his death, May 10, 1859.

His marriage was one of an unusually romantic kind. Late on a January evening in 1827, he had occasion to require the services of the postmaster of Aussee, a mountain-village in the vicinity of Grätz. The postmaster was from home; but his daughter, Anna Plochel, volunteered to drive him over the hill to his destination. The conversation and spirit of this maiden seem to have charmed the archduke, and within three weeks he married her. The titles of Countess of Meran and Baroness of Brandhof were subsequently conferred upon this lady. See MORGANATIC MARRIAGES.

JOHN, PRESTER ('Priest John'), the supposed Christian king and priest of a medieval kingdom in the interior of Asia, the locality of which was vague and undefined. In the 11th and 12th centuries, the Nestorian missionaries penetrated into Eastern Asia, and made many converts among the Keraeit or Krit Tartars, including, according to report, the khan or sovereign of the tribe, Ung (or Ungu) Khan, who resided at Karakorum, and to whom the afterwards celebrated Genghis Khan was tributary. This name the Syrian missionaries translated by analogy with their own language, converting *Ung* into 'Jachanan' or 'John,' and rendering *Khan* by 'priest.' In their reports to the Christians of the West, accordingly, their royal convert figured as at once a priest and the sovereign of a rich and magnificent kingdom. Genghis Khan having thrown off his allegiance, a war ensued, which ended in the defeat and death of Ung Khan in 1202; but the tales of his piety and magnificence long survived, and not only furnished the material of numberless medieval legends (which may be read in Assemani's *Bibliotheca Orientalis*, III. ii. 484), but supplied the occasion of several of those missionary expeditions from Western Christendom, to which we owe almost all our knowledge of medieval eastern geography. The reports regarding Ung Khan, carried to Europe by the Armenian embassy to Eugene III., created a most profound impression; and the letters addressed in his name, but drawn up by the Nestorian missionaries, to the pope, to the kings of France and Portugal, and to the Greek emperor, impressed all with a lively hope of the

speedy extension of the gospel in a region hitherto regarded as hopelessly lost to Christianity. They are printed in Assemani's *Bibliotheca Orientalis*. The earliest mention of Prester John is in the narrative of the Franciscan Father, John Carpini, who was sent by Pope Innocent IV. to the court of Batü Khan of Kiptchak, the grandson of Genghis Khan. Father Carpini supposed that Prester John's kingdom lay still further to the east, but he did not prosecute the search. This was reserved for a member of the same order, Father Rubruquis, who was sent as a missionary into Tartary by St Louis, and having reached the camp of Batü Khan, was by him sent forward to Karakorum, the seat of the supposed Prester John. He failed, however, of his hope of finding such a personage, the Khagan of Karakorum, Mangh, being still an unbeliever; and his intercourse with the Nestorian missionaries, whom he found established there, satisfied him that the accounts were grievously exaggerated. His narrative, which is printed in Purchas's *Collection*, is one of the most interesting among those of the medieval travellers. Under the same vague notion of the existence of a Christian prince and a Christian kingdom in the East, the Portuguese sought for traces of Prester John in their newly-acquired Indian territory in the 15th century. A similar notion prevailed as to the Christian kingdom of Abyssinia, which, in the hope of finding Prester John, was visited so late as the reign of John II. of Portugal (1481—1495) by Pedro Covilhã and Alfonso di Payva, the former of whom married and settled in the country. See Gieseler's *Kirchen-geschichte*, III. iii. 43; Ritter's *Erdkunde*, th. ii. b. i. 256—283.

JOHN, Sr, the commercial capital and largest city of New Brunswick, stands on the north or left bank of the estuary of the river of its own name, in lat. 45° 14' N., and long. 66° 3' W. Pop. in 1861, 27,317. The harbour, which is protected by batteries, is good, and accessible to the largest vessels at all seasons of the year. Ship-building and the timber-trade are the chief branches of industry; 435,661 tons of shipping were entered at this port in 1861.

JOHN, Sr, the most considerable river of New Brunswick, in British North America, rises in a lake of the same name in the state of Maine, and after a south-east course of 450 miles, the last 225 of which are within British territory, it falls into the Bay of Fundy by an estuary five miles in width. Near the sea, it is navigable for large vessels; while for craft of 120 tons it is practicable as far as Fredericton, which is 80 miles from its mouth, and the seat of the colonial government. The stream is of some historical interest in connection with the long-contested adjustment of the international boundary. Through most of its upper course, it separates Maine from Canada.

JOHN III. (JOHN SOBIESKI), king of Poland, 1674—1696, one of the greatest warriors of the 17th c., was born in 1624, or, according to others, in 1629, and educated with the utmost care, along with his brother Mark, by his father James Sobieski, Castellan of Cracow, a man of virtuous character and warlike spirit. The brothers travelled in France, England, Italy, and Germany. Their father's death recalled them home in 1648. The Poles were defeated by the Russians in the battle of Pilawiecz. The Sobieskis took up arms to restore the fortunes of their country. Mark fell in battle on the banks of the Bog; John distinguished himself by his valour, and became the admiration of his countrymen and the dread of

the Tartars and Cossacks. He received the highest military dignities and appointments, and on 11th November 1673, defeated the Turks in the great battle of Choczim, in which they lost 28,000 men; after which he was, on 21st May 1674, unanimously elected king of Poland, and was crowned in Cracow along with his wife, Maria Casimir Louisa, daughter of the Marquis Lagrange d'Arquien, and widow of the woiwode John Zamoiski. When the Turks besieged Vienna in 1683, John hastened thither with 20,000 Poles, and, along with the German auxiliaries who had also come up, raised the siege by the victory of 12th September of that year. In this battle, he took the banner of Mohammed, which he sent to the pope. On his entrance into Vienna, he was received with unbounded enthusiasm by the inhabitants. His subsequent undertakings against the Turks were not equally successful. He died of apoplexy on 17th June 1696. John Sobieski was not only a statesman and warrior, but a lover of science, and a man of gentle disposition and agreeable manners; but his constant wars prevented that attention to the internal condition of Poland which its critical situation urgently required, and this oversight on his part helped to hasten the downfall of Poland.

JOHN OF AUSTRIA, or DON JUAN D'AUSTRIA, was a natural son of the Emperor Charles V., and was born at Regensburg, on 24th February 1546. It is uncertain who his mother was. He was early brought to Spain; and after the death of his father, he was acknowledged by his half-brother, Philip II.; honours and an annual allowance were bestowed upon him, and he was educated along with the Prince of Parma and the Infant Don Carlos. He was intended for the church; but his own inclination was for military employment, and in 1570 he received the command of an army sent against the rebellious Moors in Granada, whom he completely rooted out of the country—signalling himself at once by valour and by cruelty. In 1571, he was appointed to the command of a maritime expedition—in which the forces of Spain, the pope, and Venice were united against the Turks—and defeated the Turks in a great battle near Lepanto (October 7). Discord breaking out among the allies, Don Juan separated himself from the rest, took Tunis, and conceived the design of forming a kingdom for himself in the north of Africa. But Philip, jealous of this design, sent him to Milan, to observe the Genoese; and afterwards, in 1576, as viceroy to the Netherlands. In this capacity, he sought to win the favour of the people by mildness; but being left unsupported by Philip, he was hard pressed for a time, till the arrival of the Prince of Parma with troops enabled him to restore the fortunes of Spain by the victory of Gemblours over William the Silent, in 1577. But Philip was now apprehensive that Don Juan might make himself king of the Netherlands; and the untimely death of the latter in his intrenched camp at Namur, on 1st October 1578, was not without suspicion of poison. See Dusmenil's *Histoire de Juan d'Autriche* (2d ed., Paris, 1828).

JOHN O' GROAT'S HOUSE (or, more correctly, it would seem, JOHNNY GROAT'S HOUSE), on Dungsby Head, the north-eastern extremity of the mainland of Scotland, has been long widely known as marking one of the limits of that country, as in Burns's line:

Frae Maidenkirck to Johnny Groat's.

It stood on the beach at the mouth of the Pentland Firth, and was probably built for the reception of travellers crossing the ferry to the Orkneys. Tradition gives a more romantic origin. In the reign of

King James IV. (1488—1513), three brothers—Malcolm, Gavin, and John Groat or Grot—supposed to be Hollanders, settling in Caithness, acquired the lands of Warse and Dungansby. When their descendants had so multiplied that they were eight families, disputes arose as to precedence at a yearly festival which they were wont to keep. John Groat settled the controversy by building an eight-sided house, with a door and a window in each side, and an eight-sided table within, so that the head of each of the eight families of Groats might enter by his own door, and sit at his own head of the table. Whatever credit may be due to this legend, there can be no doubt as to the existence of John Grot. In the year 1496, 'John Grot, son of Hugh Grot,' had a grant of a penny-land in Dungansby from William, Earl of Caithness. In 1525, 'John Grot in Dongasby,' as his name is written, chamberlain and bailie of John, Earl of Caithness, gave seisin to the Trinity Friars of Aberdeen, of a yearly payment from the island of Stroma, in the Pentland Firth. He died soon afterwards, and was succeeded by his son William, or his grandson John. In 1540, there was a payment from the Scottish treasury of £20 'to John Grote, for freight of his ship sent by the queen's grace, from St Andrews to Orkney, to the king's grace with writings.' In 1547, John Grot had a pardon from Queen Mary for helping the Earl of Caithness to storm the Earl Marischal's castle of Akirgill. About 1741, Malcolm Groat sold his lands in Dungansby, with the ferry-house, to William Sinclair of Freswick. The family of Groat still exists; but a small green knoll is all that now remains of John o' Groat's House. The shell *Cypræa Europea*, which abounds in the neighbourhood, has received the name of 'John o' Groat's bucky.'

JOHN (St) OF JERUSALEM, KNIGHTS OF, otherwise called KNIGHTS OF RHODES, and afterwards of MALTA, the most celebrated of all the military and religious orders of the middle ages. It originated in 1048 in an hospital dedicated to St John the Baptist, which some merchants of Amalfi were permitted by the calif of Egypt to build for the reception of the pilgrims from Europe who visited the Holy Sepulchre. The nurses were at first known as the Hospitaller Brothers of St John the Baptist of Jerusalem. The Seljuk Turks, who succeeded the Egyptian and Arabian Saracens in Palestine, plundered the hospice, and on the conquest of Jerusalem by the crusaders under Geoffroy de Bouillon in 1099, the first superior, Gérard, was found in prison. Released from durance, he resumed his duties in the hospice, gave material aid to the sick and wounded, and was joined by several of the crusaders, who devoted themselves to the service of the poor pilgrims. By advice of Gérard, the brethren took vows of poverty, chastity, and obedience before the Patriarch of Jerusalem. Pope Pascal II. gave his sanction to the institution in 1113. Raymond du Puy, the successor of Gérard in the office of superior, drew up a body of statutes for the order, which was confirmed by Pope Calixtus II. To the former obligations was afterwards added those of fighting against the infidels and defending the Holy Sepulchre. Various hospices, called *commanderies*, were established in different maritime towns of Europe as resting-places for pilgrims, who were there provided with the means of setting out for Palestine. The order having become military as well as religious, was recruited by persons of high rank and influence, and wealth flowed in on it from all quarters. On the conquest of Jerusalem by Saladin in 1187, the Hospitallers retired to Margat in Phœnicia, whence the progress of infidel arms drove them first, in 1285, to Acre, and afterwards, in

1291, to Limisso, where Henry II., king of Cyprus, assigned them a residence. By the statutes of Raymond, the brethren consisted of three classes, Knights, Chaplains, and Serving Brothers; these last being fighting squires, who followed the knights in their expeditions. The order was subsequently divided into eight languages—Provence, Auvergne, France, Italy, Aragon, England, Germany, and Castile. Each nation possessed several Grand Priors, under which were a number of commanderies. The chief establishment in England was the Priory at Clerkenwell, whose head had a seat in the Upper House of Parliament, and was styled First Baron of England.

In 1310, the knights, under their grand-master, Foulkes de Villaret, in conjunction with a party of crusaders from Italy, captured Rhodes and seven adjacent islands from the Greek and Saracen pirates, by whom it was then occupied, and carried on from thence a successful war against the Saracens. In 1523, they were compelled to surrender Rhodes to Sultan Solyman, and retired first to Candia and afterwards to Viterbo. In 1530, Charles V. assigned them the island of Malta, with Tripoli and Gozo. The knights continued for some time to be a powerful bulwark against the Turks; but after the Reformation a moral degeneracy overspread the order, and it rapidly declined in political importance; and in 1798, through the treachery of some French knights and the cowardice of the grand-master, D'Hompesch, Malta was surrendered to the French. The lands still remaining to the order were also about this time confiscated in almost all the European states; but though extinct as a sovereign body, the order has continued during the present century to drag on a lingering existence in some parts of Italy, as well as in Russia and Spain. Since 1801, the office of grand-master has not been filled up: a deputy grand-master has instead been appointed, who has his residence in Spain. The order at first wore a long black habit, with a pointed hood, adorned with a cross of white silk of the form called Maltese on the left breast, as also a golden cross in the middle of the breast. In their military capacity, they wore red surcoats with the silver cross before and behind. The badge worn by all the Knights is a Maltese cross, enamelled white, and edged with gold; it is suspended by a black ribbon, and the embellishments attached to it differ in the different countries where the order still exists.

JOHN OF LEYDEN (properly, JOHN BOCKELSON or BOCKOLD) was born at Leyden in 1510. He was the son of a bailiff in the Hague, and of a Westphalian bondswoman. He wandered about for some time as a journeyman tailor, and then settled in Leyden, but was fonder of amusements than of his trade. He possessed some poetic genius, and was noted for his abilities as an actor. Adopting the opinions of the Anabaptists (q. v.), he became one of their wandering prophets. In 1533, he came to Münster, was the chief supporter of Matthiesen or Matthys there, and when Matthiesen lost his life in 1534, became his successor. He set aside the ancient constitution of the city, set up in Münster 'the kingdom of Zion,' appointed judges, and applied in an extravagant manner the principles of the Old Testament theocracy. He himself became king of Zion. It is impossible to account for his conduct, and the extraordinary influence which he exercised, without the supposition of real fanaticism; but sensuality, vanity, and blood-thirstiness were intimately combined with it. He introduced polygamy, and displayed a great love of kingly pomp. The city was the scene of horrid excesses. In June 1535, it was taken by the Bishop of Münster. John and his chief accomplices

suffered death with circumstances of fearful cruelty (January 26, 1536), and his body was suspended in a cage from a high tower. He attempted to save his life by confession and submission.

JOHN OF NEPOMUK (more properly, POMUK), a popular Bohemian saint of the Catholic Church, and honoured as a martyr of the inviolability of the seal of confession. He was born at Pomuk, a village in the district of Klatau, about the middle of the 14th century. Having entered into orders, he rose rapidly to distinction, being created a canon of the cathedral of Prague, and eventually vicar-general of the diocese. The queen, Sophia, the second wife of Wenzel or Wenceslaus IV., having selected him for her confessor, Wenceslaus, himself a man of most dissolute life, conceiving suspicions of her virtue, required of John to reveal to him what he knew of her life from the confessions which she had made to him. John steadfastly refused, and the king resolved to be revenged for the refusal. An opportunity occurred soon afterwards, when the monks of the Benedictine abbey of Kladran having elected an abbot, in opposition to the design of the king, who wished to bestow it upon one of his own dissolute favourites, John, as vicar-general, at once confirmed the election. Wenceslaus, having first put him to the torture, at which he himself personally presided, had him tied hand and foot, and flung, already half dead from the rack, into the Moldau, in March 1393. His body, according to the tradition, being discovered by a miraculous light which issued from it, was taken up, and buried with the greatest honour. His memory was cherished with peculiar affection in his native country, and he was eventually canonised as a saint of the Roman Catholic Church, his feast being fixed for the 20th of March. By some historians, two distinct personages of the same name are enumerated: one, the martyr of the confessional seal; the other, of his resistance to the simoniacal tyranny of Wenceslaus; but the identity of the two is well sustained by Palacky, *Geschichte von Böhmen*, iii. 62.

JOHN THE BAPTIST, the forerunner of Christ, was the son of the priest Zacharias and Elizabeth, the cousin of Mary, the mother of our Lord. John and Christ were therefore second-cousins. The wonderful circumstances attending the conception and birth of the former, are recorded in the 1st chapter of St Luke's gospel. After a life devoted to preparing his countrymen for the coming of the Messiah, he was thrown into prison, and afterwards executed by Herod Antipas. J.'s followers existed as a separate body till long after the spread of Christianity, and a sect still exists in the East professing to be his disciples.—J. the B. was, from an early date, regarded in England as the patron saint of the common people, and on this account, apparently, great masonic festivals are held on St John's Day, the day dedicated to him, which is the 24th of June.

JOHN THE PARRICIDE, commonly called JOHN OF SWABIA, son of Rudolf II., and grandson of Rudolf I. of Austria, was born in 1289. On attaining his majority, he applied to his uncle, Albert I. of Austria, to resign to him the whole or a part of his patrimony, which consisted of Kyburg and some estates in Swabia; but this Albert refused to do. After making many other abortive attempts to gain his end, J. formed a conspiracy with others who had cause to complain of Albert's rapacity, and determined to assassinate the emperor; seizing the opportunity when Albert was riding alone, on the bank of the Reuss, near the castle of Hapsburg, they attacked and murdered him, 1st May 1308. The conspirators fled in different directions, J.

betaking himself to Italy, where he led a wandering life, and died in obscurity.

JOHN'S, EVE OF ST, one of the most joyous festivals of Christendom during the middle ages, was celebrated on midsummer eve. From the account given of it by Jakob Grimm in his *Deutsche Mythologie* (Bd. i. pp. 583—593), it would appear to have been observed with similar rites in every country of Europe. Fires were kindled chiefly in the streets and market-places of the towns, as at Paris, Metz, &c.; sometimes, as at Gernsheim, in the district of Mainz, they were blessed by the parish-priest, and prayer and praise offered until they had burned out; but, as a rule, they were secular in their character, and conducted by the laity themselves. The young people leaped over the flames, or threw flowers and garlands into them, with merry shoutings; songs and dances were also a frequent accompaniment. At a comparatively late period, the very highest personages took part in these festivities. In England, we are told (see R. Chambers's *Book of Days*, June 24), the people on the Eve of St John's 'were accustomed to go into the woods and break down branches of trees, which they brought to their homes, and planted over their doors, amidst great demonstrations of joy, to make good the prophecy respecting the Baptist, that many should rejoice in his birth. This custom was universal in England till the recent change in manners. Some of the superstitious notions connected with St John's Eve are of a highly fanciful nature. The Irish believe that the souls of all people on this night leave their bodies, and wander to the place, by land or sea, where death shall finally separate them from the tenement of clay. It is not improbable that this notion was originally universal, and was the cause of the widespread custom of watching or sitting up awake on St John's night, for we may well believe that there would be a general wish to prevent the soul from going upon that somewhat dismal ramble. In England, and perhaps in other countries also, it was believed that, if any one sat up fasting all night in the church porch, he would see the spirits of those who were to die in the parish during the ensuing twelve months come and knock at the church door, in the order and succession in which they were to die. We can easily perceive a possible connection between this dreary fancy and that of the soul's midnight ramble.' The kindling of the fire, the leaping over or through the flames, and the flower-garlands, clearly shew that these rites are essentially of heathen origin, and of a sacrificial character. They are obviously connected with the worship of the sun, and were doubtless practised long before the Baptist was born. In old heathen times, Midsummer and Yule (q. v.), the summer and winter solstices were the two greatest and most widespread festivals in Europe. The church could not abolish these; it could only change their name, and try to find something in the history of Christianity that would justify the alteration.

JOHN'S, Sr, a city of the West Indies, capital of the island of Antigua (q. v.), and the residence of the governor-in-chief of the Leeward Islands, is situated at the western side of that island, close to the shore. Pop. 8515. The town is well laid out, having spacious streets, of which the principal run east and west, being so arranged in order to obtain full advantage of the refreshing easterly or trade winds, which prevail here from April to August. The harbour is comparatively shallow, and there is a bar across the mouth of it, so that vessels heavily laden are obliged to drop anchor outside. The cathedral, the court-house, and the new market-

house are the chief edifices. Water is scarce here, and in long dry seasons the inhabitants suffer greatly from the want of it. Wells have been sunk in the town, but the water obtained is brackish, so that rain-water collected in iron and other cisterns forms the only supply of this invaluable element. The maximum heat is 96°; the minimum, 62°. The average fall of rain is said to be 45 inches.

JOHN'S, St., the chief town of Newfoundland, stands on the east coast of the island, in lat. 47° 33' N., and long. 52° 43' W. It has an excellent harbour, which is well fortified. Pop. 25,000. Being the nearest port in America to Europe (distance 1665 miles), and connected with continental America by telegraph, St John's has recently acquired importance in the commercial and political world in connection with steam-navigation between the two continents. It has suffered severely from repeated conflagrations; in 1846, it was more than half destroyed.

JOHN'S, St., a thriving town of Canada East, is situated on the left bank of the river Richelieu, opposite the town of St Athanase, with which it is connected by a bridge, and 21 miles south-east from Montreal. It contains glass-works, potteries, foundries, saw-mills, &c., and carries on a considerable trade in lumber, firewood, horses, and grain. Pop. about 5000.

JOHN'S COLLEGE, or the College of St John the Baptist, Oxford, succeeded an older institution, founded by Archbishop Chichele in 1456, for monks of the Cistercian order. Sir Thomas White procured a licence from King Philip and Queen Mary, and in 1555 founded a college, dedicated 'to the honour of God, the Virgin Mary, and St John the Baptist,' on the site of Archbishop Chichele's College. The foundation consists of a president, 50 fellows and scholars, and a choir. Six of the fellowships are founders' kin; two from Coventry, two from Bristol, two from Reading, and one from Tunbridge Schools; all the rest are from Merchant Taylor's School. In 1854, four fellowships were added by the will of Dudley Faraday, Esquire. These are open, with a preference, however, first, to founder's kin, and second, to natives of Staffordshire. This college presents to 30 benefices. In 1860, there were about 350 names on the books. The arrangements of this college were not altered by the commissioners under 17 and 18 Vict. 81. The commissioners of 1852, indeed, proposed extensive changes, which the commissioners under the act were disposed to carry out, but the college succeeded in baffling their endeavours. Similar changes, however, to those recommended by the Commissioners—involving, among other points, the throwing open of half the fellowships—have been subsequently introduced by the authority of the Privy Council.

JOHN'S COLLEGE, St. Cambridge, was founded in 1511 by Lady Margaret, Countess of Richmond, and mother of Henry VII.; but her death happening before the design was completed, her executors, one of whom was Fisher, Bishop of Rochester, carried her intentions into effect. The site of the college had been long before devoted to pious uses, but three times was the disposition of the property altered—1st, when Neal, Bishop of Ely, founded here a hospital for Canons Regular in 1134; 2dly, when Hugh de Balsham made it into a priory, dedicated to St John the Evangelist; 3dly, when Lady Margaret's executors converted it into a college. The foundation is for a master, who is elected by the Society, fifty-six fellows, sixty scholars, and nine proper sizars. There are also numerous exhibitions of considerable value, and

eight minor scholarships open every year to competition for students who have not yet commenced residence in the university. Amongst names of interest may be mentioned William Grindal, tutor to Queen Elizabeth; Roger Ascham; Cecil, Lord Burleigh; Richard Bentley (who became master of Trinity College); Kirke White, the poet; Henry Martyn, &c. For full particulars, see Cooper's *Memorials of Cambridge*.

JOHNSON, SAMUEL, son of Michael Johnson, was born at Lichfield, on the 18th September 1709. He received his early education in his native town, from a man named Hunter; of whom he has recorded that 'he beat me very well'—adding, 'without that I should have done nothing.' In 1728, he went to Pembroke College, Oxford, having been engaged for the two previous years of his life in learning his father's business of bookseller. The *Short Account of Lichfield*, 1819, says that books of his binding are still extant in that city. At Oxford, J. spent probably the most unhappy period of his unhappy life. Overpowered by debts, difficulties, and religious doubts, he became a prey to the morbid melancholy of his constitution. Poverty prevented him from taking his degree. In 1731, his father died insolvent. In the same year he went to Bosworth as usher of a school. Finding the drudgery of this situation unbearable, he soon gave it up, gaining a meagre livelihood by working for booksellers in Birmingham. In 1736, he married Mrs Porter, a widow: she brought him £800. He then set agoing a school, which having no success, he repaired (1737) to London in the company of his celebrated pupil, David Garrick. Here he formed a connection with Cave, the editor of the *Gentleman's Magazine*, to which periodical he became a contributor. In the following year he published *London*, a poem in imitation of the Third Satire of Juvenal, which was very favourably received, Pope, in particular, being warm in its praise. But for many years he was miserably remunerated for his work, and had great difficulty in keeping the wolf of hunger from his door. Little is known respecting J.'s life from this period till he was turned of fifty. We may form, however, some guess of the measure of its unhappiness, when we consider the character and constitution of the man, and what was the position of the majority of men of letters at that time—for literature, 'a dark night between two sunny days'—when the day of patrician patronage was at its close, and that of public patronage had not yet dawned. After 1740, he began to 'report' (if we may be allowed to misuse this word) the parliamentary debates for Cave's Magazine. These 'debates' were drawn up by J. himself, after he had ascertained the order in which the different speakers rose, and the drift of their arguments. One can readily believe that statesmen were surprised at the splendour and pomp of their own eloquence when they saw it in print. In 1744, J. published his interesting *Life of Richard Savage*; in 1749, his best poem, *The Vanity of Human Wishes*, an imitation of the Tenth Satire of Juvenal; and in 1750 commenced *The Rambler*, a periodical which he conducted for two years, and the contents of which were almost wholly his own composition. His *Dictionary*, a noble piece of work, entitling its author to being considered the founder of English lexicography, appeared in 1755, after eight years of solid labour; *The Idler*, another periodical, was begun by J. in 1758, and carried on for two years also; and in 1759 occurred one of the most touching episodes of his life—the writing of *Rasselas* to pay the expenses of his mother's funeral. It was written, he tells us, 'in the evenings of a week.' At last he emerged from obscurity. In 1762, a

pension of £300 a year was conferred on him by Lord Bute; and in the following year occurred an event, apparently of little moment, but which has had a lasting influence upon his fame: this was his introduction to James Boswell, whose *Life of Dr Johnson* is probably more imperishable than any of the doctor's own writings. In 1764, the famous Literary Club was instituted, and the following year began his intimacy with the Thrales. In the same year appeared his edition of Shakspeare. In 1773, he visited the Highlands with Boswell. In 1781, appeared his *Lives of the Poets*, his last literary work of any importance. He died on 13th December 1784. He was buried in Westminster Abbey, close by the grave of Garrick.

Strength, or at least force of mind, a certain sage solemnity in the treatment of moral themes, a sharp eye for the observation of character as it manifests itself in society, and a great power of caustic wit, are the chief qualities noticeable in Johnson. He had little aptitude for abstract thinking, and no great vigour of imagination—hence he was neither a philosopher nor a poet; but he had good sense, a solid judgment, and a serious thoughtful nature—hence we find scattered through his numerous works a multitude of valuable remarks on books and men and manners. His written style is very sonorous, inflated, and antithetic; the language is frequently grander than the thought, but his conversational style, as reported by Boswell, is terse, robust, and felicitous in the highest degree.

JOHNSTON, ALEXANDER KEITH, the most distinguished name in British cartography, was born near Edinburgh, December 28, 1804. The elegance of design that characterises all his productions, and which, in spite of their purely utilitarian aim, gives them a right to rank as specimens of fine art, was probably acquired or developed during his apprenticeship as an engraver. His first important work, the *National Atlas* (fol.), was published in 1843. Its merits received immediate recognition, and J. was appointed Royal Geographer for Scotland. Five years later, appeared his far-famed *Physical Atlas of Natural Phenomena*, the publication of which was the signal for a shower of honours from the geographical societies of Europe—that of Paris, in particular, pronouncing the work 'one of the most magnificent monuments that has yet been raised to the scientific genius of our age.' A second edition, greatly improved, was issued in 1856. In 1850, appeared a very useful *Dictionary of Geography*, better known as 'Johnston's Gazetteer' (3d ed. 1859; 4th ed. in course of preparation). His last and greatest work, the *Royal Atlas of Geography* (Edin. Blackwood and Sons, 1861), is probably the most beautiful and minutely accurate atlas ever executed. J. has also published, in conjunction with other savants, Hind, Murchison, and Nicol, atlases of Astronomy and Geology; besides a great number of very valuable educational atlases, physical, general, and classical, which have obtained a wide circulation.

JOHNSTONE, a manufacturing town of Scotland, in the county of Renfrew, was founded in 1781, and is situated on the Black Cart, about three miles west-south-west of Paisley. It contains several cotton factories, brass and iron foundries, and machine-shops. Pop. (1861) 6404, one-third of whom are employed in the cotton manufacture.

JOHNSTONE, JAMES T. W., an eminent chemist, was born at Paisley in 1796, and died at Durham in 1853. He was of humble parentage, and was for the most part self-educated. In 1825, he removed to Durham, where he opened a school, which he continued till 1830, when, having married

a lady of considerable fortune, he resolved to carry out the plan which he had long desired, of devoting himself to the study of chemistry. He accordingly repaired to Stockholm, and became the pupil of Berzelius, the most celebrated chemist of the time; and his reputation rose so rapidly, that in 1833, while still pursuing his studies abroad, he was invited to take the readership in chemistry and mineralogy in the newly-established university of Durham. For some time after his return from the continent, he resided in Edinburgh, and held the post of chemist to the Agricultural Society; but shortly after its dissolution, he took up his permanent residence at Durham. It is as an agricultural chemist that he is chiefly known. His *Catechism of Agricultural Chemistry and Geology* has gone through more than fifty editions, and has been translated into almost every European language; and his *Lectures on Agricultural Chemistry and Geology* are held in high esteem. The last of his works was his *Chemistry of Common Life*, which originally appeared in *Blackwood's Magazine*, and has since gone through two editions. In the summer of 1853, while travelling on the continent, apparently in his usual health, he was seized with spitting of blood, which terminated in a rapid decline.

JOIGNY (anc. *Joviniacum*), an old walled town of France, in the department of Yonne, about 90 miles south-east of Paris, noted for its red wines and extensive trade in wool. Pop. about 6500.

JOINERY, the art of joining or framing together the wooden finishings of buildings, such as the doors, windows, shutters, stairs, &c. See CARPENTRY.

JOINT AND SEVERAL, a legal phrase in England and Ireland, meaning that a contract or obligation is made by, or in favour of, each of several parties, independently as well as jointly with the others. The general rule of law is, that a contract of several persons is joint, and not several—that is to say, if it is sought to be enforced against them, they must all be sued together, and an action cannot be brought against one. Thus, for example, if A, B, and C jointly accept a bill, or make a promissory-note, without saying, 'we jointly and severally promise, &c.,' the whole of them must be sued on such bill. If, however, any one pay the whole debt, he can sue his co-contractors for their respective contribution or proportion—namely, one-third from each. If, on the other hand, the parties had, by express words, jointly and severally made the promissory-note, or bound themselves, then the creditor could sue any one of them he pleases, without taking any notice of the rest. Whichever of them, however, first paid the debt, would be equally entitled to sue his co-debtors to contribute their fair proportions. So, if a contract is made in favour of two or more persons, the general rule is, that all of them must join in any action brought to enforce the contract. But in some cases, when a contract is capable of being separated into distinct interests, it is not necessary that all of the creditors should sue. Much depends on the nature of the contract, the situation and relations of the parties, and who paid the price or consideration. In Scotland, the phrase conjunctly and severally is more frequently used than jointly and severally, though the meaning is the same. There are, however, some differences between the laws of England and Scotland on the subject. In Scotland, the general rule is the reverse of what it is in England. When a contract is joint, each is concerned and liable only for his share; but when it is expressly stated to be a conjunct contract, each is liable for the whole. Moreover, where one of several debtors is discharged without an express reservation of the remedy against

the rest, this operates in England as a discharge to the whole; whereas in Scotland it operates only as a discharge of that one.

JOINT-FIR. See SEA-GRAPE.

JOINT OWNER is, in English Law, a person who is one of several owners of property. The property may be either personal or real, goods or land. One of the characteristics of this ownership is, that if one of the parties dies, his interest accrues to the others, and does not go to the deceased co-owner's heirs or representatives. Thus, if A and B are joint owners of a horse, and A dies, the horse then belongs entirely to B. So it is with real property, such as houses, lands, and estates. This is called the doctrine of survivorship. Sometimes in wills and deeds it is not clearly expressed whether the property was given to A and B as joint tenants or owners, or as tenants in common. The chief difference between these two descriptions of owners is, that if one tenant in common dies, his share does not go to the other tenants in common, but belongs to his representatives or heirs. Hence, in doubtful cases, a court of equity generally inclines to hold that a tenancy in common was meant rather than a joint tenancy, for the former is the more fair of the two kinds of ownership. In all cases, however, it is in the power of a joint owner to convert his joint tenancy into a tenancy in common, by simply executing a deed of partition or alienation, if the property consist of land; or selling his share, if it consist of personalty. And there is an exception as to the survivorship in the case of a firm of partners, for in that case, when one partner dies, his share does not accrue to his co-partners, but belongs to his own personal representatives. This is said to be an exception to the general rule of joint ownership, created for the benefit of trade, so that, in the case of a firm, the ownership is an ownership in common, and not joint ownership. In Scotland, the general rule is different from what prevails in England, and joint property is there always equivalent to what is called in England property held in common, and not joint in the above sense. It requires express words in Scotland to make the property be held so as to be equivalent to what is joint property in England.

JOINT-STOCK COMPANY, an association of individuals who unite to carry out a particular object of a private nature by each taking and paying for shares in the common stock. The object of the association may be to manufacture some species of article, to conduct some branch of trade or commerce, the business of banking or insurance, or in general to do whatever work of a private nature any individual can do; but when the object is to execute a public undertaking, such as a railway, a canal, harbour, or other work of importance, the company is not called a joint-stock company, but a public company, and a special act of parliament is required in order to establish it and regulate its proceedings. In many respects, the proceedings of railway, canal, and public companies resemble those of what are called joint-stock companies. In ordinary circumstances, the capital or stock of a joint-stock company is beyond what any single individual, however wealthy, would be able or inclined to adventure; it is mainly on this account that the joining of parties together to undertake risks is expedient and unavoidable; though there may be instances, as in the case of Co-operation (q. v.), where a union of small sums by a large number of persons is for peculiar reasons recommendable. Joint-stock companies are of comparatively modern origin, and they can exist with a chance of success only in a community possessing good business notions and habits, along

with a spirit of enterprise, and where there is that degree of mutual confidence which will give stability to the concern. Accordingly, from a concurrence of favourable circumstances, Great Britain has taken the lead in this kind of undertakings, which, however, have also been carried to maturity on a comprehensive plan in the Netherlands and United States. In France, this method of commercial association is of more recent growth, and appears still to require the fostering care of the state.

The usual process of commencing a joint-stock company is to issue a prospectus, detailing the object of the undertaking, inviting the subscription of shares, and specifying the probable profits. As the proposed company necessarily requires a paid secretary, who is in effect to be its constructor and future *attaché*, it too frequently happens that in periods of ease in the money market, scheming solicitors and others devise projects of this kind, and induce inexperienced capitalists to take shares; the result often being a collapse of the company, to the loss of all concerned, the projector alone excepted. On this account, scrupulous care is necessary in making such investments, to see that the proposed companies are of genuine worth, and to be administered by persons of thorough integrity.

Every joint-stock company sets out on certain rules of management, which receive the approval of the shareholders, who name a chairman and board of directors, and these, on being appointed, choose subordinate officials. Whatever be the rules, and also the implied responsibilities, the practice is to allow considerable latitude to the chairman and other directors in conducting the affairs of the company, for they alone are in a position to form a correct judgment on points deeply concerning the character and welfare of the association. As, with the best intentions, they may fall into error, and thereby incur heavy losses of capital, it is reasonable to hold them blameless, unless chargeable with fraud in their representations and general dealings. Ordinarily, and with reckless imprudence, shareholders ask no questions, and experience no suspicions as long as they are getting satisfactory dividends—an indifference to consequences which sometimes suffers a severe retribution.

Joint-stock companies are at best a clumsy and often not very satisfactory method for accomplishing a particular purpose. Conducted by directors or managers with whatever dexterity, they fall immeasurably behind as regards the energy, breadth of calculation, vigilance, and promptitude with which a business may be conducted by a single individual, or by two or three active partners, ready on the instant to take advantage of every important turn in the market. Unless, therefore, in the exceptional circumstances referred to, and also in gigantic concerns which no single individual or ordinary copartnership would undertake, joint-stock companies are economically inexpedient.

The legislature has on different occasions interposed to regulate the principles of joint-stock companies, and protect the public against the injuries which they may recklessly inflict. The safest undertakings are those of a public nature, and which are therefore incorporated by special act of parliament, for besides that their rules have been scrutinised by committees of the Commons and Lords in terms of certain standing orders, the liability of shareholders is limited expressly to the amount of their respective stocks. Railway companies are of this category. Where there is no such limitation by statute, any single shareholder incurs a responsibility equal to the whole debts of the concern, and he can seek relief only against his brother shareholders conjointly or severally. The

appalling nature of this responsibility, and the necessity for as far as possible averting it, have induced the legislature to empower the organisation of companies on a method of limited responsibility; in this respect copying a plan which had worked successfully in the United States. To participate in the benefit of this limitation, companies need to be publicly registered according to certain statutory obligations, by which means all have an opportunity of judging of their character. We add a brief analysis of the laws affecting joint-stock companies without and with limited liability.

Numerous statutes have been passed during the last 20 years in England, Scotland, and Ireland, to regulate the constitution and proceedings of joint-stock companies, and there were separate statutes for each kingdom, and also for different kinds of companies in each kingdom. The principle of limited liability was first introduced in 1856. All these separate statutes, which led to much confusion, have been now repealed, and replaced by one consolidated statute, called the Companies' Act, 1862, 25 and 26 Vict. c. 89, which, taken along with the common law, constitutes the code of joint-stock companies now applicable to the United Kingdom. This general act contains provisions for enabling existing companies previously registered to register themselves under the new act. The same formalities are made applicable, with slight variations, to all joint-stock companies, whether limited or unlimited. The grand distinction between limited and unlimited companies is, that whereas formerly, if a company contracted debts, no matter how large, every member was liable, if his co-members proved to be unable to pay their proportions, to pay the whole of these debts, even to the last shilling of his fortune—a result which proved ruinous to the richer members: now, on the other hand, if the company is limited, though it contract debts however large, yet each member can in no event be called on to pay more than he expressly guaranteed; thus he knows at the outset the worst that can befall him. Hence it follows that if a limited company contract excessive debts beyond what the members are bound to pay, it is the creditors alone who will chiefly suffer; but they have such ample means of satisfying themselves beforehand about the position and capabilities of the company, by reason of the publicity and access to books now provided, that they can only blame themselves if they credulously give too large credit.

It may be also noticed, before stating the details more particularly, that no partnership of bankers which consists of more than ten persons shall be formed in future unless it is registered and conducts its business under the Companies' Act, 1862; and other partnerships consisting of more than 20 persons, are in like manner compelled to register as a company, unless they are already registered, or are formed by some act of parliament or letters-patent.

The subject will be most conveniently noticed under certain heads.

1. Constitution and Incorporation of Companies and Associations.—Any seven or more persons associated for any lawful purpose may subscribe a memorandum of association, and may define their liability as follows. They may limit their liability either to the amount, if any, unpaid on their shares, or to such amount as they may respectively undertake to contribute to the assets of the company, in the event of its being wound up. If the liability is limited by shares, then the word 'limited' must be added to the name of the company; and the amount of capital, object, place of business, and declaration of the limit, must be defined in the memorandum of association. If the liability is limited by guarantee, the word

'limited' must also be added, and the amount of guarantee defined, so as to extend to all liabilities incurred while the party is a member, and within one year after. If the company is formed on the principle of no limit being placed on the liability of its members, the declaration of any limit is omitted, and it is called an unlimited company. The memorandum of association is to be stamped and signed by each subscriber in presence of one witness, and when registered, it binds the company and members. A company in general cannot alter this memorandum of association, unless where it is a company limited by shares, and wishes to increase its capital or shares. Nor can a company alter even its name, unless by special resolution of the company, approved by a secretary of the Board of Trade. Besides the memorandum of association, there must be articles of association, also signed by the subscribers, stating the rules of the company; or if the company is limited by shares, and has no such articles, then the rules stated in schedule A to the act occupy their place. The articles of association must be printed. The memorandum and articles must be delivered to the registrar of joint-stock companies, who shall register the same, and grant a certificate of incorporation. Each member is entitled, on request, and payment of 1s., to have forwarded to him a copy of the memorandum and articles of association, otherwise, the company forfeits a penalty of £1 in each case. Companies are prohibited from adopting the same name as another company, and in some cases they cannot, without leave of the Board of Trade, hold more than two acres of land.

2. Distribution of Capital and Liability of Members.

—The interest or share of each member is part of his personal, and not real estate. A member is entitled to have his name entered on the register of members, which contains the name and address of each, his date of entry, his shares, &c. An annual list is to be made out of all members, with the names, addresses, and occupations of each, as well as the amount of capital, shares, calls, &c., possessed and paid by each, and this list is to be sent to the registrar of joint-stock companies for inspection. Every member is entitled to inspect at the office of the company the register of members gratis, and any other person is also entitled to do so on payment of 1s., or such member or person may demand a copy on payment of 6d. for every 100 words. If the name of a person is without cause entered or omitted in the register, he can set the matter right by application to the court. When a company is wound up, every member past and present must contribute towards the assets enough to pay the debts of the company, subject to the following qualifications: 1. No past member shall be liable who has ceased for one year to be member; 2. No past member is liable to contribute to any debt contracted after he ceased to be member; 3. No past member shall be liable to contribute, unless the existing members are unable to pay the debts; 4. In case of a limited company, no member is bound to pay more than the amount unpaid on shares, or the amount guaranteed by him to be paid, according to the memorandum of association. In insurance companies, if the policy or contract makes the funds alone liable, such contract will remain good. If, at the winding up, any dividend is due to a member, this is to be deemed part payment of his contribution. The result, therefore, is, that in all unlimited companies, while one rich member may be liable to his last shilling to pay the whole debts of the company, in the event of his co-members not being able to bear their shares of these debts; in limited companies, each member can never be liable to pay more than the maximum share or guarantee, whatever be the amount of the

company's debts, and whether the other members pay their shares or not.

3. *Management and Administration of Companies.*

—Each company must have an office where its business is carried on, and give notice thereof to the registrar. If the company is limited, it must have its name painted up in a conspicuous place outside its office, and its name must, under a penalty, be printed or engraved on all its notices, advertisements, bills of exchange, cheques, receipts, &c. Every limited company must also keep a register of mortgages affecting its property, which any member or creditor is entitled to inspect at all reasonable times. Some companies—viz., limited banking, insurance, deposit, provident or benefit societies—must also each year make out and suspend in their offices a statement of their debts and assets. Every company not having a capital divided into shares, must keep at its office a register of its directors and managers. No company is to carry on business when the number of members is less than seven, otherwise each such member, if cognizant of the fact, shall be liable for the whole debts of the company. A general meeting of the company must be held once at least every year. The company may in general meeting alter its regulations by special resolution, passed by not less than three-fourths of the members, and a copy thereof must be sent to the registrar, and given to each member. The Board of Trade may appoint one or more inspectors to examine and report on the affairs of the company on the following application: 1, in case of a banking company having a capital divided into shares, on the application of members holding one-third or more of the shares; 2, in the case of any other company with shares, on the application of members holding one-fifth or more of the shares; 3, in the case of any company not having a capital divided into shares, on the application of one-fifth or more of the members. The reasons of the application must, however, be supported by satisfactory evidence. The expenses of such examination shall fall on the members requiring it, unless the Board of Trade order them to be paid out of the company's funds. The company itself may also by special resolution appoint inspectors to report on the company's affairs.

4. *Winding up of Companies.*—A company may be wound up whenever it passes a special resolution to that effect; also, whenever it does not commence business within a year after incorporation, or suspends its business for a whole year; also, whenever its members are reduced to less than seven; also, whenever it is unable to pay its debts; and lastly, whenever the court thinks it is just and equitable that it should be wound up. A company is in the above sense deemed to be unable to pay its debts whenever a creditor to whom the company owes a debt above £50 has formally demanded in writing payment of such debt, and the company for three weeks have neglected to pay, or secure, or compound for it. Other tests of being unable to pay its debts are, when the company allows execution to issue for a debt, &c. Application may be made to wind up the company by petition presented by any creditor or contributory of the company. And whenever an order is made by the court for winding up, all actions and suits are to be stayed, and the remedy of winding up then becomes the exclusive remedy. In the process of winding up, the court is to have regard to the wishes of the creditors or contributories. In order to conduct the proceedings in winding up, and to assist the court, official liquidators may be appointed by such court, and the liquidators are thereupon invested with full powers to bring and defend actions, sell property, and do all things necessary for winding up the company's

affairs, and may appoint a solicitor to assist in performing these duties. The court, also, after an order to wind up, settles a list of contributories, i. e., of all persons who are bound to contribute to pay the debts of the company, also makes calls on such contributories, and may summon suspected persons who have property of the company. Besides a compulsory winding up of a company, there is also a power of voluntary winding up, whenever a special resolution has been passed to that effect, or when the company has found its liabilities too great to allow it to go on. Liquidators are then appointed with the same powers as in the other case. There is also a third mode of winding up, which is called a winding up subject to the supervision of the court. The liquidators have power to compromise calls and liabilities to calls, as well as debts present or future, upon such terms as may be reasonable. And where directors have misapplied moneys, or been guilty of breach of trust, the court, notwithstanding he is criminally responsible, may compel him to repay moneys so misapplied. The court may also order directors or officers of the company to be prosecuted, and the costs to be paid out of the assets.

5. *Registration.*—The appointment of registrars of joint-stock companies is made by the Board of Trade, and there must be at least one office for registration in each of the three kingdoms. Every person is entitled to inspect the documents kept by the registrar on paying a fee not exceeding one shilling, and he may require a copy or extract of documents at a fee not exceeding sixpence for each folio.

Moreover, as regards other remedies, it is now a criminal offence for directors of companies to declare and publish fraudulent accounts; and not only are directors personally liable to third parties buying shares on the faith of such false reports, and suffering loss, but even the officials who knowingly contribute to these false reports, are also personally liable in damages.

JOINT TENANCY, in English Law, the ownership of land or goods along with one or more other persons. See **JOINT OWNER**.

JOINT TRADE, or **ADVENTURE**, means a partnership limited as to a particular undertaking, and not, as in the usual case, for a series of years or a definite period of time. Hence the parties so joining have not the same liabilities as ordinary partners of a firm. Thus, a partnership of this kind may be limited to the working of a patent. In all such cases, the rights and liabilities of the parties are much less extensive than those of ordinary partnerships; but everything depends on the particulars of the contract made between them.

JOINTRESS, in English Law, means a lady who has a Jointure (q. v.) secured to her.

JOINTS, in Anatomy. A joint or articulation may be defined to be the union of any two segments of the skeleton of an animal body, through the intervention of a structure or structures of a different nature. The textures which enter into the formation of the more complex joints are bone, cartilage, fibrocartilage, ligaments, and synovial membrane. Bone forms the fundamental part of all joints; ligament, in various modifications, is employed as the bond of union between the bony segments; while the three remaining textures chiefly occur in those joints in which there is free motion. The joints vary in the degree of motion from almost perfect immobility to the greatest amount and extent of motion that are compatible with the maintenance of the bony segments in their proper relation with each other.

Joints have been divided by anatomists into two great classes, to which the terms *Synarthrosis* and

Diarthrosis are applied. In *synarthrosis*, the parts are continuous—that is to say, there is no synovial sac intervening between the bones; and the joints belonging to this class are so very limited in their motion as to be considered by some as immovable; while in *diarthrosis*, the articular surface of each of the bones is covered with cartilage, and between these cartilaginous plates is a synovial sac; and mobility is the distinguishing feature of this class of joints. In briefly describing the leading varieties of these two classes of joints, we shall, as far as possible, avoid the barbarous terms which have been introduced into this department of anatomy.

In *synarthrosis*, the articulation is said to be by *suture* when the bones seem to grow somewhat into one another, and to become interlocked and dovetailed together, each bone having a jagged or serrated margin, or when there is a degree of bevelling of one bone, so that it is overlapped by the other. Both these kinds of suture are at once seen in the human skull, the serrated suture being well seen in the union of the two parietal bones, the bevelled suture being shewn in the overlapping of the temporal bone above the side of the parietal, and a combination of the two being exhibited by the coronal suture between the frontal bone and the anterior edges of the parietal bones. In all these there is a thin ligamentous membrane interposed between the bones, which disappears as the growth of the cranium becomes completed.

When a slight amount of motion of one bone upon another is required to be combined with great strength, the contiguous surfaces of the bones are united by a thick and strong layer of fibro-cartilage, with which a little elastic tissue is intermixed. This is an intermediate variety between the two classes of joints, but approximates most nearly to *synarthrosis*. As examples of this kind of joint, may be mentioned the articulation between the bodies of the vertebræ and that between the two pubic bones at what is termed the symphysis. See PELVIS.

In *diarthrosis*, the degree and nature of the motion are very various. There may be merely a little *gliding* motion between the ends of the bones, as, for example, in the articulations between the various bones of the carpus and tarsus. See HAND and FOOT. In these cases, the surfaces are plane, or one is slightly concave, and the other slightly convex; and the motion is limited in extent and direction by the ligaments of the joint, or by some projecting point of one of the bones. In some cases, instead of a slight concavity and convexity, one bone presents a cup-like depression, while the termination of the other assumes a hemispherical, or more or less globular shape. Hence the name of *ball and socket* that is applied to such joints. The best example of this variety is the Hip-joint (q. v.), and the next best is the shoulder. In these joints, the ball is kept in apposition with the socket by means of what is termed a *capsular* ligament, which may be described as a barrel-shaped expansion of ligamentous structure, attached by its extremities around the margin of the articular surfaces composing the joint, and forming a complete investment of it, but not so tight as materially to restrict its movements. This species of joint is capable of motion of all kinds, as any one may readily test for himself, especially in the shoulder-joint.

Another important variety of articulation is the hinge-joint, in which the contiguous surfaces are marked with elevations and depressions, which exactly fit into each other, so as to restrict motion to one direction. The elbow and ankle joints, and the joints of the fingers and toes, are the best examples of this variety. The knee-joint is a less

perfect example, because in certain positions it is capable of a slight rotation. These hinge-joints are always provided with strong lateral ligaments. The shells of bivalve molluscs are united by a very strong and perfect hinge-joint.

The last kind of joint requiring notice is that which admits only of rotatory motion. A pivot and a ring are the essential parts of this joint, the ring being generally formed partly of bone and partly of ligament. The best example of this articulation is that between the atlas (the first vertebra) and the odontoid or tooth-like process of the axis (the second vertebra). See HAND.

Diseases of the Joints.—Formerly, all the severer forms of diseases of the joints were vaguely designated under the one general term *white swelling*; but during the last half century, thanks to the labours of modern surgeons, amongst whom the name of the late Sir Benjamin Brodie stands prominently conspicuous, the diseases of the joints are tolerably well understood, and can be discriminated from one another with very considerable accuracy.

In diseases of the joints, we may have one or more of the following textures affected: (1), the synovial membrane; (2), the cartilage; and (3), the bones themselves.

The synovial membrane may undergo either acute or chronic inflammation, giving rise to the serious affections known as acute and chronic Synovitis (q. v.).

Loose substances of a fibrous structure, and usually resembling a small bean in size and shape, sometimes occur in joints, especially in the knee-joint. They commence as little pendulous growths upon the synovial membrane, which after a time become detached. When they get between the ends of the bones, which they are apt to do during exercise, they cause a sudden and often a most excruciating pain, which is often followed by inflammation, and arrest all motion of the joint. These symptoms are not relieved till, by gentle flexion and manipulation, the loose cartilage (as it is usually termed) has been removed to a position in which it ceases to give annoyance. When the displacement of the loose body is only occasional, and does not cause intensely severe pain, the treatment should be limited to the application of an elastic bandage or a tightly fitting knee-cap, which should be constantly worn, with the view of restraining the loose body to a position in which it is inoffensive. If, however, this palliative treatment fails, the offending body must be removed by sub-cutaneous incision, which avoids the danger of a direct wound into the joint.

The cartilage may be affected in various ways. There may be (1) simple destruction of cartilage; (2), scrofulous destruction of cartilage; (3), hypertrophy of cartilage; (4), atrophy of cartilage, and other modified forms of disease of this texture, all of which, especially the second, are of a very serious character, but not of a nature that admits of popular explanation.

The most important diseases of the osseous structures of the joints are (1) ulcer and (2) caries. These diseases often, but not always, begin with the disorganisation of cartilage, and then extend to the bones. Sometimes, however, they commence in the bones. The consideration of the symptoms and general treatment of these diseases would be out of place in these pages, but a reference to one very important mode of treating articular caries will be found in the article RESECTION OF JOINTS. Several of the preceding diseases, even when the result of our treatment may be regarded as satisfactory, leave a certain amount of stiffness of the joint (sometimes extending to perfect immobility), to which the term *Ankylosis* (q. v.) is applied.

JOINTURE, in English Law, means an estate or some interest for life or a longer period in an estate settled upon a wife, in the event of her surviving her husband. The jointure was at first adopted as a substitute for Dower (q. v.), and dower is barred if a jointure is provided. The requisites of a jointure are: 1. That it must commence and take effect immediately on the husband's death; 2. It must be for the wife's life, or for some greater estate; 3. It must be given to the wife herself, and not merely to trustees for her; 4. It must be expressed to be made in satisfaction of her whole dower; 5. It must be made before marriage. The mode of giving a jointure is usually by way of a rent-charge on the husband's real estate, the effect of which is to allow her to remain in possession of the estate, or part of it, after the husband's death, so long as she lives. If a jointure be created out of an estate before marriage, the husband cannot sell the estate afterwards, so as to defeat the jointure. A jointure is not lost by the treason or felony of the husband, nor by the elopement and adultery of the wife.

In Scotland, the word jointure is also frequently used in a similar sense to denote a conventional provision to a widow, consisting either of an annuity to her or of a life rent assignation of rents, or of a life rent of lands, called a locality. In whatever way the jointure is constituted, it also excludes the widow's terce, unless it is otherwise expressed.

JOINVILLE, JEAN, SIEUR OF SIRE DE, one of the earliest French historians, whose works possess much interest or value, was born about 1224, of an old family, in Champagne, and held high offices under Thibaut IV., king of Navarre. In 1248, he joined Louis IX. of France with nine knights and 700 armed men in his crusade; shared that monarch's captivity; and returning to France in 1254, was frequently at his court, but declined to accompany him in his second crusade. After the death of Louis IX., the Sieur de J. wrote his *Histoire de St Louis*, one of the most valuable works in the whole literature of the middle ages, combining an excellence of style then very rare with a most interesting exhibition of individual character in the minute record of events. He died about the year 1318. The *Histoire de St Louis* was first published at Poitiers in 1546; the latest edition is that of F. Michel (Paris, 1858).

JOISTS, horizontal timbers (of lighter scantlings than the beams) used to support floors. See FLOORS.

JO'LIBA. See NIGER.

JOLLY-BOAT (Dutch, *jolle*, a yawl), a small boat kept on board ship for the purpose of communicating with the shore. It is a broad, safe

Jolly-Boat.

boat, and is specially devoted to the use of the steward and to the conveyance of his purchases from shore.

JOMINI, HENRI, BARON, born 6th March 1779 at Payerne, in the canton de Vaud, began his

military career in a Swiss regiment in the French service, and afterwards, chiefly through the friendship of Ney, was raised to high military rank by the Emperor Napoleon. In 1804, he began the publication of his *Traité des Grandes Opérations Militaires*. He distinguished himself in active service during the retreat from Russia, but offended at the treatment which he received from Napoleon, he passed over to the allies after the armistice of Plœswitz, and entered the service of Russia. In 1828, he took an active part in the military operations at Varna; and in 1855 he settled at Brussels. Besides the work already mentioned, his *Histoire Critique et Militaire des Campagnes de la Révolution* (5 vols. Paris, 1806), his *Vie Politique et Militaire de Napoleon* (4 vols. Par. 1827), and his *Tableau Analytique des Principales Combinaisons de la Guerre* (Petersb. 1830) are of great value to the military student.

JO'NAH (Heb. *Yonah*, a 'dove;' Gr. *Jonas*), a Hebrew prophet, son of Amittai, was, as we learn from 2 Kings xiv. 25, a native of Gath-hepher, a town of Galilee in Zebulun, and not far from Phœnicia. He appears to have flourished about the second half of the 8th c. B.C., in the reign of Jeroboam II., and was probably, therefore, the earliest of those prophets whose writings are extant. It has been urged by Rosenmüller and other critics, that the miracle recorded in the book known under his name is not to be regarded as an historical fact, but only as an allegory, founded on the Phœnician myth of Hercules rescuing Hesione from the sea-monster by leaping himself into its jaws, and for three days and three nights continuing to tear its entrails. The design of the author in incorporating this myth with the actual voyage of J., and the conversion of the heathen Ninevites, was, it is suggested, to bring out more vividly the truth, that God will not permit his merciful intentions to be frustrated by the disobedience even of a prophet. On the other hand, it has been thought by orthodox theologians generally, that the language of Christ (Matt. xii. 39—41; xvi. 4; Luke xi. 29), and the manner in which it is mentioned in Josephus and the Apocrypha, preclude the possibility of our supposing this miracle to be other than strictly historical. J. has been supposed by early authorities to have been the son of the widow of Sarephet (1 Kings xvii. 24), also to have been the pupil of Elisha. J.'s tomb is shewn at Nebi-Yunus (Prophet Jonah), near Mosul. Leusden, *Jonas Illustratus* (Traj. 1692); Friedrichsen, *Kritischer Ueberblick der Ansichten vom Buch Jonas* (Altona, 1817); Rosenmüller, *Proleg. in Jonam*; also *Notes on the Prophecies of Jonah and Hosea*, by the Rev. W. Drake (Cambridge, 1853).

JONES, INIGO, a well-known English architect, was born in London in 1572. Of his early history, little is known till the time when the Earl of Pembroke, attracted by his great aptitude at drawing, sent him abroad for four years to study the master-pieces of architecture in France, Germany, and Italy. While in Venice, he paid particular attention to the works of Palladio, whose style he introduced into England, whence we sometimes hear J. designated as the English 'Palladio.' In 1605, he was employed by James I. in arranging the scenery, &c., for the masques of Ben Jonson, which were at that time the chief amusement of the court. Jonson afterwards satirised his fellow-labourer in *Bartholomew Fair*. In 1612, J. revisited Italy, still further to improve his style, and on his return to England was appointed surveyor-general of the royal buildings. J. was at this time accounted the first architect of England, and according to some,

the first of the age. He died in 1653. The state of architecture in England during J.'s time was an excellent foil to his genius, as the praise bestowed upon his works shews, but still in any age he would have ranked high as an architect. His masterpiece is considered to be the Banqueting House at Whitehall. Other works of his are the church of St Paul, in Covent Garden, Ashburnham House, and Surgeons' Hall, which, however, are very mediocre.

JONES, JOHN PAUL, born at Arbigland, in the stewartry of Kirkcudbright, Scotland, 6th July 1747, was the son of a gardener named John Paul. He became a sailor, was for a short time engaged in the slave-trade, and afterwards settled in Virginia, assuming the name of Jones. He ardently embraced the cause of the American colonies. When the Congress, in 1775, resolved to fit out a naval force, he offered his services; and visiting the British coast in a brig of 18 guns, performed some remarkably bold exploits, and took advantage of his familiarity with the scenes of his boyhood to make a hostile visit to the shores of the Solway Firth. In 1779, he was appointed to the command of a small squadron of French ships displaying the American flag, with which he again visited the British coasts, causing great alarm, and taking some prizes. The king of France made him a chevalier of the order of Military Merit. After the war was ended, J. attempted, along with John Ledyard, to establish a fur-trade between the north-west coast of America and China, but failed. In 1787, he accepted an appointment in the Russian service, and the command of a fleet at the mouth of the Dnieper, with which he took an active part in the Turkish war, but soon left the Russian service. He died at Paris, 18th July 1792. His funeral was attended by a deputation of the Legislative Assembly.

JONES, SIR WILLIAM, was born in London, 28th September 1746, and was sent to Harrow in 1753, where he soon eclipsed all his fellows, particularly in classical knowledge. In 1764, he was entered at University College, Oxford, where he was enabled to gratify that desire for a knowledge of the oriental languages which had shewn itself during the last two years of his residence at Harrow. In 1765 he left Oxford, to become tutor to the eldest son of Earl Spencer, with whom he remained five years. In 1770 he published, at the request of the king of Denmark, a *Life of Nadir Shah*, translated into French from the Persian; in the following year, a *Persian Grammar*, republished some years ago, with corrections and additions, by the late Professor Lee; and in 1774, his *Commentaries on Asiatic Poetry*, republished by Eichhorn at Leipsic, in 1776. In 1780, he completed a translation of seven Arabic poems, known as the *Moallakat*, which obtain their collective name from being 'suspended' in the temple at Mecca; wrote an essay *On the Legal Mode of Suppressing Riots*, and another, entitled *Essay on the Law of Bailments*, and two or three odes. In March 1783, J. obtained a judgeship in the Supreme Court of Judicature in Bengal, and landed at Calcutta in September. He at once set about the acquisition and promulgation of the knowledge of oriental languages, literature, and customs. He established the Royal Asiatic Society, 'for investigating the history, antiquities, arts, sciences, and literature of Asia,' of which he was the first president. To the volumes of the *Asiatic Researches*, Sir William contributed largely. Besides these, he wrote and published a story in verse, called *The Enchanted Fruit, or the Hindu Wife*; and a translation of an ancient Indian drama, called *Sacontala, or the Fatal Ring*. A translation by him of the Ordinances

of Menu (q. v.) appeared in 1794. He was busily employed on a digest of the Hindu and Mohammedan laws, when he was attacked with an inflammation of the liver, which terminated fatally on the 27th April 1794. J. was one of the first linguists and oriental scholars that this country has produced. The East India Company erected a monument to his memory in St Paul's Cathedral, and a statue in Bengal. A complete edition of his works, in 6 vols. 4to, was published by Lady Jones in 1799; and another appeared, in 13 vols. 8vo, in 1807, with a life of the author by Lord Teignmouth.

JONE'SIA, a genus of trees of the natural order *Leguminosæ*, sub-order *Cæsalpinieæ*, having a two-leaved calyx, a funnel-shaped, 4-fid corolla, seven stamens attached to a ring which springs from the tube of the corolla, a scimitar-shaped pod. The leaves are abruptly pinnate. The *Asoca* of Sanscrit poetry (*J. Asoca*) is one of the loveliest trees of the East. Its orange and crimson flowers grow in graceful racemes. Indian poetry abounds in its praises.

JÖNKÖPING, a town of Sweden, and one of the most beautiful and finely situated in the country, is capital of the län of the same name, and stands at the southern extremity of Lake Wetter, and is backed on the south and west by pine-clad hills. It is a maritime and trading town, and contains an arsenal and a factory for arms. Pop. 6684.

JONQUIL (Fr. *jonquille*, from Lat. *juncus*, a rush), a name given to certain species of *Narcissus* (q. v.) with rush-like leaves. The COMMON J. (*N. Jonquilla*), a native of the south of Europe, is one of the most common bulbous-rooted plants in our flower-borders. It has from two to six yellow flowers at the summit of its scape (leafless stem). The SWEET-SCENTED J. (*N. odorata*), also a native of the south of Europe, is another species very generally cultivated. Perfumed waters are made from J. flowers.

JONSON, BEN, or BENJAMIN, an English dramatist, was born, according to the most reliable accounts, at Westminster, though one authority says Warwickshire, in 1574. The Scottish poet Drummond of Hawthornden, states that J. told him his grandfather was a Scotchman of Annandale, who settled in Carlisle, and his father a clergyman, who died before Ben was born. The latter received his education at Westminster school, where he had for his preceptor the illustrious Camden. Our knowledge of his career from this point until the period when he became famous as an author is very obscure. It is said that his mother took a second husband, a bricklayer (but this is doubtful), and that Ben was forced very unwillingly to assist his stepfather. The story of his residence (for a few months) at St John's College, Cambridge, may be an authentic tradition, but it really rests on no better evidence than the present of some books now in the library of that college with his name inscribed on them. If he went thither at all, he was soon forced to return home for want of means; but his antipathy to the trade of a bricklayer was so great, that he finally ran off, and served as a soldier in the Low Countries for some time. After coming back to England, he tried the profession of an actor, but did not succeed, whereupon he started as a writer for the stage. Even in this capacity he did not rapidly acquire a reputation. The first piece that procured him a name was *Every Man in his Humour* (1598). The best of his subsequent productions are *Volpone, or the Fox* (1605), *The Silent Woman* (1609), and *The Alchemist* (1610). These are comedies full of rich, dry, carefully-elaborated 'humour.' He

also composed two tragedies, *Sejanus* (1603) and *Catiline's Conspiracy* (1611), on which he—but only he—set a high value. His *Masques*, written for the courts of James and Charles, are occasionally very graceful. For many years J. was in receipt of a pension from these monarchs, but his careless and profuse habits involved him constantly in difficulties, and he died in poverty 6th August 1637. J.'s writings are not much relished now, and never were, even in his own day. There is an air of pedantry about his happiest efforts that spoils their effect. Yet, on the other hand, he possesses a rude force, and a humour which, if heavy and saturnine, is also genuine and pungent. Occasionally, too, his lyrics shew a lightness and delicacy almost inexpressible, considering the ordinarily and cumbrous movement of his faculties. The influence which he exercised over the wits of his time is a proof of the general strength and talent of the man. Shakspeare alone was reckoned his match in those wit-combats held at the Mermaid Tavern. He was an immense drinker, and his potations do not seem to have improved either his temper or his constitution. The best edition of his works is that by Gifford, accompanied by a biographical memoir (Lond. 9 vols. 1816); the latest is that by Barry Cornwall, published by Moxon (Lond. 1838; 3d ed. 1853).

JOPPA, the name given in the Greek of the New Testament to a town called in Hebrew *Yafa*; modern, *Yafa* or *Jaffa*, i. e., beauty. It is situated on the sea-coast of Syria, about 33 miles north-west of Jerusalem, and, according to Stanley, still deserves its name. J. is a place of great antiquity. Here, according to the classical myth, it was that Andromeda was chained to the rock, and exposed to the sea-monster; a story that has been supposed to shadow out in an obscure way the early intercourse between Greece and Syria. In sacred history, it appears as the port of Jerusalem in the time of David and Solomon, and the place to which the cedars of Lebanon were floated from Tyre for the building of the temple. It was at J. that the Apostle Peter saw the vision which corrected his Jewish prejudices concerning the Gentiles and the spirit of Christianity. In the reign of Constantine the Great, J. was made a bishop's see, but it attained its highest prosperity in the times of the Crusades, when it became the principal landing-place of the warriors of Christendom. In 1799, it was stormed by the French under Bonaparte, and here was perpetrated his shameful massacre of Turkish prisoners. In 1832, Mohammed Ali made himself master of it; but the Turks, with the assistance of the British and Austrians, took it from him again in 1840. The modern Jaffa is within the pashalic of Gaza. Its wretched harbour is nearly sanded up, and it has very little trade. Pop. about 5000.

JORDAENS, JAKOB, a celebrated Dutch painter, was born at Antwerp in 1594, and died in 1678. His works are exceedingly numerous, and are to be found in most European collections. They are marked by great truthfulness and vigour of portraiture, and are richly but rather glaringly coloured. Their chief defects are a want of taste and elegance in design. Among his best known works are the 'Merry-making,' the 'Satyr and Man blowing Cold and Hot,' 'Pan and Syrinx,' and 'Saturn devouring his Children.'

JORDAN, the principal river of Palestine, the bed of which forms a great valley, stretching from north to south in the eastern part of the country. The J., deriving its head-waters partly from the eastern branches of the Lebanon Mountains, and partly from Mount Hermon, flows south, and after

a course of 150 miles, having passed through the small lake of El Huleh (The Waters of Merom) and the Lake of Tiberias (Sea of Galilee), it falls into the northern extremity of the Dead Sea (q. v.). The bed of the river varies much in breadth, and its banks are in some places flat; in others, steep. Where it enters the Dead Sea, it is 180 yards broad, and 3 feet deep; but a little way further up, it is only 80 yards broad, and 7 feet deep. From the Lake of Tiberias to the Dead Sea, the J. is crossed by no bridge, although in two or three places there are ruins of bridges. Above the Lake of Tiberias is a bridge called Jacob's Bridge, over which the road from Damascus to the sea-coast passes. In a number of places, the J. is fordable; in some, even when the river is in flood. The course of the J. was explored by Lieutenant Molyneux, an English officer, in August 1847, during the dry season; and by Lieutenant Lynch, with an expedition sent out by the United States' government in April 1848, when the river was in flood.

JORGENSEN, JORGEN, a Danish adventurer, who, in the beginning of the present century, made a descent on the island of Iceland, and reigned there as protector for about six weeks, was the son of a watchmaker in Copenhagen, and was born in that city in 1779. On the 21st June 1809, having previously visited the island in a ship in which he held the position of interpreter, J. arrived at Reikiavik in the *Margaret and Ann*, an armed merchantman from London, carrying 10 or 12 guns. A few days after, he surrounded the house of the governor, took him prisoner, and informed the town's-people that he should hold Iceland in possession for England, 'until such time as the English fleet should relieve him.' He then issued several proclamations, announcing 'that relations with Great Britain should be set on a firm footing, and Iceland be placed under her protection.' He also organised a 'government office,' confiscating all Danish property, with whatever else he could lay hands on, *to the state chest*, and subjecting the inhabitants to all the miseries of an unscrupulous despotism. On the 9th August, however, his brief reign was brought to a close by the arrival of a British man-of-war, the commander of which, hearing of the piratical invasion of J., immediately seized upon and imprisoned him, restoring at the same time the previous condition of affairs. J. was carried to England, but he does not seem to have been visited by the punishment he so fully merited. He afterwards lived in London for some years, was convicted of robbery in 1820, and transported to Botany Bay in 1825.

JORNA'NDES, or JORDANES, a historian of the 6th c., was by birth a Goth, or both of Alan and Gothic descent. He was first a notary, but afterwards adopted the Christian religion, and was made Bishop of Croton, in Italy. He wrote two historical works in the Latin language; the first, *De Regnorum ac Temporum Successione*, is a short compendium of the most important events in history from the creation down to 552 A.D.; but the work is only valuable from the accounts in it of several barbarous northern nations. His other work, *De Getarum Origine et Rebus Gestis* (Concerning the Origin and Deeds of the Goths), is a work which has obtained great renown, chiefly from its being our only source of information about the Goths and other barbarian tribes, except when they are casually mentioned by some Greek or Latin historian. The work is, however, full of inaccuracies, both of time, place, and person. There are many editions of both works.

JORULLO, a volcanic mountain in the Mexican Confederation, situated 150 miles west-south-west

of the city of Mexico, was thrown up, in September 1759, to the height of 1375 feet from a plain, which itself was 2890 feet above the level of the sea; lat. 19° 10' N., long. 101° 2' W. This new creation originally consisted of a series of cones of various sizes. Many of the subordinate eminences have since disappeared altogether; some have changed their form; and few now emit vapour. The temperature of the surface has gradually declined, and much of the locality has been covered with forest trees.

JOSEPH I., Emperor of Germany, the eldest son of Leopold I., was born at Vienna 26th July 1678, was crowned king of Hungary in 1689, and king of Rome in 1690, became emperor in 1705, and died in 1711. The influence of the Prince of Salm, who had the charge of his education, and his subsequent connection with Prince Eugene, led him to embrace opinions much more liberal than those which have generally prevailed in his family, and he granted privileges to the Protestants of Hungary and Bohemia which had been refused by his predecessors. He also concluded a treaty in 1707 with Charles XII. of Sweden, by which he granted religious liberty to the Protestants of Silesia, and restored to them 120 churches which had been taken from them by the Jesuits. He was fond of courtly ceremonial, but mild and affable, and sought to improve the condition of the peasantry in his dominions by relieving them from some of the oppressions to which they were subject. He eagerly and successfully prosecuted, in alliance with Britain, the war of the Spanish Succession against France.

JOSEPH II., Emperor of Germany, son of Francis I. and Maria Theresa (q. v.), was born 13th March 1741, at a time when his mother's fortunes were in their lowest state of depression. He early gave proof of excellent abilities. After the peace of Hubertsburg, he was elected king of Rome, and after the death of his father (18th August 1765), emperor of Germany. Maria Theresa also associated him with herself in the government of the Austrian states; but for some time his actual share in it amounted to little more than the chief command of the army. On her death in 1780, he inherited all her dignities and power. He was ambitious of increase of territory, and although he failed in his object of adding Bavaria to the Austrian dominions, which he thought to consolidate by obtaining it in exchange for the Low Countries, yet he was successful in acquiring Galicia, Lodomeria, and the county of Zips, at the first partition of Poland, in 1772; and he appropriated, in 1780, great part of the bishoprics of Passau and Salzburg. He was a zealous reformer, having imbibed, like Frederick the Great, the principles of the philosophy which prevailed in that age, but he attempted his reforms too rashly, and too much by the exercise of mere authority, and was compelled to restore many things again to their former condition; the hostility of the nobles and clergy, whose power and privileges he sought to reduce, producing rebellions in various parts of his dominions. The clergy in particular regarded him with detestation. He had early shewn a dislike to them, which caused no little vexation to his mother; and as soon as he found himself in full possession of the government of Austria, he proceeded to declare himself independent of the pope, and to prohibit the publication of any new papal bulls in his dominions without his *Placet regium*. The continued publication of the bulls *Unigenitus* (q. v.) and *In cœna Domini* (q. v.) was also prohibited. Besides this, he suppressed no fewer than 700 convents, reduced the number of the regular clergy from 63,000 to 27,000, prohibited papal dispensations as to marriage, and

on 15th October 1781, published the celebrated *Edict of Toleration*, by which he allowed the free exercise of their religion to the Protestants and Non-United Greeks in his dominions. Pope Pius VI. thought to check this course by a personal interview with the emperor, and for that purpose made a visit to Vienna in 1782; and although he was quite unsuccessful in his object, he carried away with him the conviction, that the people were utterly unprepared for the reforms which their sovereign sought to accomplish, a conviction the correctness of which the event abundantly proved. J. engaged in a war with Turkey in 1788, in which he was unsuccessful; and the vexation caused by this, and by the revolts in his own dominions, and the necessity under which he felt himself of revoking many of the edicts by which he had sought to promote the welfare of his people, hastened his death, which took place on 20th February 1790. He founded many valuable institutions, and did much to promote the progress of arts, manufactures, and commerce in Austria.

JOSEPHINE, MARIE ROSE, Empress of the French, was born, 23d June 1763, in the island of Martinique, where her father, Tacher de la Pagerie, was captain of the port at St Pierre. She had only an indifferent colonial education; but her qualities of mind and heart, even more than her beauty, won universal regard. When about 15 years of age, she came to France, and soon after married the Viscount Alexandre Beauharnais; of which marriage were born Eugene, viceroy of Italy, and Hortense, queen of Holland, and mother of the Emperor Napoleon III. J.'s husband having been executed during the Reign of Terror, she herself just escaped through the events of 9th Thermidor (27th July 1794). She was married, 9th March 1796, to Napoleon Bonaparte, accompanied him in some of his campaigns, and exercised a great influence in restraining him from measures of violence and severity. At Malmaison, and afterwards at the Luxembourg and the Tuileries, she attracted round her the most brilliant society of France, and contributed not a little to the increase of her husband's power. She regarded his exaltation to the throne, however, with a presentiment of evil; and from the day of her becoming empress, seemed to dread that political motives might lead him to seek the dissolution of a marriage which had proved unfruitful. After scenes of the most painful kind, this took place. The marriage was dissolved by law on 16th December 1809. J. retained the title of empress, corresponded with Bonaparte, and if the allied sovereigns had permitted, would have rejoined him after his fall. She lived near Evreux, and died, after a short illness, on 29th May 1814. Compare *Histoire de l'Impératrice Joséphine* (2 vols. Paris, 1859), by M. J. Aubenas.

JOSEPHUS, FLAVIUS, a celebrated Jewish historian, was born at Jerusalem, 37 A.D. He was of both royal and sacerdotal lineage, being descended, on the mother's side, from the line of Asmonean princes, while his father, Matthias, officiated as a priest in the first of the twenty-four courses. The careful education he received developed his brilliant faculties at an unusually early period, and his acquirements both in Hebrew and Greek literature—the two principal branches of his studies—soon drew public attention upon him. Having successively attended the lectures at the paramount religious schools of his time—'sects,' as he inaccurately terms them—he withdrew into the desert, to a man whom he calls Banos, and who is conjectured to have been either a follower of John the Baptist or an Essene. Three years later, he

returned to Jerusalem, and henceforth belonged to the body of the 'Pharisees,' which, in fact, comprised the bulk of the people. So great was the regard for his abilities, that at the age of only twenty-six years he was chosen delegate to Nero. When the Jews rose in their last and fatal insurrection against the Romans, J. was appointed governor of Galilee. Here he displayed the greatest valour and prudence; but the advance of the Roman general Vespasian (67 A. D.) made resistance hopeless. The city of Jotapata, into which J. had thrown himself, was taken after a desperate resistance of 47 days. Along with some others, he concealed himself in a cavern, but his hiding-place was discovered, and being brought before Vespasian, he would have been sent to Nero, had he not—according to his own account, for J. is his own and his sole biographer—prophesied that his captor would yet become emperor of Rome. Nevertheless, he was kept in a sort of easy imprisonment for about three years. J. was present in the Roman army at the siege of Jerusalem by Titus; and after the fall of the city (70 A. D.), was instrumental in saving the lives of some of his relatives. After this, he appears to have resided at Rome, and to have devoted himself to literary studies. The exact period of his death is not ascertained. All we know is, that he survived Agrippa II., who died 97 A. D. He was thrice married, and had children by his second and third wives. His works are: *History of the Jewish War*, in 7 books, written both in Hebrew and Greek (the Hebrew version is no longer extant); *Jewish Antiquities*, in 20 books, containing the history of his countrymen from the earliest times down to the end of the reign of Nero (the fictitious Hebrew *Josippon*, which for a long time was identified with J.'s *Antiquities*, dates from the 10th c. A. D.); a treatise on the *Antiquity of the Jews*, against Apion, in 2 vols., valuable chiefly for its extracts from old historical writers; and an *Autobiography* (37—90 A. D.), in one book, which may be considered supplementary to the *Antiquities*. The other works attributed to him are not believed to be genuine.

The peculiar character of J. is not difficult to describe. He was, in the main, honest and veracious; he had a sincere liking for his countrymen, and rather more pride and enthusiasm in the old national history than he could well justify; but the hopelessness of attempting to withstand the enormous power of the Romans, and an aversion to martyrdom, caused him to side with the enemy:—perhaps in the faint hope of being thus of some use to the national cause. The influence of Greek philosophy and learning is visible in all his writings, and, as far as biblical history is concerned, infused into it a tone of 'rationalism.' He speaks of Moses as a human, rather than a divinely inspired lawgiver; he doubts the miracle in the crossing of the Red Sea; the swallowing of Jonah by the whale; and, generally speaking, whatever is calculated to teach that there was a special miraculous Providence at work on behalf of the chosen people. His style is easy and elegant, and J. has often been called the Greek Livy. The *editio princeps* of the Greek text appeared at Basel (Froben) in 1544. Since then, the most important editions (with notes) are those of Hudson (Oxford, 1720), Havercamp (Amst. 1726), Oberthür (Leip. 1782—1785), Richter (Leip. 1825—1827), and Dindorf (Paris, 1845). J. has been frequently translated; the two best known versions in English are by L'Estrange (Lond. 1702) and Whiston (Lond. 1737).

JO'SHUA (Heb. *Yehoshua*, 'Jehovah helps'), the name of the celebrated Hebrew warrior under whose leadership the land of Canaan was conquered. He was the son of Nun, of the tribe of

Ephraim, and was born in Egypt. Before the Israelites had reached Sinai, he was chosen by Moses to command the troops that fought against Amalek; and shortly before the death of the great lawgiver, he was publicly invested by the latter with the whole civil and military government of the Israelites. The vigorous and, on the whole, successful manner in which he pursued the conquest of Canaan, and distributed the land among the tribes, is minutely described in the book which bears his name. He died at the age of 110, and was buried at Timnath-Serah, in Ephraim.—The so-called Book of Joshua, in its present form, containing an account of the conquest and division of the 'Land of Promise,' was neither written by him nor by any of his contemporaries; but the compiler has certainly made copious use, especially in the earlier chapters, of documents drawn up during the period of the conquest. Such passages as that relative to the harlot Rahab—'and she dwelleth in Israel unto this day' (vi. 25)—demonstrate their own antiquity; but on the other hand, such passages as the narrative of the capture of Hebron (of which there are several), which did not take place till after the death of J.; the frequency of the expression, 'unto this day,' in connections that forbid us to suppose the interval a brief one; the allusion to Judah and Israel as distinct (xi. 21); the lateness of many of the grammatical forms, &c., clearly indicate the gradual growth of the book under successive editors, the last of whom is placed by Masius, Spinoza, Hasse, &c., after the exile, and by Ewald in the time of Manasseh; while Keil and others place the book in the time of Saul. A Samaritan Book of Joshua (*Chronicon Samaritanum*), containing a chronological narrative of events from the death of Moses down to the time of the Roman emperor Hadrian, compiled from Arabic and Hebrew sources, about 1300 A. D., is extant in Arabic, and was first edited at Leyden in 1848, by Juynboll, along with a Latin version. It differs very considerably from the canonical Book of Joshua.

JOSIAH (Heb. *Yoshiyahu*, 'Jehovah will help'), one of the kings of Judah, was the son of Amon and Jedidah, and succeeded his father (641 B. C.) at the age of eight years. He was apparently brought up under the care of the priesthood, early manifested a pious disposition, and became a determined religious reformer, purging Judah and Jerusalem from idolatry. In like manner, it seems, he marched through the land of Israel. This statement has naturally excited much surprise. For more than a hundred years, the kingdom of Israel had been a part of the Assyrian empire; its people were, for the most part, carried into exile, and their place supplied by heathen colonists. It was in the reign of J. that Hilkiah the high-priest found the 'Book of the Torah'—by which some understand Deuteronomy, others Exodus, and others, again, the whole Pentateuch—while the workmen were repairing the temple. J. does not appear to have heard of its existence before; at least, the words of it strike him as something novel, and excite the profoundest emotions in his breast. In commemoration of the discovery, the king celebrated the feast of the Passover with a splendour never before equalled. After this, he continued his work of extirpating every trace of idolatry. Wizards, conjurers, 'all the abominations' that could be 'spied in the land,' were 'put away.' In these efforts, the monarch seems to have spent the greater part of his reign. He met his death at Megiddo, in the valley of Esdraelon, when attempting to check the advance of Pharaoh-Necho against the Assyrians. (Compare *Herod.* II. 159.) J. was the last of the good kings

of Judah. In his days prophesied Jeremiah and Zephaniah.

JOSIKA, MIKLOS (NICHOLAS), a very remarkable Hungarian novelist, was born of a distinguished family, 28th September 1796, at Torda, in Transylvania. In his youth, he served for some time in the Austrian army, but resigned his commission in 1818, married a wealthy Hungarian heiress, and for many years devoted himself to agriculture and study. His first works appeared in 1834 under the title of *Irány and Vázlatok*, and were exceedingly popular. From that period till the revolution in 1848, he wrote about 60 volumes of novels, all of which were published at Pesth. The most important are *Az utolsó Bátor* (The Last Bátor, 3 vols. 1840), *Zrínyi a Kéltő* (The Poet Zrínyi, 4 vols. 1843), *A Csehek Magyarországon* (The Bohemians in Hungary, 4 vols. 1845), and *Josika István* (Stephen Josika—one of the author's ancestors—5 vols. 1847). Involved in the Hungarian revolution, he was obliged to abandon his native country, and has since resided at Brussels, where he continues his literary labours. Among his productions written in exile, the best are *Egy Magyar Családa forradalom Alatt* (A Hungarian Family during the Revolution, 4 vols. 1851); *The Maitly Family* (2 vols. 1850); and *Esther* (Esther, 1853). J. is a thoroughly natural novelist, and has drawn his materials almost wholly from the history of his own land, of which he possesses a most minute and profound knowledge. He has been called the Walter Scott of Hungary.

JOST, ISAAK MARKUS, an eminent Jewish scholar of Germany, born at Bernburg in 1793, died 1862. His principal works are *Geschichte der Israeliten* (History of the Israelites, 9 vols. Berl. 1820—1829, to which was added a tenth during 1846—1849, entitled *Neuere Geschichte der Israeliten von 1815—1845*); *Allgemeine Geschichte des Jüd. Volkes* (Universal History of the Jewish People, 2 vols. Berl. 1831—1832); a Translation (into German) of the Mishna with text and commentary (6 vols. Berl. 1832—1834); *Gesch. des Judenthums*, &c. (3 vols. Leipsic, 1857—1859). He also edited a journal entitled *Israelitische Annalen* (Fkf. 1839—1841). Besides being a savant, he was a patriot, and warmly interested himself in behalf of the social and political liberties of his countrymen.

JOUDPORE, a city in Rajpootana, Hindustan, capital of a protected state of the same name, stands in lat. 26° 19' N., and long. 73° 8' E. The population, not accurately ascertained, appears to amount to at least 30,000. Besides several magnificent tanks, the place is remarkable for its elaborately constructed and deep wells. The state of JOUDPORE is the most extensive and populous of all the principalities of Rajpootana. Area, 35,672 square miles; pop. 1,753,600; army, 11,000; revenue of the rajah, £180,000. J. is chiefly within the basin of the Luni; and its central parts, being level and well watered, are highly productive, yielding wheat, opium, tobacco, and cotton.

JOUFFROY, THÉODORE SIMON, a French philosopher, was born, 7th July 1796, at Pontets, a village of the Jura, early devoted himself to the study of philosophy, and became a teacher of it, and in 1832 a professor in the Collège de France. His bad health compelled him to resign his professorship in 1837, and he died 1st March 1842. His works consist chiefly of studies of the Scottish philosophy, and he published translations of the works of Reid and some of those of Dugald Stewart with notes and introductions. Of his original works, the most valuable is *Mélanges Philosophiques* (1833). He was also known as a political writer, and in 1824 took part in establishing the newspaper *Le Globe*. He

was for some time a member of the Chamber of Deputies, and was a follower of Guizot.

JOUGS, JUGGS, or JOGGS, the name given in Scotland to a form of pillory which was used also in Holland, and probably in other countries. The jogs were nothing more than an iron ring or collar, fastened by a chain of two or three links to a pillar or wall in some public place, such as a market cross, a market tron or weighing post, a prison door, a church door, a churchyard gate, a churchyard tree, a tree beneath whose branches courts were held, and the like. The ring or collar opened by a hinge or joint, so as to enclose the culprit's neck, when it was secured by a loop or staple, and a padlock. The jogs were employed as a punishment as well for ecclesiastical as for civil offences. They may be traced as far back as the 16th c., and although they have not been in use for the last hundred years, they may still be found hanging at a few country churches. The accompanying wood-cut

Jougs.

represents the jogs at the churchyard gate of the picturesque little hamlet of Duddingston, within about a mile of Edinburgh. The jogs obviously take their name from a widely-spread root, which appears in the Sanscr. *yuj*, the Gr. *zugon*, the Lat. *jugum*, the Ital. *giogo*, the Fr. *joug*, the Ger. *joch*, the Ang.-Sax. *ioc*, and the Eng. *yoke*. The BRANKS (q. v.) were occasionally hung on the same pillar with the jogs.

JOULE, JAMES P., one of the most distinguished living experimental philosophers, was born in 1818, at Salford, near Manchester. In his youth, he had the good fortune to have for instructor in science the celebrated Dalton; and he early shewed, by constructing for himself electrical machines and other philosophical instruments, the bent of his genius. His earliest notable experiments were made with reference to electro-magnetic engines; from which he passed to quantitative determinations regarding heat, and the transformation of various forms of energy (see FORCE). He is justly entitled to be considered as the experimental founder of the modern theory of conservation of energy—the grandest generalisation ever made in physical science. A sketch of this principle is given in the article FORCE above referred to.

JOUNPUR, a town in the North-west Provinces of India, is situated on both banks of the Gumti, which is here crossed by an ancient bridge, so strong as to be periodically submerged without injury. Lat. 25° 44' N., long. 82° 44' E. This structure is commanded by a fort still older than itself, a work of the latter half of the 14th century. The population is 16,000. J. is the capital of a district of the same name, with an area of 1552 square miles, and about 800,000 inhabitants. Sugar is largely produced.

JOURDAN, JEAN BAPTISTE, COMTE, a French marshal, born 29th April 1762, at Limoges, where his father was a surgeon. He early entered the army, embraced with great zeal the cause of the Revolution, and soon rose to the rank of a general of division. In September 1793, he obtained the command of the Army of the North, and on 16th October gained an important victory at Wattignies. In 1794 and 1795, he commanded the Army of the Meuse and Sambre, and prosecuted the war with great vigour and success. In 1796, he pushed his way far into Germany, but was driven back by the Archduke Charles; and this discomfiture led to his resignation of his command. In 1799, the Directory intrusted him with the command of the Army of the Danube; but he was defeated by the Archduke Charles at Stockach. Although he opposed the *coup-d'état* of 18th Brumaire, the First Consul employed him, in 1800, in the re-organisation and administration of Piedmont; and on the establishment of the Empire in 1804, he was made a marshal, and a member of the Council of State. He accompanied King Joseph to Naples, and afterwards to Spain, and in his service he was actively employed as a general. He offered his services to Napoleon after his return from Elba. Louis XVIII. made him a count in 1815. In 1819, he was made a peer of France; but his republican principles led him to enter heartily into the revolution of 1830. He lived and died poor. His death took place on 23d November 1833.

JOUSTS, exercises of arms and horsemanship, performed in the middle ages by knights and nobles. In the joust, the combatants engaged one another singly, each against his antagonist, and not in a troop, as in the Tournament (q. v.). The number of courses to be run and strokes to be given was generally three, but sometimes a larger number. The weapon most in use in the joust was the lance, but sometimes the battle-axe and sword were employed. To direct the lance anywhere, but at the body of the antagonist, was reckoned foul-play. In the joust of peace, or *joute de plaisance*, a foot encounter preceded the mounted combat. In the 15th c., the usages of jousting had come to differ in different countries to such an extent, that an elaborate treatise was written in explanation of the various modes, distinguishing the characteristic differences.

JUAN, DON. See DON JUAN.

JUAN FERNANDEZ, called also MAS-A-TIERRA, a rocky island in the Pacific Ocean, about 400 miles off Valparaiso, on the coast of Chili, to which it belongs. Lat. 33° 40' S., long. about 79° W. The island contains about 40 inhabitants. It is 18 miles long, 6 miles broad, and is for the most part covered with high rocky peaks, the highest of which, Yungu, is about 4000 feet above sea-level. There are also numerous and fertile valleys, which yield oats, turnips, apples, strawberries, melons, peaches, figs, grapes, sandal-wood, and other varieties of timber. Numbers of wild-goats wander on the cliffs. A few settlers from the United States and Tahiti hold the island under lease from the Chilian government. Here

Alexander Selkirk, a bucaneer, from the fishing-town of Largo, in Fifehire, Scotland, resided in solitude for four years (1704—1708). His story is commonly supposed to have suggested the idea of the *Robinson Crusoe* of Defoe, but this is doubtful.

JUBÆA, a genus of palms of the same tribe with the cocoa-nut. *J. spectabilis* is a palm of 30 or 40 feet high, with a wide-spreading crown of pinnate leaves; a native of Chili, where it is called *Coquito*. The Chilians cut off the crown, and collect the sap, which flows freely for several months, a fresh slice of the top of the stem being cut off every morning. A good tree will yield ninety gallons of sap, which being boiled down to a syrup of the consistency of treacle, receives the name of *miel de palma* (palm-honey), and is an important article of the domestic economy of the country. The *Jubæa* is, in fact, the Jaggery (q. v.) palm of Chili.

JUBILEE, THE YEAR OF (Heb. *Yobel*), a peculiar institution among the Hebrews (Leviticus xxv.), by which, every fiftieth (*not* forty-ninth) year, the land that in the interval had passed out of the possession of those to whom it originally belonged was restored to them, and all who had been reduced to poverty, and obliged to hire themselves out as servants, were released from their bondage; no less were (Jos. Ant. iii. 12. 3) all debts remitted. The jubilee forms, as it were, an exalted Sabbatical Year (q. v.), and the land was completely to be left to itself in the former as in the latter. The design of this institution was chiefly the restoration of the equilibrium in the families and tribes. It was to prevent the growth of an oligarchy of landowners, and the total impoverishment of some families; as well as to increase the fertility of the soil and the growth of the population. It was proclaimed at the end of the harvest-time, like the sabbatical year, on the tenth day of the seventh month—the day of atonement—by the yobel (a kind of horn), hence also its name. There is no trace in the whole history of the Hebrews down to the Babylonian exile that the jubilee had ever been observed: after the return, however, it appears to have been rigorously kept, like the sabbatical year, for some time at least; but, from its general impracticability, it must soon have fallen into disuse. When the sabbatical year was *de facto* repealed by Hillel's *Prosbol* (a legal document entitling the creditor to claim his debt during this period), mention is no longer made of the yobel. The speculations of modern critics on the *possibility* of the yobel, and on the date of its inauguration, cannot prevail against the undeniable fact that it has been kept, and also that it is much more in harmony with the primitive theocratic character of the Mosaic institutions—according to which all the land was held as a kind of loan from Jehovah, who alone had an absolute right over it—than with those of any later period, to which it otherwise would have to be referred.

JUBILEE, or **JUBILEE YEAR**, an institution of the Roman Catholic Church, the name of which is borrowed from that of the Jewish jubilee. The Catholic jubilee is of two kinds—'ordinary' and 'extraordinary.' The ordinary jubilee is that which is celebrated at stated intervals, the length of which has varied at different times. Its origin is traced to Pope Boniface VIII., who issued, for the year 1300, a bull granting a plenary indulgence to all pilgrim-visitors of Rome during that year, on condition of their penitently confessing their sins, and visiting the church of St Peter and St Paul, fifteen times if strangers, and thirty times if residents of the city. The invitation was accepted with marvellous enthusiasm. Innumerable troops of pilgrims from every part of the church flocked to Rome. Giovanni

Villani, a contemporary chronicler, states that the constant number of pilgrims in Rome, not reckoning those who were on the road going or returning, during the entire year, never fell below 200,000. As instituted by Boniface, the jubilee was to have been held every hundredth year. Clement VI., in obedience to an earnest request from the people of Rome, abridged the time to fifty years. His jubilee accordingly took place in 1350, and was even more numerous attended than that of Boniface; the average number of pilgrims, until the heats of summer suspended their frequency, being, according to Matthew Villani, no fewer than 1,000,000! The term of interval was still further abridged by Urban VI., and again by Paul II., who, in 1470, ordered that thenceforward each twenty-fifth year should be held as jubilee—an arrangement which has continued ever since to regulate the ordinary jubilee. Paul II. extended still more, in another way, the spiritual advantages of the jubilee, by dispensing with the personal pilgrimage to Rome, and granting the indulgence to all who should visit any church in their own country designated for the purpose, and should, if their means permitted, contribute a sum towards the expenses of the Holy Wars. The substitution by Leo X. of the fund for building St Peter's Church for that of the Holy War, and the abusive and scandalous proceedings of many of those appointed to preach the Indulgence (q. v.), were among the proximate causes of the Reformation. In later jubilee years, the pilgrimages to Rome gradually diminished in frequency, the indulgence being, for the most part, obtained by the performance of the prescribed works at home; but the observance itself has been punctually maintained at each recurring period, with the single exception of the year 1800, in which, owing to the vacancy of the holy see, and the troubles of the times, it was not held.

The extraordinary jubilee is ordered by the pope out of the regular period, either on his accession, or on some occasion of public calamity, or in some critical condition of the fortunes of the church; one of the conditions for obtaining the indulgence in such cases being the recitation of certain stated prayers for the particular necessity in which the jubilee originated.

JUDÆA. See PALESTINE.

JUDAH (Heb. *Yehuda*, 'the Bepraised One') was the fourth son of Jacob and Leah, and founder of the greatest and most numerous of the twelve tribes. In the march through the wilderness, it had the post of honour—the van—assigned to it; and tradition narrates that its standard was a lion's whelp, with the words: 'Arise, O Lord, and let thine enemies be scattered!' After the conquest of Canaan, its territories stretched from the Dead Sea on the east to the Mediterranean on the west (though the Philistines long held possession of the fertile district west of the mountains of Judah), and from Jerusalem (excluding that city) on the north to the land of the Amalekites on the south. The capital of the tribe was Hebron.

JUDAIZERS. See EBIONITES.

JUDAS'S TREE (*Cercis*), a genus of trees of the natural order *Leguminosæ*, sub-order *Casalpinieæ*. The common J. T. (*C. Silquastrum*) is a native of the south of Europe, and of the warmer temperate parts of Asia. It has almost orbicular, very obtuse leaves. The flowers, which are rose-coloured, appear before the leaves. There is a legend that Judas hanged himself on a tree of this kind. The American J. T. (*C. Canadensis*) is very similar, but has acuminate leaves. The flower-buds of both species are frequently pickled in vinegar. The wood

of both species is very beautiful, veined with black, and takes an excellent polish.

JUDE, EPISTLE OF, one of the smallest and least important books in the canon of the New Testament, was placed among the *Antilegomena* (Doubtful Writings) by the primitive church, while some even considered it spurious. It was not made use of by the Asiatic churches until the 4th c., and does not appear to have been known in the West until towards the end of the 2d. Even those who quote it do so with hesitation, such as Clemens Alexandrinus, Origen, and Jerome. At the Reformation, similar suspicions revived, and were entertained first by Luther and Calvin, and afterwards by the Magdeburg Centuriators and Grotius. In modern times, the tide of critical opinion has run strongly against its canonicity.

JUDGE is the generic descriptive name given to those who are invested with the power of judging and deciding causes in the highest courts of common law. In Great Britain—though it is otherwise in America—it is not usual to designate the highest class of judges by the epithet of judge, and British lawyers never do so. Thus, instead of saying Judge Blackstone, Judge Pollock, Judge Eldon, the proper description is—Mr Justice Blackstone, Chief Baron Pollock, Lord Chancellor Eldon, &c., according to the particular court in which they presided. In Scotland, the usual prefix to the name of a judge is Lord; and the judges there, on their appointment, often assume new titles in addition to the prefix 'Lord.' In England, the judges of the superior courts are only called lords while they sit in court, and are so addressed by counsel, but not elsewhere. The practice has long been for the crown to confer the honour of knighthood on all the judges of the superior courts of law and equity in England, but not in Ireland or Scotland. All the superior judges are appointed by the crown, and since 12 and 13 Will. III. c. 2, have held their offices during good behaviour; since 1 Geo. III. c. 23, they have also continued to hold their appointments notwithstanding the demise of the crown. They can only be removed from their office on the address of both Houses of Parliament. They are all, except the Master of the Rolls, disqualified from sitting in the House of Commons. Judges have no privileges over other persons in respect of their obeying the law, except that the common-law judges in England have the privilege of suing and being sued in their own court, though not of judging in their own cases.

The term judge has also been appropriated as the proper descriptive title of the judges of the county courts established in England in 1846.—*Judge Ordinary*, in English law, is the descriptive title of one judge only—viz., the judge of the Divorce and Probate Court. In Scotland, the phrase is often applied to all judges, superior and inferior, whenever they have a fixed and determinate jurisdiction, in contradistinction to commissioners, who have an occasional and temporary judicial authority delegated to them.

JUDGE-ADVOCATE-GENERAL, the supreme judge, under the Mutiny Act and Articles of War, of the proceedings of courts-martial. This officer is also the adviser, in legal matters, of the Commander-in-Chief and Secretary of State for War. Before confirmation, the sentences of all courts-martial, with the evidence adduced, are submitted to him; and it is for him to represent to the commander-in-chief any illegality of procedure, or other circumstance rendering it undesirable that the Queen should be advised to confirm the court's decision. The judge-advocate-general receives a salary of

£2000, and is a member of the House of Commons and of the ministry—changing, of course, with the latter. As it is essential that the judge-advocate-general should have an intimate acquaintance with the military law, as well as with the general law of the land, he is provided with an assistant or deputy, whose office is permanent, and who is selected from among barristers of eminence.

The *Deputy-Judge-Advocate* is an officer holding a temporary commission as public prosecutor in every court-martial. He must be an officer of intelligence, as it is part of his duty to examine and cross-examine witnesses, to warn the members of the court of any illegality in their proceedings, and generally to fulfil, in the limited area of the court, the functions which belong to the judge-advocate-general in regard to the whole army.

JUDGES, BOOK OF (Heb. *Shoftim*), a canonical book of the Old Testament, recording the achievements of those heroes who, at different periods in the early history of the Hebrews, before the consolidation of the government under a monarchy, from Joshua to Samuel, arose to deliver their countrymen from the oppressions of neighbouring nations, but only three of whom, Deborah, Eli, and Samuel, were *Judges* in our sense of the word. The contents of the book have given rise to much criticism. It cannot be said to be a *history*, properly speaking. The events recorded in it do not follow each other chronologically, nor is there any other order to be perceived in their arrangement. It is rather a collection of detached historical traditions from the time of the Hebrew republic—probably redacted in the commencement of the reign of David—from ancient poems and popular sagas. It exhibits (whether with a royalistic tendency, as has been supposed by some, or in order to point the moral that however deeply sunk a people—emphatically the people—might be in slavery or idolatry, or both, God would always send them a deliverer from either at the right time) the lawless and ungodly state of Israel during the greater part of this period, and the evil consequences their intimate connection with the idolatrous nations around them brought upon them. The book naturally falls into two portions—the first, up to chapter xvi., containing the heroic deeds of the single ‘judges;’ the second, from chapter xvii., the two accounts of the idol of Micah, and of the crime of Benjamin. The space of time over which the book extends has of old been hotly contested: that it comprises no less than 300 years (cf. xi. 26) is, however, almost the only point on which we can feel certain, since there is no doubt that many of the events recorded in the book did not follow upon one another, but fell in the same period: a circumstance which chronologers generally have failed to take into account. The book itself differs considerably from the other historical books of the Bible by its simplicity and originality. That most of the heroic adventures related contain—sometimes, perhaps, under a highly poetical guise—true historical facts, has been doubted by but a very small number of critics. Ancient traditions make Samuel the author, or rather redactor of the book, and there is certainly little to be said against, and much for, this supposition. Compare Ewald, Wette, Rosenmüller, Studer, Keil, &c. See **JEW**s.

JUDGE'S CHAMBERS means the place where a single common-law judge sits near Chancery Lane, London, in an informal manner, to hear attorneys make applications of an unimportant nature arising out of actions pending in court. If the judge refuse, or decide wrongly, there is an appeal to the court of which he is a judge. In general, a judge sits at

chambers all the year round to dispose of these applications, which are chiefly matters of form, but of urgency.

JUDGMENT is, in English Law, the term usually applied to the final determination of a common-law court in an action, and when the litigation is at an end. In the courts of equity, the more usual corresponding term is a decree or order, and in criminal and Admiralty courts, a sentence. All judgments of the superior courts are, as a general rule, capable of being appealed against (see **APPEAL**). When a judgment is not appealed against within a certain time allowed for the purpose, then it is final, and binding on the parties. If the judgment is registered, it will have the effect of preventing the judgment debtor from selling or alienating his lands, but in general has no such effect on his goods and chattels or personal estate, except money invested in government stock. In order to make a judgment effectual in an action of debt, if the debtor refuses to pay, a further process is necessary on the part of the creditor, called Execution (q.v.). In Scotland, judgment is usually called a Decree (q.v.), and judgment by default is called a decree in absence.

JUDGMENT. This familiar word of every-day discourse has a technical meaning in Logic, to which corresponds its acceptance as the name of a faculty of the mind. A ‘judgment,’ in logic, is an affirmation of some kind or other, as ‘snow is white,’ ‘man is mortal.’ The contrast to it is a mere notion, as white, mountain, mortality. In a judgment, two notions must always enter, but this is not the whole; there must be some declaration coupling the two together, a function performed in all cases by a verb. A complete meaning, as expressed in a grammatical sentence, is a judgment. Other designations for the same thing are—proposition, assertion, predication.

The intellectual faculty called Judgment has reference to the logical force of the word, and means the power of forming judgments, and by implication, the further power of determining them to be true or false. This last function is perhaps what is most prominently implied in the faculty, as commonly understood.

The intellectual power of judging, when probed to its deepest foundations in the mind, resolves itself into one of two things—the discrimination of difference, or the perception of agreement in the midst of difference (see **INTELLECT**). A judge in a court of law finds that a case comes under, or does not come under, a certain statute; which finding constitutes his decision. A scientific man decides a theory to be true by a certain extent of coincidence with observed fact. An artist approves or disapproves a work of art by its agreeing or disagreeing with his standard, or those previous productions that have settled his conception of excellence in that species.

JUDGMENT (in Theology). The doctrine of a judgment after death has always been associated with the belief in man's immortality, and is maintained as a doctrine of natural religion on the ground of that responsibility of which conscience always more or less distinctly testifies, and of the evident absence of a due proportion of rewards and punishments to human actions in this life. This doctrine, however, as a doctrine of the Christian religion, contains many things of which there is no evidence apart from revelation. Thus, we are told of a *day* or time of *judgment*, when, in great solemnity, and in presence of an assembled universe, the judgment shall be pronounced; also, that the Lord Jesus Christ is to appear in glory as judge. As a doctrine of revelation, the doctrine of a final judgment is

also brought into close connection with that of the Resurrection (q. v.) of the dead.

JUDICIAL COMMITTEE OF THE PRIVY-COUNCIL, those members of the privy-council who sit as a court of justice in the hearing of appeals, &c. See **PRIVY-COUNCIL**.

JUDICIAL DECLARATION, in Scotch Law, means a declaration made by one of the parties to a suit, and who has been specially ordered by the court to be examined on a particular point. It is not a statement made on oath. In England, the phrase is seldom used, though the same result is obtained by what are called admissions of the parties.

JUDICIAL FACTOR, in Scotch Law, is a person appointed by the Court of Session, on special application, as a guardian to protect the interests of minors, absent parties, and lunatics. In England and Ireland, the corresponding officers are called receivers or trustees, according to circumstances.

JUDICIAL RATIFICATION, in Scotch Law, means the declaration made by a married woman in the absence of her husband, before a justice of the peace, to the effect that a disposition or deed of alienation of her heritable property has been made without coercion or fear on the part of her husband, and voluntarily on her part. A notary and two witnesses must also be present, and the former indorses on the deed a memorandum of the ratification. The object is to remove objections which might otherwise be made to the validity of the deed. In England, the corresponding process is called an acknowledgment of a deed by a married woman.

JUDICIAL REMIT, in Scotch Law, is a reference by a court or judge of a cause, or part of a cause, to the decision of an arbiter or nominee, such as an engineer or accountant. The matter referred is generally some technical matter in which the referee is specially skilled. In England, the corresponding phrase is a reference to an arbitrator or expert to report.

JUDICIAL SEPARATION, in English Law, is the separation of two married persons by order of the Court of Divorce. Married persons may, if they please, mutually agree to live separate, and they may enter into a deed of separation for that purpose, which to some extent is recognised as valid by courts of equity. This is called voluntary separation. But, in the eye of the law, two married persons living apart are still married, and retain the status of married persons, and must sue and be sued in all respects the same as if they were still cohabiting. And a deed of separation is always revocable by the parties, though to some extent binding on each, if the other do not consent to renew the cohabitation. But when the parties have not mutually consented to separate, one of them can compel a judicial separation for certain grounds of misconduct. Thus, either party may apply on the ground of adultery, or cruelty, or desertion without cause for two years and upwards. The kind of cruelty which has been held a ground of judicial separation is difficult of definition.

The consequences of a judicial separation are as follow. The parties, not being divorced, cannot marry again; but there is no longer the duty of cohabiting. Part of the decree may consist of an award of a certain income to the wife after separation, and the court may make orders as to the custody and maintenance of children. But, irrespective of this, the wife becomes, to all intents and purposes as regards her future property, in the same position as if she were unmarried. On the other hand, the husband is no longer responsible for

maintaining his wife, except so far as he may have been ordered to pay her alimony, and he is not liable for her future debts. These last consequences have been declared in England since 1857, when the law was materially improved on the subject, and a new Divorce Court established.

In Scotland, the law has also been recently changed, and now nearly coincides with the English law in many respects, this improvement being made by the Conjugal Rights' Act, 24 and 25 Vict. c. 86. By that act, whenever a decree of separation *a mensa et thoro* is obtained at the instance of the wife, all property which she may acquire, or which may devolve upon her, is held entirely separate from and independent of her husband; she can bequeath it by will as if he was dead. She can also enter into contracts, and sue and be sued in her own name, and the husband is no longer liable for necessities or her debts, except so far as he is bound by the decree of separation to pay to her aliment. As regards the grounds of judicial separation in Scotland, they are nearly the same, being described by Mr Bell in his *Principles* thus: whenever life is endangered, or there is fair and reasonable ground of apprehension of personal violence, or there is continued annoyance, wearing out and exhausting the party, or there are adulterous practices. It will, however, be found that the grounds of divorce are more ample in Scotland than in England. See **MARRIAGE**.

JUDITH, the heroine of an apocryphal and fictitious book (probably of the 2d c. B. C.; Movers, Ewald, &c.) called by her name, is represented as a beautiful Jewess of Bethulia, who perils her life and chastity in the tent of Holofernes, general of Nebuchadnezzar, in order to save her native town, by the assassination of the Assyrian commander. This she achieves, and escapes with the head of Holofernes to Bethulia. Her townsmen are inspired with a sudden enthusiasm, rush out upon the enemy, and completely defeat them. The tale is not mentioned by Josephus; and has, from an early period, been held to be an allegory; but it seems more probable that it is a legend founded on some real fact. It has frequently furnished poets and painters with subjects.

JUGGERNAUT. See **JAGGERNAUT**.

JUGGLERS (Fr. *jongleurs*), a term now almost synonymous with conjuror, and applied to persons who perform tricks of legerdmain, originally designated the professional musicians who attended the troubadours and trouvères of Provence and the north of France, either singing their poems, or, if they sung them themselves, accompanying them with an instrument, which was reckoned beneath the dignity of the poet himself. The word is derived from the mediæval Latin *joculator*; in Provençal, *joglar*, *joglador*; in old French, *jonglere* or *jongléor*; in modern French, *jongleur*. These musicians soon began to be also kept in the service of kings and princes, whence they received the name of *menestrels* or *minstrels* (Lat. *minister*, a servant). The profession was at this time an honourable one, and good endowments were devoted to the maintenance of minstrels; and when the art of the minstrel ceased to be exclusively employed for the entertainment of courts, those of this profession formed a separate guild in some towns, as in Paris. But it gradually lost respectability. Rope-dancers, and all who sought to gratify the populace by sleight of hand or feats of agility, were designated by the name *jongleur*, until it became restricted to its present acceptation.—The ancient Romans had their conjurors or wonder-workers (*praestigiatōres*), their throwers of knives (*ventilatores*), and their players

with balls and rings (*pilari*). But the greatest proficient in everything of this kind are and have for many ages been the Hindus and Chinese.

JUGLANS AND JUGLANDACEÆ. See WALNUT.

JUGURTHA, king of Numidia, son of Mastanabal, who was a natural son of Masinissa, was carefully educated along with Adherbal and Hiempsal, the sons of his uncle Micipsa, who succeeded Masinissa on the throne. After Micipsa's death, J. soon caused Hiempsal to be murdered (118 B. C.), and Adherbal fled to Rome. J. succeeded in bribing great part of the Roman senate, and obtained a decision in his favour, freeing him from the charge of the murder of Hiempsal, and assigning him a larger share of the kingdom than was given to Adherbal (117 B. C.). But J. soon invaded Adherbal's dominions; and notwithstanding injunctions by the Romans to the contrary, besieged him in the town of Cirta (112 B. C.), and caused him and the Romans who were captured with him to be put to death with horrible tortures. Hereupon, war was declared against J. by the Roman people; but, by bribing the generals, J. contrived for years to baffle the Roman power. At last the consul, Q. Cæcilius Metellus, proving inaccessible to bribes, defeated him in 109 and 108 B. C., so that he was compelled to flee to the Mauritanian king, Bocchus. Marius, who succeeded Metellus in the command, carried on the war against J. and Bocchus, till at last Bocchus delivered up J. to the Romans, who exhibited him at Rome in the triumph of Marius (104 B. C.), and then threw him into prison to die of hunger. J. has obtained greater prominence in history than he deserves, on account of Sallust's having written the history of the Roman campaigns against him.

JU'JUBE (*Zizyphus*), a genus of spiny and deciduous shrubs and small trees of the natural order *Rhamnaceæ*. The species are pretty numerous. The Common J. (*Z. vulgaris*) of the south of Europe, Syria, &c., is a low tree, which produces a fruit resembling an olive in shape and size, red, or sometimes yellow when ripe. The fruit is dried as a sweetmeat, and forms an article of commerce. *Syrup of Jujubes* is used in coughs, fevers, &c.; but the *J. paste*, or *Pâte de J.*, of the shops of Britain is made of gum-arabic and sugar, without any of the dried jelly of this fruit.—The J. of India (*Z. Jujuba*) is a similar small tree, with round or oblong fruit, sometimes of the size of a hen's egg.—A Chinese species of J. (*Z. nitida*), has a very pleasant yellow fruit about an inch long; and other species not much inferior are found in Africa, South America, and other warm countries.—The *Lotus* (*Z. Lotus*), a shrub two or three feet high, a native of Persia, the north of Africa, &c., produces in great abundance a fruit about as large as a sloe, and with a large stone, but having a sweet farinaceous pulp, which the natives of some parts of Africa make into cakes resembling gingerbread. A kind of wine is sometimes made from it.—*Z. Spina Christi*, another native of the countries near the Mediterranean, is sometimes said to be the plant from the branches of which our Saviour's crown of thorns was made, and is therefore called **CHRIST'S THORN** and **JEW'S THORN**, names which, for the same reason, are also given to *Paliurus aculeatus*. The fruit is about the size of a sloe, oblong, and pleasantly acidulous.

JU'LIAN, surnamed the *Apostate*, on account of his renunciation of Christianity, Roman emperor 361—363 A. D., was born at Constantinople 17th November 331, and was the son of Julius Constantius, the brother of Constantine the Great. His proper name was Flavius Claudius Julianus. He and his brother

Gallus, who were too young to be dangerous, were spared when Constantius II., son of Constantine, massacred the rest of the imperial family. They were, however, removed to a castle in Cappadocia, where they were subjected to a system of rigorous espionage. J.'s life was very miserable, and the monkish education which he received produced no other result than a strong detestation of the religion professed by his tormentors. He was fond of literature and speculation, and he instinctively turned away from the rude asceticism, gloomy piety, and barbarous janglings of *Homoousians* and *Homoiousians*, to the cheerfulness, refinement, and pure intellectual meditativeness of the old Greek philosophers. Some of his teachers appear to have been (secretly) pagans, for the sudden change in the state religion brought about by Constantine had necessitated a great deal of hypocrisy, especially among scholars and government officials. At the age of 20, J. was at heart a disbeliever in the divine origin of Christianity. On the death of his brother Gallus, he was removed by Constantius to Milan, but was subsequently allowed to go to Athens, the home of Greek learning, where he gave himself up to philosophical pursuits, and enjoyed that cultivated society which he so highly relished. The emperor—though still jealous and suspicious—now conferred on him the title of Cæsar, and sent him to Gaul to protect it from the incursions of the Germans. J. defeated the Alemanni at Strasburg (357 A. D.), and compelled the Franks to make peace. His internal administration in Gaul was mild and judicious. His popularity, in consequence, became very great, and when Constantius ordered him to set out for the East, J.'s soldiers rose in insurrection, and proclaimed their favourite emperor, who most reluctantly acceded to their demands. The death of Constantius at Mopsocrene, in Cilicia, 3d November, 361 A. D., removed the only obstacle out of his way; and on the 11th of December he made a triumphal entrance into Constantinople. He now publicly avowed himself a pagan, but surprised both Christians and pagans by his edict of toleration. Yet he was not absolutely impartial, for he chose most of his officers from the professed followers of the old religion, and compelled the Christians to contribute to the restoration of the heathen temples. In 362 A. D., he made great preparations at Antioch, in the hope of bringing the war with the Persians to a successful termination; and in the following year advanced to Ctesiphon and across the Tigris, but want of provisions and treachery necessitated his retreat. He was followed and attacked by the enemy, who were repeatedly repulsed, but in one of the engagements he was mortally wounded by an arrow, and died 26th June 363.—J. was both a great monarch and a great man. His rule, compared with that of many of the so-called Christian emperors, was just, liberal, and humane; and though only 32 years of age when he perished, he had composed a great number of orations, letters, satires, and even poems (collected and published by Spanheim in 1696). Among his lost works are his *Refutation of the Christian Religion*, and *Memoirs of his German Campaigns*, and his *Diary*. The cause of J.'s opposition to Christianity has been already indicated. We may say further, in elucidation of this important point, that J. appears to have been more attached to philosophy than religion, and that he more readily apprehended as truth what commended itself to the intellect, than what spoke to the heart.

JULIAN CALENDAR. See **CALENDAR**.

JULIAN CROSS, or **CROSS OF ST JULIAN**, a cross crosslet placed saltire-ways.

JULIAN EPOCH. See CHRONOLOGY.

JULIAN YEAR. See YEAR.

JULIEN, STANISLAS-AIGNAN, the first Chinese scholar in Europe, was born at Orleans, in France, 21st September 1799, and in 1823 became a pupil of Abel Rémusat, who had recently been appointed to deliver a course of lectures on Chinese. In less than a year, he had made himself master of the principal difficulties of the language, and actually executed (in Latin) a translation of the great Chinese philosopher, Mencius, which was published at the expense of the Asiatic Society of Paris (2 vols. 1824), and pronounced to be faultless. From this time, his labours have been chiefly directed to the languages and literature of the far East. Ancient and modern Chinese, Manchu, Sanscrit, the Mongolian tongues, are familiar to him; although, at the same time, he is said to know almost the whole body of European languages. His translations (into French) embrace the most important works in all departments of Chinese literature. He has given specimens of the Chinese drama in his *Hoei-lan-ki* (The Circle of Chalk, 1832) and his *Tchao-chi-koueul* (The Chinese Orphan, 1834); of Chinese romances, by his *White and Blue, or the two Snake Fairies* (1834), and several other pieces which appeared in *Salmigondis* and the *Constitutionnel*. J. is also the first who has succeeded in translating Chinese poetry well—the constant use of allegory, and allusion to facts not known to Europeans, rendering it nearly unintelligible. But more valuable still than those purely literary productions, are his translations of the great works that enable us to understand the religion and philosophy of the Chinese, such as the *Book of Rewards and Punishments* (1835), in which are contained the doctrines of Tao-sse, the *Book of the Way and of Virtue* (1841) by Lao-tseu, written in the 6th c. B. C., and forming the oldest and most illustrious monument of Chinese philosophy; and above all, the history of the *Life and Travels of Hïouen-Tsang* (1852), a work of immense importance for the earlier history and geography of India, and the knowledge of Buddhism. But not content with these brilliant labours, J. has sought to instruct us concerning the industry and arts of the Chinese, in a variety of treatises, of which we may mention his *Summary of the Principal Chinese Treatises upon the Culture of Mulberry Trees and Silk-worms* (1837), and his *Treatise on the art of Manufacturing Porcelain* (1856). He is also reported to have the materials prepared for a great Chinese dictionary. On the death of Rémusat, he became his successor at the Collège de France, and in 1855 president of the college. He is also conservator of the Bibliothèque Impériale, and is specially charged with the oversight of the Chinese department. (Died February 1873.)

JULIUS, the name of three popes, of whom the second and third deserve to be noticed.—J. II., originally Cardinal Della Rovere, a nephew of Sixtus IV., was born at Albizzola, near Savona. He was vehemently opposed during his cardinalate to the designs of Alexander VI. for the aggrandisement of his family, and one of his earliest measures on his election to the pontificate, in 1503, was to resume possession of the duchy of the Romagna, which had been bestowed upon Cæsar Borgia. J. was himself beyond all suspicion of nepotism or selfish designs of aggrandisement; but his public career during his pontificate was almost entirely devoted to political and military enterprises for the complete re-establishment of the papal sovereignty in its ancient territory—Bologna, Ferrara, &c., and for the extinction of foreign domination and foreign influence in Italy. In pursuing his designs, for the purpose of compelling from the republic of Venice the restitution

of the papal provinces on the Adriatic, J. not only entered into the league of Cambray with the emperor Maximilian and Louis XII. of France, but had recourse to spiritual arms, by placing the republic under the ban of the church; and on the submission of Venice, apprehending the ambitious designs of Louis, he withdrew from the league, and entered into an opposite alliance, the 'Holy League,' to which Spain, England, and Switzerland were parties. Hence arose his bitter quarrel with Louis XII., in which the latter attempted, but ineffectually, to enlist the sympathies of the church against the pope. The Council of Pisa, which was convened under Louis's influence, was an utter failure; and the opposing council, fifth of the Lateran, assembled by J., but not brought to a close during his lifetime, completely frustrated the designs of Louis. It is alleged that, in his hatred of France, J. was desirous of drawing even the Turks into the league; but this allegation is negatived by his entire career, one of the main features of which was a design for a holy war, in which he himself should take the command. As an ecclesiastical ruler, J. has little to recommend him in the eyes of churchmen. As a political sovereign, he is described by Ranke as 'a noble soul, full of lofty plans for the glory and weal of Italy;' and Professor Leo considers him, with all his defects, as one of the noblest characters of that age in Italy. He was a liberal and judicious patron of art, and a friend of the rising literature of the time. He died February 22, 1513.—J. III., a native of Monte San Savino, near Arezzo, was known before his elevation to the pontificate as Cardinal del Monte. He was one of the four legates of the pope under whom the Council of Trent was opened; and after his election to the papacy in 1550, he himself re-opened (in 1551) that council, which had been suspended for upwards of two years. He is connected with English history as having sent Cardinal Pole to organise with Mary the reunion of the kingdom with Rome; but his general government of the church is marked by no very striking events, and his private character is sullied by the taint of nepotism. He died March 23, 1555.

JU'LUNDER, a city of the Punjab, stands in the Doab of the same name between the Sutlej and the Beas, in lat. 31° 21' N., and long. 75° 31' E. Having once been the capital of the Lodi-Afghans, it is surrounded by a vast number of large and magnificent mausoleums. The soil of the neighbourhood is remarkably productive; and the place, fallen, as it is, from its former greatness, still contains 40,000 inhabitants.

JULUS, or **IULUS**, a genus of *Myriapoda* (q. v.), of the order *Chilognatha*. The whole of this order

Julus Terrestris.

was included in the Linnæan genus *J.*, and it is still the family *Julidæ* of many naturalists. The genus *J.*, as now restricted, contains many species, some of which are British. They are sometimes called SNAKE MILLIPEDES and GALLY-WORMS. They resemble centipedes in form; but their feet are

more numerous—some having 120 pair—and are so weak that the animal seems to glide along on its belly, the feet moving like a wavy fringe on each side. The body is nearly cylindrical, not flattened. On any alarm, the animal rolls itself up in a coil. The *Juli* have no poison-fangs, like centipedes. They inhabit moist and dark places, and feed chiefly on decaying vegetable substances, sometimes also on decaying animal substances.

JULY', the seventh month of the year in our calendar, fifth in the Roman calendar, where it was called *Quintilis* (the fifth). Originally, it contained 36 days, but was reduced by Romulus to 31, by Numa to 30, but was restored to 31 days by Julius Cæsar, in honour of whom it was named *July* (Lat. *Julius*), on account of his birth having happened on the 12th of this month. It was called *Mæd-monath*, or mead-month, and *liha-aftera*, or after-mild-month, by the Anglo-Saxons.

JUMUSER, a town of British India, presidency of Bengal, is situated in the district of Bharuch, and 26 miles north-west of the town of that name. Pop. 10,000, who are principally employed in the cotton, grain, and coarse cloth trade.

JUMILLAH, a handsome town of Spain, in the modern province of Murcia, is situated in a delightful valley 35 miles north of the city of that name. Pop. 7,400, who manufacture firearms, earthenware, and tiles.

JUMNA, the principal feeder of the Ganges, is perhaps the only Indian river of the first class which has its course wholly in Hindustân—the Indus, Sutlej, Ganges, and Brahmaputra all rising in Tibet. Its source, at a height of 10,849 feet above the sea, is in lat. 31° N., and long. 78° 32' E., at the south-west base of the Jumnotri Peaks; and, after flowing 680 miles chiefly in a south-east direction, it joins the Ganges at Allahabad. After its first 100 miles, during which it receives many affluents, of which the Touse is the largest, it enters the plain of Hindustan in lat. 30° 20' N., and long. 77° 38' E., having still an altitude of 1276 feet above the sea. Below this point, it is joined by many considerable streams: the Chumbul, the Sind, the Betwa, and the Cane on the right; and the Hindon, the Seengoor, and the Rind on the left. All the way downwards, the J. is generally shallow, and, excepting as to descending rafts, unfit for navigation. By artificial means, however, its waters have been rendered doubly available both for commerce and for agriculture. From either bank, a canal has been drawn at once for the use of inland craft and for the purposes of irrigation. The one on the right side, begun in 1356, leaves the main channel a short distance below the point of its emerging from the mountains; while the one on the left side, commenced in 1824, takes its departure a little further down, near the village of Fyzabad. Both of them rejoin the parent stream at Delhi. Historically and politically, the J. occupies a more prominent position than the Ganges itself above their junction. The former was necessarily the first to cross the path of every invader from the north-west; and hence on it were built both Agra and Delhi, the two capitals of the Mussulman conquerors of India.

JUMNOTRI, hot springs near the source of the Jumna, in lat. 30° 59' N., and long. 78° 35' E., 10,849 feet above the sea. Their temperature is 104°·7 F., nearly that of boiling water at their elevation. They are overhung by three connected mountains known as the Jumnotri Peaks, whose altitudes respectively are 21,155, 20,916, and 20,122 feet.

JU'NCEÆ, or **JUNCA'CEÆ**, a natural order of endogenous plants, herbaceous, generally perennial, with creeping root-stock; narrow, often fistular leaves; regular flowers; the perianth 6-partite; the stamens six; the fruit a 3-valved capsule. This order is nearly allied to *Liliaceæ*, notwithstanding very great difference of aspect for rushes (*Juncus*) are the best known examples of it. The species, about 200 in number, are mostly natives of cold and temperate climates.

JUNE, the sixth month of the year in our calendar, but the fourth among the Romans. It consisted originally of 26 days, to which four were added by Romulus, one taken away by Numa, and the month again lengthened to 30 days by Julius Cæsar, since whose time no variation has taken place. The Anglo-Saxons called this month *sear-monath*, or dry-month, and *midsomer-monath*.

JUNG, JOHANN HEINRICH, generally called **JUNG STILLING**, an author, the events of whose life and whose gifts of imagination render him worthy of notice, although at one time his merits were greatly over-estimated. He was born of poor parents at Imgrund, in Nassau, 12th December 1740, and after trying various occupations, became a student of medicine at Strasburg, where he lived in intimacy with Goethe, who conceived a great liking for him, on account of his simple, pure, affectionate nature, settled as a medical practitioner at Elberfeld, and distinguished himself as an operator for cataract. He is said to have improved the eyesight of more than 2000 persons. J. subsequently held professorships at Marburg and Heidelberg. He died at Carlsruhe, 2d April 1817. His first publication was an autobiography, *H. Stilling's Jugend, Jünglingsjahre, Wanderschaft, Lehrjahre, Häusliches Leben und Alter* (3 vols. Berlin, 1777—1778), which attracted much attention, and was followed by other publications from time to time, continuing the history of the author's career. In religion, J. represents a class by no means uncommon in Germany—viz., the *pietistic rationalists*, men who put little stress upon the (written) word of God, but are full of veneration (often degenerating, however, into a mere sentimental enthusiasm) for the spiritual truths of Christianity. J.'s collected works were published (1838) at Stuttgart in 14 vols.

JUNGERMAN'NIA, a Linnæan genus of cryptogamous plants, containing a great number of species, which some modern botanists have divided into many genera, and some have even formed into an order, *Jungermanniaceæ*, although it is more generally regarded as constituting a sub-order of *Hepaticæ* (q. v.). The distinctive characters of the sub-order are that the *spore-cases* open by four valves, and that the *spores* are mixed with *elaters*. The species much resemble mosses in appearance. Many are natives of Britain, some of them very common in moist places. The tropical species are very numerous, and some of them are to be found even on the young shoots and leaves of plants.

JUNGFRAU (the Maiden), one of the highest mountains of the Bernese Alps, rises on the boundary-line between the cantons of Bern and Valais, and attains a height of 13,720 feet. It received its name either from the unsullied purity and dazzling brightness of the snow by which it is covered, or from the fact that until recently no traveller had ever reached its highest point. In 1828, its summit was attained by six peasants from Grindelwald; and in 1841, by M. Agassiz and Principal Forbes, accompanied by others.

JUNGLE-FOWL, the name given by the Australian colonists to a bird (*Megapodius tumulus*), which has also been called the **MEGAPODE**, totally

different from the jungle-fowl of India. See FOWL. It belongs to the family *Megapodidae*. All the species are large birds, with short wings and tail, and of slow, heavy flight. They are remarkable for the thickness of their legs (*tarsi*), and their long and thick toes; and for their habit of heaping up mounds of earth, decayed leaves, &c., in which they lay their eggs, which are hatched by the heat produced by fermentation. The Australian J. makes heaps sometimes fifteen feet high, and sixty feet in circumference at the base, under the shade of thick trees or shrubs, where the heat of the sun may not evaporate the moisture. In these heaps, it makes holes of several feet in depth, in which to deposit its eggs. How the young birds emerge, is not yet known, nor if they are assisted by the parent birds. The mounds of the J. were at first supposed to be sepulchral tumuli. The J. is mostly of a brownish colour. Its size is rather less than that of the common domestic fowl. The propensity to heap up earth is very early manifested by young birds.

JUNIPER (*Juniperus*), a genus of trees and shrubs of the natural order *Conifera*, sub-order *Cupressineae*, having unisexual flowers, the male and female generally on separate plants, and the fruit a fleshy *gambule* (popularly a *berry*), containing three small nuts. The species are all evergreen, and have small, narrow, rigid leaves, which are opposite, or in whorls of three or four, or imbricated in four rows. They are natives chiefly of temperate and cold regions, and are found in Europe, Asia, Africa, and America.—The COMMON

J. (*J. communis*) is found in all parts of Europe and the north of Asia, and in the northern parts of North America. Only in favourable circumstances does it become a tree of 15, 20, or at most 30 feet in height, and in general it is only a shrub from 2 to 6 feet high. The fruit takes two years to ripen; it is round, of a bluish-black colour, with a whitish bloom; it is of the size of a small currant, and is produced in great abundance. The little nuts or stones of the fruit have on the shell three glands, which abound, especially before ripening, in an essential oil—*Oil of J.*—present also in the wood, particularly in the young wood. The wood is yellowish red, brownish in the heart, hard, and fragrant. When of sufficient size, it is much valued by turners. It is also used for veneering. The dry twigs, roots, and berries are used for fumigation. The berries have a strong and peculiar flavour. They are much used for flavouring gin, which derives its name from them (see GIN). They also enter into several medicinal preparations, being stimulant, sudorific, and diuretic.—The bark of J. may be made into ropes, and in some parts of the Highlands of Scotland, the roots are woven into the coarse baskets which are used for potatoes, peats, &c.—Oil of J. is lighter than water; specific gravity,

0.839. It is limpid and nearly colourless. It is obtained by distilling the unripe fruit, or the twigs, with water. The medicinal properties of J. depend on it; six drops are a dose.—SPANISH J. (*J. oxycedrus*) grows in arid situations in the countries around the Mediterranean Sea. Its fruit is about the size of a hazel-nut; and from its fruit and wood is procured an essential oil of disagreeable odour, called *Huile de Cade* (q. v.), which is used in veterinary practice, particularly as a cure for scab in sheep.—VIRGINIAN J. (*J. Virginiana*), the RED CEDAR of North America, is an evergreen tree, often 30—50 feet high, of conical form, with horizontal branches and very small leaves; a native of North America, from Lake Champlain to the Gulf of Mexico. It grows in sandy or rocky places. It is often planted in pleasure-grounds in Europe, and succeeds well in Britain. The berries are small and bright blue. The heart-wood is of a beautiful red colour, and is valued by turners, coopers, &c. It is imported into England for making pencils. There are often found on the branches fungous excrescences called *Cedar Apples*, which have been recommended as a vermifuge.—The BERMUDAS CEDAR (*J. Bermudiana*) is a native of the Bermudas, a lofty tree, with very fragrant reddish-brown wood, which is used for furniture, pencil-making, &c., and also for lining cabinets, its flavour preventing the attacks of moths and other insects.—The Himalaya Mountains produce several species of J., trees of considerable size, beautiful appearance, and valuable wood. The only species of J. which is a native of Britain is the Common J., and it is found chiefly in the more mountainous parts.—The SWEDISH J. of our shrubberies is merely a variety of the common juniper.

JUNIUS, LETTERS OF, a famous series of political letters signed 'Junius,' which appeared in a London newspaper, *The Public Advertiser*, during the last year of the administration of the Duke of Grafton and the first two years of that of Lord North. They were 44 in number; besides which, are to be reckoned as proceeding from the same pen 15 signed Philo-Junius, 62 business-letters (mostly very short) addressed to his publisher, Woodfall, and 10 to Wilkes (privately); and in addition, 113 letters under various signatures. The first of the letters of J., published January 21, 1769, treats of the 'State of the Nation,' and may be said to strike the key-note of all the subsequent correspondence. In it, the author singles out several leading members of the ministry, and boldly denounces their inefficiency; and the last of the letters, dated January 21, 1772, closes somewhat suddenly the long indictment against ministers in the same spirit in which it had begun. No sooner did the first Junius appear, than the court-party took the alarm. An invisible and dreaded censor was evidently moving among them—one who, though as yet the days of parliamentary reports were still far off, seemed cognizant of all the proceedings of both Houses, who not only knew intimately the public career of ministers, but was fully informed regarding the follies and the crimes of their private character. Sir W. Draper, who entered into controversy with this unknown adversary, was in the end overmastered, and reduced to mere humble complaint and confession. The Duke of Bedford, Lord Mansfield, and chief of all, the Duke of Grafton, writhed beneath his lash—the last of these being more indebted for immortality to the splendid sarcasm of Junius than to any measure which it was his fortune to introduce. It cannot, however, be denied that the hatreds of Junius, though springing for the most part from his detestation of injustice, and his contempt for incapacity, were increased and embittered by party

Common Juniper (*J. communis*):

a, branchlet with male flowers;
b, part of branchlet with female flowers; c, unripe fruit.

spirit and personal dislike. The style of these letters, though perhaps occasionally somewhat stiff and formal, is of the very highest class. Occasionally rising to the loftiest eloquence, it is always remarkable for closeness of argument, felicity of illustration and allusion, and brilliant epigram. Whoever Junius was, his life depended upon his preserving his *nom de plume*. He had made too many enemies to be safe in acknowledging himself. From the day of the publication of his first letter, however, conjecture has been busy framing theories of the authorship. Burke, Lord Shelburn, Colonel Barré, Lord George Sackville, Wilkes, Horne Tooke, Thomas Lord Lyttelton, among others, were supposed in turn to be Junius; but the general opinion now is, that Sir Philip Francis (q. v.) was the author of these letters. The Franciscan theory is supported by a weight of evidence, which, although entirely circumstantial, is sufficient, Macaulay thinks, 'to support a verdict in a civil, nay, in a criminal proceeding.' The handwriting of Junius is the handwriting of Francis slightly disguised. Junius, as is evident from his letters, knew the forms of the Secretary of State's office, was intimately acquainted with the business of the War Office, attended the House of Commons in 1770, and took notes of speeches, especially of those of the Earl of Chatham; denounced the promotion of Mr Chamier in the War Office as unjust to *Mr Francis*, and was bound by some strong tie to the first Lord Holland. All these circumstances in the position and actions of Junius, the unknown author of the letters, correspond exactly with the history of Francis, and do not agree in more than two points with the history of any other public man of that period. 'If this argument,' says Macaulay, 'does not settle the question, there is an end of all reasoning on circumstantial evidence.' See *Junius*, by Woodfall, published by Bohn (2 vols. London, 1850), and Macaulay's *Essays* (Warren Hastings).

JUNK, a Chinese vessel, often of large dimen-

Junk.

sions. It has a high forecastle and poop, and ordinarily three masts. Junks, although clumsy vessels,

incapable of much seamanship or speed, have proved themselves seaworthy on voyages extending even to America and Europe. The junk of Japan is considerably superior to that in use in China.

Junk, in the British navy, is a familiar term for the salt meat supplied to vessels for long voyages—the name being probably derived from the fact that it becomes as hard and tough as old rope, pieces of which are officially styled *junk*.

JUNKSEYLO'N, or **SALA'NG**, an island in the Bay of Bengal, lies in lat. 7° 46' N., and long. 98° 18' E., near the west coast of the peninsula of Malacca. It belongs to Siam, and trades chiefly with the British settlements of Malacca, Penang, and Singapore. It yields tin, edible birds'-nests, and Japan wood.

JU'NO AND HE'RA, the Roman and Greek names of the queen of heaven, and wife of the supreme divinity. The two conceptions have unfortunately been confounded, and hence their essential dissimilarity has been lost sight of—a dissimilarity, it may be remarked, as great as that which existed between the Roman and Greek character. We shall endeavour to distinguish between the two conceptions.

HERA (meaning 'mistress'), the Greek goddess, was the daughter of Kronos and Rhea. She was the sister of Zeus, and afterwards became his wife. Her jealousy is proverbial, and was unfortunately too well founded, for Zeus was the reverse of a faithful husband. In the Homeric poems, she appears, on the whole, as an obstinate, quarrelsome shrew, whose temper is a source of frequent discord between herself and her lord, whom, however, she greatly fears. She is represented as often spitefully favouring persons who were the objects of the displeasure of Zeus, and has to be punished for her disagreeable ways. Zeus scolds and even beats her; and on one occasion, we read of his having tied her hands, and hung her up in the clouds. But she is, nevertheless, a female of majestic beauty, the grandest of the Olympian dames. As the only wedded goddess in the Greek mythology, she naturally presided over marriage and at the birth of children. She rode in a chariot drawn by two horses; and in her famous temple at Mount Eubœa, her statue, made of gold and ivory, bore a crown, symbolic of her queenly dignity. Her favourite residences were Argos, Sparta, and Mycenæ; but she had sanctuaries in many parts of Greece. The Greek artists loved to represent her as a majestic woman of middle age, possessing a maternal dignity of mien, with beautiful forehead, large eyes, and venerable expression. Homer repeatedly calls her 'the venerable ox-eyed Hera.'

JUNO (the name is from the same root as Jupiter), the Roman goddess, was the queen of heaven, and, under the name of *Regina*, was worshipped in Italy at an early period. She bore the same relation to women that Jupiter did to men. Like the Greek Hera, she took a special interest in marriage, whence her name of *Juga* or *Jugalis* (the yoke-maker); but she was also a kind of female Providence, protecting the sex from the cradle to the grave. Her epithets, *Virginalis* (the goddess 'of virgins') and *Matrona* ('of mothers'), indicate this. It is a very significant feature of the Roman character, that J. was also believed to be the guardian of the national finances, watching over her people like a thrifty mother and housewife. A temple, containing the mint, was erected to her on the Capitoline as *J. Moneta* (the money-coiner). She was besides the goddess of chastity, and prostitutes were forbidden to touch her altars. She had a multitude of other surnames, which we cannot afford space to enumerate. Her great festival was

called the *Matronalia*, and was celebrated on the 1st of March. Her month (June) was considered the most propitious for fruitful marriages; and even yet, after eighteen centuries of Christianity, this old Roman faith lingers superstitiously in the popular mind.

JUNOT, ANDOCHE, Duke of Abrantes, and Marshal of France, was born October 23, 1771, at Bussy-le-Grand, in Côte-d'Or, entered the army as a volunteer in 1792, and distinguished himself in the early wars of the Republic. In 1798, he followed Napoleon to Egypt, was there created general of brigade, and particularly distinguished himself at Nazareth, where, at the head of 300 cavalry, he put to flight 10,000 Turks, after a conflict of fourteen hours' duration. In 1807, he was appointed to the command of the army of Portugal. His army, after undergoing dreadful privations, reached Lisbon, and J., with the greatest expedition, made himself master of all the strong places in the kingdom, and reorganised his army. For his brilliant conduct at this time he was created Duke of Abrantes, and appointed governor of Portugal; but being defeated by Wellington at Vimieira, he concluded a convention at Cintra, returned to France, and subsequently served in Germany, Spain, Portugal, and Russia. In 1812, he was disgraced by Napoleon for a supposed want of energy, and sent to govern Illyria. This, along with other causes, produced mental derangement. He was taken to his father's house at Montbard, near Dijon, and two hours after his arrival, precipitated himself from a window (22d July 1813), and fractured his thigh-bone. Amputation was performed, but J. frantically tore off the bandages, and died some days afterwards.—His wife, LAURE PERROX, the celebrated Duchess of Abrantes, has gained a reputation in the literary world by her *Mémoires ou Souvenirs historiques sur Napoléon, la Révolution, le Directoire, le Consulat, l'Empire et la Restauration* (Paris, 1831—1835), and by several minor works.

JUNTA, i.e., an association, the name given in Spain to a body of persons combined for any political or civil object. The term was formerly applied more exclusively to assemblies of representatives of the people meeting without authority of the sovereign, but has been extended to those of the most strictly legal character.

JUPATÍ PALM (*Raphia tædigeria*), a palm which grows on rich alluvial tide-flooded lands near the mouth of the Amazon. The stem is seldom more than six or eight feet high; but the leaves are often 50 or 60 feet long, rise vertically from the summit of the stem, and bend out on every side in graceful curves, forming a magnificent plume. The leaves are perhaps the largest in the vegetable kingdom; they are pinnate, the leaflets about four feet long. The leaf-stalks, which are often twelve or fifteen feet long below the first leaflets, and four or five inches in diameter, perfectly straight and cylindrical, are almost like birds' quills in strength and lightness, when dried, of a soft substance, with a thin, hard, glossy outer covering. They are used for various purposes, as for laths, window-blinds, &c. The interior part is soft enough to be used instead of cork.

JUPITER, or **JUPITER**, in Roman Mythology, was the greatest of the gods. The name is a modification of *Diavis pater*, or *Diespiter* (*Diavis*, or *Dies* = *divum*, heaven), i.e., the Father of Heaven or the Heavenly Father. As such, J. had all power over the phenomena of the skies; hence his numerous epithets, such as *Pluvius* (the Rain-giver), *Tonans* (the Thunderer), *Fulminator* (the Lightning-

hurler), and *Serenator* (the Weather-clearer). But he possessed still higher and diviner attributes. The future was spread out clearly before his all-seeing eye; the destinies of men were in his hands, and events were but the expression of his omnipotent will. But he was not careless of mankind. He revealed himself in a variety of ways to them, and taught men to interpret these mystic and symbolic revelations. Wonderful appearances in the sky, or unwonted circumstances happening on the earth, were the *media* of his communications; hence his surname of *Prodigialis* (the Sender of Prodiges). As the national god of the Roman people, he went with them into battle (like the Jehovah of the Hebrews), fought for them, procured them victory, and, generally speaking, was their protector at home and abroad. This conception of J. is shewn in such names as *Imperator* (the Ruler), *Victor* (the Conqueror), *Stator* (the Stayer or Stander-by). The strong sense of morality which marked the old Romans also found its expression in their view of the character of the best and greatest (*optimus maximus*) of their gods. J. was the guardian of law, justice, and virtue; oaths and all solemn engagements were made as to him ('in the sight of God,' as we say). He had temples erected to him at Rome under all his different names; but the principal one was that on the Capitol, whence he had the title of *Capitolinus*, and where, with beautiful significance, the statues of *Fides* (Faithfulness) and *Victoria* (Victory) were placed beside his own. When consuls or other magistrates entered on the duties of their office, or when the army was about to open a campaign, or a general returned victorious from war, sacrifices were solemnly offered to J., and his favour invoked. When the Romans began to know the religion and literature of Greece, they foolishly sought to identify their own noble, majestic, and gravely upright J. with the slippery, lustful, and immoral *Zeus* of the Greeks. Hence have originated much confusion and misconception. See **ZEUS**.

JUPITER. See **PLANETS**; **SOLAR SYSTEM**.

JUPITER SERAPIS, TEMPLE OF. The ruins of this temple at Puzzuoli, near Naples, afford a remarkable instance of the changes which have taken and are taking place on the relative position of the land and water on the earth. Only three of the original forty-six pillars exist. They rise out of the water, the pavement of the temple being at present submerged; but they bear evidence that they have been at one time submerged to half their height, which is 42 feet. The base of the pillars as high as twelve feet is quite smooth; for the next nine feet they are penetrated by a boring shell, which is still active in the neighbouring rocks. The water must have covered this portion of the pillars, and while the molluscs were busy, the lower twelve feet must have been protected from their ravages by being buried in mud. The changes of level have been so gradual that the pillars have not been moved from their original position.

JUPON, or **JUST-AU-CORPS**, a surcoat. The name *jupon* is chiefly applied to the short tight form of that military garment in use in the 14th century.

JU'RA, a range of mountains, of a peculiar limestone formation, known as the Jura Limestone, extending from the angle formed by the Rhone and the Ain, in a north-easterly direction (with a gradually declining elevation), for more than 450 miles, to the upper part of the course of the Maine. The Rhine, breaking through it between Schaffhausen and Basel, divides it into two parts, the Swiss or French, and the German Jura. The loftiest peaks are Reculet de Toiry, Grand-Colombier,

Credoz, Dôle (which commands a splendid view of Mont Blanc), and Mout d'Or, all of which are between 5000 and 6000 feet in height. The Swiss Jura consists of a number of parallel chains with long deep valleys between, and over it roads have been carried with great difficulty; but the German Jura is more broken up by cross valleys. In both parts of the range are numerous caves, which abound in magnificent stalactites, and in the bones of extinct animals; whilst in the Swiss Jura, there are several instances of rivers of considerable size sinking into the ground, and reappearing after some distance, as the Orbe, the Doubs, and the Creuse. The southern part of the range lies partly within the French department of Jura, to which it gives its name. Magnificent pine-forests are here a characteristic feature of the scenery.

JURA, a frontier department in the east of France, is bounded on the S. by the department of Ain, and on the E. by Switzerland. Area, 1943 square miles, of which upwards of one-third is under cultivation, and upwards of one-fourth in wood. Pop. 298,477. Of its surface, two-thirds are covered by the Jura Mountains; the remainder is a low plain about seven miles wide, skirting the western border. Chief rivers—the Ain, the Doubs, and the Loue. The soil on the mountains is thin and stony, but yields abundant grass, upon which great numbers of horses and cattle are fed from June to October; on the plain, the soil is rich, and grain-crops are produced in great abundance and variety. The wines of Arbois, of Poligny, of Etoile, and of Salins, have some reputation; 9,000,000 gallons of wine are produced annually. The mineral wealth of the department is considerable; the working of iron is one of the chief branches of manufacturing industry. Cheese is extensively made, and there is a good trade in timber. The department is divided into the four arrondissements, Lons-le-Saulnier, Poligny, Sainte-Claude, and Dôle. Capital, Lons-le-Saulnier.

JURA, one of the Inner Hebrides, lying off the coast of the mainland of Argyre, and having the island of Islay on the south-west. It is 27 miles long, and about five miles in average breadth. A ridge of bleak and rugged mountains traverses the whole length of the island, and rises in the *Paps of Jura*, in the south, to an elevation of 2566 feet. The west coast is deeply indented by Loch Tarbert, which nearly divides the island in two. The western shores are savage and rugged; the eastern are pleasing in appearance, presenting green slopes and a belt of plain. At the northern extremity of J., and between it and Scarba, is the whirlpool of Corrieveikin (q. v.). About 600 acres are under cultivation. Oats, barley, potatoes, and flax are produced; and black cattle are reared for export. Pop. (1871) 761.

JURASSIC GROUP, the name given by continental geologists to the Oolitic series, because the chain of the Jura Mountains, on the north-west of Switzerland, is composed of these rocks. See **OOLITE**.

JURISDICTION, in Law, means the authority which a court or judge has to entertain a particular case and decide it. The general rule is, that if a court, which has no jurisdiction to decide a particular case, does decide it, the judgment is a mere nullity. Many nice questions often arise on the question of jurisdiction, which are too intricate to be here stated. When the objection is taken to the jurisdiction in England, it is generally called a plea to the jurisdiction. In Scotland, it is included among what are called preliminary pleas.

JURISPRUDENCE is the science of law, which professes to discuss the principles on which legal rights should be protected and enforced; or it may be called the philosophy of law. This subject has been less cultivated in England than in continental countries, or even in Scotland; for, in England, the habits of the people and also of their lawyers are too practical to admit of spending time in discussing elementary principles which are more or less vague and speculative. In its literal sense, the term means merely knowledge of the law, and seems to have been so used in the Roman law, from which it has been borrowed. The word is often used in a popular sense in this country as synonymous with law, and it is also so used in France; but it is also and more correctly used in contradistinction to law, as implying the system or supposed methodical scheme embracing the principles on which positive law is founded. A distinction is sometimes made between general jurisprudence, which investigates the principles common to various systems of positive law, divesting these of their local, partial, and other accidental peculiarities; and particular jurisprudence, which confines itself to the particular laws of England, or France, or Scotland, as an independent system taken by itself. Jurisprudence thus embraces a wide range, as treating of all those duties which are enforced between man and man; and yet it may be safely said, that lawyers, though dealing with the results of the science every day of their lives, seldom give any attention to the latent and general principles on which these results are founded. The only writers who have devoted their attention to this speculative side of the law in this country are Bentham, whose various works abound with these discussions, and Mr Austin, whose *Province of Jurisprudence Determined* is an acute and masterly work on first principles, to whom may be added John Stuart Mill and Mr H. S. Maine.

JURY TRIAL (Fr. *juré*, sworn), is a mode of trial in the United Kingdom, by which a few citizens, selected for the purpose, are constituted the judges of the truth of the facts in suits between parties, and compelled to discharge this duty on the sanctity of their oath, but in subordination to a higher judge, who has distinct functions of control. Various theories have been adopted as to the origin and development of this characteristic feature of the administration of justice in the United Kingdom. Jury trial does not owe its existence to any positive statute, but has grown up insensibly, and has become inextricably interwoven with the people's habits. It was generally supposed, until recently, that our Anglo-Saxon ancestors had the credit of having nursed the germ of this vigorous plant of liberty; and a cartoon in the new Houses of Parliament has embodied this popular belief. Recent researches have, however, shewn that jury trial, as now known and practised, did not exist in those times, though it has been the natural development and sequence of other rudimentary forms of trial then prevailing. Indeed, the germ of jury trial is found in human nature itself, and in some phase or other, is detected in almost every form of civilisation, the essence of it being a reference of disputed facts to the impartial judgment of a few men of average understanding and of nearly the same station in life as the litigants. In ancient Rome, a criminal trial was conducted before a presiding judge and a body of *judices*, taken from a particular class, whose duty it was to determine the fact of the guilt or innocence of the accused; but they could exercise the prerogative of mercy, which does not belong to the modern jury. The result of the forms of trial usual with the Anglo-Saxons has been summed

up by Mr Forsyth in his *History of Jury Trial*, and he states these conclusions. Courts were presided over by a reeve, who had no voice in the decision, and the number of persons who sat was usually twelve. The assertions of parties were admitted as conclusive, when supported by the oaths of a certain number of compurgators. The testimony of the neighbourhood was appealed to for the purpose of deciding matters of general concern. Sworn witnesses were appointed in each district, whose duty it was to attest all bargains and transactions, in order that they might be ready to give evidence in case of dispute. Every care was taken that all dealings between man and man should be as open and public as possible. It was by a gradual process of improvement that the precise functions of the jury were defined, and it would be beyond our limits to discuss the details of this progress. It will suffice to describe the institution of jury trial as it now exists, and has for centuries existed with little alteration.

In criminal cases in England and Ireland, there are two or three kinds of juries in requisition. In all cases of sudden death, homicide, or murder, the coroner of the district summons a jury of twelve men, who inquire into the circumstances of the death, and if it appear that such death was caused by the criminal misconduct of any person, the jury may find that such person was guilty of murder. This inquisition, or finding, is sufficient, without any other process, to put the alleged criminal on his trial by the petty jury; but one may proceed also against the prisoner in the ordinary manner. In most criminal cases, the grand jury is the medium of accusation. They perform the duty of public accusers; they do not try a prisoner, but the indictments are in the first instance submitted to their consideration, for the purpose of seeing whether there is enough of doubt and suspicion to make it necessary to put the accused on his trial. Accordingly, in every county and borough of England where sessions of the peace or assizes are held for criminal trials, a jury of not less than 12, nor more than 23 men, are summoned to see that there is some foundation for each indictment. The judge first charges them—that is, gives them general directions as to particular crimes, and they hear witnesses for the prosecution only and *ex parte*, finding a true bill, or ignoring the bill, according as they think there is or is not a case worthy of trial against the prisoner. See **GRAND JURY**. The chief duty, however, as to the trying of prisoners is discharged by the *petit* jury, which consists of twelve men, who are sworn to try the cause between the crown, as prosecutor, and the prisoner. Previous to this trial, the prisoner is not, as a matter of course, entitled, except in cases of treason, to a copy of the indictment, though in many cases he can indirectly obtain a copy, or at least is generally made acquainted with the particulars of the charge against him. Nor is the prisoner entitled, except in cases of treason, to have a list of the witnesses who are to be brought against him. The first thing is to arraign the prisoner at the bar, and ask him if he pleads guilty or not guilty. If he do not plead guilty, he is then put on his trial. He is not entitled to demand from the court to have a counsel to defend him, though practically there is little difficulty in procuring one. The jury are then sworn. The number of jurors is twelve, but a much larger number is summoned, and the prisoner is entitled to challenge those of the jury who, he has good cause to believe, will be hostile to him. He can challenge a certain number of these without giving any reason; but when he exceeds such number, he must state some valid reason. The prisoner is

not, however, entitled beforehand, except in cases of treason, to have a list of jurors supplied to him. At the trial, the prosecuting counsel begins and makes a speech to the jury, commenting on the case. He then calls his witnesses, and it may be observed that it is a public duty for witnesses to attend, and they can be compelled, subject to fine and imprisonment, to attend and be examined. Each witness is first examined by the prosecuting counsel, then cross-examined by the prisoner or his counsel, and then re-examined by the prosecuting counsel. A witness testifies on his oath, and if he speaks falsely, may be prosecuted for perjury. After the prosecutor's case is closed, the prisoner or his counsel addresses the jury, and if he has any witnesses, calls them, and they are examined, cross-examined, and re-examined in like manner. If the prisoner calls witnesses, the prosecuting counsel has the right of making a speech in reply; and even where the prisoner calls no witnesses, the prosecutor can frequently insist on replying, and thus having the last word. The judge then sums up the evidence by going over it in detail, explaining any points of law that may arise; but he carefully informs the jury that it is for them exclusively to say whether, upon the evidence as laid before them, they think the prisoner was guilty or not guilty. The jury must be unanimous in their finding. If they have a difficulty in agreeing, they are locked up a reasonable time, which means generally about six hours—though no definite limit is fixed—without food, till they agree. If, after this reasonable time has elapsed, they are unable to agree, they are discharged without a verdict. The consequence is that a new jury are summoned, when the same process is repeated. If they find the prisoner guilty, it is for the judge exclusively to pronounce the appropriate sentence, and some discretion is allowed to the judge on that point. But neither the judge nor the jury can pardon the prisoner; it is for the crown alone to do so, and practically the propriety of doing so is left to the Home Secretary, whose duty it is, if any application reasonably supported by evidence is made to the crown, to inquire into it, which he does by examining the matter and consulting the judge. The settled rule is, that no new trial can be had in criminal cases, even though some error may have been made by the judge or jury. The only mode of obtaining redress is by petitioning the crown to pardon the prisoner, or commute the sentence, as the case may be; and the Home Secretary advises the crown as above.

In civil cases, the established practice in England and Ireland is for most questions of disputed fact which are material to the case to be referred to the decision of a jury. It is the only regular mode of solving the dispute which the law provides. The necessity of a jury trial is arrived at after the parties have, by their mutual pleadings, come to an issue—i.e., one party distinctly asserts some fact which the other as distinctly denies, the fact being material to the cause. A jury is then summoned, and the rule is, that all causes of action are tried in the county in which the dispute arose. The jury consists of twelve persons. Juries are either common juries or special juries: the former act compulsorily, but are not paid for their loss of time; the latter also act compulsorily, but they are selected on the ground of their supposed superior intelligence, and they are paid a small sum for their services. In most cases, the plaintiff's counsel begins, and makes a speech to the jury; then calls his witnesses, who are examined, cross-examined, and re-examined on oath; after which, if the defendant's counsel do not intend to call witnesses,

the plaintiff's counsel sums up his case, and makes a second speech; but if the defendant's counsel calls witnesses, then he first makes a speech to the jury, next calls his witnesses, and lastly sums up his case in a second speech to the jury, after which the plaintiff's counsel replies; so that it depends on whether the defendant's counsel calls witnesses, whether or not he has the last word with the jury. The judge then sums up the evidence, and the jury must be unanimous in their verdict. If they do not agree after being shut up a reasonable time, they are discharged, as in criminal cases, and a new jury may be summoned. If there was any mistake of the judge, or any mistake and misconduct of the jury, the losing party may, in many cases, obtain leave to have a new trial, which is conducted in the same way before other jurors.

In both criminal and civil cases, the functions of the judge and the jury are distinct. The judge has no right to decide the fact, nor the jury to decide the law; but in some cases, the jury cannot be prevented from practically deciding both. Thus, in the case of libel, it was at one time attempted by judges to confine juries to the decision of an unimportant fact; and the practice of Lord Mansfield in so restricting the functions of juries was attacked by Junius and others, till finally Mr Fox's Act was passed, which restored the powers of juries in those cases, and made them practically judges of the law also. In other cases, however, the separation of the functions of judge and jury requires very nice discrimination, and none but experienced lawyers and judges can readily recognise these technicalities. In practice, there can be no doubt that juries can with difficulty be controlled in their decisions on all questions affecting personal and political wrongs; and it is especially to their control over the issues of the latter class of cases, often most judiciously exercised, that the great authority and permanent influence of juries are to be traced. One great advantage of jury trial, over and above the essential fairness of the principle on which it is founded, is the experience and knowledge, as well as the love of fair-play, which are thereby acquired by the people who take part in it. On the other hand, it is often complained that in a great majority of cases, whether caused by qualifications of jurors being too low, and the essential obtuseness of uneducated minds, or the capricious and wayward humours which sway them, the result is little else than a lottery, and even indirect bribery is frequently suspected to operate in some of the cases, especially those which unscrupulous attorneys conduct. Probably the chief reason why jury trial has so long stood, and still stands, so high in public favour is, that notwithstanding all its glaring and familiar defects, no other machinery has ever been devised which is not open to similar or greater strictures.

In criminal trials in Scotland, prisoners have the advantage of being by law entitled, before the day of trial, to have a copy of the indictment, also a list of the witnesses to be brought forward against them, and likewise a list of the jurors, of whom forty-five are summoned. As regards the order of procedure at a criminal trial, a different practice prevails: the evidence is first given on both sides, and then the prosecutor's counsel addresses the jury, after whom the prisoner's counsel addresses the jury; so that in all cases the prisoner has the last word, and he always knows the whole of the prosecutor's case before he requires to open his own. The judge then sums up the case, as in England. From the forty-five jurors, fifteen are drawn by lot; these constitute the jury, and the verdict of a majority suffices. There is also a verdict of 'Not proven' allowed to be given, and which is often

preferred by the jury in cases where there is little moral doubt, though the legal evidence is insufficient. In England, such a verdict is equivalent to, and treated as, a verdict of 'Not guilty'; and it is so far final in Scotland, that the prisoner cannot a second time be put on his trial. The expediency of such a verdict has been objected to, as fixing a stigma on the accused person; but the answer has been made, that it is most in conformity with the true result of the inquiry. In Scotland, new trials are not allowed in criminal cases; and in case of pardons, the Home Secretary acts in the same way as he does in England.

As regards trial by jury in civil cases in Scotland, the practice was introduced by a statute in 1815, which imported most of the forms then existing in the English practice. As in England, the jury in civil cases consists of twelve persons. Unanimity is not now essential. By a recent statute, 22 and 23 Vict. c. 7, if, after being kept three hours in deliberation, nine or more of the jury agree on a verdict, such verdict is to be taken as that of the jury; and if, after being enclosed nine hours, the jury, or nine of them, cannot agree, the judge is entitled to discharge them, and generally does so. Moreover, the judge may allow the jury refreshment after they are locked up to deliberate. These latter modifications on the rigid rule have not been yet adopted in England.

A jury *de medietate linguæ* is a jury half composed of foreigners, and it is a privilege which may be demanded by foreigners, when indicted in England for felony or misdemeanour, if so many foreigners are found in the place.

JURYMAST, a temporary spar used to replace a mast which has been lost from any cause, and so to enable the vessel to reach some port for more permanent repair.

JUS DELIBERA'NDI. See **ANNUS DELIBERA'NDI**.

JUS DEVOLUTUM, a phrase used in Scotch ecclesiastical law, to denote the right which devolves on the presbytery to present or appoint a minister to a vacant benefice, if the patron do not within six months present a properly qualified person.

JUS GENTIUM, a phrase now translated to mean a branch of International Law (q. v.).

JUS MARITI, a phrase used in Roman law, and adopted in the Scotch law to denote the legal right accruing to a husband *qua* husband over his wife's property. See **HUSBAND AND WIFE**.

JUS RELICTÆ, in Scotch Law, is the right of a widow to a share in the movable or personal property of her deceased husband. This is a vested or absolute right, and cannot be defeated by the husband's will; and hence the movable estate of the married parties is often called in Scotch law the goods in communion, because, on the death of the husband, there is a division of such goods between the widow, the children, and next of kin of the deceased. If the husband has left children, then the goods in communion are divided into three equal parts, one of which belongs to the widow. If, on the other hand, there are no surviving children or grandchildren, then the goods are divided into two equal shares, one of which belongs to the widow. When the husband dies insolvent, the wife cannot claim her *jus relictæ* in preference to the creditors. Though the widow has this right to her *jus relictæ* at common law, yet, if she entered into an antenuptial contract of marriage, by which she accepted an equivalent provision, her right may be defeated, provided the contract expressly stated the one to be in substitution for the other. In

England, there is no such absolute right of a widow to a share of a husband's goods, unless he died intestate, in which case, but in which only, she gets a similar share of the personal estate by virtue of the statute of distributions. See GOODS IN COMMUNION, HUSBAND AND WIFE, SUCCESSION.

JUS REPRESENTATIONIS, a phrase adopted by the Scotch from the Roman law, to denote that in heritable succession, and also to a limited extent in movable succession, when one or more of the children of a deceased person have predeceased, the children of such predeceasing children represent their parent, and take his or her share. Thus, if A die, and one of his children, B, had predeceased A, leaving children C, D, E, F, then C, D, E, F collectively take the share of A's property which would have come to B if B had survived A.

JUSHPORE, a protected state on the south-west side of Bengal Proper, is entirely surrounded by British territory. It contains 617 square miles and 27,000 inhabitants. Its chief place is a town of the same name. The country, a table-land, is much overrun with jungle, the cleared ground producing grain, chiefly rice, and oil, and the uncleared portions abounding in wild silk.

JUSTIEU, DE, the name of a family which, for more than a century and a half, has numbered among its members some of the first botanists of the age.—**ANTOINE DE J.**, who was born at Lyon in 1686, and died at Paris in 1758, was Professor at the Jardin du Roi, and the author of various works on botany; amongst others, an *Appendix to Tournefort* (Lyon, 1719). He made several voyages and journeys to foreign countries for the purpose of collecting plants, on which occasions he was accompanied by his younger brother Bernard, who co-operated with him in all his investigations, and acted as his assistant.—**BERNARD DE J.**, who was born at Lyon in 1699, and died in Paris in 1777, contented himself through life in assisting his brother and nephew, without seeking renown by the publication of his own important observations. Having been named superintendent of the gardens at the Petit-Trianon in 1759, he arranged the plants in accordance with a natural system substantially the same as that which his nephew and pupil, Laurent de J., subsequently elaborated in a more perfect manner. As Bernard refused to make publicly known the principles on which his mode of arrangement was based, the glory of his labours devolved upon Laurent, who alone possessed the key to this botanical enigma.—**LAURENT DE J.**, who was born at Lyon in 1748, and died at Paris in 1836, was worthy the rich heritage left to him by his learned and disinterested relatives. At the age of 17, he began his botanical studies under his uncle Bernard, and, four years later, was nominated demonstrator and assistant to Lemonnier, the Professor of Botany in the Jardin du Roi. He at once began to reform the arrangement of the gardens and collections of plants under his charge, and to apply to them his own and his uncle's ideas in regard to the natural method. For thirty years he continued to develop his novel views; and when his *Genera Plantarum*, which he began in 1778, was finally completed in 1789, the natural system was finally established as the true basis of botany (see BOTANY). In 1793, J. became Professor of Botany in the newly organised Jardin des Plantes, where he continued to teach till 1826, when blindness compelled him to resign his chair to his son Adrien. During his tenure of office, he founded the library of the Museum, which is one of the best in Europe. His papers in the *Annales du Museum* (from 1804—1820), and his articles in the *Dictionnaire des Sciences Naturelles*, rank among

the most valuable contributions to the literature of botany, and embody all the results of his own investigations.—**ADRIEN DE J.**, his son, was born at Paris, December 23, 1797, and died in the same city, June 29, 1853. From his earliest years, he had shewn himself a worthy representative of the reputation of his family. As a youth, he carried off the first prize in the *Concours*, or annual competition among all the collegiate schools of Paris; and on taking the degree of M.D. in 1824, he presented as his thesis a memoir on the family of the *Euphorbiaceae*, which attracted the attention of all botanists. His subsequent papers on the *Rutaceae*, *Meliaceae*, and *Malpighiaceae*, fully realised the expectations that had been entertained of him. His memoir on the embryo of the *Monocotyledons* is a work of great merit, and was to have been followed by a series of papers on similar subjects, when ill health compelled him to relinquish this project. He was also prevented, by the same cause, from extending his *Cours Élémentaire de Botanique* (1848) into a complete and general treatise. In 1831, he was elected a member of the Academy, and, shortly before his death, he was nominated to the presidency of that body. J. contributed many valuable papers to the *Annales du Museum*, the *Comptes Rendus*, and the *Dictionnaire Universel d'Histoire Naturelle*; but the services which he rendered to science were not due only to his writings, for his influence as a lecturer was of even higher importance, and has been manifested by the number of able botanists of all nations who have owed their training to him.

JUSTE MILIEU, a French term, signifying the *just mean*, or, according to the common expression, the *golden mean*. After the revolution of 1830, this term acquired a political signification, and came into very frequent use, because of the declaration of the organs of Louis Philippe, that the *juste milieu* was the only principle of government which could secure the welfare of France.

JUSTICE, one of the cardinal virtues of the ancients, and the name for a principal department of social and moral duty in all ages. Practically, justice is considered to be clear and definite; but theoretically, there have been great disputes as to its ultimate analysis and the source of its binding quality. It has been maintained very generally, that both the perception of what is just and unjust, and the powerful sentiment in favour of the one, and in opposition to the other, are instincts of our nature, or make a part of that comprehensive instinct termed Conscience, or the Moral Sense. On the other hand, it has been held that utility, in other words, the general interests of mankind at large, is what determines justice, and that the sentiment enforcing it grows out of a regard to those interests.

The supposed instinctive origin of the sense of justice is encumbered with all the objections that attend the hypothesis of innate notions generally, so powerfully set forth by Locke in his *Essay on the Understanding* (see ETHICS). But neither is the other view free from serious difficulties, of which the greatest is the universally felt contrast between the Just and the Expedient, or the simply useful. We are frequently called upon to sacrifice expediency to justice, which would seem to imply an obligation higher than the interests of mankind. *Fiat justitia, ruat cælum*—'Let justice be done, although the universe should collapse.' Whence arises this paramount obligation?

If we inquire into the nature of justice by examining the particulars coming under it, we find such instances as the following: It is unjust to deprive a

man of his personal liberty, his property, or any other thing belonging to him by law; justice, therefore, requires us to respect each one's *equal rights*. Sometimes, however, we call the law itself unjust, in which case we sympathise even with disobedience to it. It is then supposed that there is some higher law that should have preference—as, for example, the moral law. Thus, it is conceived by most men at the present day to be unjust to hold our fellow-creatures in slavery. Again, it is considered unjust to *break faith* with any one; in other words, promises and engagements must be fulfilled in order to do justice. It is unjust to shew partiality in cases where all are equally entitled to favours. *Impartiality* in public tribunals is of the very essence of justice. Nearly the same idea is expressed by the notion of *equality*. In all these cases, there are some definite individuals—one or more—that are considered to be possessed of a *right*, and to be wronged if that right is not fulfilled. Herein lies the difference between justice and Benevolence or generosity, this last being the mere overflowing of our disinterested fellow-feeling, which no one can claim as a right, and for whose neglect we are not punished.

These particulars, which are among the most marked instances of the property in question, do not suggest any qualities present in all just actions, and absent in the opposite, excepting the existence of a so-called right on the part of somebody, and also the sentiment which demands the punishment of those that violate those rights. We are no nearer the solution of the original question, which is, Why should these rights be either determined or enforced on any other ground than expediency, or the well-being of mankind? It is admitted on all hands that the just and the expedient concur in the long-run, but yet people demur to making expediency the test of justice. Probably, there is something peculiar in the application of the term 'expediency,' which is the cause of the apparent paradox whereby the two qualities are made the same, and yet not the same.

This is really the case. Of the social regulations that affect the well-being of mankind, there are two widely different classes. In the first place, there are the interests of *SECURITY*, or those requisites without which human society could not be maintained. Respect for liberty, life, and property, and the performance of engagements, are essential to the very existence of human beings in society: if these cannot be enforced, if offenders in these points were to escape with impunity, disorganisation and ruin would be the inevitable consequences. The strength of the sentiment that injustice calls forth is therefore not a matter of surprise; *existence* is at stake, and whatever be the force of our impulse of self-preservation, and our desire of the preservation of our fellow-beings, the same will be the measure of our repugnance to the acts that endanger both the one and the other. Compare these interests with another class of things, also for the good of society, as, for example, the promotion of trade, manufactures, or science, all which are very advantageous to mankind, but not absolutely essential to our existence. They at most express the difference between two grades of happiness, not the difference between existence and annihilation. The contrast between the just and the expedient may now be apparent; both relate to the welfare of mankind; but the one is concerned with *being*, the other with *well-being*, to use a favourite distinction of Oliver Cromwell's. The one is so immeasurably superior in point of urgency to the other, as to account for the very different degrees of our attachment to the two interests. The superior claims of justice to generosity flow from the same considerations; in fact, the argument is an

identical one. We can live without generosity, or with some very small share of it; a thoroughly selfish community, if not also very short-sighted as well, might exist; but a community where justice was nowhere observed, could not exist. Still, the grounds of justice are and can be no other than general utility. 'If,' says Mr John Stuart Mill, 'that expression does not seem to convey a sufficient feeling of the strength of the obligation, nor to account for the peculiar energy of the sentiment, it is because of the extraordinarily important and impressive kind of utility which is concerned. The interest involved is that of security, to every one's feelings, the most vital of all interests. All other earthly benefits are needed by one person, not needed by another; and many of them can, if necessary, be cheerfully foregone, or replaced by something else; but security no human being can possibly do without; on it we depend for all our immunity from evil, and for the whole value of all, every good beyond the passing moment, since nothing but the gratification of the instant could be of any worth to us, if we could be deprived of everything the next instant by whoever was momentarily stronger than ourselves. Now, this most indispensable of all necessities, after physical nutriment, cannot be had unless the machinery for providing it is kept unintermittedly in active play. Our notion, therefore, of the claim we have on our fellow-creatures to join in making safe for us the very groundwork of our existence, gathers feelings around it so much more intense than those concerned in any of the more common cases of utility, that the difference in degree becomes a real difference in kind. The claim assumes that character of absoluteness, that apparent infinity, and incommensurability with all other considerations, which constitute the distinction between right and wrong, and that of ordinary expediency and in expediency. The feelings concerned are so powerful, and we count so positively on finding a responsive feeling in others (all being alike interested), that *ought* and *should* grow into *must*, and recognised indispensability becomes a moral necessity, analogous to physical, and often not inferior to it in binding force.'—On Utilitarianism.

If there were such a thing as intuitive, eternal, and immutable justice, independent of all the concerns of this world, and paramount over the highest interests of mankind, it ought to be something clear and unambiguous, the same in all ages and nations, being revealed to the human mind without any reference to men's outward circumstances. But, not to repeat the arguments that refute this notion as respects morality in general (see *ETHICS*), it may easily be seen that as to justice in particular there is a very great disagreement among mankind in everything except the first essentials of social security—namely, the respect for legal rights, the keeping faith, and the like. These things men in all ages have recognised as a part of justice; but in the things less essential to the common safety of mankind, where notions of just and unjust are still admitted and pleaded, there is anything but unanimity of opinion; nay, what is considered just in one country and time, is considered unjust in other countries or other times. Primogeniture is one example; slavery is another.

JUSTICE, COLLEGE OF. See COLLEGE OF JUSTICE.

JUSTICE, LORD CHIEF, the title given in England to the chief judge of the Courts of Queen's Bench and Common Pleas. The chief of the former court is called the Lord Chief-justice of England,

while the other is merely the Lord Chief-justice of the Court of Common Pleas.

JUSTICE OF THE PEACE, in England, is a person appointed by commission of the crown, or by act of parliament or charter, to exercise certain judicial authority in a county or borough. The person who practically appoints to the office is the lord chancellor, who in his discretion may include in the commission certain persons who must have an estate of £100 a year, clear of all rents and charges; or if he has no estate in possession, but is entitled to the reversion thereof, if it be of the rent of £300 a year. All persons having the above qualification may be appointed justices of the peace; but practising attorneys or solicitors are not eligible for counties in which they practice. The office of justice of the peace is entirely gratuitous, for they receive neither salary nor fees, and hence the justices are often called the 'great unpaid.' But in modern practice it has been found necessary to deviate from this rule, and to appoint in all the cities and many large towns certain paid justices called stipendiary magistrates at a fixed salary, who discharge the duties of justices, which are necessarily onerous and important. In the city of London and certain other places, the mayor and certain corporators are constituted by charter justices of the peace by virtue of their office.

The institution of justices of the peace is very ancient. Previous to 1327, there were conservators of the peace in every county chosen by the freeholders out of the principal men of the county to perform similar duties, but by a statute of Edward III., a change took place in the practice, and ever since, the election of justices has been taken from the people, and exercised by the crown. At first, however, they were still called merely conservators or keepers of the peace, and were not dignified with their present title. Gradually, the office grew more and more important, in consequence of many statutes adding to their duties and jurisdiction, until, in the thirtieth year of the reign of Elizabeth, the form of commission was revised, and was settled nearly in the form which is now used. The commission is in the name of the sovereign, addressed to certain persons by name, and directing them 'to keep our peace in our county of —, and to keep all ordinances and statutes for the good of the peace, and for the good rule and government of the people, and to chastise and punish all persons that offend against the said ordinances.' The commission then assigns them to inquire 'by the oath of good and lawful men of all manner of felonies, poisonings, enchantments, sorceries, arts, magic, trespasses, forestallings, regratings, engrossings, and extortions whatsoever, and of all crimes and offences, &c.' Formerly, it was usual to select the most eminent to be of the *quorum*, a name derived from the first word of the clause *quorum aliquem vestrum* A, B, C, D, &c. *unum esse volumus*, and one of these must always be present; but now nearly all are included in the *quorum* clause; and it is no longer an objection to a warrant that one of the convicting justices is not of the *quorum*. When new justices are appointed, the commission is sent by the clerk of the peace to the crown-office, where the names are inserted. On appointment, the justice must take an oath that he possesses the necessary estate as a qualification; and if he act without taking such oath, he incurs a penalty of £100. Each justice, on appointment, also takes the oath of allegiance, and the usual judicial oath. The appointment of a justice of the peace has always stood high in popular estimation, and is eagerly sought after by men of station, especially in the

country. As the appointment is practically in the hands of the lord chancellor, it is a frequent charge brought by one political party against another that the appointments are given as rewards for political service; but owing to the frequent alternation of power among parties, the undue preponderance of one set of politicians is speedily neutralised by the acts of their successors.

The functions of justices of the peace are exceedingly multifarious in the present day, for there are few departments of the law in which the aid of justices is not required for purposes either of administration or of judicial decision. For the last century especially, there has been a continual addition to their duties created by successive acts of parliament, and this is caused by certain remedies which either did not exist before being created, or by their being transferred from other courts and jurisdictions to the summary powers of justices. Of late, about twenty statutes every year involve material alterations, chiefly by way of addition to this branch of jurisdiction. To enumerate all the heads of law which in part have been confided to the disposal of justices, would require too much space; but it may suffice briefly to indicate the general character of their duties. These are either administrative or judicial. Thus, in carrying out the provisions of the poor-law, if the parish officers require to remove a pauper from one parish to another, instead of intrusting this power to these officers, they are required to go before justices of the peace, so as to shew the circumstances under which the removal takes place, and to satisfy the justices that the statutes on the subject have been complied with. But the great and distinguishing functions of justices are concerned in the judicial decision of what are called offences punishable by means of summary convictions or orders. The theory on which all this jurisdiction is founded is, that while the graver crimes must be left to the ordinary remedy of an indictment, and the slighter wrongs to that of an action at law, there are many intermediate offences which are not worthy of the solemnity of an indictment, nor yet fit to be left to the slow, expensive, and often elusory result of a civil action. Hence this intermediate class of cases arises, which justices can punish by fine and imprisonment swiftly and decisively. Thus, if certain classes of servants employed in agriculture or mechanical arts suddenly break their engagement, they may be fined or imprisoned by justices, for if there were no speedy remedy like this, the mischief often caused to the master might go unredressed. In like manner, justices punish poaching offences, whether against fish or game, personal assaults, vagrancy offences, &c.

Another important class of duties consists in the preparatory proceedings of all criminal trials, as issuing the warrants to arrest, and examining witnesses so as to see if there is a *prima facie* ground of suspicion sufficient to warrant the committal of such persons to be tried before juries. There are also various offences of the class of misdemeanours which justices are entitled to try with the aid of a jury at quarter-sessions, but none of the more serious offences are intrusted to their jurisdiction. The courts composed of justices are general or quarter sessions where indictable offences may be tried by juries; and petty sessions and special sessions, where a great variety of judicial and administrative business is performed. All these duties are not only performed gratuitously, but the justices are liable for mistakes often of a very innocent description, and have to pay damages for the injuries thereby caused to third parties. They are protected to some extent, so far as they have acted judicially, but if anything

like malice can be proved against them, they seldom escape being sued and amerced in heavy damages.

As regards Scotland, the first act establishing justices was that of 1587, c. 82. The office was further regulated by acts in 1609, 1617, 1633; by instructions during the Protectorate in 1655, embodied in the act 1661, which is the principal statute regulating the duties of justices. Two justices are held to form a quorum. The jurisdiction of justices is confined in practice to the penal statutes in reference to revenue, highways, fishings, game, and public-houses, and in many of these the sheriffs have cumulative jurisdiction. Their ordinary criminal jurisdiction is confined to breaches of the peace, petty thefts, and trifling assaults. They appoint a procurator-fiscal or public prosecutor for their own court. The civil jurisdiction is chiefly confined to the small-debt court. In many counties, the sheriffs' small-debt court is the only tribunal resorted to. No particular qualification as regards rank or property is essential. The appointment is less popular, and the range of authority and jurisdiction, as just shewn, is much inferior to what it is in England. This is chiefly due to a different arrangement of judicial business, and to the antiquity of the practice of local sheriff courts in Scotland, which are presided over by trained lawyers, who are paid by a fixed salary. These officers absorb much of the multifarious jurisdiction exercised by justices of the peace in England.

JUSTICE-CLERK, LORD, a high judicial officer in Scotland, being the second highest judge in point of rank, and in the absence of the Lord Justice-general, the presiding judge of the Court of Justiciary. His usual duty is to sit as chief of one of the divisions of the Inner House called the Second Division of the Court of Session (q. v.). The office in its origin was, as its name imports, of a more humble character.

JUSTICE-GENERAL, LORD, the highest judge in Scotland, also called the Lord President of the Court of Session. Formerly, the office of Justice-general was a sinecure, and not a judicial office, but the title is now, since 1831, associated with that of the Lord President.

JUSTICES, LORDS. From the times of the Norman and Plantagenet kings, it has been the occasional practice in England for the sovereign to appoint one or more persons called Lords Justices, to act as his substitutes in the supreme government during his absence from the kingdom. Subsequent to the Revolution, these appointments have been made by letters-patent under the great seal, and the authority of parliament has sometimes been required in confirmation of their powers. On five occasions, such appointment was made by William III. when going abroad, though while his queen was alive, he delegated his authority to her during his absence. The statute 12 and 13 Will. III., settling the succession on the House of Hanover, provided 'That no person who shall hereafter come to the crown shall go out of the dominions of England, Scotland, or Ireland, without consent of parliament;' but this clause was repealed by 1 Geo. I. c. 2, and the first sovereign of the House of Hanover, during five of his absences in Germany, made an appointment of lords justices. George IV., on his visit to Hanover, delegated his authority to 19 guardians, of whom the Duke of York, heir-presumptive, was one. On none of the absences of her present Majesty from her kingdom has there been any delegation of the royal authority; and on one of these occasions, Lord Chancellor Lyndhurst stated in the House of Lords that the law officers regarded it unnecessary in point of law to appoint lords justices, in which opinion

he concurred. In case of the sovereign's minority, a regency has generally been resorted to. The powers of lords justices have been usually limited in the matter of pardoning and reprieving criminals, summons or prorogation of parliament, the disposal of public moneys in the treasury, and of church preferment in the gift of the crown. The lords justices appointed under the commissions of 1719 and 1729 could continue the existing parliament by short prorogations, till otherwise directed under the royal sign-manual—the other acts here specified could not be exercised without the special signification of the royal pleasure, except when necessary for the public service. The power to create peers has only once been delegated, by Charles I. in 1644; and Lord Herbert, afterwards Earl of Glamorgan, in whose favour the right was exercised, was, after the Restoration, compelled to resign by the House of Lords.

Lords justices have sometimes been appointed to carry on the government of Ireland in place of a viceroy; in modern times, this has only been done during occasional absences of the lord-lieutenant, or in the interval between the demise of one lord-lieutenant and the appointment of his successor. These lords justices have usually been the Lord Primate, the Lord Chancellor, and the Commander of the Forces.

JUSTICES' CLERK, an officer, generally a solicitor, appointed by justices of the peace in England to assist them in their duties. Owing to the justices themselves not being trained lawyers, and yet being called upon to administer many branches of the law, and construe acts of parliament, all of which require much skill, the justices' clerk is a person of much local influence, and in practical effect guides and controls the justices under the form of advice. He is, properly speaking, not a public officer, but in the nature of a servant of the justices. By various statutes, he is entitled to receive fees in connection with the business transacted by the justices.

JUSTICIARY COURT, the highest criminal court in Scotland. Its judges are five of the judges of the Court of Session—viz., the Lords President, Justice-clerk, and three others appointed by patent. The quorum of the high court consists of three judges. It sits usually in Edinburgh, but also holds circuit-courts twice a year in some of the largest towns, and thrice in Glasgow, the kingdom being divided for that purpose into three divisions or circuits. The jurisdiction embraces all crimes whatever; and it is an appellate court as regards inferior criminal tribunals. Its decisions are final, there being no appeal to the House of Lords.

JUSTIFIABLE HOMICIDE is the killing of a human creature without incurring legal guilt, as where a man is duly sentenced to be hanged; where one, in self-defence, necessarily kills another to preserve his own life, &c.

JUSTIFICATION, one of the most common terms of technical theology. In Protestant theology, it expresses an act of divine favour whereby a sinner is absolved from the penalty of his sins, and accepted as righteous, not on account of anything in himself, but on account of the righteousness of Christ imputed to him. According to this view it is a purely forensic act—the act of a judge sitting in the forum, or place of judgment, and acquitting the condemned by an exercise of clemency, in consideration of the merits of another, who has paid the penalty which was justly his due. In this forensic sense of the word the apostle is understood by Protestants to speak (Rom. iii. 26) of God as 'the justifier of him which believeth in Jesus.'

In the doctrinal system of the Roman Catholic Church, justification is considered not purely as a forensic act, or act of acquittal, but, further, as an infusion of personal righteousness, and as hence equivalent to what Protestants specially call *sanctification*. The distinction between the two things is in Protestant doctrine a cardinal distinction—the one being viewed as an *act*, the other as a *work*; the one proceeding from the divine clemency or grace once for all, the other, from the progressive agency of the divine Spirit. A corresponding distinction is likewise found in the Catholic system between the *act of justification* and the *state or condition of habitual justice*.

This doctrine of justification is laid down most plainly in the Epistles of St Paul, and it has appeared to some as if there were a discrepancy in this respect between these writings and the Epistle of St James. Whereas the one says: 'For if Abraham were justified by works, he hath whereof to glory; but not before God. For what saith the Scripture? Abraham believed God, and it was counted unto him for righteousness.' The other says: 'Was not Abraham our father justified by works? Ye see then that by works a man is justified, and not by faith only.' Perhaps the most effectual way of reconciling these statements is to suppose that the Apostle Paul is describing the inward reality of justification, which has no dependence upon works, but only upon faith, while St James is speaking of its outward manifestation—of its reality as evinced in the Christian character and conduct, which necessarily expresses itself in good works, without which, in *this* sense, there can be no justification. Justification, in short, is independent of works in its origin and primary condition. Its origin is the grace of God—its only primary condition, acceptance of this grace, or *faith*. But it is dependent upon works as its essential manifestation. Faith is not passive, but *active*; and a faith which is not active, which is not a spring of earnest Christian activity, is not a true faith. Such a faith cannot justify a man.

JUSTIN, a Roman historian who flourished, in all probability, in the 3d or 4th c., although some assign him an earlier date. His History—which is of great value, from its being our only authority on many important points—is merely a selection of passages from the *Universal History* of Trogon Pompeius, a work now lost.

JUSTINIANUS (JUSTINIAN) I., FLAVIUS ANICIUS, nephew, by the mother's side, of the Emperor Justin, was born 483 A.D., in the village of Tauresium, which afterwards grew into the splendid city of Justiniana, and on the site of which the modern Kustendje stands. Although of obscure parentage, he shared the success of his maternal uncle, Justin, being invited at an early age to Constantinople, where he received a careful education, and if the reports of his courtly biographers can be accepted, attained to considerable eminence in philosophy, theology, and law, as well as in the more elegant pursuits of poetry, music, and architecture. When his uncle was elevated to the purple in 518, he appointed J. commander-in-chief of the army of Asia. The tastes of J., however, inclining him rather to civic pursuits, he declined this appointment, and remained attached to the court of Constantinople. In 521, he was named consul, and during the remaining years of the reign of his uncle, he continued to exercise great influence. In 527, the Emperor Justin, by the advice of the senate, proclaimed him his partner in the empire. Justin survived the step but a few months, and J. was crowned as sole emperor, along with his wife,

the famous Theodora, whom, despite of her more than dubious antecedents as an actress, he had raised to the position of his wife. J., on his accession, was in his 45th year. His reign, which extends over 38 years, is the most brilliant in the history of the late empire. Although himself without the taste or the capacity for military command, he had the fortune or the skill to select the ablest generals of the last days of Roman military ascendancy. Under the direction of his generals, and especially of the celebrated Narses (q. v.) and Belisarius (q. v.), his reign may be said to have restored the Roman Empire, at least in outward appearance, to its ancient limits, and to have reunited the East and West under a single rule. In his first war—that with Persia—he concluded a treaty by which the crisis that had so long threatened was at least warded off; but the rejoicings which celebrated its termination had almost proved fatal, by a domestic revolution, to the authority of J. himself. A conflict of the so-called Blue and Green factions in the circus in 532 was but an outburst of political discontent, which went so far as to elect a rival emperor, Hypatius. J. himself was struck with dismay, and had made preparations for flight; but the vigour and determination of Theodora arrested the revolt. Narses, with a relentless hand, repressed the tumults, 30,000 victims having, it is said, fallen in a single day. By the arms of Belisarius, the Vandal kingdom of Africa was re-annexed to the empire; and the same general, conjointly with Narses, restored the imperial authority as well in Rome as in Northern Italy and a large portion of Spain. One of the most extraordinary, though in the end ineffective, works of the reign of J. was the vast line of fortifications which he constructed, or renewed and strengthened, along the eastern and south-eastern frontier of his empire. These works of defence, and the construction of many public buildings both in his capital and in other cities of the empire, involved an enormous expenditure, and the fiscal administration of J., in consequence, pressed heavily on the public resources; but it is admitted to have been ably and uprightly conducted. It is, however, as a legislator that J. has gained renown. Immediately on his accession, he set himself to collect all previous legislative enactments which were still in force; and in order to do this thoroughly, he first compiled a *code*, which comprised all the constitutions of his predecessors (527—529). See CODE. The authoritative commentaries of the jurists were next harmonised, and published under the title *Digesta Pandecta* (529—533). See PANDECTS. The code was republished in 534, with the addition of J.'s own constitutions. His third great legal undertaking was the composition of a systematic treatise on the laws, for the guidance of students and lawyers. This was published a short time before the *Digest*, under the title of *Institutiones*, i. e., 'Institutes.' All these works were accomplished under the careful superintendence and direction of Tribonian, and were written originally in Latin. The later treatises which J. caused to be written were in Greek, and were entitled *Novellæ*, i. e., 'New Works.'

The character of J. as a ruler contrasts favourably with that of most of the emperors, whether of the earlier or the later empire. His personal virtues were of a class and in a degree seldom united in one of such station; and his public administration, with the single exception of that of ecclesiastical affairs, in which he was an arbitrary and imperious intermeddler, exhibits great ability, and just and upright intentions. He died at the age of 83, and in the 38th year of his reign, November 14, 565.

JUSTINUS, surnamed the MARTYR, and

frequently the PHILOSOPHER, a Father, and, after Tertullian, the most distinguished apologist of the Christian Church, was a native of Flavia Neapolis, a Roman city erected on the site of the ancient Scchem, in Samaria. The date of his birth is variously assigned to the years 89, 113, 114, and 118 A.D. His father Priscus was a heathen, and J. was educated in the religion of his father. He became an ardent student of the philosophy of his age, beginning with the school of the Stoics, but finally adhering to that of the Platonists. With the last, as he himself relates, he was in the commencement highly satisfied; but, as he was one day wandering along the sea-shore, he encountered a man of mild and venerable aspect, who created in J.'s mind a desire for higher knowledge than Plato had reached, referring him to the study of the Jewish prophets, and through them to the great Christian teacher whom they foretold. The result was his conversion to Christianity, at some date between 119 and 140 A.D. After his conversion, he retained the garb of a philosopher, but, as a Christian philosopher, he strove by his writings and his instructions to bring others to the truth which he had himself discovered. He is said to have been beheaded about the year 165, in the reign of Marcus Aurelius, because he refused to offer sacrifice to the heathen gods. His death is attributed by the ancients to the enmity and malignant arts of the Cynic philosopher Crescens. The works of J., although not very voluminous, are highly interesting and important. The books ascribed to him with certainty are two *Apologies for the Christians*, the first addressed 'to Antoninus Pius,' the second 'to the senate,' a *Dialogue with Trypho the Jew*, which professes to be the record of an actual discussion held at Ephesus. The *Address to the Greeks* is not so certainly a genuine work of J., and the same may be said of his *Exhortation to the Greeks*, his *Letter to Diognetus*, and his work *On the Monarchy of God*, an argument against the polytheism of paganism. The other works ascribed to him are certainly spurious. The first edition of his works is that of Robert Stephens (Paris, 1551). The Benedictine edition of J. is that of Maran (Paris, 1742), and a recent edition has appeared in Germany by Professor Otto, 2 vols. 8vo (Jena, 1842—1844).

JUSTINUS I., or **JUSTIN THE ELDER**, Emperor of the East, was born in 450 A.D., of barbarian parents, and entered as a private into the emperor's body-guard, of which he rose to be commander. He held this last post till the death of Anastasius I., whom he succeeded on the throne, 518 A.D. Feeling that, from his total want of learning, he was unfitted to direct the internal civil administration, he wisely resigned this duty to the quaestor Proclus, whose administration gave general satisfaction. In 519, he entered into an arrangement with the pope, which resulted in a cessation of hostilities between the Greek and Latin churches. In 523, he resigned to Theodoric, king of Italy, the right—which till this time the eastern emperors had always exercised—of appointing 'consuls' in Rome; and the same year he became involved in a war with the king of Persia. In 525, occurred a terrible earthquake, which laid Edessa, Pompeiopolis, Corinth, and Dyrrachium in ruins, and the ill-fated Antioch was completely destroyed by fire and inundation combined. On hearing the news, J. took off his crown, put on mourning, and ordered a supply of money and necessities for the unfortunate sufferers. Some time before his death, which took place in August 527, he had adopted his nephew Justinian, and associated him with himself in the government.

JUSTINUS II., or **JUSTIN THE YOUNGER**, Emperor of the East, succeeded his uncle, Justinian I.,

in 565 A.D., and espoused Sophia, the niece of the Empress Theodora, a beautiful and able, but revengeful woman. In order to ingratiate himself with the people, he immediately paid his predecessor's debts, and gave considerable largesses to the lower classes. His rule was weak and despicable, and though the empress was the *de facto* sovereign, she too often allowed her passions to blind her reason. Through her influence, Narses (q. v.) was dismissed from the exarchy of Ravenna, though at the time J. was fully aware that the Longobards were meditating an invasion of Italy. The joy of these savages, on hearing of the disgrace of the one man whom they dreaded, was excessive; and in 568 they burst like an avalanche upon Italy, which from this time was for ever lost to the Greek Empire. The emperor had better fortune towards the east and north; but though he had enough of able generals, such as Marcian, Tiberius, and Mauricius, yet the incompetent government found it impossible to raise a disciplined army, and was obliged to have recourse to the fatal expedient of employing mercenaries. Khosrû, king of Persia, took Dara after a long and gallant resistance, and followed up his success by conquering Mesopotamia and Syria. He was repeatedly driven back by Mauricius, but returned with redoubled fury. In the midst of this war, J. died, 26th September 578, after appointing Tiberius, one of his generals, as his successor. J. had been insane from 574, from which time till his death the supreme authority was in the hands of the empress.

JUTE is the fibre of an Indian plant, the *Corchorus capsularis* of botanists (see CORCHORUS), and another species, *C. olitorius*; the former, however, is the one from which the fibre is chiefly obtained. The fibre constitutes the inner bark, and is separated by

Jute (*Corchorus capsularis*).

maceration. It is sometimes obtained 12 feet long. Jute-fibre has become a very important part of the commerce of this and other countries, although its introduction to Europe for the purposes of weaving is of comparatively recent date. Previous to 1830, it was scarcely known, except in the form of gunny-bags, in which sugar, rice, pepper, and other products of India had been constantly imported, without attracting attention to the nature of the material of which they were made. When the raw fibre was first introduced, its great length led to

the impression that it would be useful for cordage; subsequent trials, however, soon shewed that its liability to injury from moisture made it useless for that purpose. But its capabilities for employment in such fabrics as matting and coarse carpeting soon became apparent, and a vast trade sprang up. Its employment for coarse bagging is immense; it is used for the cottons of India and America; all the sugar and rice, the pepper, ginger, cinnamon, gums, dye-stuffs, oil-seeds, and numerous other articles of Indian produce, reach us in gunny-bags, and almost every producing country either imports gunny-bags or jute for making them. In Great Britain, large quantities of gunny or jute bagging are manufactured at Dundee and other places; and it has the beneficial effect of relieving large quantities of hemp for the more important purposes of sail-cloth and cordage. Jute can be bleached only with difficulty, otherwise, the worn-out gunny-bags would furnish an abundance of paper material. Very much is employed, especially in India, for making inferior kinds of wrapping-paper. The total value of this article, and manufactures of it, exported from British India during 1871, was £2,922,304. It is imported into this country in bales weighing about 3 cwt. each; and the manufacture of it is extending in Forfarshire and the east of Perthshire.

The cultivation of *C. capsularis* has been successfully attempted in England, a good crop of fibre being obtained; but the plants, although attaining 14 feet in height, did not ripen their seeds well.

JÜTERBOGK, a small manufacturing town of Prussia, in the province of Brandenburg, is situated on the Nuthe, 27 miles south of Potsdam. Here considerable wool and flax markets are held, and wine is produced to some extent. Woollen-cloth manufactures, spinning, weaving, and dyeing are also carried on. Pop. 6257. In the vicinity is the field of Dennewitz, where the Prussians defeated the French under Ney and Oudinot, September 6, 1813.

JUTLAND (Dan. *Jylland*), the only considerable peninsula of Europe that points directly north, forms a portion of the kingdom of Denmark, and used to comprise the province of North Jutland and the duchy of Slesvig (q.v.), which was called by the Danes South Jutland. The province of North Jutland has an area of 9618 square miles, and a population (1870) of 788,119. See DENMARK. J. is said to have been inhabited in the earliest times by the Cimbric (q.v.), and from this circumstance it has received the name of the Cimbric Peninsula, or Chersonesus. In historical times, we find it inhabited by the Jutes, who took part in the expedition of the Saxons to England. As allies of the Saxons, they waged war with Charlemagne, and under the name of Normans (Northmen), frequently desolated the coast of Germany and France.

JUVENALIS, DECIMUS JUNIUS, the Roman satirist, was born at the Volscian town of Aquinum. The year of his birth is unknown; but it may be taken for granted that he was a youth in the reign of Nero; that he was come to man's estate, and was writing in that of Domitian (81—96 A.D.); and that he survived into the times of Hadrian (117—138 A.D.). He seems to have enjoyed a competence. He practised at Rome as an advocate; and there are some reasons for supposing that he visited Egypt. Among his friends were Martial and Statius, and perhaps Quintilian. But nothing is known of his personal history except a few leading facts—among them, that he recited some of his satires in public with much applause; and even these facts are not known to us in any detail. His interest for

posterity depends altogether on his writings—on his sixteen satires, still surviving, which occupy the very first rank in satirical literature, and are of priceless value as pictures of the Roman life of the Empire. J. and Horace respectively represent the two schools into which satire has always been divided; and from one or other of them every classical satirist of modern Europe derives his descent. As Horace is the satirist of Ridicule, so J. is the satirist of Indignation. J. is not a man of the world so much as a reformer, and he plays in Roman literature a part corresponding to that of the prophets under the Jewish dispensation. He uses satire not as a branch of comedy, which it was to Horace, but as an engine for attacking the brutalities of tyranny, the corruptions of life and taste, the crimes, the follies, and the frenzies of a degenerate state of society. He has great humour of a scornful, austere, but singularly pungent kind, and many noble flashes of a high moral poetry. We would especially point out that the old *Roman* genius—as distinct from the more cosmopolitan kind of talent formed by Greek culture—is distinctly discernible in Juvenal. He is as national as the English Hogarth, who perhaps gives a better image of his kind and character of faculty than any single English humorist or moralist that we could name. J. has been better translated in our literature than almost any other of the ancients. Dryden's versions of five of his satires are amongst the best things Dryden ever did. Dr Johnson imitated two of the most famous in his *London* and *Vanity of Human Wishes*; and the version of the whole of them by Gifford is full of power and character. The best known modern edition of J. is that of Ruperti, and there are good recent English ones by Maclean and Mayor.

JUVENILE OFFENDERS. The practice of singling out offenders of a tender age from adult offenders, and subjecting them to different punishment and reformatory treatment, has gained ground of late years. In the eye of the law, persons are considered capable of committing crime when of the age of seven, and are punishable like other persons. But in England and Ireland, in cases of larceny, whenever a person under the age of 16 is brought before justices, and is convicted, he or she may be committed to the house of correction for three calendar months or less, or, in the discretion of the justices, shall be fined £3 or less; or if a male under 14 years, shall be once privately whipped (with a birch rod, not more than 12 strokes), either instead of or in addition to such imprisonment. The juvenile offender, however, may object to be tried by justices of the peace, and may insist upon being tried by jury, if he prefer it. And in all cases of juveniles under 16 being convicted of offences, the justice or magistrate may, in addition to the sentence then passed, provided such sentence is not less than 14 days' imprisonment, direct the offender, at its expiration, to be sent to a reformatory school for a period of not less than two years, and not more than five. But the parent or guardian may have the child sent to another reformatory school than the one named by the magistrate, on paying the additional expense, if any. The expense of the conveyance of the offender to the school is paid by the county or borough, but his continued maintenance there must be paid for by the parent or step-parent, if of sufficient ability, such sum, however, not to exceed 5s. per week. Children who have not yet committed crime, but are in a vagrant and neglected state, may also be sent to an Industrial School (q.v.). In Scotland, there are also statutes with regard to reformatory schools and juvenile offenders similar to what exist in England.

K

THE eleventh letter of the English alphabet. The Semitic languages had two characters with the same or very similar consonantal power—the one called in Hebrew *Kaph* (hollow of the hand), the other *Koph* (the hind head). Both were at first transplanted into the Greek [κ (*Kappa*) = K, φ (old Greek *Koppa*) = Q], and thence into Latin; but in Greek, *Koppa*, or *q*, was early dropped, and in Latin, *Kappa*, or *k*, was supplanted by *c* (see ALPHABET, and letter C), except in the case of a few words, as *Kalendæ* and *Kæso*. In the languages derived from Latin, accordingly, *k* is used only in writing foreign words. Although unknown to the Anglo-Saxon alphabet, it has in modern English to a considerable extent taken the place of *c* in words of Saxon origin. See C. The character *Koppa*, or *q*, has been retained in modern alphabets, as it was in Latin, only in the combination *qu*. This is clearly a relic of the primitive nature of written characters, when they constituted syllabaries rather than alphabets, each character expressing a consonantal articulation followed by a particular vowel sound; so that there was one character for *ba*, and another for *bo*; one for *ka*, and another for *ko* or *ku*, as in hieroglyphs. *K* (*q*, or *c* hard) is the sharp mute of the guttural series, *k*, *g*, *ch*, *gh*. See LETTERS. The interchanges of *k* are indicated under C.

KAABA (Arab. 'square house'), the name of an oblong stone building within the great mosque of Mecca (q. v.). According to the legend, Adam first worshipped on this spot, after his expulsion from Paradise, in a tent sent down from heaven for this purpose. Seth substituted for the tent a structure of clay and stone, which was, however, destroyed by the Deluge, but afterwards rebuilt by Abraham and Ishmael. Certain it is that the building existed from time immemorial, and served the Arabs before Mohammed as a place of idolatrous worship, probably to Zohal (Saturn). It is, as it now stands—rebuilt in 1627—35 to 40 feet high, 18 paces long, 14 broad. Its door, coated with silver, is opened only three times in the year—once for men, once for women, and once for the purpose of cleaning the interior. Next to this door, in the north-east corner of the edifice, is set the famous lava-like Black Stone which, since the second year of the Hedjrah (q. v.), has served as Kibleh, i. e., as an indicator of the direction towards which all Moslems must turn in their prayers. This stone, which is said to have dropped from paradise together with Adam, is held in extreme veneration, and one of its principal names is 'The Right Hand of God on Earth.' It was originally of white colour, but the sins of mankind have caused it to shed so many silent tears, that it has become (externally) quite black. Others explain this change of colour by the unnumbered kisses and touches bestowed upon it by the pilgrims, part of whose ceremonies (see HAJJ) consists in

compassing the K. seven times, each time either kissing this stone, or touching it with the hand, and kissing the latter. A smaller stone, to which, however, less veneration is shewn, is set in the south-east corner of the Kaaba. The outside of the K. is annually covered anew with the richest black silks, on which are embroidered sentences from the Koran in gold; a pious contribution first on the part of the califs, later of the sultans of Egypt, now of the Turkish emperors. The K. has a double roof, supported by pillars of aloë-wood, and it is said that no bird ever rests upon it. The whole edifice is surrounded by an enclosure of columns, outside which there are found three oratories, or places of devotion, for different sects; also the edifice containing the well Zem-Zem, the cupola of Abbas, and the Treasury. All these are further enclosed by a splendid colonnade, surmounted by cupolas, steeples, spires, crescents, all gilded and adorned with lamps, which shed a brilliant lustre at night. These surroundings, between which and the K. run seven paved causeways, were first devised by Omar, for the better preservation of the K. itself.

KAAMA, or **CAAMA** (*Antilope Caama*), a species of antelope, a native of the south of Africa, nearly allied to the *Bubalus* (q. v.) of the north of Africa. It is the *Harte-beest* of the Dutch colonists of the Cape of Good Hope, where it is the most common of all the large antelopes. Its horns are rather short and thick, curved like the sides of a lyre. It inhabits plains, and congregates in large herds. Its flesh is very good, more resembling beef than that of almost any other antelope. It is very capable of domestication.

KA'BA-NAGY, a small town of Hungary, situated in a plain 20 miles south-west of Debreczin. Pop. 6600.

KABYLES, another name for the Berbers (q. v.).

KATFA, a fortified town and seaport of South Russia, in the government of Taurida, is picturesquely situated on the east coast of the Crimea, 70 miles east of Simferopol. The harbour, a portion of the bay of K., an inlet of the Black Sea, is deep and safe. It contains a citadel, a barracks, and a museum of antiquities chiefly collected in the vicinity; and although it has greatly declined, it is still the seat of considerable trade. The principal exports are wheat, hides, sackcloth, and goats' hair. About 250 vessels, of an average of 45,194 tons, enter and clear the port annually. Pop. 8500.

K., the ancient *Theodosia* or *Feodosia*, was in the 13th c., when it was under the Genoese dominion, the centre of trade. In 1465, it fell into the hands of the Turks, under whom it had 100,000 inhabitants. In 1783, it was taken by the Russians, to whom it was ceded by the treaty of Jassy in 1792.

KA'FFIR, or **KAFIR**, the name of a great family of the human race inhabiting the south part of the continent of Africa, classed by Dr Latham in division B of the variety *Atlantidæ*, their

physical conformation being modified negro, and which also includes the Betjuans (q.v.), Ovampos, Damaras, and other similar tribes living in the region south of 18° south latitude, and extending to the boundaries of the Cape Colony. By the term K., however, the tribes inhabiting the coast-country on the east side of South-east Africa are generally understood, and recent events have further narrowed the designation in a popular sense as more particularly applying to the tribes living in the country between the Cape Colony and Natal, those east of the latter colony, as far north as Delagoa, being now better known as Zulus or Zulu Kaffirs. General distribution of the K. races: 1. Tribes (Amatabele, Amazulu, &c., north of Natal; Amampondo, Amaxosa,* &c., in Kaffraria Proper) speaking the Zulu language and its dialects, inhabiting the east-coast region; 2. Tribes (Makololo, north, and Bakuku, north-west of Lake Ngami; Bakalihari, &c.) speaking the Sichuana language and its dialects, inhabiting the central region, and known under the general name of Betjuans; 3. Tribes (Ovampos and Damaras) speaking the Ovampo or Otjherero and its dialects, inhabiting west-coast region.

History, &c.—The word K. is derived from the Arabic *Kiafir*, ‘an unbeliever,’ which was applied by the Mohammedan inhabitants of the east coast to the native tribes living south of them, and adopted by the Portuguese, after their settlements at Melinda and Mozambique, to designate the inhabitants of the vast region lying to the south, and extending to the country of the Hottentots, now the Cape Colony.

The oldest genealogical records of the K. chiefs go back to 1617. In 1688, the old Dutch colonial records first mention the Kaffirs as having at that early period driven the Hottentot aborigines as far south as the Great Fish River; and in 1784, the latter was declared the boundary of the Cape Colony to the east. In 1798, commenced our series of K. wars, and between that and 1811 they were repeatedly attacked and driven across the Fish River. In 1819, under the leadership of a false prophet called Makanna, they ventured to attack Graham’s Town, but were repulsed with great slaughter. A period of broken peace and ill-kept treaties then succeeded, during which time a considerable European and Hottentot population had been settled along the frontier (1820). In 1828, they were driven out of the Kat River Valley, which was filled with Hottentot settlers; then came the great war of 1834–1835, which cost upwards of a million sterling, and ended in the Kaffirs being driven to the east of the Great Kei, and the territory between it and the Great Fish River was taken possession of by Sir E. Durban, but immediately restored by the then Colonial Secretary, Lord Glenelg. In 1846, war, which had been long inevitable, again broke out, and the Gaika and Islambie Kaffirs, members of the great Amaxosa tribe, invaded the colony, and overran the whole of the frontier districts as far west as Uitenhage, and north to the Stormbergen, inflicting great loss even on the imperial troops on many occasions. Again, under Sir H. Smith, they were in 1848 driven back, and the country they inhabited once more annexed to the British crown, under the title of British Kaffraria. Unfortunately, however, the influence of the chiefs remained unbroken, and they used it for evil by again invading the colony in 1851, and this time not only the Gaika tribes, but the whole of the Amaxosa and Amantembu, besides a numerous body of rebel Hottentots, all well armed, and provided with ammunition. Again, after a

struggle of many months, the enemy was finally repulsed; and Sir H. Smith being relieved by Sir H. Pottinger, and he by Sir George Grey, the latter, by his wise and astute policy, succeeded in breaking up the power of the chiefs, dispersing the tribes amongst the European settlers, and utterly destroying their strength, in which he was not a little assisted by a terrible famine which about that period fell on the unfortunate people, they having neglected to plant their fields, and having killed nearly all their cattle, at the command of a false prophet called Umlangeni, whose influence the deluded chiefs used to urge their people to this last war. Since 1852, the principal actors in these great frontier contests, the well-known chiefs Macomo, Pato, Seyolo, &c., are miserable exiles and prisoners on a sandy islet in Table Bay, and another K. war appears to be a very remote contingency. A well-armed European population now occupies British Kaffraria, and the natives look for justice to local magistrates instead of to their former chiefs. Beyond the Kei River, the chiefs still rule, but their power is very much broken, as our frontier police control matters with a pretty high hand on both sides of the border.

The K. races are a tall, well-made, and generally handsome people, of a dark brown or bronze colour, and hair in short woolly tufts. As we proceed to the north, they gradually become more assimilated to the negro type, until at last the two races seem to blend together. They are brave, and in times of peace, kind and hospitable to strangers, affectionate husbands and fathers; and their minds have a peculiarly acute and logical turn, which in many of our ‘palavers’ with them often gave them the best of the argument. They are an honest people, except, perhaps, in the article cattle. Although their idea of God appears very indistinct, and their feelings of veneration but small, yet they are very superstitious, and dread the influence of wizards and sorcerers. Their huts, which are built by the women, are of a bee-hive shape, composed of wattles stretched with grass, and a collection of them is called a ‘kraal,’ a word of Portuguese origin signifying an enclosure. The general rule of the chiefs is patriarchal, they being assisted, however, by a number of ‘pakati,’ or councillors, whose advice is generally followed by the chief. Polygamy is allowed, and wives are generally purchased for cattle. The chief has absolute power over the property of his whole tribe, although he seldom exercises it. If any individual accumulates great wealth, an accusation of witchcraft is sure to make him disgorge it. They practise, in common with all other African nations, circumcision and many peculiar rites of purification, many of them analogous to those prescribed in the Mosaic law; but these rites appear, both in Africa and Asia, to have been generally practised at an earlier period even than the Jews adopted them. The K. criminal code is very simple: a fine, great or small, of cattle pays for almost any offence, and the *lex talionis* is strictly forbidden even in case of murder. Many of their ceremonies and dances are of a very gross and obscene nature, although the K. women, especially after marriage, are very chaste and modest in their deportment, and present in this respect a striking contrast to the Hottentot race. The Kaffirs are strictly a pastoral people, and the men tend their herds exclusively, even to milking them, leaving to the women the labour of cultivating their gardens, building their huts, gathering fuel, &c. They generally wear a blanket; the former robe of softened ox-hide is now very seldom seen. In time of war, the K. appears in the field naked and painted with a fiery red clay. The native arms are assagais and

* The prefix *Ama* signifies tribe or family.

clubs, but the use of firearms is now prevalent amongst all the South-African tribes; and in the late war, the K. warriors, in skirmishing, excited the admiration of the light companies of some of our most distinguished regiments. The K. language is considered as a dialect of the Sichuana, which is the original stock of the different tribes of the K. race. It is fine, sonorous, and expressive, with a most ingenious and complicated system of grammar. On the Cape frontier, many Hottentot and Dutch words have been introduced; and in the Zulu dialect, the Wesleyan missionaries and Bishop Colenso of Natal have published many excellent works tending to elucidate the philology of South-African languages.

The Amafengu, or Fingoes, are the remains of various Zulu tribes, refugees from the wars of Chaka, reduced to slavery by the Amaxosa Kaffirs, and rescued by Sir B. Durban in 1835, and settled by him along the frontier of the Cape Colony. They are a saving, careful people, and many of them are converted to Christianity. They have always been our firm allies against their hereditary enemies the Kaffirs, although of the same race and language. The Fingoes are often, from their money-making propensities, called the Jews of the K. race. The Amampondo, Amabaxa, and other tribes living near the Natal frontier, have never been at war with us, although often quarrelling amongst themselves: they are gradually declining in numbers, and are not near so fine a race as the frontier Kaffirs.

The number of the K. races has been estimated at three millions, scattered over an area of about a million square miles. Of these, there may be about 300,000 in Kaffraria Proper, 150,000 in British Kaffraria and Cape Colony, and 150,000 in Natal.

KAFFIR CORN. See DURRA.

KAFFRARIA, PROPER OR INDEPENDENT. The general designation of Kaffraria was formerly applied to the whole of the coast region of South Africa east of the Great Fish River, and extending as far north as Sofala, but it is now limited to a comparatively small region enclosed by the high and almost impassable mountain-chain called Kalambi, or Quathlamba, running parallel to the coast (see CAPE OF GOOD HOPE AND AFRICA) at a distance of about 120 miles from it between the east frontier of the Cape Colony and Natal, and comprising an area of about 25,000 square miles, lying between the Great Kei and Umzimculu rivers.

K. is drained by the Great Kei, the Umzimvoobo or St John's River, and its fan-like branches, the Tsetse and Tena, which rise in the Quathlamba, the Umzimculu, Umtata, Umbashee, and several other streams, with short courses, which rise in a high escarpment or ridge, forming a sort of buttress to an undulating grassy but woodless plateau, which extends along the foot of the mountains at a height of about 2500 feet above the sea. The rivers, especially near the coast, run through deep-wooded kloofs, sunk below the level of the surrounding country, and none of them are navigable. The coast generally is rocky and dangerous, and should not be approached closer than three miles; anchorage may be found in one or two shallow bays east of the St John's River.

K. is inhabited by the remains of the Amaxosa and Amantembu tribes of Kaffirs (who, since the annexation of British Kaffraria, have retired across the Kei River), the once powerful tribes of the Amagaleka, Amampondos, and Amabaxa, besides the remains of many broken Zulu tribes, refugees from the wars of Chaka and Dingaan, who have found shelter in that portion of the country that borders on Natal. The total number of natives may be

roughly estimated at 300,000; but it is probable in a very few years the whole region will be absorbed into the neighbouring colonies of British Kaffraria and Natal, as the population is rapidly decreasing, and the chiefs fast losing their prestige and influence. The paramount chief is Rili, or Creili, of the Amagaleka tribe, who has his principal kraal about 20 miles east of the Great Kei River.

The soil of K. is fertile. The natives raise sufficient crops of Indian and Kafir corn, pumpkins, &c., for their own use. Cotton has been successfully grown in many localities along the coast. Cattle, horses, and goats thrive well, and a considerable trade with the adjacent colonies is carried on in hides, horns, goat-skins, tallow, and wagon-wood. The Wesleyan Society have established many well organised stations, forming convenient halting-places along the lines of road which traverse Kaffraria between the Cape Colony and Natal, and where travellers will be sure to meet a kind reception.

KAFFRARIA, BRITISH, a country of South Africa, between the Great Kei, the White Kei, the Keiskamma, and Indian Ocean (wrested from the Kaffirs by the Cape colonists in the war of 1846—1847), was for a time an independent colony, but is now a part of Cape Colony. It has an area of 4500 square miles, and is bounded on the north by a high and picturesque range of mountains called the Amatola (4000 to 5000 feet), a continuation of the Great Winterberg and Katberg ranges in the Cape Colony. It is well watered by the Keiskamma, Chumie, Buffalo, Gonubi, and other minor streams or torrents, generally running in deep and rugged beds, and by the Great Kei, a considerable stream, dividing it from Independent Kaffraria. None of these rivers are navigable.

The physical aspect of British K. is similar to that of Lower Albany, or the east-coast region of the Cape Colony. Many fertile, well-watered valleys are found amongst the spurs of the Amatola Mountains. Behind these mountains are high grassy plateaux, extending to the Kei River, and well adapted both for grazing and agriculture.

In 1859, British K. was divided into farms of from 1000 to 3000 acres, which were granted free on certain terms of settlement and defence; and it now contains a population of from 8000 to 10,000 souls of British and German descent, and probably 100,000 of the native races, Amaxosa and Amafengu Kaffirs.

The principal town is King William's Town, the head-quarters of the military and seat of government, and containing a population of about 2500 souls. The port of British K. is East London, at the mouth of the Buffalo River, where there is good anchorage. There are numerous military posts and German villages extending along the line of the Buffalo from the sea to the mountains, and also several mission-stations, Episcopal, Wesleyan, Presbyterian, and German; and the natives are in numerous cases reclaimed from heathenism, and becoming an orderly and civilised population. In 1861, by her Majesty's letters-patent, British K. was declared an independent colony, under a lieutenant-governor, the governor of the Cape being styled High Commissioner. Its revenues were derived from quit-rents of the farms granted, and the revenue duties collected at the port of East London, and were about sufficient to pay the expenses of the limited executive.

The larger *feræ nature* have nearly disappeared, although a few years back the high plains north of the Amatola, called the Bontebok Flat, were the favourite hunting-grounds of South African sportsmen. A considerable number of the German Legion, sent here after the Crimean war, have received grants of land, and make excellent settlers. Two

English, and one or two German newspapers are published in King William's Town.

In 1866, British Kaffraria ceased to be an independent colony, and was annexed to Cape Colony.

KAFIRISTAN (i.e., country of the Kafirs or infidels), a country of Central Asia, on the south declivity of the Hindu Kush, forming part of the northern basin of the Cabul, in 35°—36° N. lat., and 69° 20'—71° 20' E. long.; area, 7000 square miles. The country is divided into narrow valleys by spurs of the Hindu Kush. The inhabitants, whose number is unknown, differ, as the name of the country implies, in creed and origin from the great body of the neighbouring tribes; in features and complexion, they claim kindred with Europeans. Their language, too, is said to be wholly independent of the other dialects of Central Asia. This state of isolation is mainly owing to the natural strength of the region, which, though repeatedly invaded, has never yet been subdued. The soil is fertile enough to render external intercourse comparatively unnecessary, yielding, as it does, fruits, wheat, and millet, and feeding large herds of cattle, sheep, and goats. Metals and timber likewise abound, the people working in the same with considerable skill.

KAF TAN, an article of Turkish dress, resembling a dressing-gown, which is in use also amongst other oriental nations.

KAIN, an old term in Scotch Law, used to denote rent paid in kind, as in the shape of poultry or animals, to a landlord. The word is said to be derived from *canum*, a Latinised form of the Gaelic *ceann*, 'the head.'

KAIRWAN, a decayed town of Northern Africa, in the state of Tunis, is situated 80 miles south of the town of that name, in a treeless, marshy plain. It is surrounded by a brick wall, surmounted by four towers. It contains about 50 ecclesiastical structures, of which the Okbah Mosque, one of the most sacred of Islam, is compassed by a quadrangular wall, and contains numerous ancient pillars of marble, granite, and porphyry. The trade is chiefly in furs; saddlery and sandals are manufactured. Pop. 12,000.

KAISARIYEH. See **CESAREA**.

KAISERSLAUTERN, or **LAUTERN**, a small town of Rhenish Bavaria, is pleasantly situated on the Lauter, 25 miles north-west of Landau. Pop. about 6700.

KAKODYLE. See **CACODYLE**.

KALAMAZOO, a city of Michigan, United States, is situated in the south-west portion of the state, on the west bank of the river of the same name, 65 miles from its mouth, and 143 miles west of Detroit, on the Michigan Central Railway. It has a state lunatic asylum, a college for both sexes, ten churches, two newspapers, and several manufactories. Pop. in 1870, 9181.

KALBE, or **CALBE**, a town of Prussian Saxony, in the government of Magdeburg, is situated 18 miles south of the town of that name, on the left bank of the Saale. Spinning and weaving, with manufactures of paper, tobacco, and sugar, are here carried on. Pop. 6863.

KALE, or **BORECOLE** (Ger. *Kohl*), a cultivated variety of *Brassica oleracea*, differing from **CABBAGE** in the open heads of leaves, which are used for culinary purposes as *greens*, and also as food for cattle. There are many sub-varieties, of which some are of a green, and others of a reddish-brown or purplish colour; some have the leaves comparatively plain, and others have them very much waved or curled, some also fringed or laciniated. Most of the kinds are biennial, like the cabbage, but some may

be reckoned perennial, as the *Milan Kale* (*Chou de Milan*), and are frequently propagated by cuttings. The kind called *German Greens* is one of the most delicate, and is very much cultivated in Britain, chiefly as a winter vegetable. The more the leaves are curled the more is it esteemed. The mode of its cultivation nearly agrees with that of cabbage.

KALE, **SEA**. See **SEA KALE**.

KALEIDOSCOPE (from Gr. *kalos*, beautiful, *eidos*, image, and *skopeo*, I see), an optical instrument invented by Sir David Brewster in 1817. It consists of a tube, through whose whole length pass two mirrors or reflecting planes, which are hinged together along one edge, and make with each other an angle which is an aliquot part of 180°, whilst the one end is fitted up with an eyeglass, and the other is closed by two glasses, at a small distance from each other, between which are placed little fragments of glass or other variously coloured objects. The eye looking into the tube now perceives these objects multiplied as many times as the angle which the reflecting planes make with each other is contained in the whole circumference of a circle, and always symmetrically disposed; and the slightest shaking of the instrument produces new figures. There are various modifications of the kaleidoscope, by some of which its power is much increased; and it is not only a pleasing toy, but of great use to pattern-drawers and others, to whom it supplies endless varieties of figures.

KALENDAR. See **CALENDAR**.

KALENDS. See **CALENDS**.

KALEWALA. See **FINNISH LITERATURE**.

KALGUEF, or **KOLGUEV**, an island of Russia, in the Arctic Ocean, 240 miles in circumference, belongs to the government of Archangel, and is situated 115 miles east of the northern extremity of the peninsula of Kanin. It is the resort of innumerable flocks of wild-fowl, especially eider-ducks, geese, and swans, which are caught in great numbers by the fowlers who visit the island every summer.

KĀLIDĀSA, the greatest dramatist, and one of the most celebrated poets of India. He is known to the literary public of Europe especially through his drama *S'ākuntala*, which, first introduced to the notice of the western world by Sir William Jones (1789), created so great a sensation throughout Europe, that the early success obtained by Sanscrit studies in England and Germany may be considered due to this master-piece of Sanscrit literature. Another drama of the same poet, and next in renown to *S'ākuntala*, is the *Vikramorvas't*, or the Hero and the Nymph. Besides these works, Hindu tradition ascribes to his authorship a third drama and several poems, which no European critic will believe could ever have sprung from a mind like that of Kālidāsa. Professor Lassen, in the *Indische Alterthumskunde*, passes the following judgment on this poet: 'Kālidāsa may be considered as the brightest star in the firmament of Hindu artificial poetry. He deserves this praise on account of the mastery with which he wields the language, and on account of the consummate tact with which he imparts to it a more simple or more artificial form, according to the requirements of the subject treated by him, without falling into the artificial diction of later poets, or overstepping the limits of good taste; on account of the variety of his creations, his ingenious conceptions, and his happy choice of subjects; and not less on account of the complete manner in which he attains his poetical ends, the beauty of his narrative, the delicacy of his sentiment, and the fertility of his imagination.' But although we are enabled by his works to appreciate the merits of this poet,

we know little of his personal history. That he lived at Ujjayini or Oujein, and that he was 'one of the nine gems of the court of Vikramāditya,' is all that is related in regard to him. But as there have been several Vikramādityas at Ujjayini, his date is as uncertain as that of any personage of the ancient history of India. Dr Bhāo Dājī, in a learned and ingenious essay 'On the Sanscrit Poet, Kālidāsa' (*Journal of the Bombay Branch of the Royal As. Soc.*, October 1860), has endeavoured to identify Vikramāditya, the contemporary of K., with Harsha Vikramāditya, and that the great poet would therefore have lived in the middle of the 6th c. of the Christian era.

KALIHARI DESERT. The Kalihari is a vast central and nearly uninhabited tract of country lying between Great Namaqualand and the Betjouana country, in South Africa, extending from the northern banks of the Gariep or Orange River to the latitude of 21° south, or the verge of the Ngami region, a distance of nearly 600 miles, with an average breadth of about 350 miles, and presenting some curious physical features quite distinct from other desert regions of the globe. It is a nearly waterless, sandy, but in many places well wooded region, on which rain seldom falls, intersected by dry water-courses, with a substratum of a tufaceous limestone, and to all appearance formerly the bed of an immense lake. Livingstone considers it remarkable for little water and considerable vegetation, and therefore very different from the karroos of the Cape Colony, which have neither water nor vegetation except after heavy rains, and from the bare and sandy deserts of North Africa and Arabia. No mountains or elevations of any considerable height are found in the Kalihari, the general level of which may be considered as 3000 feet above the sea. The few springs or 'sucking-places' which here and there are found are generally carefully concealed by the Bakillhari, a miserable wandering race of Betjouana Bushmen, who roam through the desert in quest of game, of the skins of which they make the fur-robes called 'carosses.' The Kalihari has been crossed by C. J. Andersson and others, near its outskirts; but of its central parts very little is known. After heavy rains, immense herds of elephants, rhinoceroses, and giraffes are found in its dense thickets, and feed on the succulent wild melons called 'Kengwe,' which then abound there. In the north part, are immense forests of thorn-trees.

KALISZ, a town of Poland, on the Prosna, in the government of Warsaw, 136 miles west-south-west of the city of that name. It is one of the oldest Polish towns, and was formerly the capital of a palatinate. Population 12,253, who carry on an extensive trade. The adjoining county is the best cultivated in the kingdom. Two famous battles were fought here—the first between the Poles and Russians and the Swedes in 1706; the other between the Russians and Saxons in 1813.

KALIYUGA, in Hindu chronology, the fourth or last of the periods contained in a Mahāyuga or great Yuga (q. v.). It may be compared to the Iron Age of classical mythology. It consists, according to native imagination, of 432,000 solar-sidereal years, and begins 3101 years before the Christian era. The relation of the four Yugas being marked by a successive physical and moral decrement of created beings, the Kaliyuga is the worst of all. 'In the Kṛita (or first) age,' Manu says, 'the (genius of) Truth and Right (in the form of a bull) stands firm on his four feet, nor does any advantage accrue to men from iniquity. But in the following ages, by reason of unjust gains, he is deprived successively

of one foot; and even just emoluments, through the prevalence of theft, falsehood, and fraud, are gradually diminished by one foot (i. e., by a fourth part).' The estimate in which this Kaliyuga, our present age, is held by the modern Hindus may be gathered from one of their most celebrated Purānas, the Padma-Purāṇa. In the last chapter of the Kṛiyāyogasāra of this Purāṇa, the following account is given of it: 'In the Kaliyuga, (the genius of) Right will have but one foot; every one will delight in evil. The four castes will be devoted to wickedness, and deprived of the nourishment which is fit for them. The Brahmins will neglect the Vedas, hanker after presents, be lustful and cruel. They will despise the scriptures, gamble, steal, and desire intercourse with widows. . . . For the sake of a livelihood, some Brahmins will become arrant rogues. . . . The Sūdras will endeavour to lead the life of the Brahmins; and out of friendship, people will bear false witness. . . . they will injure the wives of others, and their speech will be that of falsehood. Greedy of the wealth of others, they will entertain a guest according to the behest of the scriptures, but afterwards kill him out of covetousness; they are indeed worthy of hell. The twice-born (i. e., the first three castes) will live upon debts, sell the produce of cows, and even their daughters. In this Yuga, men will be under the sway of women, and women will be excessively fickle. . . . In the Kaliyuga, the earth will bear but little corn; the clouds will shed but little rain, and that, too, out of season. The cows will feed on ordure, and give little milk, and the milk will yield no butter; there is no doubt of that. . . . Trees, even, will wither in twelve years, and the age of mankind will not exceed sixteen years; people, moreover, will become gray-haired in their youth; women will bear children in their fifth or sixth year, and men will become troubled with a great number of children. In the Kaliyuga, the foreigners will become kings, bent upon evil; and those living in foreign countries will be all of one caste, and out of lust take to themselves many wives. In the first twilight of the Kaliyuga, people will disregard Vishṇu; and in the middle of it, no one will even mention his name.'

KALMAR, a town and seaport on the south-east coast of Sweden, capital of a lan of the same name, is situated on the Kalmar Sound, opposite the island of Oland, and about 200 miles south-south-west of Stockholm. It has a good harbour, a handsome cathedral, and a large and beautiful castle, in which, on the 12th July 1397, the treaty called the 'Union of Kalmar,' which settled the succession to the three northern kingdoms upon Queen Margaret of Denmark and her heirs for ever, was agreed to by the deputies of the three kingdoms. The union, nevertheless, lasted only till the death of Margaret (see DENMARK, HISTORY OF). The commerce of the town is considerable, and manufactures of sugar and tobacco are carried on. Pop. 7554.

KALMIA, a genus of plants of the natural order *Ericææ*, consisting of evergreen shrubs, mostly about two or three feet high, natives of North America, with red, pink, or white flowers, generally in corymbs. The flowers are very delicate and beautiful, and the corolla is in the shape of a wide and shallow bell. Some of the species are frequent ornaments of gardens in Britain. They delight in a peat-soil. *K. latifolia*, the MOUNTAIN LAUREL, or CALICO BUSH of North America, occupies large tracts on the Alleghany Mountains. It grows to the height of ten feet, and the wood is very hard. It is narcotic and dangerous; the leaves are poisonous to many animals, and the honey of the flowers possesses noxious

properties. A decoction of the leaves has been used with advantage in cutaneous diseases.

KALMUCKS, or, as they call themselves, the *Derben-Ueirat* (the Four Relatives), and also designated by the name of *Eleutes* and *Khalimik* (*Apostates*), are the most numerous and celebrated of the Mongol nations. They are divided into four tribes, the first of which, the *Khoskôts* (Warriors), number nearly 60,000 families, and inhabit the country around the *Koko-nur*, which they consider the native country of the race. One portion of this tribe migrated to the banks of the *Irtisch*, and became subsequently incorporated with the second tribe, the *Dzangars*; another portion migrated to the banks of the *Volga*, in the 17th c., and is found at the present day in the government of *Astrakhan*. The second tribe are the *Dzangars*, who give the name to a large territory (*Dzangaria*) in the west of Chinese *Tartary*; at the present day they number about 20,000 families. The third tribe are the *Derbets* or *Tchoros*, who deserted *Dzangaria*, and finally, to the number of 15,000 families, removed a few years ago to the plains of the *Ili* and the *Don*, where they are being rapidly incorporated with the *Don Cossacks*. The fourth great tribe of the *K.* are the *Torgots*, who, about 1660, separated from the *Dzangars*, and settled in the plains of the *Volga*, whence they were called the *K. of the Volga*; but finding the Russian rule too severe, the majority returned to *Dzangaria*.

No Mongol or Turkish race presents such characteristic traits as the *K.*; indeed, they answer exactly to the description given of them by *Jornandes* 13 centuries ago, when, under the name of *Huns*, they devastated Southern Europe. The *Kalmuck* is short in stature, with broad shoulders, and a large head; has small black eyes, always appearing to be half-shut, and slanting downwards towards the nose, which is flat, with wide nostrils; the hair is black, coarse, and straight, and the complexion deeply swarthy. The *Kalmuck* is considered to be the original type of the Mongol and *Manchû* races, and his ugliness is the index of the purity of his descent. They are a nomad, predatory, and warlike race, and pass the greater part of their lives in the saddle. Their usual food is barley-flour soaked with water, and their drink is the 'koumiss' (made from fermented mare's milk). In 1829, Russia established a *Kalmuck* institute for the training of interpreters and government officials for the *K. of Russia*, and she has since been making great efforts to introduce civilisation among them. Many still retain their native Buddhism.

KALOCSA, a town of Hungary, near the left bank of the *Danube*, about 70 miles south of *Pesth*. It contains a fortified bishop's palace, with a library of 30,000 volumes. *K.* is a steam-packet station on the *Danube*, and contains a population of 11,400.

KALONG, a name originally Javanese, and belonging to one or more species of frugivorous Bat (q. v.) inhabiting Java, but now frequently applied to all the frugivorous bats, the family *Pteropidae*, or at least to all the species of the genus *Pteropus*. The *Pteropidae* are all large bats, and some of them are the largest of all the *Cheiroptera*. They are called *Roussette* by French naturalists, and often, popularly, *FLYING FOX* by Europeans in the East. They are found in the East Indies, Japan, Australia, Africa, and South America. There are many species. Their food consists chiefly of soft fruits, as bananas, figs, &c. The Javanese *K.* (*Pteropus Javanicus*) measures about 5½ feet in expanse of wing. The head and body are more than a foot long. It is gregarious, and during the day, great numbers may be seen hanging by their hinder claws, motionless

and silent, on the branches of trees which they have selected for their abode. The body is covered with fur of a reddish-brown colour. This and the other true *Pteropi* have no tail, and a smaller number of vertebræ—24 in all—than any other mammalia. Some of the *Pteropidae* have a very short tail. The flesh of some of them is eaten, and one, inhabiting the *Moluccas* and *Isles of Sunda*, has been called the *Eatable Kalong* (*P. edulis*). It is said to be white and delicate. Some of the species are migratory.

KALPA, in *Hindu Chronology*, a day and night of *Brahmâ*, which, according to some, is a period of 4,320,000,000 solar-sidereal years, or years of mortals, measuring the duration of the world, and as many, the interval of its annihilation. The *Bhavisya-Purân'a* admits of an infinity of kalpas; other *Purânas* enumerate thirty. A great kalpa comprises not a day, but a life of *Brahmâ*.—In *Vedic literature*, kalpa is a *Vedāṅga*. See **KALPA-SŪTRA**.

KALPA-SŪTRA is, in *Vedic Literature*, the name of those Sanscrit works which treat of the ceremonial referring to the performance of a *Vedic* sacrifice. See **VEDA**.—In *Jaina Literature*, it is the name of the most sacred religious work of the *Jainas*. See **JAINAS**. It is chiefly occupied with the legendary history of *Mahavira*, the last of their 24 deified saints, or *Tirthankaras*, but contains also an account of other four saints of the same class. The name of the author was *Bhadra Bâhu*, and the work was composed, as *Stevenson* assumes, in the year 411 of the Christian era; but the conjecture of another writer places it 632 after Christ. It is held in so high respect with the *Jainas*, that, 'of the eight days in the middle of the rains which are devoted to the reading of those works esteemed peculiarly sacred, no less than five are allotted to the *Kalpa-Sûtra*.' *Stevenson, The Kalpa-Sûtra and Nava Tatva* (Lond. 1848).

KALUGA, a government of Russia, lies immediately south-east of that of *Smolensk*. Area, 11,780 square miles; pop. 1,006,400. The surface is flat; the soil, stony, sandy, and only moderately fertile. More than half of the province is under forest. It is watered by numerous rivers, the chief of which is the *Oka*. The principal occupation of the inhabitants is the cultivation of hemp. Sailcloth, which is not only sent to the ports of Russia and Europe, but also largely exported to America, is the chief article of manufacture. Coloured cloths for the China trade are also made. The government of *K.* is divided into eleven districts.

KALUGA, chief town of the government of the same name, is situated on the right bank of the *Oka*, in lat. 54° 31' N., long. 36° 20' E. From the 14th to the 18th c., its stronghold was a great protection against the invasions of the *Lithuanians*, the *Tartars* of the Great Horde, and especially against the *Crimean Tartars*. Situated in the centre of the empire and on a navigable river, it carries on an extensive corn-trade, the corn being sent down the *Oka* to *Nijni-Novgorod*, and thence up the *Volga*, the *Volga* canals, and the *Neva*, to *St Petersburg* and the *Baltic* ports. The value of this branch of trade is 22,000,000 rubles (£3,500,000). There are several leather and other factories in the town. Pop. 32,335. *K.* has for many years been a place of banishment for political offenders; and used to be the residence of *Schamyl*, the *Circassian* chief.

KA'MA, a navigable river of European Russia, the principal affluent of the *Volga*, rises in the government of *Viatica*, and after a south-west course of 1100 miles, joins the *Volga* in the government of *Kasan*, 50 miles above the town of that name. Its

chief tributaries are the Viatka, the Tchousovaia, and the Bielaia. This river is navigable 40 miles below its source, and the navigation commences in the beginning of May. The annual value of the goods conveyed on the K. is estimated at £8,000,000. The river abounds in fish, especially salmon.

KĀMA, or KĀMADEVA, the Hindu god of Love, and one of the most pleasing creations of Hindu fiction. In Sanscrit poetry, especially that of a later period, he is the favourite theme of descriptions and allusions; and mythology exalts his power so much that it allows even the god Brahmā to succumb to it. According to some Purānas, he was originally a son of Brahmā; according to others, a son of *Dharma* (the genius of Virtue), by *S'raddhā* (the genius of Faith), herself a daughter of *Dakṣha*, who was one of the mind-born sons of Brahmā. The god Śiva being on one occasion greatly incensed at K., reduced him to ashes; but ultimately, moved by the affliction of Rati (Voluptuousness), the wife of K., he promised her that her husband should be reborn as a son of *Kr'ishna*. The god *Kr'ishna*, accordingly, having married Rukmini, she bore him *Pradyumna*, who was the god of Love. But when the infant was six days old, it was stolen from the lying-in chamber by the terrible demon *S'ambara*; for the latter foreknew that *Pradyumna*, if he lived, would be his destroyer. The boy was thrown into the ocean, and swallowed by a large fish. Yet he did not die; for that fish was caught by fishermen, and delivered to *Māyāvati*, the mistress of *S'ambara's* household; and when it was cut open, the child was taken from it. Whilst *Māyāvati* wondered who this could be, the divine sage, *Nārada*, satisfied her curiosity, and counselled her to rear tenderly this offspring of *Kr'ishna*. She acted as he advised her; and when *Pradyumna* grew up, and learned his own history, he slew the demon *S'ambara*. *Māyāvati*, however, was later apprised by *Kr'ishna* that she was not the wife of *S'ambara*, as she had fancied herself to be, but that of *Pradyumna*—in fact, another form of Rati, who was the wife of K. in his prior existence.—K. is described or represented as holding in his hands a bow made of sugarcane, and strung with bees, besides five arrows, each tipped with the blossom of a flower which is supposed to conquer one of the senses. His standard is, agreeably to the legend above mentioned, a fabulous fish, called *Makara*; and he rides on a parrot or sparrow—the symbol of voluptuousness. His epithets are numerous, but easily accounted for from the circumstances named, and from the effects of love on the mind and senses. Thus, he is called *Makaradhvaja*, 'the one who has *Makara* in his banner'; *Mada*, 'the maddener,' &c. His wife, as before stated, is *Rati*; she is also called *Kāmakalā*, 'a portion of *Kāma*,' or *Pṛiti*, 'affection.' His daughter is *Trishā*, 'thirst or desire'; and his son is *Aniruddha*, 'the unrestrained.'

KAMINETZ-PODO'LSK, or PODOLSK, a town of West Russia, capital of the government of Podolia, is picturesquely situated near the Austrian frontier, on a steep rock above the river Smotritza, an affluent of the Dniester. Its foundation dates from the earliest times. Pop. 19,579. The most noteworthy buildings are the Gothic Cathedral and the Dominican Church. The fortifications, which were razed in 1812, have been renewed. K. was, before the partition of Poland, the strongest bulwark of that country against the Turks.

KAMPEN, one of the prettiest towns of the Netherlands, in the province of Overysse, is situated near the mouth of the Yssel, in the Zuyder Zee. Here a bridge 790 feet long, and upwards of 20 feet broad, extends across the river. Though

formerly of greater importance, it still carries on a considerable general trade. Pop. 12,316.

KAMPTULICON, the name given to a newly invented floor-cloth, which is said to be made of india-rubber and cork; much of it, however, consists of oxidised linseed oil and cork. The cork is reduced to a state resembling very fine sawdust, and kneaded up with the real caoutchouc, or with the artificial kind made of oxidised linseed oil, the whole being kept very soft by heat. The mass is then made into sheets by passing through cylinder rollers heated with steam. The sheets, when cold, are ready for use, when no ornamental surface is required; but very excellent designs may be painted upon it, the same as upon ordinary floor-cloth. Kamptulicon, notwithstanding the ease with which it is made, is more expensive than the floor-cloth made by painting hempen or linen fabrics; it has, however, qualities which render it very valuable for special purposes; its elasticity to the tread not only makes it agreeable to walk on, but it is noiseless, and is consequently well adapted for hospital passages and other positions in which quiet is desirable; it is also impervious to damp, and thereby well suited to damp stone floors where other fabrics would soon decay.

KAMTCHATKA, PENINSULA OF, forms the south-east extremity of Siberia, from which it stretches southward, extending in lat. between 51° and 60° N., and in long. between 155° 40' and 164° 20' E. It is 725 miles long, and averages 190 miles in breadth. A chain of volcanic mountains traverses the centre of the peninsula, and gives rise to the rivers, of which the Kamchatka is 150 miles in length. There are about 14 volcanoes in the peninsula, the most remarkable of which—the volcano of Plutchevsky—is 16,000 feet high. This mountain now only emits smoke and embers; but in former times, eruptions used to take place every seven or eight years. The soil, in general, is stony; but there are many tracts of mountain-slope which are arable. Agriculture, however, is much hindered by untimely frosts, periodical rains, and sometimes by multitudes of mice and rats. The bread required by the inhabitants of the fortresses of Petropaulovsk and Tagil is supplied from Okhotsk. The principal occupations of the inhabitants are fishing and hunting. The most valuable domestic animal is a peculiar kind of dog which never barks. K. was annexed to Russia at the end of the 17th c., after the expedition of the Cossack chief Atlasof. Pop. 10,000, made up of Kamtchadales, Kourdetri, Omototzi, and Russians. The Kamtchadales—the preponderating race of the inhabitants—live mostly in the south. They are small in stature, with a large head, broad face, black hair, small eyes, broad shoulders, and hanging lips and stomach. Formerly, they lived in tents made of branches; they now dwell in huts. They have nominally embraced Christianity, but retain much of their savage nature and superstitions. Nijni-Kamtchatsk, the chief town of the government, is situated on the river Kamchatka. The fort of Petropaulovsk, with a fine harbour covered with ice only during a brief period of the year, is most picturesquely situated, and enjoys a healthful climate.

KAMYSHIN, a town of Russia, in the government of Saratov, 120 miles below the town of that name, on the right bank of the Volga, lat. 50° 5' N., long. 45° 25' E. It possesses about 7800 inhabitants, who carry on a considerable trade in corn.

KANAGA'WA, a town of Japan, and the shipping port of Yeddo. It was opened (together with Hakodadi and Nagasaki) to British subjects on the 1st July 1859 by the treaty of August 1858.

It is situated on the northern edge of a bight on the western side of the great bay of Yeddo, and about 16 miles from that city. Here is located the official section of the small foreign community which, through the manoeuvres of the Japanese, has been established—not at K., but at Yokohama—on the opposite point of the bay, and in a more isolated situation. K. has a larger foreign trade than any other port of Japan. In 1861, its foreign trade was worth nearly a million sterling—the imports amounting to £307,981 and the exports to £558,948, and it gave employment to about 100 vessels.

KANARIS, KONSTANTIN, a native of the isle of Ipsara, distinguished for his exploits in the Grecian war of independence, and particularly for the destruction of Turkish vessels by fireships. He was master of a small merchant-vessel before the commencement of the war. In 1822, he blew up the Turkish admiral's ship in the Strait of Chios, and thus avenged the cruelties which the Turks had perpetrated on the Greeks in that island. In November of the same year, he burned the Turkish admiral's ship in the harbour of Tenedos. His native isle of Ipsara having been ravaged, he took revenge, on 17th August 1824, by burning a large Turkish frigate and some transport-ships which were carrying troops to Samos, and thereby saved Samos from the calamity which Chios and Ipsara had endured. In 1825, he formed the bold design of burning the Egyptian fleet in the harbour of Alexandria, where it lay ready to carry troops to the Peloponnesus, and it appears that only an unfavourable wind springing up prevented his success. He was appointed to important commands by the Greek president, Capo D'Istrias, and in 1848 and 1849 was war minister of Greece, and president of the cabinet. In 1862, he took part in the revolution which overthrew King Otho, and has since been in office under the present king.

KANAWHA, GREAT. See GREAT KANAWHA.

KANDAVU, one of the Fiji Islands (q. v.).

KANE, SIR ROBERT, M.D., a celebrated chemist, was born in Dublin in 1810. He was educated for the medical profession, and in 1832 was received as a member of the Royal Irish Academy, and in the same year projected the *Dublin Journal of Medical Science*, which at first treated only of chemical and pharmaceutical subjects. In 1840, he received the gold medal of the Royal Society of London for his researches into the colouring matter of lichens. From 1844 till 1847, K. was Professor of Natural Philosophy to the Royal Dublin Society, and in the last-mentioned year received the Cunningham Gold Medal of the Royal Irish Academy for his discoveries in chemistry. In 1846, he originated the Museum of Industry in Ireland, was appointed its first director, and the same year received from the Lord-lieutenant the honour of knighthood. At the present time, he holds the office of President of the Queen's College, Cork. His important works are—*Elements of Chemistry* (1841—1842, 1849), a work of widely acknowledged merit; *Industrial Resources of Ireland* (1844), being the substance of a lecture delivered in the previous year, and published at the expense of the Royal Society of Dublin.

KANE, ELISHA KENT, M.D., a celebrated Arctic explorer, was born in Philadelphia, United States, February 3, 1820, entered Virginia University in 1836, afterwards studied medicine, and entered the navy as a surgeon, in which capacity he visited China, India, the East Indies, and, under leave of absence, Arabia, Egypt, Greece, and Western Europe. Soon after returning home, he was ordered

to the west coast of Africa in May 1846, but being attacked by fever, was compelled to return in the following April. He was then transferred to the military staff, and served in Mexico. In May 1850, he commenced his career of Arctic discovery as surgeon, naturalist, and historian to the first Grinnell expedition. In the spring of 1853, he was again sent out, this time as commander of a second Grinnell expedition, in which he achieved important results. These results are fully detailed in his *Second Grinnell Expedition in Search of Sir John Franklin* (2 vols. Philadelphia, 1856). On his return, in the autumn of 1855, honours were showered on the fortunate adventurer; he received gold medals from the Queen of Great Britain, the Royal Geographical Society of London, the American Congress, and the New York Legislature; but his health, which had been precarious since 1844, was rapidly failing, and after a visit to London, where he grew rapidly worse, he sailed to Havannah, where he died on February 16, 1857. His life has been written by W. Elder, M.D. (8vo, Philadelphia, 1857).

KANGAROO' (*Macropus*), a genus of marsupial quadrupeds, of which there are many species, almost all Australian, although a few are found in New Guinea and neighbouring islands. The genus, which some naturalists subdivide, is the type of a family *Macropidae*, including also the Kangaroo-rats or Potoroos (q. v.), which have canine teeth in the upper jaw, whilst the kangaroos have no canine teeth, and in their dentition generally, and in their digestive system, make a nearer approach than any other marsupial quadrupeds to the ruminants; the potoroos, on the other hand, approaching the rodent type. Kangaroos are said sometimes to ruminate. The stomach of kangaroos is large, and is formed of two elongated sacs. They are entirely herbivorous. The *Macropidae* are all characterised by great length of the hind-legs, whilst the fore-legs are small; but the radius allows a complete rotation of the fore-arm; and they make use of the fore-feet as organs of prehension, and for many purposes, with great adroitness. The fore-feet have five toes, each armed with a strong curved nail; the hind-feet have four toes—one very large central toe, with a very large solid nail. The hind-feet are very long, through an extraordinary elongation of the metatarsal bones. The tail is very long, thick, strong, and tapering, and is of great use in balancing the animal in its leaps, and also for sustaining the body in its ordinary erect sitting posture, in which it uses the hind-legs and the root of the tail as a tripod. In this posture, also, it usually walks by the hind-legs alone. The head is in form somewhat like that of a deer; the ears moderately large, and oval; the eyes large, and the aspect mild.

The GREAT K. (*M. giganteus*) is generally about $7\frac{1}{2}$ feet in length from the nose to the tip of the tail, the tail being rather more than three feet in length, and fully a foot in circumference at the base. The height of the animal is rather more than fifty inches, in the erect sitting posture already mentioned, but it sometimes raises itself on its toes to look around it, and its height is then greater than that of a man. The WOOLLY K. or RED K. (*M. laniger*) rather exceeds it in size. The Great K. was first discovered in Cook's first voyage, 22d June 1770, and until that time it may almost be said that kangaroos were unknown to Europeans, although a New Guinea species (*M. Brunii*) had been described by Le Brun in 1711. It is of a grayish-brown colour, the fur moderately long, and moderately soft. It is found in many parts of Australia and in Van Diemen's Land. It sometimes attains the weight of 160 lbs., or upwards. Its flesh is highly esteemed, and it is

KANGAROO GRASS—KANT.

much sought after by the colonists, so that it is now rare in regions where it was once abundant. It is not properly gregarious. The kangaroos are all timid animals, making their escape from their pursuers by extraordinary leaps. The Great K. often

Great Kangaroo (*Macropus giganteus*).

proves too swift for greyhounds. When driven to bay, it sometimes kills a dog by a single stroke of its hind-leg, the great nail ripping him open at once. Some of the kangaroos inhabit open plains, some are more generally found in forests, some are frequent on the snowy summits of the highest Australian mountains. They are of very various size; some are not much larger than a rabbit. They are easily tamed; some species have been brought to Britain, and have bred in zoological collections, but have not yet been properly naturalised.

The exceedingly immature state in which young kangaroos are born, and the manner in which they are nourished, fall to be noticed in the article *MARSUPIATA*. Ere they finally desert the pouch of the mother, the young may be seen poking their heads out of it, and nibbling the herbage among which she moves.

KANGAROO GRASS (*Anthistiria australis*), the most esteemed fodder-grass of Australia. It grows to a height much above that of the fodder-grasses of Britain, affords abundant herbage, and is much relished by cattle. The genus is allied to *Andropogon*, and has clusters of flowers with an involucre. The awns are very long and twisted, both in the K. G. and in a nearly allied species, *A. ciliata*, which is one of the most esteemed fodder-grasses of India.

KANO', a great manufacturing and mercantile town and capital of a province of the same name, in the empire of Sokoto, Central Africa, stands in lat. 12° 2' N., and long. 8° 22' E. The province is estimated to contain 500,000 inhabitants, and from its beauty and wealth, has been called the 'Garden of Central Africa.' The wall which surrounds the town of K. is 15 miles in circuit, and between it and the town, which is circular in shape, and is about three miles in diameter, a space intervenes large enough to supply the inhabitants with corn in case of siege. The houses are built of clay, covered for the most part with conical thatched roofs. The industry consists chiefly in the weaving and dyeing of cotton cloths, which are exported from K. to the value of £30,000 annually, to Timbúktu on the west, over the empire of Bornu on the east,

and to Tripoli on the north. Dr Barth estimates the number of slaves exported from K. at 5000 annually. The population is about 30,000, but during the busiest season of the year, from January to April, it rises to about 60,000.

KANSA, in Hindu Mythology, a king of the race of Bhoja—considered also as a demon, Kálanemi, in human shape—notorious for his enmity towards the god Krishna (see *VISHNU*), by whom he was ultimately slain.

KAN'SAS, a river which, with its tributaries, drains the northern portion of the state of Kansas, United States of America, flowing eastward into the Missouri, into which it falls, on the eastern boundary of the state. Its northern branch, Republican Fork, rises in the Rocky Mountains.

KAN'SAS, one of the United States of America, lying between lat. 37° and 40° N., and long. 94° 40' and 102° W. Bounded on the N. by Nebraska, E. by Missouri, S. by Indian Territory, W. by Colorado, it is 208 miles broad, and 408 miles long, and contains 81,318 sq. miles. Three-fourths of this area is considered fit for agriculture; nearly 2,000,000 acres are strictly mineral lands. The grazing-lands are chiefly west of the 99th degree of west longitude. No mountain ranges or swamps exist, but the land rises in bluffs and rolling prairies. The timbered lands lie along the streams. Efforts for the redemption of the arid plains, once called the 'Great American Desert,' appear highly promising. The soil of K., where it is under cultivation, is very fertile: the prairies contain abundance of game; the rivers, abundance of fish. Among its mineral resources are iron—in the northern part of the state, coal, lignite, marble, kaolin, and salt. The climate has wide extremes, but is generally healthy, and is becoming, it is said, more temperate and humid, as cultivation and forest-planting proceed. In 1870, there were 1500 miles of railroad open to traffic, and 2197 more projected. Education flourishes, and there are 1707 schools, with 48,007 pupils, a state university, agricultural college, normal school, and 9 colleges supported by religious denominations. The present capital is Topeka. K. was organised as a territory in 1854, and became the scene of violent contests between northern and southern settlers, on the question of slavery. After much violence, a constitution was adopted, excluding slavery, and K. was admitted into the Union, January 29, 1861. Pop. in 1870, 361,089.

KAN-SU', the most north-western province of China, is bounded on the E. by Shen-se, on the S. by Thibet and Se-Chuen. Area estimated at from 80,000 to 100,000 square miles; pop. at 16,000,000. Its surface is mountainous; chief river the Hoang-ho. Lan-chow is the capital, and there are six other cities of the first rank.

KANT, IMMANUEL, one of the greatest and most influential metaphysicians of all time, was the son of a saddler, of Scotch descent, and was born at Königsberg, 22d April 1724. He was educated at the university of his native town, and after spending some years as a private tutor, took his degree at Königsberg, in 1755, and began to deliver prelections on logic, metaphysics, natural philosophy, and mathematics. In 1762, he was offered, but declined the chair of poetry, and in 1770, he was appointed professor of logic and metaphysics. He died 12th February 1804. K.'s private life was uneventful, yet curious and almost ludicrous in its mechanical regularity. As Socrates could hardly be induced to go beyond the walls of Athens, so K. clung with oyster-like tenacity to the city of his birth, never leaving it during the thirty years of his professorship.

He remained a bachelor all his life. K. was a man of unimpeachable veracity and honour, austere even in his principles of morality, though kindly and courteous in manner, a bold and fearless advocate of political liberty, and a firm believer in human progress. The investigations by which he achieved the reputation of a reformer in philosophy, refer not so much to particular sections or problems of that science, as to its principles and limits. The central point of his system is found in the proposition, that before anything can be determined concerning the *objects of cognition*, the *faculty of cognition itself*, and the *sources of knowledge* lying therein, must be subjected to a critical examination. Locke's psychology, indeed, at an earlier period in European speculation, had shewn a similar tendency; but before K., no thinker had definitely grasped the conception of a critical philosophy, and K. himself was led to it not so much by Locke, as by Hume's acute scepticism in regard to the objective validity of our ideas, especially of the very important idea of causality. The Kantian criticism had a twofold aim: 1st, to separate the necessary and universal in cognition from the merely empirical (i. e., from the knowledge we derive through the senses); 2d, to determine the limits of cognition.

In regard to the former of these, it is of importance to observe, that K. did not subject the old psychological doctrine of 'faculties' to any analysis, but attributed to each of these—viz., to the faculties of Sense, Understanding, Judgment, and Reason—certain innate *à priori* forms, conceptions, and functions, which, as constituting the necessary conditions of any experience whatever, possessed, on account of their subjective necessity, a universal subjective validity. Thus, in the Sense, as the faculty receptive of external impressions, there must lie, according to K., the forms of Space and Time; in the Understanding, as the faculty by which the manifold in appearance is combined in the unity of conception, the Categories; in the Reason, as the faculty of principles, the Ideas of the Unconditioned and the Absolute; in the Judgment, in as far as it is not merely subsumptive, but also reflective, the conception of Design or Conformity to the purpose in view; finally, in the Will or the Practical Reason, the Categorical Imperative of the Moral Law.

In regard to the latter aim of the Kantian criticism—viz., to determine the limits of theoretical knowledge—the efforts of K. go to shew that universal forms existent *à priori* in the human mind, can afford knowledge only under the condition that the objects which they cognize are presented by experience; while for the determining of what lies beyond the limits of Experience, they are merely empty forms, by which something indeed is *thought*, but nothing *known*. Even within the limits of Experience itself, we are cognizant, according to K., through the forms of the Sense and of the Understanding, not of things as they are in themselves, but only as they appear; hence the opposition between *noumena* and *phenomena*. But when we try to transcend those limits, and to ascertain the intelligible basis of the phenomenal world by the forms of the Sense and the Categories, the Reason becomes entangled in an unavoidable Dialectic, for which there is no objective, but only a critical solution. The objects of this Dialectic, the carrying out of which constitutes an essential and leading part of the *Critique of the Pure Reason*, are the Soul, the World, and God; and in relation to the cosmological conceptions in particular (viz., of the Beginning and End of the World, of the Unity or Non-unity of the ultimate particles of Things, of Causality through Freedom or through the necessity

of Nature), the Reason is involved in a series of self-contradictions (in the Kantian technology, *antinomies*). The result, according to K., of the critical examination of all claims to a knowledge transcending Experience in the regions of rational or speculative Psychology, Cosmology, and Theology, is the necessity for abandoning the hope of attaining such. The idea (native to the Reason) of the Unconditioned is allowed to possess a regulative, not a constitutive value; that is to say, it is a principle necessary for the extension of our inquiries beyond the fixed limits of experience, without, however, yielding us an extended knowledge. So far the philosophy of K. is purely negative and destructive. Hamilton, Mansel, and others have—in regard to the limits of the knowable—merely reiterated the arguments of the great German, while in regard to the points in which they do differ from him, as, for example, the *nature* of our knowledge, it is a matter of very great doubt if they are as logical and consistent as their predecessor.

But the austere and stoical morality of K. was something too *positive* to allow him to rest satisfied with merely negative results; hence he sought in the reality of his Ethics a compensation for the nihilism of his Metaphysics. He maintained the unconditional validity of the Moral Law, and of the consequences which legitimately flow from it. This validity, however, it should be observed, is simply *moral*, and in no way demonstrates the metaphysical reality of the ideas, which, nevertheless, by a power of its own, it compels us to accept. The Reason, as operating in the sphere of Ethics, is called by K. the Practical Reason, or the Practico-legislative Reason. The ideas which the Practico-legislative Reason postulates are, 1st, the idea of *Freedom*; 2d, of *Immortality*, as the necessary condition for an ever-increasing approximation to the fulness of the Moral Law; and 3d, of the Being of God, as the necessary condition of such a regulation of the universe as shall shew the order of nature to be the expression of a moral design. Rejecting all the ontological, cosmological, and physico-theological proofs of the existence of God as mere *futilities*, K. based his belief in God on the inward necessities of a practical morality. Religion—i. e., the recognition of our duties as divine commands—has, in the system of K., the closest dependence on Morality; in fact, becomes identical with it. This purely ethical conception of religion led him to a criticism of the positive dogmas of theology from an ethical standpoint, in which are contained most of the elements of theological rationalism. The application of the Practical Reason, as understood by K., to Aesthetics and Jurisprudence is equally fruitful of important results.—K.'s first work, *Gedanken von der wahren Schätzung der lebendigen Kräfte* (Thoughts on the True Estimation of the Active Powers), was published in 1747. The principal of its successors were, *Die falsche Spitzfindigkeit der vier syllogistischen Figuren* (The False Hair-splitting of the Four Syllogistic Figures, 1762), *Beobachtungen über das Gefühl des Schönen und Erhabenen* (Observations on the Beautiful and Sublime, 1764); *De Mundi Sensibilis et Intelligibilis Forma et Principiis* (On the Form and Principles of the Sensible and Intelligible World, 1770); this is the prelude to his *Kritik der reinen Vernunft* (Critique of the Pure Reason, 1781); *Grundlegung der Metaphysik der Sitten* (Basis of the Metaphysics of Ethics, 1785), *Kritik der praktischen Vernunft* (Critique of the Practical Reason, 1788), *Kritik der Urtheilskraft* (Critique of the Judgment, 1790), and *Religion innerhalb der Grenzen der blossen Vernunft* (Religion within the Limits of Mere Reason, 1793). For an account of the

influence of K. in the development of speculation in Germany, see GERMAN PHILOSOPHY.

KA'OLIN is the name given by the Chinese to the fine white clay which they use in making their porcelain. It is furnished by the decomposition of a granitic rock, the constituents of which are quartz, mica, and felspar, the latter having gradually mouldered, by the joint action of air and water, into this substance. A very similar clay, to which the Chinese name has been given, occurs near St Austel in Cornwall, and near Limoges in France. In these cases, it is produced by the decomposition of *Pegmatite*, a granite in which there is scarcely any mica, and very little quartz. All clays are silicates or hydrated silicates of alumina; and these clays, which are much valued by the porcelain-makers, may be represented by the formula $Al_2O_3 \cdot 3SiO_2 + 2H_2O$.

KAPILA, the renowned founder of the Sāṅkhya (q. v.), one of the philosophical systems of the Hindus. Professor J. E. Hall, in his learned and excellent preface to his edition of the text-book of the Sāṅkhya, the *Sāṅkhya-Pravachana*, says: 'By the prevalent suffrage of mythology, Kapila is reputed to have been a son of Brahmā; but he is otherwise described as an incarnation of Vishnu. He is also recounted to have been born as the son of Devahūti; and again is identified with one of the Agnis or fires. Lastly, it is affirmed that there have been two Kapilas—the first, an embodiment of Vishnu; the other, the igneous principle in human disguise. It must be acknowledged, in short, that we know nothing satisfactory concerning Kapila; the meagre notices of him that are producible being hopelessly involved in uncertainty, and inextricably embarrassed by fable. Yet it may be credited, with but little hesitation, that he was something more substantial than a myth; and there seems to be tolerably good ground for receiving, as an historical fact, his alleged connection with the Sāṅkhya.'—*Bibliotheca Indica, Sāṅkhyapr.*, p. 14, seq.

KARAITES. See JEWISH SECTS.

KARAMA'N, KARAMA'NIA, or CARAMANIA, an inland eyalet of Asia Minor, is bounded on the W. by Anatolia, on the E. by Rumili, on the S. by the Taurus Mountains. Cattle-breeding is the chief employment of the inhabitants, who are for the most part nomadic Turks. The town of Karaman, said to be the chief trading town of this district, contains a population variously estimated at from 10,000 to 20,000.

KARAMSIN, NICHOLAS MICHAILOWITSH, the greatest of Russian historians, was born on 1st December 1766, at Bogorodtza, in the government of Simbirsk. His father was an officer of Tartar descent, and placed him in the army, but he soon retired from it, and devoted himself to literary pursuits, and after a tour in Germany, Switzerland, and France, took part in establishing the *Moscow Journal*, and published volumes of tales, poetry, &c. But the work which first gained him a high reputation was his *Letters of a Russian Traveller* (6 vols. Moscow, 1797—1801), a work which exercised an extraordinary influence in the improvement of literary taste in Russia. After some other literary attempts of no great importance, he directed his attention to the history of his country. In 1803, he was appointed imperial historiographer, with a pension of 2000 rubles; and from this time he laboured uninterruptedly at his *History of Russia* (12 vols. Petersb. 1816—1829), for the preparation of which he had access to all the national archives. For this work, the Emperor Alexander, who had read part of it in manuscript, made him a present of 60,000 rubles. It has been translated into other languages. It comes down only to 1611.

It is in high repute in Russia, displays much research and judgment, and is, in fact, by far the most valuable work in Russian historical literature. K. died on May 13, 1826.

KARA'SU-BAZAR, a manufacturing town in the Crimea, 25 miles east-north-east of Simferopol. It is surrounded by gardens, and contains 5 churches and 22 mosques with minarets. Pop. 15,287, who carry on considerable trade, and manufacture morocco leather and other articles.

KARATCHEF, a town in the north-west of the government of Orel, European Russia, on the Sniejas, an affluent of the Dezna, dates from the 12th c., and contains 10,750 inhabitants, who carry on a large trade in cordage.

KARDZSA'G-UJ-SZALLA'S, a market-town of Hungary, capital of the district of Great Cumania, is situated about 90 miles east-south-east of Pesh. It is the centre of a district of exuberant fertility, and is the mart for the grain, fruit, wine, and cattle raised in that district. Pop. 12,000.

KARE'LIA, an ancient province of Sweden, near the Gulf of Finland, annexed to the Russian empire by Peter the Great, and now forming portions of the governments of Finland, St Petersburg, Olonetz, and Archangel. The original inhabitants were of Finnish origin.

KARE'NGIA (*Pennisetum distichum*), a grass closely allied to the Millets, and producing a grain of the same kind. It is a native of Central Africa, and is extremely plentiful on the southern borders of the Sahara, supplying in some places the principal part of the food of the inhabitants.

KARIKAL, a remnant of the once extensive possessions of France in India, lies on the Coromandel Coast, on the estuary of one of the branches of the Kaveri, within the limits of the British district of Tanjore. It contains only 63 square miles, with about 50,000 inhabitants, of whom more than 49,000 are natives. K. was ceded to the French by the Rajah of Tanjore in 1759. Having subsequently fallen into the hands of the English, it was restored at the general pacification of 1814, on condition that it should neither contain any fortification, nor possess any garrison, unless for purposes of police. This tract is of little commercial importance, for it is only during the season of high water that the estuary is navigable even for coasting craft. K. is 150 miles to the south of Madras, being in lat. 10° 55' N., and long. 79° 53' E.

KARNA'C. See THEBES.

KARROO' is the original Hottentot term, now generally adopted into the language of physical geography, for the immense barren tracts of tablelands, about 2000 feet above the sea-level, which occupy such a large portion of the surface of the Cape Colony and the region north of it. The karroos of South Africa are generally composed of shallow beds of the richest clay-soil, resting on a substratum of slaty rock, and only want the fertilising power of water to render them as productive as any other part of the surface. After heavy rains, luxuriant vegetation quickly springs up, which as quickly perishes; and the different rivers shewn on maps as crossing the karroos, are generally little more than dry water-courses, with strings of standing pools in their beds. In the most barren portions the soil is much impregnated with alkaline matter.

The principal karroos of the Cape Colony are found extending in a north-easterly direction, between the Roggeveld and Nieuveland Mountains and the coast ranges, forming a belt of table-land about 350 miles in length, with an average width of

60 miles, and only inhabited by the Boers in the winter season, when water and grass are abundant.

Within the last few years, by the introduction of merino sheep, and the construction of dams, land in the karroo is becoming more valuable; and farms that, a few years ago, were considered nearly valueless, now realise considerable sums.

KARS, the capital of a pashalik in the Turkish eyalet of Erzerum or Armenia, 110 miles north-east from Erzerum, near the Russian border. It is situated on a table-land of upwards of 6000 feet in elevation; the climate is therefore rather severe. Pop. 12,000, mostly Armenians, who carry on an active transit trade. In 1828, it was taken from the Turks by the Russians under Paskievitch. The siege of K. by the Russians under Mouravieff, and its defence by the Turks, with the aid, and under the conduct, of General Williams, form one of the most brilliant passages in the history of the recent Russian war. The siege began on the 16th of June 1855, and the place held out till the beginning of December.

KÂRTTIKEYA, the Hindu Mars, or god of war, a being represented by the Purânic legends as sprung from S'iva, after a most miraculous fashion. The germ of K. having fallen into the Ganges, it was on the banks of this river, in a meadow of S'ara grass, that the offspring of S'iva arose; and as it happened that he was seen by six nymphs, the *Kṛttikâs* (or Pleiades), the child assumed six faces, to receive nurture from each. Grown up, he fulfilled his mission in killing Târaka, the demon-king, whose power, acquired by penances and austerities, threatened the very existence of the gods. He accomplished, besides, other heroic deeds in his battles with the giants, and became the commander-in-chief of the divine armies. Having been brought up by the *Kṛttikâs*, he is called *Kârttikeya*, or *Shân-mâtura*, the son of six mothers; and from the circumstances adverted to, he bears also the names of *Gângeya*, the son of Gangâ; *S'arabhâ*, reared in S'ara grass; *Shân-mukha*, the god with the six faces; &c. One of his common appellations is *Kumâra*, youthful, since he is generally represented as a fine youth; and as he is riding on a peacock, he receives sometimes an epithet like *S'ikhivâhana*, or 'the god whose vehicle is the peacock.'

KA'SCHAU, a town of Hungary, is situated in the beautiful valley of the Hernad, surrounded by vine-clad mountains, 130 miles north-east of Pesth. It contains 15 churches, of which that of St Elizabeth (built 1342—1382) is said to be by far the finest Gothic edifice in Hungary. Stoneware, leather, cloth, sugar, tobacco, and paper, are manufactured. Pop., exclusive of suburbs, 13,100. Two battles were fought near K. during the Hungarian revolution, both of which the Austrians gained.

KASHA'N, one of the most flourishing towns of Persia, is situated in a well-peopled, well-cultivated district, 3690 feet above sea-level, and 92 miles north of Ispahan. The vicinity is celebrated for its fruit, and the town for its extensive manufactures of silk-stuffs, gold brocade, carpets, and copper-ware. It is a large town, and abounds, like all Persian towns, in mosques, bazaars, baths, &c. Pop. 30,000.

KASHGAR. See **CASHGAR**.

KASKA'SKIA, a river of Illinois, United States of America, which rises in the eastern part of the state, and running south-west, falls into the Mississippi at Kaskaskia. It is navigable to Vandalia, 150 miles.

KASSIMO'F, a town in the north-east of the government of Riazan, European Russia, on the left bank of the Oka, dates from the 12th century. Pop. 10,088. The chief branches of industry are tanning, rope-making, and chemicals. In the vicinity are several tombstones and other interesting relics of the time of the Mongolian rule.

KASTAMU'NI, a town of Turkey in Asia, in the north of Anatolia, is capital of an eyalet of the same name. The glory of this city has to a great extent departed. It contains thirty mosques, and about as many public baths; but its industrial products comprise only cotton goods to a small extent, and some copper-ware. Pop. 30,000.

KAT RIVER, a branch of the Great Fish River, in the Cape Colony, rising in the Didima-berg, in the valleys of which, in 1828, were settled, under the care of the London Mission Society, a large body of Hottentots and Bastaards, who occupied the country formerly inhabited by the Kafir chief Macomo and his people. But in the commencement of the war of 1850, the credulous Hottentot population believing that the Colonists were about to drive them from their farms, threw themselves into the arms of the Kafir chiefs, and expelling the missionaries, invaded the Colony. This led to the breaking up of the settlement as a mission station and exclusive native reserve; and it now forms the division of Stockenstroem, and is inhabited by a rather dense, mixed population of Hottentots, Fingoes, and Europeans. It is one of the best watered, wooded, and fertile districts in the Cape Colony, and includes an area of about 400 square miles.

KATER, HENRY, a mechanist of considerable eminence, was born at Bristol in 1777, and died in London in 1830. At his father's desire, he began the study of the law, but in 1794 relinquished his legal studies, and obtained a commission in the 12th Regiment of Foot, then stationed in India. During the following year, he was actively engaged, under Colonel Lambton, in the trigonometric survey of India; and on his return in 1808, became a student in the senior department at Sandhurst, and was shortly afterwards promoted to a company in the 62d Regiment.

His contributions to science are chiefly to be found in the *Philosophical Transactions*, to which, between the years 1813 and 1828, he contributed fifteen papers. The most important of these memoirs are those relating to his determination of the length of the seconds' pendulum at the latitude of London; and those which describe his 'floating collimator,' an instrument for aiding the determination of the horizontal or zenith points. For the invention of this instrument, he received the gold medal of the Royal Astronomical Society. In addition to these memoirs, he was, conjointly with Dr Lardner, the author of 'A Treatise on Mechanics' in the *Cabinet Cyclopædia*. Most of the learned societies in Great Britain and on the continent enrolled him among their members. His memoirs on the verification and comparison of the standards of weights and measures of Great Britain and Ireland, induced the emperor of Russia to employ him to construct standards for the weights and measures of that country; and for these labours he received the order of St Anne, and a diamond snuff-box. He died from an affection of the lungs in the fifty-third year of his age.

KATRINE, LOCH, one of the most celebrated of Scottish lakes, is situated near the south-west border of Perthshire. It is eight miles in length, and three-quarters of a mile in mean breadth; greatest depth, 78 fathoms; height above the sea,

about 370 feet. Its shape is serpentine, and displays great variety of shore and background. Ben Venue and Ben An are on its banks. It contains several islets, one of which, Ellen's Isle, is the centre of the action of the *Lady of the Lake*. Several also of Wordsworth's lyrics were written on subjects suggested in this locality.

The waters of Loch K. are remarkably pure, having only one degree of hardness, and in all, two grains of solid matter to the gallon. The new water-supply to the city of Glasgow (q. v.) is drawn from this lake and those connected with it (Vennachar and Achray). The water is conducted first by a tunnel 6975 feet long through a mountain, and then by aqueducts, pipes, and tunnels, to the reservoir near the city—a distance of upwards of 25 miles.

KÂTSENA, a large, but now desolate town of Central Africa, capital of a province of the same name, subject to the Sultan of Sôkoto, is situated in a beautiful and salubrious district in lat. 12° 54' N., and long. 7° 25' E., ninety miles north-west of Kanô. It is surrounded by a wall about fourteen miles in circuit, and contained at one time at least 100,000 inhabitants. In 1807, the conquering Fûlbe assailed it, and a war was commenced, which lasted for upwards of seven years. The capture of K. was achieved only through its destruction. It has now a population of from 7000 to 8000, and Kano (q. v.) has taken its place as the centre of commerce for the country.

KATTIMUNDOO', or CUTTIMUNDOO, a substance somewhat resembling gutta-percha. It is the milky juice of the East Indian plant, *Euphorbia nereifolia*, and is either obtained as a natural gum, which has oozed through the bark, or by making incisions, and collecting the juice which flows. It is much used in India as a cement for knife-handles, and for similar purposes, but is not exported to other countries.

KATTYWAR, a term originally applied to one of the ten districts of the peninsula of Guzerat, has gradually been made to extend, as a collective name, to the whole of them. In this larger sense, it stretches in N. lat. from 20° 42' to 23° 10', and in E. long. from 69° 5' to 72° 14', containing about 20,000 square miles, and about 1,500,000 inhabitants. This province of India, touching on part of its eastern frontier the district of Ahmedabad, is everywhere else bounded by water—the Runn and Gulf of Cutch, the Arabian Sea, and the Gulf of Cambay. Politically, the country is divided among more than 200 chiefs, some of them paying tribute to the Guicowar of Guzerat, and the rest to the British government, but all of them being under the protection of the latter. Between them, these petty princes have a revenue of about £500,000 sterling, and a force of about 4000 cavalry and 8000 infantry. The climate is unhealthy, and the surface is generally undulating. The principal crops are millet, maize, wheat, sugar, and cotton.

KÂTYÂYANA, a name of great celebrity in the literary history of India. It belongs, in all probability, to several personages renowned for their contributions to the grammatical and ritual literature of the Brahmanical Hindus; but it is met with also amongst the names of the chief disciples of the Buddha, S'âkyamuni.—The most celebrated personage of this name, however, is K., the critic of the great grammarian Pân'ini; and he is most likely the same with the K. who wrote the grammatical treatise called the *Prâtisâkhyâ* of the white Yajurveda. See VEDA. Professor Goldstûcker, in his *Pân'ini, &c., his Place in Sanscrit Literature*

(London, 1861), has shewn that he cannot have been a contemporary of Pân'ini, as was generally assumed; and in a paper recently read by him before the Royal Asiatic Society (February 1863), he has proved that this K. lived at the same time as the great grammarian Patanjali, whose date he had previously fixed between 140 and 120 before the Christian era. See PATANJALI.

KÂTYDID (*Platyphylum concavum*), a species of Grasshopper (q. v.) of a pale-green colour, a native of North America, very plentiful in some parts of the United States, where its peculiar note is always to be heard during the summer, from the evening twilight till the middle of the night. This note is almost like a shrill articulation of the three syllables kat-y-did, following each other in quick succession, after which there is a pause of two or three minutes. The organ of sound is a transparent elastic membrane in a strong oval frame, in each of the wing-covers; these membranes, by the overlapping of the wing-covers, can be made to rub against one another, and the sound is produced by the friction.

KÂTZBACH, a small river in the Prussian province of Silesia, falling into the Oder at Parchwitz. It has become famous in history from the battle fought on its banks on 26th August 1813, between the French troops under Marshal Macdonald, and the Prussians under Blucher, in which the latter were completely victorious. The French lost in the battle of the K. 5000 killed, and 18,000 wounded and prisoners, with 103 cannons, two eagles, and 250 ammunition-wagons.

KAULBACH, WILHELM VON, a celebrated German painter, was born at Arolsen, in the principality of Waldeck, 15th October 1805, and in his seventeenth year entered the Academy of Arts at Düsseldorf, where he soon became one of Cornelius's best pupils. He seemed thoroughly penetrated by the severely ideal and allegorical spirit of that great master, yet even from the first he displayed no lack of individual genius. Among his first important productions (1828—1829), were six symbolical figures, the best known of which is 'Apollo among the Muses.' To the same period belongs a work of a wholly different and even opposite character, 'The Madhouse,' conceived and executed in the most vigorously realistic spirit. It added immensely to K.'s reputation, and King Ludwig of Bavaria now employed him to decorate Duke Maximilian's palace in Munich. For this he executed, in the strictly antique style, sixteen frescoes illustrating the fable of Psyche and Cupid. His designs from Klopstock, Goethe, and Wieland, for the same monarch, are also worthy of mention. In 1837, K. completed his 'Battle of the Huns,' a picture representing the grand legend of the continued struggle in mid-air of the souls of the Huns and Romans who had fallen before the walls of Rome, which was regarded as the culmination of the new German school. Nevertheless, the realism of which we have spoken still found expression in various works. His patient study of Hogarth is quite visible in his illustration of Schiller, of Goethe's *Faust*, and *Reineke Fuchs*. In 1846, K. completed what is probably his chef-d'œuvre, the 'Destruction of Jerusalem by Titus.' It is a marvellous mixture of history and symbolism. Of K.'s other works, it will be sufficient to mention 'The Tower of Babel' (for the new museum at Berlin), and a series of frescoes representing the history of art since the renaissance (for the Pinacothek at Munich). Latterly, he has painted a great number of portraits. K. is undoubtedly one of the greatest modern painters that Germany has produced.

KAUNITZ, WENZELIUS ANTHONY, PRINCE VON,

Count of Rietberg, a great Austrian statesman, born at Vienna in 1711; studied at Vienna, Leipsic, and Leyden; travelled in England, France, and Italy; and being the head of an ancient and honourable family, soon received important political appointments from the Emperor Charles VI. He continued to fill important situations under Maria Theresa. He gained great fame as a diplomatist, in 1748, at the congress of Aix-la-Chapelle. He was afterwards Austrian ambassador at the French court; and in 1753, was appointed court and state chancellor, and in 1756 chancellor also for the Netherlands and Italy, and continued for almost forty years to have the principal direction of Austrian politics. The project of the partition of Poland originated with him. He had so much to do in the management of the political affairs of Europe, that he was jocularly called the European coach-driver. He was very vain and confident of his own abilities, so that his highest praise for anything which he thought well done was to say with an oath: 'I could not have done it better myself.' He was narrow in his political views, regarding exclusively the supposed interests of Austria, but sincere and upright according to his notion of his duty. He took a very active part in the ecclesiastical reforms of Joseph II., so that at Rome he was styled *the heretical minister*. He was a liberal patron of the arts and sciences. He retired from public life on account of old age, when Francis II. ascended the throne, and died 27th June 1794.

KAURI, or **KOWRIE**, or **K. PINE** (*Dammara australis*), a species of *Dammara* (q. v.), a native of New Zealand. It is a tree of great size and beauty, and is said sometimes to attain a height of 140 feet or more, with whorls of branches, the lower of which die off as it becomes old. The timber is white, close-grained, durable, flexible, and very valuable for masts, yards, and planks. It is much used for masts for the British navy, no other being considered equal to them. The Fiji Islands, New Hebrides, and Australia produce other species, the timber of all of which is sold under the name of *K. Pine*, although there are differences of quality. All of them are trees of dark dense foliage. All of them also produce a resin called **K. RESIN**, or **K. GUM**, and sometimes Australian Copal and Australian Dammar, of which large quantities are imported into Britain and North America, chiefly from New Zealand. It is sometimes found in pieces as large as a child's head, of a dull amber colour, where forests of these trees have formerly grown, and is obtained by digging. It is also collected from the trees from which it has newly exuded, and is then of a whitish colour. It is used for making varnishes, &c.

KAVA. See **AVA**.

KAZAN, a town of Russia, capital of the government, and ancient capital of the kingdom of the same name, is situated on the river Kazanka, four miles from the north bank of the Volga, and 200 miles east-south-east of Nijni-Novgorod. It was founded in 1257 by a Tartar tribe, and after various vicissitudes, was made the capital of an independent kingdom, by the Khan of the Golden Horde, which flourished in the 15th century. In 1552, the Russians, under Iwan the Terrible, carried the town after a bloody siege, and put an end to the existence of the kingdom. Pop. 53,129. **K.** contains 70 churches and 9 mosques; a university, theological academy, and other educational establishments. The manufactures are leather, soap, cloth, and silk.

KAZAN (in Tartar, *a golden-bottomed kettle*), a government of Russia, between Astrakhan on the

east, and the government of Nijni-Novgorod on the west. Area, 23,650 square miles, $\frac{3}{4}$ ths of which is cultivated, $\frac{3}{4}$ th in pastures, and $\frac{1}{4}$ th covered with forests. Pop. about 1,540,340—mostly Christians, with a number of Moslems, and some idolaters. The soil is for the most part fertile; corn is exported; the climate is rather severe, but healthy. Cattle-breeding, keeping of bees, and fishing are the chief employments of the people. There is an extensive trade in timber, pitch, and wooden dishes.

KAZIMIRZ, a town of Poland, in the government of Lublin, on the right bank of the Vistula, 30 miles east-south-east of Radom. It was founded in 1350, and formerly carried on a flourishing trade in grain, in which a number of English commercial houses established here were engaged. **K.** now contains only 6700 inhabitants, of whom a great many are Jews.

KEAN, **EDMUND**, was born in London about 1787. His father was a stage-carpenter; his mother, an actress. From his infancy, the glare of the footlights was familiar to him as the light of common day. While but a child, he made his appearance on the boards, and on one occasion gave a recitation before George III. at Windsor Castle. In 1803, he joined a strolling company in Scotland, and for eleven years he performed in country theatres. He came to London in 1814, in which year he appeared as Shylock in Drury Lane, his immense popularity filling the coffers of the managing committee, and enriching himself. All London flocked to hear him; and Hazlitt, Hunt, and Lamb, who were constantly in the pit, declared that his acting was like 'teaching Shakspeare by a flash of lightning.' He twice visited America, made meteoric visits to the provinces, and ever in the heyday of his powers 'the pit rose at him,' to use his own expression. Unhappily, his habits were dissolute, and almost constant intoxication impaired his memory and his physical vigour. In 1833, while his son Charles was playing Iago to his Othello, the great actor broke down, and was led off the stage. He never again appeared in public. His death took place at Richmond on the 15th May 1833. His great characters were Othello, Shylock, Richard III., and Sir Giles Overreach. He was amongst actors what Byron is amongst poets, and Napoleon amongst generals.

KEAN, **CHARLES JOHN**, second son of Edmund, was born in 1811, and educated at Eton. When his father fell into ill-health, he adopted the stage as a profession. He was popular in the provinces and in America before he achieved reputation in London. He married, in 1842, Miss Ellen Tree, and till his death in 1868 they acted together. He became the lessee of the Princess's Theatre in 1850, and was the director of the royal theatricals. His management at the Princess's Theatre was distinguished chiefly by the splendid manner in which certain plays were produced. The utmost pains was expended on scenery and dress, and as much care was taken to avoid anachronisms as to secure good acting. *Sardanapalus*, produced in 1853, was perhaps the most striking of these 'restorations,' as they are called. **K.** attempted the parts in which his father shone, but did not succeed in being more than a comparative to the superlative which the elder generation of playgoers yet remember. In a lower line of character, and in such pieces as the *Corsican Brothers*, *The Wife's Secret*, and *Louis XI.*, he was more at home than in the world of Shakspeare.

KEANG-SI, an inland province of China, lies immediately north-west of the maritime province of Fo-kien. See **CHINESE EMPIRE**.

KEANG-SU', an important maritime province of China, the wealthiest and most densely peopled district of the empire. See **CHINESE EMPIRE**.

KEATS, JOHN, an English poet, was born in London in 1796. He was educated at Enfield, and was afterwards apprenticed to a surgeon. Certain of his sonnets were published in the *Examiner*, then edited by Mr Leigh Hunt, and received his cordial admiration. He published in 1817 his first volume of poems; and in the following year *Endymion* appeared, dedicated to the memory of Thomas Chatterton. This poem was severely handled in the *Quarterly Review* and in *Blackwood*. He published a third volume of poems, containing *Lamia*, *Isabella*, *Eve of St Agnes*, the fragment of *Hyperion*, and the odes to the *Nightingale* and the *Grecian Urn*. His health was at this time delicate; and shortly after the publication of his book he went to Italy, and died at Rome, on the 24th February 1821, his last moments soothed by the tender care of Mr Severn the artist. The English pilgrim can see his grave and Shelley's in affectionate neighbourhood. An admirable memoir of K., with copious selections from his letters, has been published by Monckton Milnes, Esq., M.P.

K.'s early poems are disfigured by conceits and affectations, but his latest place him amongst the masters of his art. The *Eve of St Agnes* is as melodious as any portion of the *Faery Queen*; *Hyperion* has something of the organ-tone of Milton. His influence is strikingly apparent in the subsequent efforts of the English muse—Browning has his colour without his melody, Tennyson has his colour and his melody both.

KECSKEMET, a town of Hungary, 54 miles south-east of Pesth, is a station on the railway between that city and Temesvar. It is said to be the greatest market-town in the country, and with its extensive suburbs, its streets, straggling and low buildings, may be considered as a type of the Magyar town. Agriculture and vine-growing are carried on to some extent; but the inhabitants are chiefly employed in rearing cattle, sheep, horses, and swine. Five markets are held here annually; the cattle-market, which lasts for fourteen days, is the most important in Hungary. Pop. 39,434.

KEDGE, or **KEDGE-ANCHOR**, a small anchor used in large ships to keep the bow of the vessel clear of the bower, or principal anchor. Another use of the kedge is to move the ship from mooring to mooring in a harbour; for this purpose, it is conveyed to a distance in a boat, then dropped, and the vessel hauled up towards it by a cable attached.

KE'DJERI, a seaport of Bengal, stands on the west side of the most westerly channel of the Hoogly, once the principal approach to Calcutta from the sea. Between it and the metropolis there is a telegraphic line of about 40 miles in length, being the first work of the kind in India.

KEEL is the backbone, as it were, of a ship, running longitudinally along the middle of the bottom. It consists of massive timbers clinched together lengthwise. From it spring, on either side, the ribs on which the ship's sides are laid, and from it, at the bow and stern respectively, the stem and the stern-post. As the decks bear by transverse beams upon the ribs, it follows that the whole weight of the ship and its contents exercise an oblique lateral pressure on each side of the keel. It is usually protected by strong iron binding, so that the keel may be as little injured as possible, in the event of the ship taking the ground. In iron vessels of modern construction, the keel is frequently dispensed with, corresponding strength

being obtained by internal tie-beams, &c.; but the absence of the keel takes away one preventive to rolling from side to side. To be 'on an even keel,' is to have the keel parallel to the surface of the water, i. e., the bow and stern equally deep.

KEELAGE, a toll or custom payable by ships for resting in a port or harbour.

KEELHAULING, a punishment in use, or formerly in use, for sailors in the Dutch navy. The culprit was suspended from one yard-arm, and attached to him was a rope passing beneath the keel to the yard-arm on the opposite side of the ship. The punishment consisted in dropping the prisoner suddenly into the water, and hauling him beneath the keel up to the yard-arm on the other side.

KEELSON, in a ship, passes inside the vessel (B in fig.), from stem to stern, as the keel (A) does outside. The floor-timbers are passed below it, each being bolted through the keel, and alternate ones through the keelson. Like the keel, the keelson is composed of several massive timbers scarfed longitudinally together.

KEEP, in medieval fortification, was the central and principal tower or building of a castle, and that to which the garrison retired, as a last resort, when the outer ramparts had fallen. See **CASTLE**. A fine specimen of the ancient keep is still extant amid the ruins of Rochester Castle.

KEEPER OF THE GREAT SEAL, a judicial officer, whose duties are now generally merged in those of the lord chancellor.

KEEPING THE PEACE. When a person has been assaulted, or is apprehensive of an assault, he may apply to justices to order the assaulting or threatening party with sureties to keep the peace. This is done by the justice ordering the party to enter into recognisances under articles of the Peace (q. v.), called in Scotland a bond in pursuance of letters of Lawburrows (q. v.).

KEI RIVER, GREAT. This important stream divides British Kaffraria on the south-west from Kaffraria Proper, and with its branches, the Black or White Kei, the Indwe and Tsomo, all rising in the Stormbergen, drains a basin of about 7000 square miles. It is very rugged in its lower course, and its mouth, like all other Kaffrarian rivers, is hopelessly barred. Its banks have been the scene of several severe conflicts during our wars with the Kafir tribes.

KEIGHLEY, a market and manufacturing town in the West Riding of Yorkshire, is situated on the river Aire, nine miles north-west of Bradford. Among the few interesting institutions of the town, is the Free Grammar-school, with an endowment of £240 per annum. The worsted manufactures are important, and machine manufactories and paper-works are in operation. Pop. (1871) 19,775.

KEISKA'MMA. This river forms the boundary between the Cape Colony and that of British Kaffraria. It is a purely Hottentot name, signifying 'clear water.' It rises in the Amatola, and with its branches, the Chumie and Gaga, waters a very fertile tract of country, formerly the head-quarters of the Amaxosa Kafirs, now densely settled with industrious German and English settlers.

KEITH, THE FAMILY OF. The origin of this, as of most other Scottish historical houses, is unascertained. It first appears in record during the latter half of the 12th c., and undoubtedly took its name from the lands of Keith in East Lothian, to which the office of the king's marischal was attached.

The family enters the page of history in the beginning of the 14th century. In 1305, Sir Robert of Keith, hereditary marischal of Scotland, is found high in the confidence of King Edward I. of England, holding under him the office of joint justiciar of Scotland from the Forth to the Mounth, and sitting in the English council at Westminster as one of the representatives of Scotland. He kept his allegiance to England for some years after Bruce was crowned king of the Scots, but joined that prince before Bannockburn, where he commanded the cavalry, and by a well-timed charge upon the English archers, contributed not a little to the fortune of the day. His services were rewarded by a large grant of land in Aberdeenshire; and the possessions of the family were still further increased, before the close of the century, by a marriage with one of the co-heiresses of Sir Alexander Fraser, chamberlain of Scotland, Bruce's brother-in-law. Through this alliance, the Keiths acquired great estates in Kincardineshire, and having added to them the remarkable sea-girt rock of Dunnottar, they built or restored a castle upon it, which was henceforth their chief seat.

Earls Marischal.—About 1458, the family was ennobled in the person of Sir William Keith, who was created Earl Marischal and Lord Keith. His House reached its highest pitch of power in the person of his great-great-grandson, the fourth earl, nicknamed, from the seclusion in which he lived at Dunnottar, 'William who kept the Tower.' By marriage with his kinswoman, the co-heiress of Inverurie, he nearly doubled the family domains, which now included lands in seven shires, Haddington, Linlithgow, Kincardine, Aberdeen, Banff, Elgin, and Caithness. He was reputed the wealthiest peer in Scotland, having a rental of 270,000 marks a year, and being able, it was boasted, to travel from the Tweed to the Pentland Firth, eating every meal and sleeping every night on his own lands. These vast possessions passed to his grandson, George, the fifth earl, who, in 1593, founded the Marischal College and University of Aberdeen. Its walls were inscribed with the words: 'THAY HALF SAID : QUHAT SAY THAY : LAT THAME SAY ;' in allusion, it would seem, to the popular reproach which the earl had brought upon himself by adding the lands of the ancient abbey of Deer (q. v.) to his already overgrown estates. The story ran, that his wife earnestly entreated him to forego the spoil. 'But fourteen score chalders of meal and bear was a sore temptation,' says Patrick Gordon of Cluny, and the earl was deaf to her entreaties. Hereupon, it is said, she dreamed a dream, which was thought to portend the downfall of the House of Keith. She saw the monks of Deer set themselves to work to hew down the crag of Dunnottar with their penknives, and while she was laughing them to scorn, 'behold! the whole crag, with all its strong and stately buildings, was undermined and fallen in the sea.' This was written before 1660. Within little more than half a century, Dunnottar was in ruins, and its lord a landless exile. At the age of 22, George, the tenth and last Earl Marischal, took part with his younger brother James in the rising of 1715. He was attainted, and his estates (yielding £1676 a year) were forfeited; but he himself escaped abroad, where he rose to distinction in the Prussian service. His communication to the British government of a political secret which he learned when Prussian ambassador at Madrid, procured his pardon in 1759. A year or two afterwards, he revisited Scotland, and bought back part of the family estates, but refused the proffered restoration of the family titles. He speedily returned to Prussia, and died there in 1778 at the age of 86. His brother, who

had risen in the Prussian service to the rank of field-marshal, fell at Hochkirch in 1758.

Lords Keith.—Neither having any issue, the direct male line of the House came to an end. His sister, Lady Mary, by her marriage, in 1711, with John, sixth Earl of Wigton, had a daughter, Lady Clementina, who married Charles, tenth Lord Elphinstone, by whom, besides other children, she had Sir George Keith Elphinstone, who, in 1797, was created Lord Keith of Stonehaven Marischal in the Irish peerage, and in 1803, Lord Keith of Banheath in the peerage of the United Kingdom. His daughter, the Baroness Keith, is the wife of the Count de Flahault.

Earls of Kintore.—Sir John Keith, third son of the sixth Earl Marischal, was, for his services in saving the Scottish Regalia during the Commonwealth, raised to the peerage by the titles of Earl of Kintore, and Lord Keith of Inverury and Keithhall. On the death of his grandson, the fourth earl, in 1761, the estates devolved on the last Earl Marischal; and on his death in 1778, the estates and titles passed to Alexander, sixth Lord Falconer of Halkertoun, the grandson of the eldest daughter of the second earl. Her descendant is now the ninth Earl of Kintore and eleventh Lord Falconer of Halkertoun.

KELAT, the capital of Beloochistan, stands at an elevation of more than 7000 feet, in lat. 28° 52' N., and long. 66° 33' E. The district round about is fruitful, and thickly peopled. K. contains about 12,000 inhabitants. Seated on the summit of a hill, K. is a place of military importance. In the Afghan wars, it was twice taken by the British.

KELLERMANN, FRANÇOIS CHRISTOPHE, Duke of Valmy, born 28th May 1735, at Wolfsbuchweiler, in Alsace, entered the French army, and had risen to the rank of a *maréchal-de-camp* before the Revolution broke out. He warmly espoused its cause, and contributed much to its progress in Alsace. In 1792, he received the command of the Army of the Centre on the Moselle, repelled the Duke of Brunswick, and delivered France by the famous cannonade of Valmy. Yet, on allegation of treason against the republic, he was imprisoned for ten months, and only liberated on the fall of Robespierre. He afterwards rendered important services in Italy, and on the erection of the Empire he was made a marshal and a duke. In the campaigns of 1809 and 1812, he commanded the reserves on the Rhine. At the Restoration, he attached himself to the Bourbons. He was moderate and constitutional in his views. He died 12th September 1820.

KELLS (originally, *Kenlis*), an ancient corporate town of the county of Meath, Leinster, Ireland, is situated on the Blackwater, 13 miles north-north-west of Trim, and has been associated, from a very early period, with the most important events of Irish history, sacred and profane. The town originated in a monastery, which was founded in the middle of the 6th c. by St Columba, and among its antiquities, which are most numerous and interesting, are shewn a stone-roofed cell or chapel, evidently of very great antiquity, and popularly regarded as built by St Columba. K. was frequently plundered in the wars of the Danes, and after the Conquest, it became an important stronghold of the Pale. It was a bishop's see, and before the act of union, it returned two members to the Irish parliament. Its oldest charter is of 11 and 12 Richard II. This was modified by several succeeding charters, under which the municipal body was maintained until the Irish Municipal Reform Act, which created a body of town commissioners. The population in 1851 was 3997; in 1861, it had fallen to 3225, of whom

2988 were Roman Catholics, and 331 members of the Established Church.

KELP (Fr. *varec*) is the crude alkaline matter produced by the combustion of sea-weeds, of which the most valued for this purpose are, *Fucus vesiculosus*, *F. nodosus*, *F. serratus*, *Laminaria digitata*, *L. bulbosa*, *Himanthalia lorea*, and *Chorda filum*. These are dried in the sun, and then burned in shallow excavations at a low heat. About 20 or 24 tons of sea-weed yield one ton of kelp, which, as met with in commerce, consists of hard, dark-gray or bluish masses, which have an acrid, caustic taste, and are composed of chloride of sodium, of carbonate of soda (formed by the decomposition of the organic salts of soda), sulphates of soda and potash, chloride of potassium, iodide of potassium or sodium, insoluble salts, and colouring matter. It used to be the great source of soda (the crude carbonate); but as this salt can now be obtained at a lower price and a better quality from the decomposition of sea-salt, it is prepared in far less quantity than formerly. A ton of good kelp will yield about eight pounds of iodine (which is solely obtained from this source), large quantities of chloride of potassium, and additionally, 'by destructive distillation, a large quantity (from four to ten gallons) of volatile oil, from four to fifteen gallons of paraffine oil, three or four gallons of naphtha, and from one and a half to four hundred-weight of sulphate of ammonia.'—Ansted's *Channel Islands*, p. 515. Except the iodine and chloride of potassium, none of these substances are obtained under the present treatment.

In Brittany, the total annual production of kelp is as much as 24,000 tons, while in all the British Islands the total manufacture is only 10,000 tons. Professor Ansted, in the work already quoted, shews that the manufacture of kelp might be made a source of great wealth to the Channel Isles. The Guernsey sea-weed is stated by Professor Graham to be the richest known source of iodine, and the increasing demand for that substance for photographic purposes renders the subject highly important. From the numerical data given in pp. 514, 515, of the *Channel Islands*, it appears that they might yield annually about 10,000 tons of kelp, worth about £4 per ton. The British supply would thus be exactly doubled.

Before the remission of the duty on salt and on Spanish barilla, the kelp manufacture was carried on to a very large extent, and the value of many estates in the Scottish Highlands and Hebrides greatly increased in consequence of it. The rent of some farms in the Orkneys rose from £40 to £300 a year. Many thousand tons were made annually on the shores of Great Britain, which sold for £7 to £10 per ton, and employment was given to a great number of people. The regular cultivation of the sea-weed was even proposed, and to some extent carried into effect, by placing large stones within tide-mark upon sandy shores, which were soon covered with it.

KELP, in point of law, if found beyond high-water mark, belongs to the owner of the adjacent land. The right to kelp is often let by the owner separately from the lands in the Highlands of Scotland.

KE'LSO, a town in Scotland, finely placed on the north bank of the Tweed, opposite to the point where that stream receives the waters of the Teviot. The name was anciently written *Kalchu* or *Calchou*, and is supposed to have had its origin in a precipitous bank abounding in gypsum, still called the *Chalkheugh*. The town derived its importance, if not its existence, from a richly endowed abbey of Tironensian monks, planted

at Selkirk in the year 1113, by King David I., when Prince of Cumbria, and transplanted, after his accession to the Scottish throne in 1124, 'to the church of the blessed Virgin Mary, on the bank of the Tweed beside Roxburgh, in the place called Calkou.' The abbey was ruined by the English under the Earl of Hertford in 1545, and all that now remains of it is part of the Abbey Church. It is in the later Norman or Romanesque style, and had a nave of two bays, north and south transepts each of two bays, a central tower still 91 feet high, and a choir of unascertained length. The more modern parts of the town are well built. A handsome bridge, designed by Rennie, connects Kelso with its suburb of Maxwellheugh, and commands a noble view. On the north-west of the town, in the midst of a beautiful park, is Floors Castle, the seat of the Duke of Roxburgh: it was built in 1718, from the design of Sir John Vanbrugh, and was enlarged and improved by the present duke from the designs of the late Mr Playfair of Edinburgh. On the opposite bank of the Tweed are the ruins of Roxburgh Castle, once the strongest fortress on the eastern border. The town of Roxburgh, which rose under the shelter of its walls to be one of the four chief towns in Scotland, has so completely disappeared, that scarcely a vestige of it remains. K. was made a burgh of barony in 1634. It has no manufactures, and little trade, although three newspapers are published in it. Its population in 1861 was 4309. Pop. in 1871, 4073.

KEMBLE, JOHN PHILIP, son of Roger Kemble, an actor, was born at Prescot, in Lancashire, on the 1st February 1757. He received his education at a school in Worcester, afterwards at a Roman Catholic seminary in Staffordshire, and finally at the English College of Douai, in France. On his return to England, he adopted the stage as his profession, making his first appearance at Wolverhampton on January 8, 1776. On the 30th September 1783, he made his first appearance at Drury Lane in Hamlet—always a favourite character of his—and in 1790, he succeeded to the management of that theatre. In 1803, he purchased a share in Covent Garden Theatre, of which he also became manager. On the destruction of the building by fire, K. raised a new theatre, which was opened in 1809, the management of which he retained till the close of his theatrical career. In June 1817, he took leave of his patrons in London; and a few days thereafter a public dinner was given to him, under the presidency of Lord Holland. Thomas Campbell made his retirement from the stage the subject of a spirited set of verses. He finally took up his residence in Switzerland, where he died, on the 26th February 1823, aged sixty-six years.

K. was a great actor, and he loved to personate the loftier characters of the drama—kings, prelates, heroes. His figure was commanding, his voice sonorous and well modulated. He was especially successful in Brutus and Coriolanus; and the ancient playgoers, who remember his intonation and his Roman look, find the stage of the present day comparatively unworthy of regard.

KEMBLE, CHARLES, brother of the foregoing, was born at Brecknock, in South Wales, on the 25th November 1775. He received his education, like his brother, at Douai, and like him also, he, on his return to England, devoted himself to the stage. In April 1794, he made his first appearance at Drury Lane in the character of Malcolm. In July 1806, he married Miss De Camp, a lady who had distinguished herself in the walk of high-comedy. K., on being appointed Examiner of Plays, relinquished the stage on the 10th April 1840. He

died on the 12th November 1854, having almost completed his 79th year.

KEMBLE, JOHN MITCHEL, chiefly distinguished for his researches in Anglo-Saxon literature and the early history of England, was the son of Charles Kemble, and was born in London, 1807. He studied at Trinity College, Cambridge, where he took the degree of B.A. in 1830, and afterwards that of M.A. While an undergraduate, he spent some time at Göttingen, under Jacob Grimm, which perhaps determined the bent of his mind towards Anglo-Saxon studies. The first fruits of these studies was an edition (1833) of the poem of Beowulf (q. v.), to a second edition of which he added a translation, with a glossary and notes. Not to mention several minor publications, he edited for the English Historical Society a valuable collection of charters of the Anglo-Saxon period, entitled *Codex Diplomaticus Ævi Saxonici*, 2 vols. (1839—1840). But his most important work, which contains the chief results of all his researches, is *The Saxons in England*, 2 vols. (1849). This work is unfinished. The author had been making preparations for two more volumes, when he died suddenly, March 26, 1857. K. was for a good many years editor of the *British and Foreign Review*; he also held the office of Censor of Plays, under the Lord Chamberlain.

KEMPIS, THOMAS À, so called from his native place, Kempen, a village in the diocese of Cologne, was born probably in 1379. His family name was Hämerken (Latinised, *Malleolus*, 'Little-hammer'). He was educated at Deventer, and in 1400 entered the Augustinian convent of Agnetenberg, near Zwoll, in the diocese of Utrecht, of which his brother John was prior, and in which he took the vows in 1406. He entered into priest's orders in 1413, and was chosen sub-prior in 1429, to which office he was re-elected in 1448. His whole life appears to have been spent in the seclusion of this convent, where he lived to an extreme old age. His death took place in 1471, at which time he certainly had attained his 90th year, and most probably his 92d. The character of K., for sanctity and ascetic learning, stood very high among his contemporaries, but his historical reputation rests almost entirely on his writings, which consist of sermons, ascetical treatises, pious biographies, letters, and hymns. Of these, however, the only one which deserves special notice is the celebrated ascetical treatise *On the Following (or Imitation) of Christ*, the authorship of which is popularly ascribed to him. This celebrated book has had, next to the sacred Scripture itself, the largest number of readers of which sacred literature, ancient or modern, can furnish an example. In its pages, according to Dean Milman (*Latin Christianity*, vi. 482), 'is gathered and concentrated all that is elevating, passionate, profoundly pious in all the older mystics. No book, after the Holy Scripture, has been so often reprinted; none translated into so many languages, ancient and modern,' extending even to Greek and Hebrew, or so often retranslated. Sixty distinct versions are enumerated in French alone, and a single collection, formed at Cologne within the present century, comprised, although confessedly incomplete, no fewer than 500 distinct editions. It is strange that the authorship of a book so popular, and of a date comparatively so recent, should still be the subject of one of the most curious controversies in literary history. The book, up to the beginning of the 17th c., had been ascribed either to Thomas à K. or to the celebrated John Gerson (q. v.), chancellor of the university of Paris, except in one MS., which, by a palpable anachronism, attributes it to St Bernard; but in the year 1604, the Spanish Jesuit, Mauriquez, found a MS.

in which it is attributed to the abbot, John Gersen, or Gesen, whom he regarded as clearly a distinct person from the Chancellor Gerson. From the time of this discovery, three competitors have divided the voices of the learned—not alone individuals, but public bodies, universities, religious orders, the Congregation of the Index, the parliament of Paris, and even the French Academy; and the assertors of these respective claims have carried into the controversy no trifling amount of polemical acrimony. The most recent and best account of the details of the discussion, as well as its history, will be found in Malou's *Recherches historiques et critiques sur le véritable Auteur du Livre de l'Imitation de Jésus Christ* (Louvain, 1849). We shall only state that M. Malou gives his verdict in favour of the claim of Thomas à K., an opinion in which the learned have now generally acquiesced. The first edition of the *Imitation* was printed at Augsburg, in 1486, and before the end of that century, it was reprinted upwards of 20 times in Germany. The most remarkable modern edition is a Heptaglot, printed at Sulzbach (1837), containing, besides the original, later versions in Italian, Spanish, French, German, English, and Greek. The theology of the *Imitation* is almost purely ascetical, and (except in the 4th book, which regards the Eucharist, and is based on the doctrine of the real presence) the work has been used indiscriminately by Christians of all denominations.

KE'MPTEN (anciently, *Campodunum*, *Campidona*), a city of Bavaria, situated on the river Iller, 64 miles south-south-west of Augsburg, with which it is connected by railway. Like most of the Swabian cities, K. grew up around a monastery, which was founded by the disciples of the great Irish missionary monk, St Gall, about the end of the 7th century. Partly by the favour of the emperors, partly through the natural sequence of the events of the period, the abbots of the monastery were the suzerains of the town and its environs, and eventually the abbot of K. became a prince-abbot of the empire (1348). In the secularisation of the ecclesiastical principalities in 1803—1804, it shared the common fate; the abbey, as well as the city and territory—comprising at that time 7 market-towns, 85 villages, and above 40,000 inhabitants—being assigned to Bavaria. The present city contains about 8000 inhabitants, and is divided into the abbatial town (*Stifts-Stadt*) and the city proper, which lies in the plain at the foot of the hill on which the abbey stands. It is a place of considerable trade, and carries on manufactures of cotton and linen.

KE'NDAL, or **KIRKBY KENDAL**, a municipal and parliamentary borough of England, in the county of Westmoreland, is situated on the right bank of the Kent, 22 miles south-south-west of Appleby. Here, in the reign of Edward III., a settlement of Flemings, under a certain John Kemp, was formed, and afterwards the town became well known for its manufactures of woollen cloths, called, from the name of the town, *Kendals*. The letter of protection, dated 1331, and granted by King Edward III., 'on behalf of John Kempe of Flanders, cloth weaver, concerning the exercise of his craft,' may be found in Rymer's *Fœdera*, vol. ii. p. 283. The name, 'Kendals,' is still applied to the cloths produced here, which, with carpets, worsted stockings, cottons, linsey-woolseys, doeskins, tweeds, and coat-linings, are the staple manufactures of the town. In the immediate vicinity are also several mills, dye, marble, and paper works. The weekly market is the chief one for corn and provisions in the county. K. returns one member to the imperial parliament. Pop. (1861) 12,029; (1871) 13,442.

KENILWORTH, a market-town of England, in the county of Warwick, situated $4\frac{1}{2}$ miles north of the town of that name, and the fashionable town of Leamington. Tanning operations are here carried on upon a large scale, and comb-making to some extent. Pop. (1871) 3335. The town, however, is chiefly interesting from historical association. The castle of Kenilworth, united to the crown domains in the reign of Henry IV., was conferred by Elizabeth upon Robert Dudley, Earl of Leicester, who here, in 1575, entertained his sovereign for 17 days, at a daily cost of £1000. The present noble owner is the Right Honourable the Earl of Clarendon. Extensive remains of the castle still exist, which are well preserved, and much visited by the aristocracy and by tourists from all parts of the country. There are also ruins of the ancient monastery.

KENNEBEC, a river in Maine, United States, which rises in Moosehead Lake, in the west of the state, and runs in a southerly direction into the Atlantic Ocean, after receiving the Androscoggin, 18 miles from its mouth. On its banks are the important towns of Bath, Gardiner, Hallowell, and the state capital, Augusta. It is navigable by ships to Bath, 12 miles; by steam-boats to Hallowell, 40 miles. In its course of 150 miles, this river falls 1000 feet, affording abundant water-power. At Augusta are falls, increased by a dam, 584 feet long, supplying water to large factories, saw-mills, &c.

KENNICOTT, BENJAMIN, an eminent biblical scholar of the last century, was born at Totness, in Devonshire, April 4, 1718, and educated at Oxford, where he highly distinguished himself. He took his degree of M.A. in 1750, having been previously elected a Fellow of Exeter College; and in 1767, he was appointed Radcliffe librarian; and in 1770, Canon of Christ Church, Oxford, where he died, September 18, 1783. The whole interest and importance of K.'s life are comprised in his great undertaking for the improvement of the Hebrew text. In 1753, he published a work entitled *The State of the Printed Hebrew Text of the Old Testament Considered*. This contained, among other things, observations on 70 Hebrew MSS., with an extract of mistakes and various readings, and strongly enforced the necessity for a much more extensive collation, in order to ascertain or approximate towards a correct Hebrew text. He undertook to execute the work in the course of 10 years, and laboured, until his health broke down, from 10 to 14 hours a day. In spite of considerable opposition from Bishops Warburton, Horne, and other divines, K. succeeded in enlisting the sympathies and obtaining the support of the clergy generally. Upwards of 600 Hebrew MSS., and 16 MSS. of the Samaritan Pentateuch, were collated, with the assistance of other English and continental scholars. The first volume of his edition of the Hebrew Bible appeared in 1776, and the second in 1780, accompanied by a very useful and instructive dissertation. The text chosen was that of Van der Hooght, and the various readings were printed at the bottom of the page. The *Varie Lectiones Veteris Testamenti* (Parma, 1784—1788), published by De Rossi, is a valuable addition to K.'s Hebrew Bible. Jahn published at Vienna (1806) a very correct abridgment, embracing the most important of K.'s readings.

KENNING TO THE TERCE, a phrase in Scotch Law to denote the process by which a widow, whose husband has died infertile in lands, acquires a separate interest in a definite part thereof. She is by law entitled to the rents of one-third of the husband's lands, called her Terce (q. v.); and the above process is carried on before the sheriff of the county, the object being to define and set out

a particular portion of the lands to which her life-rent may attach.

KENSINGTON GARDENS, one of the public ornamental parks of London, extends on the west side of Hyde Park, from which it is partly separated by the Serpentine. It is traversed by walks, and ornamented with rows and clumps of noble trees. Near the western border of the park stands Kensington Palace, an edifice of brick, originally the seat of Heneage Finch, Earl of Nottingham and Lord Chancellor of England, and afterwards bought by King William III. William III., Queen Mary, Queen Anne, and George II. all died in this palace, and here her Majesty Queen Victoria was born. The gardens at first consisted of the grounds attached to the palace, and were only 26 acres in extent, but have been frequently enlarged, and now are two and a half miles in circuit.

KENT, an important maritime county of England, occupies a portion of the south-east angle of the country, and is bounded on the N. by the estuary of the Thames, and on the E. and S.E. by the Strait of Dover. Area, 1,039,419 statute acres; pop. (1861) 733,887. Besides the river which forms the northern boundary of the county, the chief streams are the Medway, which flows north-east into the estuary of the Thames; the Stour, and the Darent. The surface is undulating, being traversed from west to east by the North Downs (see article Downs). With a climate which is in general mild and genial, and a fertile soil of mixed chalk, gravel, and clay, K. is, in an agricultural sense, a highly productive county. Besides the usual crops, great quantities of seeds are raised for the London markets, as canary and radish seeds, spinach, cresses, and white mustard. There are also numerous market-gardens and orchards. Hops (q. v.) are one of the chief products of the county. Twenty-nine thousand acres, forming in all a hop-field more than twice as extensive as that of any other hop-growing county of England, are here devoted to the cultivation of this plant. Great numbers of sheep are fattened on the excellent pasturage found on the tracts of alluvial soil that skirt the banks of the Thames and Medway, and especially on the Romney Marsh, which comprises 44,000 acres. The county returns four members to parliament.

K. is unusually rich in historical association. For its early history, see article **HEPTARCHY**. It has been the scene of frequent sieges, battles, and revolutions; and the county is also bound up with the social history of the country through the three well-known insurrections which broke out here under Wat Tyler, Jack Cade, and Sir Thomas Wyatt. Of its numerous and interesting ecclesiastical edifices, it will suffice to specify here the cathedrals of Canterbury and Rochester. It contains the important dock-yards and arsenals of Woolwich, Chatham, and Sheerness; and the famous watering-places of Margate, Ramsgate, and Tunbridge Wells. Pop. in 1871, 847,507.

KENTIGERN, St. See Mungo, St.

KENTISH FIRE, a term employed to denote the vehement and protracted cheers with which the rabble greeted the No-papery orators at the public meetings held in Kent to prevent the passing of the Roman Catholic Relief Bill (1828—1829).

KENTISH RAG, a dark-coloured, hard, calcareous sandstone, which occurs at Hythe, and other places on the coast of Kent, in the Lower Greensand Measures. It sometimes attains a thickness of 60 or 80 feet.

KENT'S HOLE, a large cave in the limestone rock near Torquay, Devon. It is said to be 600

feet long, with a breadth varying from 2 to 70 feet, and a height from 3 to 18 feet. The bones of the cave-bear, hyæna, &c., have been found in the mud of the cave below the stalagmitic covering. See CAVES.

KENTUCKY, one of the United States of America, in lat. $36^{\circ} 30'$ — $39^{\circ} 6'$ N., and long. $82^{\circ} 2'$ — $89^{\circ} 40'$ W., is bounded on the N. by the Ohio River, on the E. by Virginia, on the S. by Tennessee, and W. by the Mississippi River. Area, 37,680 square miles, or 24,115,200 acres. It has 110 counties. The capital is Frankfort, and the chief towns, Louisville, Covington, Lexington, Maysville, Paducah, Columbus, and Hickman. The country is rolling, hilly in some portions, and in the south-east mountainous, some of the elevations rising to 3000 feet. Its chief rivers are the Ohio and Mississippi on its borders, and the Tennessee, Cumberland, Kentucky, Licking, and Green. The soil is mostly fertile, and contains some of the finest agricultural regions in America, producing wheat, maize, cotton, hemp, tobacco, and all the fruits of the warmer temperate regions. Herds of cattle find rich pasture, and millions of swine fatten in the woods. There are coal-beds, some rich in oil, extending nearly across the state. Of the many caverns, the Mammoth Cave (q. v.) is the most celebrated. There are also deposits of lead, iron, beautiful marbles, and salt. There are 907 miles of railway, a taxable property of 400,000,000 dollars, and annual agricultural products of 50,000,000 dollars. In 1864, there were 10 colleges in operation, 4 theological seminaries, 1 medical school. The Public School system is attracting the attention of the government. An agricultural college, with 200 students, was established in 1868 at Ashland. K. was formerly a portion of the western territory of Virginia, and once the home of warlike Indians, from the sanguinary contests with whom it derived its name—'the dark and bloody ground.' It was settled by Daniel Boone (q. v.) in 1769, organised as a territory in 1790, admitted as a state in 1792. Upon the breaking out of the Rebellion in 1861, efforts were made by Governor Magoffin to make the state secede, or at least to place her in an attitude of neutrality. Better counsels, however, prevailed, and the loyalty of the state was maintained, though many of her citizens joined the rebels. Pop. in 1860, 1,155,713 (225,490 slaves); in 1870, 1,323,264.

KENTUCKY, a river of Kentucky, which rises in the Cumberland Mountains, on the south-east frontier of the state, and after a winding north-west course of 260 miles, enters the Ohio, about 50 miles below Cincinnati. The river runs through most of its course between perpendicular limestone rocks, through which it appears to have worn its bed, and is celebrated for the romantic beauty of its scenery. It is navigable by steam-boats to Frankfort, 60 miles, and by means of 17 dams and locks, to the Forks. Its banks abound with anthracite, iron, and marble.

KEOKUK, a city of Iowa, is the south-east corner of the state, on the Mississippi River, 205 miles above St. Louis. It is the site of the State Medical College, and has several academies, 12 churches, 50 manufacturing establishments, and a large commerce, being at the head of the low-water navigation of the Mississippi, and the terminus of two railways. Pop. upwards of 10,000.

KEPLER, or KEPPLER, JOHANN, one of the greatest astronomers of all ages, was born at Magstatt, a small village in Würtemberg, ten miles from Stuttgart, 27th December 1571. While a mere child he was left to his own resources, and his early education in consequence would have been

entirely neglected had he not been admitted into the convent of Maulbrunn. K. afterwards studied at the university of Tübingen, and devoted nearly the whole of his time to mathematics and astronomy. In 1593, he was appointed Professor of Mathematics at Grätz. At this time K.'s views of astronomy, as seen in his *Prodromus*, were somewhat mystical; he supposed the sun, stars, and planets were typical of the Trinity, and that God distributed the planets in space in accordance with the regular polyhedrons, &c. Yet this searching after harmony led him to the discovery of the three remarkable truths called *Kepler's laws*. K., about 1596, commenced a correspondence with Tycho-Brahé, and in 1599 went to Prague to aid him in his researches. Tycho obtained for him a government appointment; but the salary was not paid, and K. lived for eleven years there in great poverty. He then obtained a mathematical appointment at Linz, and, fifteen years afterwards, was removed to the university of Rostock; but poverty from the same cause still pursued him, and he died shortly after at Ratisbon, 15th November 1630. K.'s connection with Tycho-Brahé had a salutary effect upon his fiery enthusiasm, but, happily for science, the timid counsels of the old astronomer were only partially followed. K. established the law of the diminution of light in proportion to the inverse square of the distance, and was acquainted with the fact 'that the attractive force of the sun decreases as his light;' it is strange that this latter fact did not lead him to anticipate the discovery of Newton. In 1609, he published his *Astronomia nova*, a commentary on the motions of Mars, in which, taking for his base of operations the observations of Tycho, he determined the excentricity and aphelion of this planet, on the supposition of a circular orbit, and found the results quite irreconcilable with observation. This led him to his first law, *that the planets move in ellipses with the sun in one of the foci*. The second law, *that the Radius-vector (q. v.) sweeps over equal areas in equal times*, he at first asserted dogmatically, and was for a long time puzzled to find some proof of it (the infinitesimal calculus not having at that time been invented); but at last he hit upon the expedient of dividing the ellipse into an immense number of small triangles, whose areas could be easily found. His third law (the first discovered) was an attempt to harmonise in some way the period and mean distance of the planets, and after twenty-two years of vigorous application, he discovered *that the square of the periodic time is proportional to the cube of the mean distance*. These discoveries, great as they undoubtedly are, are rendered still more so when we take into account the little real knowledge of the heavenly bodies existing at that time, and the scanty means in the hands of astronomers for making discoveries. K. also affirmed the essential inertia of matter, the first of Galileo's laws of motion; the dependence of the curvature of the path of planets on the attraction of the sun (K. unfortunately thought it was *magnetic attraction*) and the proportionality of the mutual attraction of bodies to their respective masses; he demonstrated the four new planets of Galileo to be satellites of Jupiter; gave a complete theory of solar eclipses; and calculated the exact epoch of the transits of Mercury and of Venus across the sun's disc. He also made numerous discoveries in optics, general physics, and geometry.

KERGUELEN'S LAND, or ISLAND OF DESOLATION, is situated in the Southern or Antarctic Ocean, the latitude and longitude of its southern extremity, Cape George, being $49^{\circ} 54'$ S., and $70^{\circ} 12'$ E. It is about 100 miles long, and about 50 miles broad. It consists chiefly of

moss-covered rocks of primary formation. It is said, however, to produce coal fit for steam-ships. The island was discovered in 1772 by the French navigator, Ives Joseph de Kerguelen Tremarec.

KERGUELEN'S LAND CABBAGE (*Pringlea antiscorbutica*), the only known species of a very curious genus of plants of the natural order *Crucifera*, and further interesting as being found only in that most lonely of islands, Kerguelen's Land, and as being extremely useful to the crews of whalers and other vessels which have occasion to touch there. It has a long, stout, perennial root-stock; a *bolled* head of leaves very similar to those of the common garden cabbage. Captain Cook first discovered this plant, and directed attention to it. It is exceedingly abundant in all parts of Kerguelen's Land, which produces only seventeen other flowering plants. The root-stocks have the flavour of horse-radish. The dense white heart of the cluster of leaves tastes like mustard and cress, but is coarser. The whole foliage abounds in a very pungent pale-yellow essential oil, which is confined in vessels that run parallel to the veins of the leaf. The K. L. C. is used by voyagers, boiled either by itself, or with beef, pork, &c., and its antiscorbutic qualities make it very important to them.

KERMAN (ancient *Carmania*), one of the eastern provinces of Persia, lying south from Khorassan, and having an area of about 59,000 square miles. The north and north-east are occupied by a frightful salt waste called the *Desert of Kerman*, which forms a part of the great central desert of Iran. On this extensive tract, not a blade of grass is to be seen. The southern portion, although mountainous, is equally arid and barren with the north, except the small tract of Nürmanshir, towards the east, which is fertile and well watered. Roses are cultivated for the manufacture of 'attar of roses.' Silk and various gums are exported. Cattle, sheep, goats, and camels are reared, and the hair of the last two has long been celebrated for its length and fineness. The inhabitants, who number about 600,000, are chiefly Persians proper; the rest are Guebres or Parsees, Belûchis, and other wandering tribes.

KERMAN, the chief town, is situated near the middle of the province, in the central mountain range, and contains a population estimated at 30,000. The manufactures are chiefly shawls, carpets, and matchlocks. The trade, though still considerable, is very small compared with what it was during the last century, when K. was the great emporium for the trade by the Persian Gulf and the Indian Ocean. In 1794, it was taken and pillaged by Aga Mohammed, and 30,000 of the inhabitants made slaves. But the chief cause of the decline of its trade was the fall of Gombroon (q. v.), its port, before the rising prosperity of Bushire.

KERMANSHA'H, a flourishing modern town of Persia, in the province of Ardelan, near the right bank of the river Kerkhah. It is the centre of converging routes from Bagdad, Tehran, and Ispahan. Its commerce is considerable, and there are manufactures of carpets and weapons. Pop. 30,000.

KERMES, sometimes also known in commerce as *Scarlet Grain*, a dyestuff which consists of the bodies of the females of a species of *Coccus* (q. v.) (*C. ilicis*). It has been supplanted over the greater part of Europe by Cochineal (q. v.), but is still used in some parts of the south of Europe, and more extensively in India and Persia. The K. insect is abundant in these regions, attaching itself to the leaves of a small species of oak, the K. Oak (*Quercus coccifera*), a low bushy shrub with evergreen spinous leaves, much resembling a holly. In some parts of Spain, the K. Oak grows in great profusion, as on the

slopes of the Sierra Morena. Many of the inhabitants of Murcia live by collecting Kermes. This is chiefly the employment of women, who scrape the insects from the trees with their nails, which they suffer to grow long on purpose. The K. insect attacks the young shoots of the shrub, the female affixing itself and remaining immovable, till, after attaining its full size, about that of a pea, it deposits its eggs, and dies. K. is gathered before the eggs are hatched. It is thrown into vinegar, and afterwards dried in the sun or in an oven. It has been employed from time immemorial to dye cloth of a blood-red colour. It was called *Thola* by the Phœnicians, *Coccus* by the Greeks, K. by the Arabians. From K. comes the French *cramoisi*. It is supposed to have been the substance employed in dyeing the curtains of the Jewish tabernacle (Exod. xxvi.).

KERMES MINERAL, so called from its resemblance in colour to the insect Kermes, is an antimonial preparation which was discovered by Glauber (q. v.). The method of preparing it subsequently became known to M. de la Ligerie, from whom the king of France purchased the prescription in the early part of the 18th century. It was at that period often described as *Carthusian Powder*, or *Poudre des Chartres*, in consequence of a Carthusian friar having effected some remarkable cures by it. Chemists differ slightly as to its composition, but it is generally regarded as a tersulphuret of antimony. K. M. is scarcely ever employed in this country, but it is much used in France and Italy. Its effects are much the same as those of the golden sulphuret (sulphide) of antimony, and of the oxysulphuret of antimony of the London pharmacopœia, it being a sudorific in small doses (half a grain, for instance), and an emetic and purgative in large doses.

KERN, a name applied formerly to Irish and Gaelic infantry soldiers.

KERNER, ANDR. JUSTINUS, a German poet, one of the leading members of the so-called 'Swabian School,' was born at Ludwigsburg, in Würtemberg, 18th September 1786. He studied medicine at Tübingen, and finally settled as a physician at Weinsberg. Here he died, 21st February 1862. The most conspicuous qualities of K.'s poetry are a dreamy fancy and a highly original humour. His chief works are—*Reiseshatten von dem Schatten spieler Lux* (Heidelb. 1811); *Romantische Dichtungen* (Karlsr. 1817); and *Der letzte Blütenstrauß* (Stuttg. und Tüb. 1853). As a physician, he displayed quite a morbid interest in the phenomena of animal magnetism, and wrote several books on the subject, one of which, *Die Seherin von Prevorst* (2 vols. Stuttg. 1829; 4th edit. 1846), excited a great interest in America, and is believed to have originated the recent spiritualism.

KE'RRY, a maritime county in the south-west of Ireland, in the province of Munster, is bounded on the N. by the mouth of the Shannon, and on the W. by the Atlantic Ocean. Area, 1,185,917 statute acres, of which 414,614 are arable, 726,775 are uncultivated, and 32,761 are under water. In 1862, the total acreage under crops was 161,062, the half of which was in meadows and pasture, the rest chiefly in oats and potatoes. The county is 60 miles in length from north to south, and 58 miles broad. Its coast-line is about 220 miles in length, fringed with islands, of which the chief are Valentia, the Blasquets, and the Skelligs, and is deeply indented by Kenmare, Dingle, and Tralee Bays. Between these bays are two peninsulas, occupied by branches of the mountain system, which, stretching westward from the county of

Waterford, traverses the whole of the south of Ireland. The principal group is that of Macgillicuddy's Reeks, the chief summit of which, Carran Tual, 3414 feet, is the highest in Ireland. The largest rivers are the Laune, the Maine, and the Cashen. The county contains numerous lakes, some of them, especially those known as the Lakes of Killarney (q. v.), of exquisite beauty. The climate is mild, but moist, especially on the coast. The soil rests on slate and sandstone, with limestone; consists of a rich loam in the central districts, and is productive in grain-crops and in pasture. The manufactures are inconsiderable; oats and butter are the chief exports. The fisheries on the coast are extensive and profitable; they employ nearly 3000 men and boys. K. returns two members to the House of Commons. Pop. in 1871, 196,014.

KERSEY, or **KERSEYMERE**, a variety of woollen cloth, differing from ordinary *broad cloth* by being woven as a *twill*. See **TWILL**. It is easily distinguished from the common cloth by the diagonal ribbed appearance of its under side, where the nap not being raised, admits of its structure being seen.

KERTCH, previous to 1855, the most important port of the Crimea, with the largest trade in the export of corn, is situated on the eastern shore of the peninsula, on the strait of Kaffa or Yenikale. The town has a distinctively eastern air; and the appearance of the houses is greatly enhanced by the pillars and balconies with which they are furnished. The streets, like those of Constantinople, are haunted by troops of homeless dogs. K., the ancient *Panticapæum* or *Bosporus*, was the capital of ancient Taurica. Previous to 1475, it belonged to the Genoese; subsequently, it came into the hands of the Turks; and finally, in 1774, it was acquired by the Russians. On the 25th May 1855, it was taken by the allies during the Crimean War, on which occasion the Catacombs, a very valuable collection of antiquities connected with early Greek times, was ruthlessly plundered by the soldiery. Pop. 21,000.

KESTREL, or **WINDHOVER** (*Falco tinnunculus*), a small species of falcon, and one of the most common of the British *Falconidae*. It is rather

Kestrels (*Falco tinnunculus*):
1, the male; 2, the female.

larger than the merlin, its whole length being from thirteen to fifteen inches. It may be at once recognised by its peculiar habit of hovering or sustaining itself in the same place in the air by a

rapid motion of its wings, always with its head to the wind, evidently looking for prey on the surface of the ground. Its prey consists in great part of mice; and although of course included by gamekeepers in the large category of 'vermin,' and destroyed on every opportunity, it deserves the most careful protection by farmers, as a check to the excessive multiplication of mice. It more rarely captures small birds, and does not disdain cockchafers and other insects. It is a very widely distributed bird. The male and female differ considerably in colour; ash-gray prevailing more in the former, and rusty brown in the latter.

KE'SWICK, a market-town of England, in the county of Cumberland, is situated in a charming district on the Greta, at the northern extremity of Derwentwater, 22 miles south-south-west of Carlisle. Manufactures of coarse woollen cloth and blankets are carried on here. In the vicinity, at Borrowdale, black-lead mines are worked; and K. is well known for the black-lead pencils here manufactured. Pop. (1871) 2777.

KESZTHELY, a market-town of Hungary, in the county of Szalad, is situated on the western shore of Lake Balaton, 96 miles south of Presburg. The breeding of horses is carried on, and there is a good trade in corn. Pop. 7500.

KETCH, a broad, strongly built vessel of two masts—viz., the main and mizzen. It is now almost obsolete, but formerly was the favourite form for state yachts, and, till very lately, was the prevailing mortar-boat. In this latter capacity it was called a bomb-ketch.

KE'TCHO, or **KESHO**. See **CACHAO**.

KE'TCHUP, or **CATSUP**, a name common to several esteemed kinds of sauce, much used with meat, fish, toasted cheese, &c.—**MUSHROOM KETCHUP** is made from the common mushroom (*Agaricus campestris*), by breaking it into small pieces, and mixing it with salt—which so acts upon it as to reduce the whole mass to an almost liquid state—straining, and boiling down to about half the quantity. Spices of different kinds are added, for which there are many receipts, and sometimes wine. Mushroom ketchup must be kept in tightly-corked bottles.—**WALNUT KETCHUP** is made from unripe walnuts, before the shell has hardened. They are beaten to a pulp, and the juice separated by straining. Salt and vinegar are added, also spices variously, and after considerable boiling down, the ketchup is bottled, and may be kept for years.—**TOMATO KETCHUP** is made in a similar manner from tomatoes, but is not strained. These are the three most esteemed kinds.

KE'TTERING, a market-town of England, in the county of Northampton, is situated 13 miles north-north-east of the town of that name. The parish church is a large and handsome specimen of the perpendicular style, with a tower, dating from about 1450. The Free School has an endowment of £155 a year. Silk-weaving, and plush, and wool-combing are here carried on. Pop. (1871) 7184.

KE'TTLEDROM, a drum formed by stretching vellum over the circular edge of a hemispherical vessel of brass or copper. This instrument, which gives forth a sharp, ringing sound, is used by regiments of cavalry and horse-artillery in lieu of the ordinary cylindrical drum, which would, from its shape, be inconvenient on horseback.

KEUPER, the upper division of the Triassic Period, consisting in the typical German series of a thickness of more than 1000 feet of (1) various coloured sandstones; (2) marls, with gypsum and dolomite; and (3) a series of carbonaceous

slate-clay, with gray sandstones and small irregular beds of impure earthy coal. In Britain, it consists of (1) an extensive series of red marls, with large deposits of rock-salt and gypsum; and (2) white and brown sandstones with beds of red marl. The whole reaches a maximum thickness of 1300 feet. The Keuper occupies a large portion of the valleys of the Ouse and the Trent, and is extensively developed in Worcester, Stafford, and Cheshire, where beds of salt, often as much as 80 or 100 feet in thickness, occur. The Keuper does not abound in fossils. The contained organisms differ from those of the Permian and older periods; they have the general appearance of the fossils of the Lias and Oolite. The plants consist of ferns, equisetum-looking plants, cycads, and conifers. The character of the rocks, and the quantity of oxide of iron, which seems to have been injurious to life, account for the paucity of fossils. The strata are chiefly of interest to the paleontologist, because of the numerous footprints they contain (see *ICHOLOGY*), and the remains of the reptiles which produced them, as well as because in them are also found the only observed fragments—the teeth—of the oldest mammal yet known. See *MICROLESTES*.

KEW, a small village in Surrey, on the right bank of the Thames, and six miles west of Hyde Park Corner. On the opposite side of the river is Brentford, with which K. is connected by a bridge. The most interesting object at K. is the Royal Botanic Gardens, containing a large and choice collection of plants, native and exotic, which have been arranged with great skill and care by Sir W. J. Hooker. The hothouses and conservatories are very numerous. There are also a *palm-house*, 362 feet by 100, and 60 feet high; a *temperate-house*, of the same height, occupying three-fourths of an acre; and a *museum*. The gardens extend over about 75 acres, and the pleasure-grounds connected with them to 240 acres. The Botanic Gardens were commenced by the mother of George III., but owe much of their celebrity to the able management of the present keeper. Since 1840 they have been open to the public in the afternoons, Sundays not excepted. There is also an observatory, which, however, is used chiefly as a meteorological station.

KEY, a common heraldic bearing in the insignia of sees and religious houses, particularly such as are under the patronage of St Peter. Two keys in saltire are frequent; and keys are sometimes *interlaced* or linked together at the *bows*—i. e., rings. Keys *indorsed* are placed side by side, the wards away from each other. In secular heraldry, keys sometimes denote office in the state.

KEY, a musical term synonymous with *scale*, from *scala*, a stair. The diatonic scale, as produced by nature, is a certain succession of tones and semitones, ascending from any sound taken as a basis to the octave of that sound, the semitones of which will be found to lie between the 3d and 4th, and between the 7th and 8th degrees, ascending from the basis. In rendering this succession of sounds available for musical purposes, by our artificial method of notation, the sounds have, so to speak, been fixed at a certain recognised pitch. Any of the sounds of the natural scale may be taken as a note to form the basis of a new scale, observing always the due succession of the tones and semitones. The note forming the basis is denominated the Key-note of the scale, and such scale is said to be in the key of that note. As in our notation, each whole tone can be artificially divided into two semitones (see *CHROMATIC SCALE*), it follows that, with the already existing diatonic semitones, there are twelve equal semitones between a key-note and its octave; and

as each of these semitones may be taken as a new key-note, there are therefore twelve keys major, and the same number minor, all differing in pitch. In written notation, the scale of the note named C has been assumed as the natural key; the notes forming that scale being held to fall naturally into the requisite succession of tones and semitones. It follows that if any other note be taken as a key-note, one, or more, or all, of the notes of the so-called natural scale must be altered, by being either sharpened or flattened, to bring the scale of the new key into the due succession of tones and semitones. Such alteration is indicated by the marks of sharps, or flats, placed at the beginning of the staff, and is termed the *Signature* of the key. In the minor mode, the key of A minor stands exactly in the same relation to the other minor keys as the key of C does to the other major keys, A being the key-note on which the natural minor scale is found. All other keys have sharps or flats, in greater or less number, as they are distant from the natural key of C major or A minor, reckoning by perfect fifths, ascending or descending; thus, the key of G major, which is a perfect fifth above C, has one sharp for its signature—viz., F sharp; the key of D, which is two fifths above C, has two sharps—viz., F sharp and C sharp; and so on to the key of F sharp, adding a sharp for every ascending fifth. The keys with flats are found exactly in the reverse order—viz., by descending fifths—thus, the key of F, a perfect fifth below C, has one flat—viz., B flat; the key of B flat has two flats—viz., B flat and E flat; and so on to the key of G flat with six flats, which in practice is regarded as the same as the key of F sharp with six sharps. The number of flats or sharps is in some cases, for a harmonical purpose, extended still further; such as the key of C sharp with seven sharps, which is the same as D flat with five flats; or the key of G sharp with eight sharps, which is the same as A flat with four flats. The unnecessary increasing of either sharps or flats only increases the difficulty of reading the music. The term key is often loosely used in the sense of *mode*, and we frequently hear of the major or minor *key*. Much confusion has arisen from this.

KEY WEST, a city of Florida, United States of America, situated on the island of Key West (Sp. *Cayo Hueso*, Bone Key), the most westerly of the Pine Islands, of the group of Florida Keys, 60 miles south-west of Cape Sable. It is a coral island, 6 miles long, 2 wide, and nowhere more than 15 feet above the level of the sea. It has gardens of tropical fruits, and an artificial salt lake of 350 acres. There are extensive fortifications, a good harbour, two light-houses and a light-ship, several churches, a marine hospital and barracks. The city is beautiful, with ornamental cottages and gardens, and is inhabited by army and naval officers, traders, wreckers, divers, and invalids. The exports are salt, turtle, and sponges; but the frequent wrecks among these islands afford the most profitable business, which employs fifty vessels, manned chiefly by Conchs, or natives of the Bahama Islands, and their descendants. The climate is delightful, the temperature being from 50° to 90° F., with perpetual breezes, but there are also violent hurricanes. Pop. about 3000.

KEYS, POWER OF THE (*Potestas Clavium*), in Roman Catholic Theology, properly signifies the supreme authority in the church, which Catholics believe to be vested in the pope, as successor of St Peter. The phrase is derived from the metaphor addressed by our Lord to Peter in Matt. xvi. 19, and which Catholic interpreters, relying on the analogous use of the phrase in Isaiah xxii. 22, Apoc. iii. 7,

and again i. 18, and also in classical writers, understand as implying the supreme power in the church. The power of the keys is divided by Catholics into two branches—that of order, which, though possessed by all bishops and priests, is believed to belong specially and primarily to the pope; and of jurisdiction, which chiefly regards the supreme government of the church, and embraces the power of enacting laws and dispensing in them, and of directing and governing not only the Christian flock, but also its pastors in their several spheres. The jurisdiction of the keys is exercised in a more limited field, and in a subordinate way by patriarchs, primates, archbishops, bishops, and other dignitaries; but that, according to the Roman theory, it has its source, as well as its chief seat, in the pope, is implied in the distinctive use of the emblem of the keys as a symbol of papal jurisdiction. The metaphor of the keys was frequently appealed to in the debates of the late Vatican Council on the papal privileges. The phrase is also applied to the sacrament of penance, to designate the power of remitting or retaining sin, and with the same distinction of order and jurisdiction, of which the former is imparted to every priest by his ordination, while the latter is only communicated by an express act of the bishop or other superior.

Protestants in general regard the power of the keys as equally intrusted to the whole ministry of the church of Christ, and as including *doctrine* and *discipline*. They admit the argument from the use of the key in Scripture as a symbol of authority; but refuse to acknowledge any limitation of that authority inconsistent with their views of Christian doctrine and of the relation of the ministry to the whole church of Christ, and of Peter to the rest of the apostles.

KEYS, QUEEN'S. In Scotch Law, when a messenger or bailiff executes a caption or warrant under an extract decree, a writ in the former case, or in the latter, that part of the warrant which authorises him to break open the outer door of the house of the debtor, is called the queen's keys, or letters of open doors. English courts have no power to give a bailiff the right to break open an outer door in executing writs of execution for debt. See **HOUSE, IMPRISONMENT.**

KHALKA'S. See **MONGOLIA.**

KHAN, a title of Mongolian or Tartar sovereigns and lords. A *khanate* is a principality. *Khagan* means 'khan of khans,' but has seldom been applied. The word khan is probably of the same origin as King (q. v.).

KHAN'IA. See **CANEA.**

KHARA'SM. See **KHIVA.**

KHARGEH. See **EL-KHARGEH.**

KHARKO'W, a government of Little Russia, immediately east of the government of Poltava. Area, 20,737 square miles; pop. (1867) 1,681,486. The surface is flat, with chalk hills following the courses of the streams. The soil is a rich and fertile loam, watered chiefly by affluents of the Don. In the north-west, the principal occupations are agriculture and distilling corn-brandy; in the south-east, the breeding of cattle and sheep. The breeding of horses is also carried on. Corn, tobacco, wax, honey, and tallow, are largely produced, beet-root sugar is manufactured, and there is an extensive trade in sheep and cattle; but as there is almost no communication with the surrounding governments, the resources of K. may be said to be still in great part undeveloped.

KHARKOW, capital of the government of the same name in European Russia, on the banks of

three streams, affluents of the Donetz, in lat. 50° N., long. 36° 14' E., 916 miles south-south-east of Petersburg. It had in 1867 a pop. of 59,968, and ranks as one of the chief towns of the Ukraine. Its position between Moscow, Odessa, Kief, Taganrog, and the Caucasus has made it an important market for the exchange of the products of the north and south. The chief mercantile transactions are effected during the time of the fairs, of which there are four, the principal being the Troitsk fair. The transactions during the fairs amount to about £10,000,000. The staple article of commerce is wool. The town contains seventy factories of various kinds, and manufactured goods are supplied to the surrounding governments. An enormous quantity of wool (value, £1,150,000) is washed here annually. The university of K., founded in 1805, and the other educational institutions, constitute this town the intellectual as well as the commercial centre of the Ukraine.

KHARTOUM, an important town of Africa, the chief centre of trade in Upper Nubia, stands in a sterile district, in lat. 15° 35' N., long. 32° 30' E., at the junction of the Blue and White Nile. Previous to 1847, it was the residence of the governor-general of Egyptian Sdán; it is now the seat of the local governor of the province of its own name. The principal stores of the government are kept here, and there is a government arsenal for the building and repair of boats. The houses are built principally of sun-dried bricks. K. is the centre of many converging caravan routes, and carries on considerable commerce. The imports consist chiefly of Manchester manufactured goods; the exports are ivory, gum-arabic, ostrich-feathers, bees-wax, and hides. Pop. 40,000.—See *Egypt, the Sudan, and Central Africa*, by J. Petherick.

KHATMANDU', the seat of government in Nepal, in lat. 27° 42' N., and long. 85° 18' E. With narrow and dirty streets, and generally mean houses, it contains about 50,000 inhabitants. The architectural pretensions of the town—for even the residence of the rajah is a very ordinary edifice—are confined to its temples, some of them of brick, and the others of wood.

KHAY'A, a genus of trees of the natural order *Cedrelacæ*. The *KASSOU-KHAYE* of Senegal (*K. Senegalensis*), one of the most abundant forest-trees in that part of Africa, attains a height of eighty or one hundred feet, and is much valued for its timber, which is sometimes called *Cailcedra*, and is reddish coloured, very hard, durable, and of beautiful grain. The bark is astringent and febrifuge, and contains a peculiar alkaloid.

KHERSO'N, a government of Southern Russia, on the borders of the Black Sea, first appearing in history during the 4th c. B. C., when it formed a portion of the kingdom of the Bosphorus. From the 11th c., the right of possession was claimed by the Poles, the Cossacks, and various Tartar tribes, the last being ultimately successful. In the 17th c., Russians commenced to settle in the province; and during the next century, their example was followed by a number of Servians. The province, with an area of 28,666 square miles, is uniformly fertile in the north and north-west; in the south it is sometimes dry and arid, with here and there sandy wastes, which towards Odessa become incrustated with salt. Notwithstanding that three large rivers—the Dnieper, Bug, and Dniester—run through the south of the province, the want of water is often severely felt, especially in July, when the vegetation is almost completely burned up by the heat. The climate is very changeable, being very hot in summer, and piercingly cold in winter. Destructive

ravages by locusts are not uncommon. The population in 1867 was 1,497,995, consisting of Little Russians (natives of the Ukraine), Moldavians, Bulgarians, Greeks, Germans, and Jews, who are chiefly employed in agriculture. The Germans cultivate tobacco, and rear silk-worms. Much of the arable land, however, is lost from want both of capital and labour. Cattle and sheep breeding are also carried on, on a large scale.

KHERSON, or **CHERSON**, capital of the government of that name, in European Russia, lies on the right bank of the Dnieper, near to where it widens out into the estuary of the Liman, and 808 miles south-by-west from Moscow. It was built by Catherine II. in 1778, as a port for the construction of ships of war; but, in a very few years, was supplanted by Odessa and Nikolaief, both as a dock-yard and a commercial outlet. Only ships of light draught are now built at K., and only such ships can navigate the estuary. K. is the centre of the coasting and staple trade in timber and other goods, floated down the Dnieper and its tributaries, and in Crimean salt. Rope-making, tallow-melting, and wool-washing, are the chief branches of trade, and the products are largely exported. Pop. (1867) 45,926. K. has a gymnasium, naval school, school for training pilots, and an observatory.

KHI'VA (anc. *Chorasmia*), **KHAUREZM**, **KHARASM**, or **URGUNGE**, a khanate of Turkestan in Central Asia, lies between lat. 37° 45'—44° 30' N., and long. 50° 15'—63° E., and contains about 195,000 square miles (not including that part of the Kizilkum Desert over which the khan arrogates sovereignty). It is bounded on the N. by the Russian territory and Sea of Aral, E. by the khanates of Khokan and Bokhara, S. by Persia, and W. by the Caspian Sea. The chief oasis, in which the capital, Khiva, is situated, stretches from the mouth of the Oxus or Amu-Daria for 200 miles along its banks, and is watered by artificial canals supplied from that river, to which it entirely owes its fertility. Its extent is variously estimated at from 2000 to 4000 square miles. According to a recent estimate (see *Times*, April 28, 1873), the population consists of 260,000 settled, and 240,000 nomad inhabitants. There are from 10,000 to 40,000 Persian freedmen or slaves who have been captured in Khorassan by the Turkomans.

K., in ancient times, was nominally subject to the Seleucids; subsequently it formed a part of the kingdoms of Bactria, Parthia, Persia, and the Califate, and became an independent monarchy in 1092 under a Seljuk dynasty. The Khivans, or, as they were then called, the Khaurezmians, after conquering the whole of Persia and Afghanistan, were obliged to succumb to the Moguls, under Genghis Khan, in 1221. In 1370, it came into the hands of Timur. Timur's descendants were subdued in 1511 by Shahy Beg (called Sheibani Khan by western writers), chief of the Uzbeks, a Turkish tribe, and his successors have ruled over Khiva to our times. Ever since the Russians entered Central Asia, they have complained that the Khivans fostered rebellion among their Kirghis subjects, and plundered their caravans. In 1717 Peter the Great endeavoured to conquer K., but was defeated, and in 1839 the attempt was renewed by the Czar Nicholas, but with no better success. War may be said to have recommenced when new Russian forts in 1869 and 1871 were founded on the shores of the Caspian. It was not, however, till 1873 that a great effort was made finally to crush Khiva. To diminish the difficulties of crossing the deserts, the Russian force was divided into five columns, each about 3000 strong, to approach K. by different routes. After

enduring with admirable fortitude great privations and fatigue, the Russians entered K. on the 10th of June. A treaty has since been concluded with the khan, by which he engages to pay a war indemnity of 2,000,000 roubles in seven years, and to cede to Bokhara the Khivan possessions on the right bank of the Oxus. See Sir Henry Rawlinson's Account of Khiva, read to the Geographical Society of London, March 24, 1873, and the *Times*, 29th July 1873.—**KHIVA**, the capital of the khanate, is situated in the great oasis. It consists almost entirely of earth-huts, not excepting the residence of the khan, the only stone-buildings being three mosques, a school, and a caravansary. Pop. about 20,000.

KHOJ'END, a town of Russian Turkestan, on the Sir-Daria, the ancient Jaxartes, about 90 miles north-west of Khokan, has a laborious and intelligent population. It is the seat of some cotton manufactures, and of a considerable transport trade between the Russian dominions and Southern Turkestan. Pop. estimated at 45,000.

KHOKA'N (originally *Kokand*), previous to 1867, a khanate of Turkestan extending east of 64° long. over the whole of the upper basin of the Jaxartes or Sir-Daria. The greater part of this territory has since been added to Russian Turkestan (see **TASH-KEND**), and the khanate of K. is now practically a Russian dependency, and confined to the populous part of the valley of the Jaxartes, east of Khojend. The district was famous throughout the East during the middle ages for its fertility and beauty, under the name of Ferghana. Since it came under the power of Russia, Professor Fedschenko of Kazan has explored and described the country (see 'Reise in Kokan, 1871,' *Petermann's Mittheilungen*, 1872, No. 5. The inhabitants are Sarts—that is to say, of Persian or Indo-Germanic origin, with a Turkish admixture. The population of the khanate has been estimated at 3 millions. On 24th May 1868, a treaty of commerce was entered into between Russia and K.; and since then, European manufactures have been introduced, and commerce has rapidly increased. Manufactures of silks and coarse cottons are the chief industrial products. The chief town is Khokan, with about 100,000 inhabitants.

KHOLMOGORY, a town in the government of Archangel, European Russia, was a place of great note when the White-Sea trade was in its glory, but since the seat of government has been removed to Archangel, K. has steadily declined, and in 1871 contained only 1577 inhabitants. Peter the Great, on his return from his travels, brought to K. several specimens of the Dutch breed of cattle, by means of which the natives have so improved their own, that the K. breed is now considered to be the best in Russia.

KHONSA'R, a town of Persia, in the province of Irak-Ajemi, 80 miles north-west of Ispahan, and on the route from that city to Hamadan. Orchards abound here, and the raising of fruit, with weaving, are the chief employments of the people. Pop. about 12,000.

KHORASSA'N (anc. *Parthia*, *Margiana*, and *Aria*), the largest province of Persia, lies between lat. 31°—38° 30' N., and long. 53°—62° 30' E., and contains about 210,000 square miles, of which nearly one-third is a vast salt waste; of the remainder, a large portion consists of plains of shifting sand; and the rest is fertile. The fertile districts are in the north, where the high range of the Elburz crosses the province, throwing out spurs, forming a mountainous district, abounding with fertile and well-watered valleys. Artificial fertilisation by means of canals was here carried on to a great extent in ancient times, but the incessant disturbances

which have unsettled the district for the last 1000 years, have almost put an end to this practice. The chief products of K. are grain, cotton, silk, hemp, tobacco, aromatic and medicinal plants, fruits, wine, salt, gold, silver, and precious stones, also camels, horses, and asses. In the more thickly-peopled districts, manufactures of silk, woollen, and camels' and goats' hair fabrics, also of muskets and sword-blades, are carried on to a considerable extent. The chief towns of the province are Meshed, the capital, Nishapûr, Yezd, and Astrabad. The inhabitants are Mohammedans of the Shiah sect.

K., in ancient times, also included the desert of Khiva or Kharasm, and the district now known as the kingdom of Herat; but the first was separated from it by the Seljuks at the commencement of the 11th c., and the latter about 1510, since which period it has been on several occasions seized and held for a short time by the Persians.

K. has been several times separated from the Persian empire, but was finally re-united to it at the commencement of the 16th c. by Ismail Sofi, the first Suffavean shah of Persia. See PERSIA.

KHORSABA'D. See NINEVEH.

KHOSRŪ, or **KHŪSRŪ** I., surnamed **NŪSHĪRVAN** (the noble soul), and known in Byzantine history as Chosroes I., the greatest monarch of the Sassanian dynasty, was the son of Kobad, king of Persia. K. mounted the throne on his father's death in 531 A. D., gave shelter to great numbers of those whom Justinian, the Byzantine emperor, persecuted for their religious opinions, in 540 commenced a war of 20 years' duration with the Roman emperor; but though the Persians reaped an abundant harvest of glory, the other results were unimportant. On the accession of Justin II., the Persian ambassadors having been ignominiously abused, and the Greeks having taken possession of Armenia, K., justly indignant, again declared war in 570, took Dara, the eastern bulwark of the empire, but was terribly defeated at Melitene (577) by Justinian, grand-nephew of the emperor of that name; this defeat was, however, counterbalanced by the victorious Greek being in his turn totally routed in Armenia. K. did not live to see the end of the contest, as he died in 579. His government, though very despotic, and occasionally oppressive, was yet marked by a firmness and energy rarely seen among the orientals. Agriculture, commerce, and science were greatly encouraged, ravaged provinces were repopled from his conquests, and wasted cities rebuilt. His memory was long cherished by the Persians, and many a story of the stern justice of K. is still current among them. Persia, during his reign, stretched from the Red Sea to the Indus, and from the Arabian Sea far into Central Asia. —(For a full account of this prince, see Sir John Malcolm's *History of Persia*).—**KHOSRŪ** II., grandson of the preceding, surnamed **Purviz** (the Generous), was raised to the throne in 590, but being immediately deposed by another claimant, was, by the assistance of the Emperor Maurice, reinstated, and in gratitude surrendered Dara, Nisibis, and a great part of Armenia, to the Romans. In spite, too, of numerous and just grounds of quarrel, he preserved peace with that nation till the murder of his benefactor by Phocas. K. then invaded Mesopotamia in 604, took Dara, and during 17 years inflicted upon the Byzantine Empire a series of disasters, the like of which they had never before experienced. Syria was conquered in 611; Palestine, in 614; Egypt and Asia Minor, in 616; and the last bulwark of the capital, Chalcedon, fell soon after. At this crisis, the fortune of war changed sides. See **HERACLIUS**. K., driven in turn

to the very gates of Ctesiphon, was deposed and murdered by his eldest son, Shiroueh, or Siroes, 28th February 628. It was to this prince that Mohammed sent a letter demanding a recognition of his mission. See **MOHAMMED**.

KHUZISTA'N (anc. *Susiana*), a province of Persia, in lat. 30°–33° 7' N., and long. 47° 45'–51° E., having Fars and the Persian Gulf on the S., is divided into two almost equal portions—the one, the north-east, very hilly, the other, the south-west, so level as to be almost a stagnant sea during the rainy season, changing to an arid waste in summer. K. contains extensive pastoral districts, on which vast herds of cattle are reared, and naturally abounds in alluvial soil fitted for such crops as rice, maize, cotton, sugar-cane, indigo, &c. The silk-worm is also reared in some districts. The chief towns are Shuster, Dizful, and Mohammerah.

KHYBER PASS, the most practicable of all the openings, four in number, through the Khyber Mountains, is the only one by which cannon can be conveyed between the plain of Peshawur, on the right bank of the Upper Indus, and the plain of Jelalabad, in Northern Afghanistan. It is 30 miles in length, being here and there merely a narrow ravine between almost perpendicular rocks of at least 600 feet in height. It may be said to have been the key of the adjacent regions in either direction from the days of Alexander the Great to the Afghan wars of 1839–1842, during which it was twice forced by a British army, in spite of an obstinate defence by the natives. The gorge is understood to be extremely unhealthy.

KHYERPU'R, a town of Sind, stands about 15 miles to the east of the Indus, in lat. 27° 30' N., and long. 68° 48' E. The town owes its importance, such as it is, to its having been selected as the residence of the northern Ameers of the country. The place, however, is little better than a collection of filthy mud-hovels, and it is estimated to have only 15,000 inhabitants.

KIABOU'CCA, **KIABOOCA**, **KYABUCA**, or **AMBOYNA WOOD**, a beautifully mottled wood, which is found in our timber-yards in small pieces, very evidently the wens or excrescences formed on the stem of the producing tree, *Pterospermum Indicum* (natural order *Byttneriaceae*). The colour of this wood is yellowish red, of different shades, and covered with a most elegant mottled figure in darker shades. It is much used for small ornamental articles, especially snuff-boxes, its scarcity and the small size of the pieces forbidding its employment in the manufacture of larger articles.

KIA'HTA, or **KIACHTA**, a town in Siberia, 150 miles south of Lake Baikal, and close to the Chinese frontier, being only separated by a piece of neutral-ground 280 yards broad from the Chinese town of Maimatchin. The population in 1867 was 4286. Through this town began the commercial intercourse between Russia and China, which had been arranged by the treaties of 1689 and 1727. Since the middle of last century, a lively and profitable barter-trade has been carried on both in K. and in Maimatchin; but it was not till the end of the century that the Russians were able to produce on their side any articles besides furs, but since then, cloth and cotton goods, first of English or French, and later of Russian manufacture, have in part been substituted. Formerly, the export to China of coins and the precious metals was forbidden at K., but this restriction is now in part removed. The exports from China consist chiefly of tea, of which about 100,000 cwts. finds its way into Russia by this road. This tea is very dear, on account of the enormous distance it has to be

brought to K. (more than 3000 miles), and the Russian import duty, which amounts to from 40 to 70 kopeks. It is generally imported by the Russians at 1s. 9½d. per lb. But it must not be overlooked that the K. tea is the first crop, immensely superior to all that reaches Europe by any other route.

KIDDERMINSTER, a well-known manufacturing town and municipal and parliamentary borough of England, in the county of Worcester, is situated on the Stour, four miles above its junction with the Severn. The parish church is a handsome edifice, partly in the decorated and partly in the perpendicular style. K. is chiefly noteworthy on account of the carpet manufactures which are here carried on. The borough returns a member to the House of Commons. Pop. (1871) 20,814.

KIDNAPPING is not a legal term, but is frequently applied in popular language to the offence of stealing or forcibly carrying off a child or adult. The offence of forcibly carrying off a grown person, in general, now amounts only to an assault or false imprisonment, though formerly punishable with death. Child-stealing, where the child is under 14 years of age, if done with intent to steal any article upon or about the person of the child, or to deprive the parent or guardian of the possession of the child, is in England and Ireland a felony, punishable with penal servitude for not less than three, nor more than seven years, or with two years' imprisonment. See also ABDUCTION.

KIDNEY-BEAN (*Phaseolus*), a genus of plants of the natural order *Leguminosæ*, sub-order *Papilionaceæ*, having nine stamens united by the filaments, and one separate stamen, a downy stigma, a 2-lipped calyx, and the keel of the corolla with the stamens and style spirally twisted. The species are mostly annual herbaceous plants, natives of the warm parts both of the Eastern and Western Hemispheres. The Common K. (*P. vulgaris*) is the *Haricot* of the French. In Britain, it is sometimes called *French Bean*. In the south of Europe, and as far north as Germany, in the United States of America, and many other countries, the K. is a field-crop, and the ripe seeds are an important article of food. Within the tropics, it is sown at all seasons; but in countries subject to frost, only in spring, after the danger of frost is over. The seeds are used for food in a boiled state. In Britain, they are not regularly ripened, except in the most favourable situations in the south. The plant is therefore cultivated chiefly for the sake of the unripe pods, which, when boiled with the young seeds in them, form a well-known and very delicate dish.—The **SCARLET RUNNER** (*P. multiflorus*) has often been regarded as merely a larger variety of the K., with long twining stem. It is doubtful, however, if they are originally from the same native country; an American origin being assigned to the Runner, which is also a perennial—although in the climate of Britain usually destroyed by the winter's frost, and therefore treated as an annual—and has tuberous roots. The roots, in common with those of some other species of *Phaseolus*, are narcotic and dangerous; serious consequences have ensued from the accidental eating of them. The plant is cultivated for the same uses as the K., and affords, even in Scotland, a very abundant crop of green pods in the latter part of autumn, although the seed is not sown till about the 1st of May. It is a very ornamental plant, particularly the common variety with scarlet flowers. It readily covers any trellis or paling, and requires stakes of 6–10 feet in height.—Closely allied to the K., if indeed more than varieties, and cultivated for the same uses, are the *Haricot de Soissons* (*P. compressus*), the *Haricot Princesse* (*P. tumidus*), &c. In some parts of India,

one of the most esteemed kinds of pulse is the **MOOG**, **MOONG**, or **MUNGO** (*P. Mungo*); in others, the **KALA MOOG**, or **BLACK GRAM** (*P. Max*).

KIDNEY-VETCH (*Anthyllis*), a genus of plants of the natural order *Leguminosæ*, sub-order *Papilionaceæ*, containing a number of species, some shrubby, and some herbaceous, natives chiefly of the warmer temperate parts of the Eastern Hemisphere. They have the petals nearly equal in length, and an oval 1–3-seeded pod, enclosed in the permanent inflated and generally downy calyx. The only British species is the Common K. (*A. vulneraria*), also called *Lady's Fingers*, a herbaceous perennial, with pinnated unequal leaves, and crowded heads of yellow (or sometimes scarlet) flowers. It grows on very dry soils, and is eaten with avidity by cattle, but does not yield much produce.

KIDNEYS, **THE**, are two glands having for their office the secretion of the urine. That this office or function is of extreme importance, is sufficiently shewn by the facts that if, in consequence of disease, it is altogether suspended in the human subject, even for a day or two, death not unfrequently occurs, and that urinary glands corresponding in function to our kidneys are found, not only in all vertebrate animals, but in almost all molluscs, in the arachnidans, in insects, and in myriapods.

The human kidneys are situated in the region of the loins, on each side of the spine, and are imbedded in a layer of fatty tissue. Their form is too well known to require any description. The average length of each kidney is a little more than four inches, and its usual weight is from four to

Vertical Section of the Kidney.

(From Gray's Anatomy.)

a, supra-renal capsule; *bb*, cortical substance of kidney; *cc*, medullary substance of kidney; *eee*, the sinus or pelvis; *f*, the ureter, proceeding to the bladder.

six ounces. The substance of the kidneys is dense, extremely fragile, and of a deep red colour. On making a vertical section of the kidney, it is seen to consist of two different substances, which are named, from their position, the external or cortical, and the internal or medullary substance.

The *cortical substance* forms by far the greater part of the gland, and sends numerous prolongations inwards between the pyramids of the medullary substance. It is soft, granular, and contains numerous minute red globular bodies diffused throughout it, which are called, from their discoverer, the

Malpighian bodies, and which will be presently noticed more fully. Its substance is made up of the *uriniferous tubes* (which are described in the notice of the medullary portion), capillaries, lymphatics, and nerves, held together by an intermediate parenchymatous substance.

The *medullary substance* consists of pale-reddish, conical masses, called the pyramids of Malpighi. They are usually about twelve in number, but vary from eight to eighteen, and their apices (the *papillae*) point towards the hollow space (termed the *sinus* or *pelvis*) which occupies the interior of the gland. The medullary structure is firmer than the cortical, and instead of being granular, presents a striated appearance, from its being composed of minute diverging tubes (the uriniferous tubes, or tubes of Bellini), which run in straight lines through this portion of the kidneys, after having run in a highly convoluted course through the cortical portion.

The cavity occupying the interior of the kidneys (the *sinus* or *pelvis*) is lined by mucous membrane, which, through the medium of the ureter, is continuous with that of the bladder, and which extends into the tissue of the kidneys, to line the uriniferous tubes. The mucous membrane forms a cup-like cavity around the termination of each pyramid, and the cavity, termed the *calyx*, receives the urine from the open terminations of the tubes, and conveys it towards the pelvis, from whence it passes down the ureter into the bladder.

Each kidney is supplied with blood by a renal artery, a large trunk which comes off at right angles

at which the artery had entered. The Malpighian body itself consists of a rounded bunch or tuft of capillaries, derived from the afferent, and terminating in the efferent vessel, and enclosed in a clear and transparent capsule, lined at its lower part with epithelium, continuous with that of the uriniferous tube which springs from each capsule.

The convoluted portion of the tube which proceeds from, and is continuous with, the Malpighian capsule, is composed of a delicate basement membrane, in immediate relation externally with an abundant capillary net-work, and lined in its interior by the spheroidal or glandular variety of epithelium. The diameter of its central canal is about $\frac{1}{100}$ th of an inch. The straight portion of the tubes of which the pyramids are composed is lined with epithelium, which approaches more nearly to the scaly or tessellated variety, and which seems to serve as a protecting layer, rather than to take part in the function of secretion. The tubes unite with one another to a great degree as they pass through the structure of the pyramids, so that at the base of a pyramid there may be many thousand tubes, while the number of openings at the extremity of a papilla are comparatively few.

It now remains to consider the respective functions of these two essential elements of the kidney (as it exists in the vertebrate animals), viz., the Malpighian bodies and the tubes. From the admirable researches of Mr Bowman (*Philosophical Transactions*, 1842), and from the labours of subsequent anatomists, it appears that in animals in which the urinary excretion is passed in an almost solid form (as in birds and reptiles), the tufts are small and simple as compared with those in the kidneys of animals which (like man and most mammals) pass the urinary constituents dissolved in a large quantity of water. On these grounds, as well as from the fact, that the anatomical arrangement of the tufts is well calculated to favour the escape of water from the blood, Mr Bowman arrives at the conclusion, that the function of the Malpighian bodies is to furnish the fluid portion (the water) of the urine. The arrangement of the convoluted portion of the tubes, with a capillary net-work on one side of their basement membrane, and secreting epithelial cells on the other, is the exact counterpart of the arrangement in other secreting glands, and there can be no doubt that the functions of the cells in the convoluted portion of the tubes is to separate from the blood the various organic constituents (urea, uric acid, creatinine, &c.) and inorganic salts (chloride of sodium and phosphate of soda, &c.), which collectively form the solid constituents of the urine. It does not necessarily follow that these secreting cells undergo rapid decay and renewal; it is more probable that they have the power of selecting certain materials from the blood, and of transmitting them, without the disintegration of their own structure, to the interior of the tube.

The physical and chemical characters of the secretion yielded by the kidneys will be considered in the article URINE.

DISEASES OF THE KIDNEYS.—The most important affection of the kidneys is *Bright's Disease* (q. v.), the symptoms of which have already been described. On examining the kidneys, in a case of death from this disease, it is found that there is a great increase in the size and number of the oil-globules which exist in small quantities in the epithelial cells of the healthy gland. The urinary tubes becoming thus gorged and distended, compress the capillary vessels on their exterior; and hence, in consequence of passive congestion of the Malpighian vessels, which gives rise to obstruction of the circulation, the serum of the blood exudes in place of pure

Plan of the Renal Circulation in Man and the Mammalia:

a, terminal branch of the artery, giving the terminal twig, *af*, to the Malpighian tuft, *m*, from which emerges the efferent vessel, *ef*. Other efferent vessels, *e*, *e*, *e*, are seen proceeding from other tufts, and entering the capillaries surrounding the uriniferous tube, *t*. From this plexus of capillaries the emulgent vein, *ev*, springs.

to the aorta. The blood, after the separation of the various matters which constitute the Urine (q. v.), is returned into the venous system by the renal or emulgent vein, which opens into the inferior vena cava.

The nerves are derived from the renal plexus, which is formed by filaments of the solar plexus and the lesser splanchnic nerve. They belong entirely to the ganglionic or sympathetic system.

The Malpighian bodies are found in all vertebrate animals. In mammals, which are the only animals in which there is a division into a cortical and a medullary portion, these bodies are only found in the former. In an injected specimen, they appear to the naked eye as mere coloured spots. They are for the most part of a spherical, oval, or flask-like form. Their diameter in man may range from $\frac{1}{80}$ th to $\frac{1}{17}$ th of an inch, the mean being $\frac{1}{10}$ th. A small artery, termed the *afferent vessel*, may be traced into each Malpighian body, while a minute venous radicle, the *efferent vessel*, emerges from it close to the point

water, and gets mixed with the urine, which thus becomes albuminous in this disease. *Inflammation of the Kidneys*, or *Nephritis*, is not uncommon. In acute inflammation, there is a deep-seated pain in the small of the back, on one or upon both sides, often extending downward towards the inside of the thigh. This pain is increased by pressure, sudden change of position, coughing, &c. The urine is scanty, high-coloured, albuminous, or bloody, and often deposits pus and sedimentary matter on standing. There is more or less fever, preceded by rigors; nausea and vomiting are frequent, and the bowels are usually constipated. In chronic inflammation, most of the above symptoms are present, but in a milder form, and there is little or no fever. In both the acute and chronic form, the blood may become contaminated, as in Bright's Disease (q. v.), from the want of due purification by the kidneys, and various secondary affections may arise.

The causes of inflammation of the kidney are various. It may be due to mechanical violence, exposure to cold and wet, and to the ingestion of substances which have the property of irritating the kidneys, as cantharides, oil of turpentine, &c. A gouty diathesis and the presence of concretions may also be noticed as causes. Any affection capable of producing retention of urine, may, by distending the pelvis of the kidney, occasion inflammation, as, for example, stricture of the urethra and affections of the spinal cord producing paralysis of the urinary organs.

The treatment must, on the whole, be antiphlogistic (or lowering) in the early stage of the disease, but must be considerably modified in accordance with the origin of the disease.

Nephralgia, or *Pain in the Kidney without Inflammation*, which usually but not invariably depends upon the passage of a concretion through the ureter, is one of the most painful affections to which the human frame is subject. It usually comes on when the concretion makes its way from the pelvis of the kidney into the ureter, and does not cease till it has passed into the bladder. During an ordinary fit of gravel (see LITHIASIS), or even in apparent health, a severe pain is suddenly felt in the loins, extending to the groin, thigh, or abdomen, and sometimes simulating colic. The pain comes on in paroxysms, with intervening periods of comparative ease. The paroxysm is usually accompanied by vomiting, a small and feeble pulse, and a profuse sweat. There is a frequent desire to pass urine, but the effort is usually futile. At length, usually after some hours, or even one or two days, the concretion escapes into the bladder, and the pain suddenly ceases.

This affection may be readily distinguished from inflammation by the sudden access and paroxysmal character of the pain and by the absence of fever.

As the disease is one which is very liable to return, the patient should know what steps to take before advice can be obtained. Opium is our sheet-anchor in this affection. The patient (assuming that he is an adult) may take two grains of opium, or an equivalent dose (35 or 40 minims) of laudanum or solution of muriate of morphia, when the attack comes on, and may repeat the medicine in half-doses every hour or two hours, until the pain is somewhat alleviated, or signs of the narcotic influence of the drug begin to manifest themselves. Should the stomach be so irritable as to reject the medicine, a drachm of laudanum in a little thin starch may be injected into the rectum. Hot fomentations to the abdomen and loins also give partial relief. Chloroform may be inhaled with great benefit during the paroxysms, but only under the superintendence of a physician.

Suppression of Urine, or *Ischuria renalis*, is an affection in which there is either a complete cessation

of the secreting action of the kidney, or so considerable a diminution as to be clearly morbid. It is undoubtedly, in most cases, a mere symptom of some other disease, but occasionally no other disorder is obvious, and it must be regarded as an independent or idiopathic affection. If no urine be separated from the blood, coma (intense stupefaction) and death rapidly supervene from the retention of urea (or of carbonate of ammonia, into which it readily breaks up) in the blood, which thus becomes impure, and acts as a poison on the brain. The treatment, which is seldom successful, is too purely professional for notice in these pages.

For further information on diseases of the kidneys and allied affections, see the articles BRIGHT'S DISEASE, DIABETES, DROPSY, and LITHIASIS.

KIDRON, or KEDRON. See JEHOSEPHAT.

KIEF, or KIEV, the chief town of the government of that name, on the west bank of the Dnieper, is one of the oldest of the Russian towns, and was formerly the capital. In 864, it was taken from the Khazars by two Norman chiefs, companions of Ruric, and conquered from them by Oleg, Ruric's successor, who made it his capital. In 1240 (when it ceased to be the capital), it was nearly destroyed by Batü, Khan of Kiptchak. Christianity was first proclaimed in Russia at K. in 988. In the 14th c., it was seized by Gedimin, Grand Duke of Lithuania, and annexed to Poland in 1569, but in 1686 was restored to Russia. The K. of the present time is one of the largest towns in the empire, possessing (1867) 70,591 inhabitants, one-third of whom are Poles. It is strongly fortified, has a remarkable suspension-bridge over the Dnieper, one of the best universities in Russia, a military and an ecclesiastical school. In its neighbourhood is the convent of Kievo-Petchersk, a celebrated Russian sanctuary, which annually attracts thousands of pilgrims from the most remote corners of the empire. K. is not an industrial, but a commercial centre; large fairs take place here annually, the most celebrated of which is the 'Contracts' during the winter, which is attended by all the surrounding proprietors, and by many foreign merchants. The trade is chiefly with Odessa, Poltava, and Austria.

KIEKIE (*Freyinetia Banksii*), a shrub of the natural order *Pandanaceae*, yielding an edible, aggregated fruit, said to be the finest indigenous fruit of New Zealand. The species of this genus are tropical Asiatic, or Polynesian climbing shrubs, with sheathing, long, rather grassy leaves, usually spinous or serrated on the margin; and terminal, solitary, or clustered spadices of unisexual flowers. The K. is found in the northern part of New Zealand. It climbs the loftiest trees, branching copiously. The leaves are two or three feet long. The spadices are clustered. The fruit is a mass of fleshy berries. The jelly made of it tastes like preserved strawberries.

KIEL, capital city of the Prussian province of Slesvig-Holstein, lying on a deep fjord or bay of the Baltic, which admits large ships to anchor close to the town, is the station of the greatest portion of the German navy, and is situated in lat. 54° 20' N., and long. 10° 7' E. Pop. (1871) 32,899. K. is the seat of the Supreme Court of Appeal for the province, and of a university, which was founded in 1665, and has a library of 80,000 volumes, an observatory, a botanic garden, a natural history museum, and a good collection of northern antiquities. In 1872 an imperial order was issued that an academy for the benefit of all seafarers should be established at K. The town has two bridges, connecting the northern or older parts with the rapidly increasing southern suburbs. The most ancient of its five

churches is St Nicholai, which dates from the 13th century. The castle has a good sculpture-gallery, containing, among other copies of the best works of art, casts of the Elgin marbles, and of Thorwaldsen's best productions. The public gardens and the wooded shores of the fjord, together with the woods of Düsterbrook (where a bathing establishment has existed since 1822), afford numerous pleasant walks. K., which became a member of the Hanseatic League in the 14th c., was formerly the chief mart for the farm and dairy produce of the Danish islands; and the very ancient annual fair, which was held for four weeks after Epiphany, was attended by buyers of all classes from every part of the duchies. K. has manufactures of tobacco, oil-colours, sugar, machinery, ironmongery, &c. Butter is extensively exported. It is an important link in the line of communication between Germany and the Baltic islands and ports; and steam-packets daily convey passengers and mails to and from the ports of the Baltic and North Sea.

KIEV, a government of Little Russia, lies immediately north of the government of Kherson, and is bounded on the north-east by the river Dnieper. Area, 19,546 square miles, more than one-half of which is arable, and one-fifth under wood. Pop. (1867) 2,144,276. In the northern portions, the surface is flat and marshy; the south is covered with ranges of hills, branches of the Carpathian Mountains, running from north-west to south-east. The chief river is the Dnieper, with its tributaries, the Pripiet and the Teterev. The soil, chiefly loam, and partly clay and sand, is very fertile; so that, although agriculture is backward, the returns are considerable. The climate is exceedingly mild; everything is in blossom in April, and frosts do not set in till November. Agriculture and horticulture are the chief occupations of the inhabitants. Wheat is extensively exported to Odessa. There are numerous distilleries, and beet-root sugar, tobacco, cloth, china, and delft are manufactured. Large cargoes of timber and firewood are floated down the Dnieper to the ports of the Black Sea annually.

KILDA, St, a small island, lying off the west coast of Scotland, in lat. 57° 49' 20" N., sixty miles west of the peninsula of Harris, to the parish of which it is reckoned as belonging. It presents bold and lofty precipices to the sea, except at two points, one on the south-east, the other on the west side of the island. At each of these points there is a bay with a low shore. Besides the main island, there are several small islets, and the whole group has an area of from 3000 to 4000 square acres. Pop. (1871) 71. Situated in the midst of the Gulf Stream, St K. enjoys a mild climate, although the weather is often boisterous. On the main island, there are eighty or ninety head of black cattle, and nearly 2000 sheep (among which is a Spanish breed, whose wool is highly prized) are grazed on it and on the surrounding islets. Immense numbers of wild-fowl are killed annually, the flesh of which is very generally eaten and the feathers sold. The sea abounds in delicious fish, easily caught from the rocky shore without the use of boats. The inhabitants formerly were able to export more or less grain annually; but although the population has decreased within late years, they now consume all the cereal produce of the island, besides an additional quantity, which they import. The present inhabitants habitually consume much more farinaceous food than their forefathers did. They do not receive, nor do they require, any regular gratuitous assistance from the proprietor, as is often represented. The principal

exports are wool, woollen cloth, feathers, oil, and salted fish.

KILDA'RE (Hib. *Kill-dara*, Church of the Oaks), an ancient episcopal and market town in the county of the same name in Ireland, 25 miles south-west of Dublin. It owed its origin to a monastery, founded, according to the annalists, in the end of the 5th c., by St Bridget, the daughter of an Irish chieftain, who received the veil from St Patrick himself. Around the monastery, a town of some importance sprang up, which, as well as the abbey, was repeatedly plundered by the Danes. After the English invasion, it rose to considerable importance, and a parliament was held in it in 1309. In the wars of Elizabeth, and subsequently in the Great Civil War, it suffered almost complete ruin, from which it but partially recovered. Prior to the Union, K. returned two members to the Irish parliament. At present, it is much decayed, consisting of but 246 houses. The population in 1851 was 1298; it is now slightly increased, being (1871) 1333. The see of K., together with that of Leighlin, in the Protestant Church, is united to that of Dublin. In the Roman Catholic the united sees of Kildare and Leighlin form a distinct diocese. Notwithstanding its present decayed condition, K. is exceedingly interesting for its antiquities, which comprise the ruined cathedral, a Franciscan and a Carmelite abbey, a portion of the chapel of St Bridget, popularly called 'The Firehouse,' from a perpetual fire anciently maintained there, and, above all, the round tower, 130 feet in height, which crowns the elevation on which the town is built, and is seen from a great distance.

KILDARE, an inland county of the province of Leinster, Ireland, distant, at its eastern border, about 14 miles west from the English Channel. Its greatest length from north to south is 40 miles; from east to west, 27 miles; area, 458,436 acres, of which 356,787 are arable. Its surface is almost one unvaried plain, with the exception of the south-east border, which meets the range of Dublin Hills, and the southern border, which likewise is slightly elevated. Its principal rivers are the Liffey and the Barrow, the latter of which forms in part its boundary. The Boyne has its source in K., as has also the Blackwater. It is traversed by the Grand and Royal Canals. The most remarkable features of K. are the celebrated plain called the 'Curragh of Kildare'—an undulating down, six miles long, and two broad, the site of the well-known race-course, the Newmarket of Ireland—and the Bog of Allen. The solitary hill called Allen, which rises in the great central limestone plain, is a mass of granular compact greenstone and porphyry, with some red sandstone conglomerate, which is quarried for millstones. The soil is generally a rich loam, resting on limestone or slate. The total extent of land under tillage, in 1853, was 140,837 acres; but the proportion of pasture land to tillage has been much increased, the acres under crop in 1872 being only 131,290. The pop. (1871) was 84,198, of whom 71,972 were Roman Catholics, 10,615 Episcopalians, and the rest of other denominations. The principal towns are Naas, Athy, and Kildare; but the number of minor towns is beyond the average of Irish counties. K. sends two county members to the imperial parliament. In antiquities of all historical periods, K. is peculiarly rich. In the time of Geraldus Cambrensis, the plain of the Curragh had a stone circle similar to that of Stonehenge. Of the round tower there are no fewer than five examples. Some stone crosses also are still preserved, and many castles of the Anglo-Norman period, three of which are still inhabited. The well-known Roman

Catholic college of Maynooth (q. v.) is situated in this county, as is also the Jesuit college of Clongowes Wood.

KILIA, a fortified town of European Turkey, in the province of Bessarabia, is situated on the left bank of the Kilia branch of the Danube, 25 miles north-east of Ismail. Commerce is carried on here to some extent, and there is a population of 6400.

KILIAN, a saint of the Roman Catholic Church, and Bishop of Würzburg in the 7th century. He was a native of Ireland, and a member of that distinguished body of Irish missionaries among the Teutonic nations, to whose labours, in the 6th and 7th c., Christianity and civilisation were so largely indebted in the southern and south-eastern countries of Europe. He was of a noble family, and while yet young, entered the monastic life in his native country. Having undertaken, in company with several of his fellow-monks, a pilgrimage to Rome, he was seized in his journey through the still pagan province of Thuringia, with a desire to devote himself to its conversion, and being joined by his fellow-pilgrims, Colman and Donatus, he obtained for the project at Rome, in 687, the sanction of the then pope, Conon, by whom he was ordained bishop. On his return, he succeeded in converting the Duke Gosbert, with many of his subjects, and in opening the way for the complete conversion of Thuringia; but having provoked the enmity of Geilana, who, although the widow of Gosbert's brother, had been married to Gosbert, by declaring the marriage invalid, and inducing Gosbert to separate from her, he was murdered at her instigation, during the absence of Gosbert, in 789, together with both his fellow-missionaries. The work which K. commenced was completed some years later by Boniface and his fellow-missionaries.

KILIMANJARO' (the Great Mountain), supposed to be the highest known mountain of Africa, is situated on the western border of Zanzibar, in lat. 3° 40' S., and long. 36° E. It is covered with perpetual snow, and is supposed to reach an elevation of 20,000 feet above sea-level.

KILKENNY, CITY OF (Gael. 'Church of St Kenny, or Canice'), the capital of the county of that name, and a county of itself, is situated on the river Nore, 81 miles south-south-west from Dublin by the Great Southern and Western Railway. Pop. in 1861, 14,031. In 1871, it had decreased ten per cent., having fallen to 12,664; of whom 11,315 were Roman Catholics, 1188 Episcopalians, and the rest Protestants of other denominations. The county of the city comprises an area of 17,012 acres, of which 16,091 are external to the city. K. returns one member to the imperial parliament. This city owes its origin to the cathedral church of the diocese of Ossory, which dates from the 12th century. Almost from the time of the invasion, K. was a strong seat of the English power, its castle dating from the time of William, Earl of Pembroke, in 1195. From an early date, K. was a place of much political importance, as well as the seat of numerous religious establishments. Being seated on the southern frontier of the Pale, it was strongly walled in the end of the 14th c., and several parliaments were held in it, of which the most notable was that of 1367, in which was enacted the well-known 'Statute of Kilkenny,' the great nucleus of all the distinctively English legislation for Ireland. The cathedral dates in part from the 13th c.; and the abbey church of St John's, called the Black Abbey, has been partially restored, and is one of the very few ancient Irish churches now in actual occupation for the religious use of the Roman Catholics. A handsome Roman Catholic cathedral

also has been recently completed. The so-called college or grammar-school of K. was founded by the Butlers in the 16th c., and was further endowed by the great Duke of Ormond. St Kyran's College is an educational establishment for the Roman Catholics, and is interesting as one of the first opened by that religious community after the repeal of the law which made Catholic education penal in these countries. K. formerly possessed considerable manufactures of blankets and coarse woollen and linen cloths, but of late they have much declined. It is the seat of tolerably extensive marble-works, and has a large and active provision-trade, the chief outlet of which is Waterford, with which K. is connected both by river and by the Kilkenny and Waterford Railway. (1871—pop. 12,664.)

KILKENNY, an inland county of the province of Leinster, in Ireland, bounded on the S. by Waterford, is 46 miles in its greatest length from N. to S., and 24 in its greatest width from E. to W. Its area is 796 square miles, or 509,732 acres, of which 470,102 are arable. The population has been steadily decreasing since 1841, when it was 189,312. In 1851 it was 138,775; in 1861 it had fallen to 110,341, and in 1871 to 96,638; of whom 91,897 were Roman Catholics, 4514 Episcopalians, and the rest of other denominations. The surface of the county is very varied, the southern portion being especially elevated, the hills rising to a height of 1696 feet in the summit of Mount Brandon. In the western district are situated the Walsh Mountains. The principal rivers are the Nore, which traverses the whole length from north to south-east, and falls into the Barrow; the Barrow, and Suir, which form the eastern and southern boundary. The surface of K., except the mountains in the S., is mainly of the limestone formation, overlaid in the N. districts by shale and sandstone. In the hilly districts is an extensive deposit of anthracite coal, but of inferior quality. In the neighbourhood of the city of K., a valuable black marble, interspersed with fossil shells, is quarried, of which a considerable manufacture of chimney-pieces and similar objects is carried on. Marl is generally found throughout the county. The soil is generally fit for tillage. In 1872, the number of acres under crop was 171,027. The live-stock in 1872 was—horses, 16,552; cattle, 112,377; sheep, 109,284; pigs, 56,966. The capital is the city of Kilkenny (q. v.). The towns of secondary importance are Callan, Thomastown, Freshford, Urlingford, and Castlecomer, which is the centre of the coal-district. K. has two county members, and the city a third. K. having been, from an early period after the invasion, the seat of the great Anglo-Norman families of Fitzgerald, Butler, Grace, Purcell, and others, has been the scene of much of the conflict of the English and Irish races, and is still thickly studded with remains of the military strongholds of the English settlers. The ecclesiastical remains are no less numerous; and it possesses five round towers, and a considerable number of raths or tumuli, cairns, stone-circles, and pillars. The most remarkable natural curiosity is the cave of Dunmore, between Castlecomer and Kilkenny, opening by a natural arch of 50 feet in height, and containing several chambers encrusted with stalactites. It is traversed by a subterranean stream.

KILLARNEY, a small market-town of Ireland, in the co. Kerry, Munster, is situated $1\frac{1}{2}$ mile from the Lower Lake of the same name, 17 miles S.E. of Tralee, and 46 miles W.N.W. of Cork. It contains an imposing Roman Catholic cathedral, a Dominican friary, and a nunnery, has little trade, is exceedingly dull in winter, though it wakes up into

animation in spring and summer, when it is visited by crowds of tourists, attracted by the beauty of the scenery in the vicinity. Pop. 5204.

KILLARNEY, LAKES OF, a series of three connected lakes, near the centre of the county of Kerry, Ireland. The surplus waters are conveyed by the river Leane north-west to Castlemain Harbour. The Upper Lake is $2\frac{1}{2}$ miles long and $\frac{3}{4}$ ths of a mile broad, and contains several islands. The Long Range River, leading to the Middle Lake, is about three miles in length. The Middle Lake is 2 miles long by 1 mile broad; and the Lower Lake, with about thirty islands, is 5 miles long by 3 broad. The beauty of the scenery, which is widely celebrated, consists in the gracefulness of the mountain outlines, the rich and varied colouring of the wooded shores, deepening through gray rock and light-green arbutus to brown mountain heath and dark firs.

KILLIECRANKIE, BATTLE OF. See **GRAHAM, JOHN, VISCOUNT DUNDEE.**

KILMAINHAM HOSPITAL, an establishment near Dublin for the reception of wounded and pensioned soldiers. It was originally founded by King Charles II., and is conducted on similar principles to the sister institution, Chelsea Hospital (q. v.). K. H. is maintained by an annual parliamentary grant, and provides everything necessary for the comfort of upwards of 250 veterans and officers. The general commanding the forces in Ireland for the time being is *ex officio* the master of K. H., and has his residence on the estate.

KILMARNOCK, the largest town in the county of Ayr, Scotland, and one of the chief stations on the Glasgow and South-western Railway, is situated on a small stream of the same name, 12 miles north-north-east of Ayr. K. was once celebrated for its manufacture of 'cowlis'; in the days of hand-loom-weaving, the 'Kilmarnock wabsters' were a notable class, and have received from the satiric pen of Burns a not altogether enviable immortality; but the introduction of machinery has reduced the class to insignificance. Later, the town became one of the chief seats of calico-printing in Scotland; but though this manufacture is still carried on, it has ceased to be as important as formerly. It has also several large engineering establishments, woollen mills, carpet manufactories, tanneries, breweries, &c. The country round about is one of the richest in Scotland in coal and iron, and its dairy produce is also extensive. The largest cheese show in Scotland is held here. In 1872, the value of the cheese exhibited and sold amounted to nearly £25,000. K. is a parliamentary burgh, and unites with Rutherglen, Dumbarton, Port-Glasgow, and Renfrew in sending one member to parliament. Pop. (1871) 22,952.

KILOGRAMME. See **GRAMME.**

KILRUSH, a small market and seaport town of Ireland, in the county of Clare, is situated on an inlet of the same name, on the northern shore of the estuary of the Shannon, 50 miles west of Limerick. It is much resorted to for sea-bathing, has a good harbour with secure anchorage from westerly gales, and carries on considerable trade in corn, butter, pigs, fish, feathers, hides, flags, Irish moss, and in turf cut in the vicinity. Stone and slate are quarried here, and there are manufactures of flannels, friezes, and linen-sheetings. Pop. above 4500.

KILSYTH, a burgh of barony in Stirlingshire, Scotland, is distant about 12 miles north-east from Glasgow, with which it is connected by railway. There are here several factories, and coal and iron works. Pop. (1871) 4895.

KILWINNING, a town in the county of Ayr, Scotland. It consists chiefly of one long, irregular street. Hand-loom weaving, which at one time was carried on to a large extent, is now comparatively nothing. Hand-sewing or embroidery, introduced about a century ago, was the source from which a large portion of the female community derived their support, but very few are now employed in this branch of industry. The prosperity of the town now depends mainly on the numerous coal-pits in its vicinity, and on its proximity to the Eglinton Ironworks, which alone afford employment to 1700 miners and others. The parish church, built in 1775, occupies part of the site of the famous Abbey of Kilwinning. The town is noted as being the birthplace of freemasonry in Scotland, and until the institution of the Grand Lodge in 1736, all other lodges in Scotland received their charters from 'Mother Kilwinning'; even after 1736, down to 1807, when the disputes between the two lodges were adjusted, many charters were issued by the mother-lodge. It is also celebrated for its archery, and is the only place in Scotland where shooting at the papingo is practised. Pop. in 1871, 3598. About a mile and a half to the south-east of the town, in the midst of extensive and beautiful policies, stands Eglinton Castle, the principal residence of the family of Montgomerie, Earls of Eglinton, and the scene of the renowned 'Tournament' in 1839.

KIMCHI, DAVID (generally quoted by his initials, *ReDaK*), the most eminent Jewish grammarian and exegete, was born towards the end of the 12th c., probably at Narbonne, where he spent the greater part of his life. He died in Provence about 1240. His father, Joseph Kimchi, was the author of a number of commentaries and other theological works. His brother Moses is renowned for works of a similar description, more especially a Hebrew Grammar, *Mahalach Shebile ha-Daal*, of which there are several editions. His own celebrity, however, far exceeds theirs. His Grammar, *Michlol*, and his Lexicon, *Shorashim*, have, to a certain degree, been the basis of all subsequent Hebrew grammars and lexicons. He wrote also commentaries on almost all the books of the Old Testament, most of which have been separately printed, and translated into Latin by Nelo, Pontaco, Leusden, Muis, Janvier, &c., besides several polemical works, such as the *Vikuaach, Teshuboth le-Nozrim*, &c. He was also made arbiter in the great Maimonides controversy (1232).

KIMMERIDGE CLAY, the lowest series of the Upper Oolite, consists chiefly of a bituminous shale, in some places passing into an impure brown shaly coal, and in others having beds of sand or calcareous grit, with layers of nodules of septaria scattered through them. The series attains a maximum thickness of 500 or 600 feet. The beds occur in the vale of Pickering, in Yorkshire, and continue as a narrow band south through Lincoln and Norfolk, then south-east through Huntingdon, Buckingham, and Wilts, to Dorset, where they terminate near Weymouth, and eastward at the village of Kimmeridge, which has given its name to the series. The fossils are chiefly mollusca, with a few placoid and ganoid fish, and several reptiles. In many places, layers of an oyster (*Ostrea deltoidea*), without any other organic remain, occur in broad continuous floors parallel to the stratification: the valves are usually together, and young specimens are occasionally attached to the older ones.

KIN, NEXT OF. When a person dies intestate, leaving personal property, such property devolves upon and belongs to the next of kin, who are the blood-relatives of the deceased. The law has

declared a certain order of precedence among next of kin, which is not exactly the same in the three kingdoms. The degrees of kindred are divided into lineal and collateral. The lineal consists of the ascending, such as father, mother, grandfather, grandmother, paternal and maternal, and so on *ad infinitum*; and the descending, such as son, daughter, grandson, granddaughter, and so on *ad infinitum*. The collateral kindred consists of brothers, sisters, uncles, aunts, and the children of such *ad infinitum*. The mode by which the civil law computed the propinquity of degree was this; it allowed one degree for each person in the line of descent exclusively of him from whom the computation begins, and in the direct line counted the degrees from the deceased to his relative; but as regards collaterals, it counted the sum of the degrees from the deceased to the common ancestor, and from the common ancestor to the relatives. Thus, a brother was in the second degree, counting one to the father, and one from the father to the brother; a nephew, and also an uncle, a great-grandfather and a great-grandson, were all in the third degree; a son and a father were in the first degree; and so on. This mode of computing the degrees of kindred has been adopted in the law of England and Ireland.

When a person dies intestate, leaving personal property, there are two classes of rights to which the next of kin are entitled: one is the right to administer the estate, or to take out letters of administration; the other is the right to a share of the property itself. As regards the right of administration, the widow or next of kin may be selected, both or either. But among the next of kin, those are to be preferred who are nearest in degree according to the above computation: thus, a son or father is preferred to a brother, grandfather, or grandson; and these to a nephew, uncle, great-grandson, or great-grandfather; and so on. As regards the more valuable right of a share in the property, the rule is, that if there is a widow surviving, and also issue of the deceased, who are in that case the next of kin, then two-thirds of the property go to the next of kin; if there are no issue, but a widow survives, then one-half only goes to the next of kin; but if there is no widow surviving, then the whole goes to the next of kin. But the next of kin take according to the statute of Distributions, which slightly differs from the order of the civil law as to the degrees of priority: thus, the children exclusively take the whole, if children survive; if some of the children are dead, leaving issue, then the issue collectively of each dead child take an equal share with the living children, by what is called the principle of Representation. If there are none nearer than grandchildren, all take an equal share, and the issue of a deceased grandchild also take one of such shares. After all the children and grandchildren are dead without issue, then the father, if alive, is entitled to the whole. If he also is dead, then the mother, the living brothers and sisters (together with the issue of deceased brothers and sisters collectively), take each one share. After these are dead, then grandfathers and grandmothers, paternal and maternal, and nephews and nieces, if alive, take each a share. The right of representation, i.e., the right of the children of a deceased person being one of a class (and who, if alive, would have been one of the next of kin), to represent him, and take his share, applies as far as the children of brothers and sisters, but no further. The heir-at-law, if of equal degree, is one of the next of kin, and takes his share with the rest, though he also gets all the real estate. The half-blood counts among the next of kin equally with the whole blood.

In Scotland, the rules of priority among the next

of kin vary considerably from the above order, which prevails in England and Ireland. The children being entitled to an absolute legal share called Legitim (q. v.), take the father's property in two characters—one part as legitim, the other as being next of kin—and the result is often different from what obtains in England. Moreover, in Scotland, though the heir-at-law may be one of the next of kin, still he is not entitled to take such share unless he Collate (q. v.) the heritable estate. The degrees of kindred are not counted in exactly the same way. The father never can take more than one-half, nor the mother than one-third, while any of the brothers and sisters, or their issue, are alive. The half-blood does not share equally with, but in an inferior degree to the full blood.

KINA BALU, an interesting mountain in the northern angle of the island of Borneo, reaches a height of 13,000 feet. It was twice ascended by Mr Spenser St John, F.R.G.S., author of *Life in the Forests of the Far East*.

KINBU'RN, a small fort of South Russia, in the government of Kherson, is situated at the extremity of a long narrow sand-bank, which forms the southern boundary of the estuary of the Dnieper. During the Crimean War, it fell before a naval expedition of the allies, October 17, 1855. About a mile from the fort stands the little fishing-village of Kinburn.

KINCARDINESHIRE, or THE MEARNES, a maritime county of Scotland, with Aberdeenshire and the Dee on the north, Forfarshire and the North Esk on the south and west, and the North Sea on the east. The rocks are granite, gneiss, sandstone, conglomerate, mica-slate, clay-slate, limestone, and trap. Area, 252,250 acres, of which 118,700 are in cultivation, and 23,153 acres in wood. The county may be divided into five sections—viz., the Coast, Garvock, the 'How o' the Mearns,' the Grampians, and Deeside. The coast-land and much of the 'How' is of superior quality, and rents from £2 to £3, 10s. an acre. The 'How' forms part of the Valley of Strathmore (q. v.). The Grampians, running across the county from east to west, parallel to the Dee, with an average breadth of from seven to eight miles, cover about 80,000 acres. One of the peaks, Mount Battock, is 2555 feet high. The Deeside portion of the county is a comparatively narrow strip of light sharp soil. The rainfall is from 23 to 27 inches; in 1872, it was 50 per cent. above the average. The produce of the county and the condition of the inhabitants have improved vastly since the middle of the 18th c., when there was little to be seen but poor huts and starved cattle, and when the value of the largest ox was not more than 20s. In 1872, K. had 1216 acres wheat, 12,111 acres barley and bere, 31,518 acres oats, 401 acres rye, 530 acres beans, 54 acres peas, 3226 acres potatoes, 19,227 acres turnips. Of live-stock, there were 4356 horses, 23,179 cattle, 28,339 sheep, and 3090 swine. There are few manufactures in the county. The principal towns and villages are Stonehaven (q. v.), the county town; Bervie, a royal burgh; Lawrence Kirk, a burgh of barony; and Johnshaven. In the beginning of the 19th c., about 1 in 50 of the population was on the poor-roll, the average expenditure for each being £1, 16s. In 1872, 17 parishes of the 19 in K. were assessed for the poor, and had 1530 paupers, costing £8545. Of the objects of antiquarian interest, the most noted is Dunnottar Castle (q. v.). K. was the birthplace of George Wishart, Robert Barclay, Bishop Burnett, Dr J. Beattie, and Dr Thomas Reid. The pop. in 1871 was 34,651, who return one member to parliament. Valued rent, £250,623 in 1872—1873.

KING (Saxon, *Cyning*; Sanscrit, *Ganaka*, father, from the root *Gan*, to beget: 'what the husband was in his house, the lord, the strong protector, the king was among his people'—*Max Müller*), the person vested with supreme power in a state. According to feudal usages, the king was the source from which all command, honour, and authority flowed; and he delegated to his followers the power by which they exercised subordinate rule in certain districts. The kingdom was divided into separate baronies, in each of which a baron ruled, lord both of the lands, which he held under the obligation of rendering military service to the king, and in many cases also of the people, who were vassals of the soil, and his liege subjects. In modern times, the kingly power often represents only a limited measure of sovereignty, various constitutional checks being in operation in different countries to control the royal prerogative. The king may succeed to the throne by descent or inheritance, or he may be elected by the suffrages of the nation, or by the suffrages of some body of persons selected out of the nation, as was the case in Poland. Even when the kingly power is hereditary, some form is gone through on the accession of a new king, to signify a recognition by the people of his right, and a claim that he should pledge himself to perform certain duties, accompanied by a religious ceremony, in which anointing with oil and placing a crown on his head are included as acts. By the anointing, a certain sacredness is supposed to be thrown round the royal person, while the coronation symbolises his supremacy. There is now no very clearly-marked distinction between a king and an Emperor (q. v.). A queen-regnant, or princess who has inherited the sovereign power in countries where female succession to the throne is recognised, possesses all the political rights of a king.

In England, it is said that the king never dies, which means, that he succeeds to the throne immediately on the death of his predecessor, without the necessity of previous recognition on the part of the people. He makes oath at his coronation to govern according to law, to cause justice to be administered, and to maintain the Protestant Church. He is the source from which all hereditary titles are derived, and he nominates judges and other officers of state, officers of the army and navy, governors of colonies, bishops and deans. He must concur in every legislative enactment, and sends embassies, makes treaties, and even enters into wars, without consulting parliament. The royal person is sacred, and the king cannot be called to account for any of his acts; but he can only act politically by his ministers, who are not protected by the same irresponsibility. A further control on the royal prerogative is exercised by the continual necessity of applying to parliament for supplies of money, which practically renders it necessary to obtain the sanction of that body to every important public measure.

The Crown (q. v.) now in use as the emblem of sovereignty differs considerably in form in different countries of modern Europe; but in all cases it is distinguished from the coronets of the nobility in being closed above. The royal crown of Great Britain, here represented, is described under article CROWN. The helmet placed by the sovereign over his arms is of burnished gold, open-faced, and with bars. For the arms of the sovereign, see GREAT BRITAIN.

KING-AT-ARMS, or **KING-OF-ARMS**. The principal heraldic officer of any country. There are four kings-at-arms in England, named respectively

Garret, Clarenceux, Norroy, and Bath, but the first three only are members of the College of Arms.

Garret principal king-of-arms was instituted by Henry V., 1417 A.D., for the service of the order of the Garter. His duties include the regulation of the arms of peers and the knights of the Bath. In the capacity of king-of-arms of the order of the Garter, he has apartments within the castle of Windsor, and a mantle of blue satin, with the arms of St George on the left shoulder, besides a badge and sceptre. His official costume as principal king-of-arms of England is a surcoat of velvet, richly embroidered with the arms of the sovereign, a crown, and a collar of SS. The insignia of the office are borne by Garret impaled with his paternal arms, the latter on the dexter side of the shield. These are argent, St George's cross, on a chief gules a ducal coronet encircled with a garter, between a lion of England on the dexter side, and a fleur-de-lis on the sinister, all or.

Clarenceux and Norroy are provincial kings-of-arms, with jurisdiction to the south and north of the Trent respectively. They arrange and register alone or conjointly with Garret the arms of all below the rank of the peerage. The official arms of Clarenceux are argent St George's cross, on a chief gules a lion of England ducally crowned or. Those of Norroy are argent St George's cross, on a chief per pale azure and gules a lion of England ducally crowned between a fleur-de-lis on the dexter side, and a key, wards in chief, on the sinister, all or. Both provincial kings have a crown collar and surcoat. The crown is of silver gilt.

The crown of a king-of-arms is of silver gilt, and consists of a circle inscribed with the words, *Miserere mei Deus secundum magnam misericordiam tuam*, supporting 16 oak leaves, each alternate leaf higher than the rest. Within the crown is a cap of crimson satin turned up with ermine, and surmounted by a tassal wrought of gold silk. Kings-of-arms were formerly entitled to wear their crowns on all occasions when the sovereign wore his; now they assume them only when peers put on their coronets. The installation of kings-at-arms anciently took place with great state, and always on a Sunday or festival-day, the ceremony being performed by the king, the earl-marshal, or some other person duly appointed by royal warrant.

Bath King-of-arms, though not a member of the college, takes precedence next after Garret. His office was created in 1725 for the service of the order of the Bath. On the 14th January 1726, he was constituted Gloucester King-of-arms (an office originally created by Richard III., in whose reign it also became extinct), and principal herald of Wales. He was at the same time empowered, either alone, or jointly with Garret, to grant arms to persons residing within the Principality.

The chief heraldic officer for Scotland is called Lyon King-of-arms (q. v.), who since the Union has ranked next to Garret. His title is derived from the lion rampant in the Scottish royal insignia, and he holds his office immediately from the sovereign, and not as the English king-at-arms, from the Earl Marshal. His official costume includes a crimson velvet robe embroidered with the royal arms, a triple row of gold chains round the neck with an oval gold medal, with the royal arms on one side, and St Andrew's cross on the other; and a baton of gold enamelled green, powdered with the badges of the kingdom. His crown is of the same form with the Imperial crown of the kingdom, but not set with stones. Before the Revolution he was crowned by the sovereign, or his commissioner, on entry on office.

There is one king-of-arms in Ireland, named Ulster. In the 14th c., there existed a king-of-arms

Crown of Great Britain.

called Ireland, but the office seems to have become extinct, and Edward VI. created Ulster to supply the deficiency. His arms are argent, St George's cross, upon a chief gules a lion between a harp and a portcullis, all or. The royal ordinance relative to the order of St Patrick, issued 17th May, 1833, declares that in all ceremonials and assemblies, Ulster King-of-arms shall have place immediately after the Lyon.

KING-CRAB (*Limulus*), a genus of *Crustacea*, ranked by Cuvier among the *Entomostraca*; but so widely differing from all the rest of the *Crustacea*, that Milne-Edwards makes it a sub-class by itself.

King-Crab (*Limulus Polyphemus*):

Copied from *English Cyclopædia*.

a, position of the two smooth eyes; b, b, lateral composite eyes; c, c, respiratory apertures.

The head and thorax are united together, and are covered by a shield, which is convex above, and concave beneath. The abdomen is more or less hexagonal, no division into rings appears in it, and it is covered by a shield not so broad as that of the head and thorax. On each side it has along the margin six movable spines directed backward and outwards; and attached to it is a tail, which forms a long and strong dagger-like spine, sometimes exceeding in length the whole body of the animal. The legs are not large enough to be visible beyond the shield when the animal moves along the ground.—These remarkable animals are found only on the shores of tropical Asia, the Asiatic Archipelago, and tropical America. They feed on animal food; and

are said to be themselves less agreeable food than crabs or lobsters. Some of them exceed two feet in length, and the strong and jagged spine is a formidable weapon. In some of the Asiatic islands, the spine is often used for pointing arrows. In tropical America, the K. is called *Casserole Fish*, and the shell is used as a ladle. The number of species of K. is not great.—Fossil species are pretty numerous. Trilobites are supposed to have been allied to the *Limuli*.

KINGFISHER (*Alcedo*), a genus of birds of the order *Insectores*, and family *Halcyonidae*. The name

Kingfisher (*Alcedo ispida*).

is often extended to the whole family; the only British and almost the only European species of which is the Common K. (*A. ispida*), a bird not much larger than a sparrow, in brilliancy of colour

rivalling the finest tropical birds—blue and green being the prevailing colours. The K. is generally distributed over Britain and Ireland, but is not so common in Scotland. It is not a bird of passage, although in many places it appears only as an occasional visitant. It is found in all parts of Europe except the most northern, and over a great part of Asia and Africa. It frequents the banks of rivers and streams, and is often seen flying near the surface of the water. Its food consists of small fishes, such as minnows, sticklebacks, and trout or salmon fry, and of leeches and water-insects. When it has caught a fish, it often kills it by beating on a branch, and always swallows it head foremost. The indigestible parts are afterwards disgorged.

It seems probable, although not quite certain, that the K. is the *Halcyon* of the ancients, about which many wonderful fables were current among them: of its having power to quell storms, of its floating nest, and the stillness of the winds during the time necessary for its safety, &c. Shakspeare makes repeated allusion to the popular notion, that if the stuffed skin of a K. or Halcyon is hung up by a thread, the bill will always point to the direction from which the wind blows.

The BELTED K. (*Alcedo Halcyon* or *Ceryle Halcyon*) of North America is a much larger bird than the K. of Britain, being fully twelve inches in length. It is common on most of the rivers of North America, to the 67° N. lat. in summer, but migrates southward in winter, and is then to be found in the West Indies. Its colours are dull when compared with those of the common kingfisher.

Many species of K. are found in the warmer parts of the world. Some of them, forming the genus *Ceyx*, want the hind toe. The common European K. may be regarded as the type of the family, which belongs to the group called *Syndactyle Birds*, and is characterised by the much-united toes. The form is bulky; with long, straight, quadrangular, sharp, heron-like bill, short wings, very short square tail, short legs, and small feet.

KING GEORGE'S SOUND, an inlet of the Indian Ocean, at the south-west angle of Australia. Independently of an excellent roadstead, it contains two landlocked recesses, Princess Royal and Oyster Harbours. The entrance is in lat. 35° 6' S., and long. 118° 1' E.

KINGLAKE, ALEXANDER WILLIAM, was born at Taunton, Somersetshire, in 1802, studied at Eton and Trinity College, Cambridge, and—having chosen the law as a profession—was called to the bar in 1837. His practice soon became very great; nevertheless, he found time to make a tour in the east of some length, the result of which was a book entitled *Eothen*, descriptive of his adventures and impressions. It was published in 1844, and at once attained an astonishing popularity, passing through many editions both in England and America, and being also extensively translated on the continent. The graceful vigour and liveliness of the style have made *Eothen* a model for subsequent works of a similar kind, but none have yet reached the exquisite talent of the original. In 1857, K. entered parliament as member for Bridgewater. The first two volumes of his *Invasion of the Crimea* appeared in 1863, and fully sustained the literary reputation of their author; but the virulent antipathy shewn towards the French emperor and all the actors in the *coup d'état* was not calculated to beget confidence in him as a historian. At the general election of 1868, he was again elected for Bridgewater, but, on petition, was unseated.

KINGPOST. See *Roof*.

KINGWOOD, a very beautiful wood, in small pieces, used for ornamental work. It is brought from Brazil, and is believed to be the wood of a species of *Triptolomia* (nat. ord. *Leguminosæ*, subord. *Papilionaceæ*).

KINGS, BOOKS OF (*Melakim*), the name given to two of the canonical books of the Old Testament. Originally, they were but one, and were first separated by the Seventy, by whom they are designated 'the third and fourth of the kingdoms'—the Books of Samuel forming the first and second. This division was copied by the Vulgate, and passed thence into the general usage of Christendom. The exact titles of these books in the English Authorised Version are—*The First Book of the Kings, commonly called the Third Book of the Kings, and The Second Book of the Kings, commonly called the Fourth Book of the Kings*. They embrace (1) the reign of Solomon, (2) the history of the divided kingdoms of Judah and Israel, (3) the history of the kingdom of Judah after the dispersion of Israel, until the Babylonian captivity—a period of about 570 years in all. The books do not appear to be merely vague compilations from royal annals and other—rather contradictory—sources, as is held by some, but rather the diligent work of a historian—with a clear and distinct tendency—who gathered together all the written and unwritten information, provided it could be made useful for his purpose. The unity of style and language is indeed palpable throughout, nor are any later alterations of consequence apparent. The principal sources quoted are a *Book* [of the Chronicles] of Solomon, further a *Book of the Chronicles of the Kings of Israel*, and another of the *Kings of Judah*. The Talmud, and some of the earlier Christian theologians, ascribe it to Jeremiah; this view is also maintained by Hävernick in modern times. Huet and Calmet are in favour of Ezra, but all that can be safely asserted is, that the compiler lived during the second half of the Captivity, and after the death of Joiachin, and probably in Babylon. The spirit of the work is *theocratico-prophetic* in a high degree (its historical fidelity with respect to the political events is generally recognised, but the stories relating to the prophets Elijah and Elisha are by most critics referred to the province of legend); while that of Chronicles (which goes over much the same ground) is held to betray the predominance of priestly influence. One of the best modern commentaries is that by Thenius (Leip. 1845).

KING'S BENCH. See **QUEEN'S BENCH**.

KING'S COLLEGE, Cambridge, was founded in 1441 by Henry VI., for a provost, seventy fellows and scholars, three chaplains, with clerks, choristers, servitors, and poor scholars—in all, 140. Its revenues were seriously diminished by Edward IV. The chapel is the work of the three Henries, VI., VII., VIII. The architect is supposed to have been Nicholas Cloos, or Klaus, Fellow of the college, and Bishop of Lichfield, or, as others say, his father. It is perhaps the finest specimen of perpendicular Gothic in the world. Its internal dimensions are 290 feet long, 45 wide, and 78 high. There is an inner roof of stone, which, though of enormously massive structure, has, from its proportions, and the beauty of the groining, the most airy and pleasing effect. Under the statutes of 1861, the foundation consists of forty-six fellows, and not less than forty-eight scholars, governed by a provost. Twenty-four of the scholarships are appropriated to the scholars of Eton College. The fellowships are open to all members of the college of sufficient standing. In 1871, a scholarship of £80, tenable for three years, was established for natural science.

KING'S COLLEGE, London, a proprietary institution occupying the east wing of Somerset House, and founded in 1828 on the fundamental principle:—'that instruction in the Christian religion ought to form an indispensable part of every system of general education for the youth of a Christian community.' The college being strictly in connection with the Church of England, church service is a regular part of its routine. The course embraces theology, general literature and science, applied sciences, and medicine. A limited number of matriculated students reside within the walls. The museum contains the calculating-machine of Mr Babbage, and George III.'s collection of mechanical models and philosophical instruments, the latter presented by the Queen. There is a school in connection with the college.

KING'S or QUEEN'S COUNSEL are certain barristers at law, in England and Ireland, who have been appointed by letters-patent to be her Majesty's Counsel. The office is entirely honorary, but it gives a right of precedence in all the courts, according to the date of appointment. The appointment practically belongs to the Lord Chancellor. Though called her Majesty's Counsel, they are not prevented from being retained and acting for ordinary clients, except that in defending prisoners and acting in suits against the crown, they require a special licence from the crown, which is, however, never refused. In Scotland, there is no distinction of Queen's Counsel, but the Lord Advocate and Solicitor-general are so in reality. The appointment of Queen's Counsel is for life, but in case of disgraceful conduct, the letters-patent are revoked, as was done in 1862 to Edwin James, who, in 1873, applied in vain for restitution.

KING'S COUNTY, an inland county of Ireland, is bounded on the E. by Kildare, and on the W. by the Shannon, which separates it from Roscommon and Galway. Area, 493,985 statute acres, of which 337,256 are arable and 8258 in plantations. In 1872, 128,725 acres were under crops, and only 1450 were lying fallow. The population has steadily decreased—(1851) 112,076; (1861) 90,013; (1871) 75,781; of whom 67,301 were Roman Catholics, 7561 Episcopalians, and the rest of other denominations. The surface is in general flat; it includes, however, in the south, a portion of the Slieve Bloom Mountains, from which a line of low limestone hills extends north-east through the centre of the county, forming a water-shed between the basin of the Shannon on the west, and those of the Boyne and Barrow on the east. The soil, a light loam of medium depth, resting on limestone gravel, is of average fertility. The Bog of Allen (q. v.) extends from west to east the whole length of the county. The Grand Canal traverses the north portion of this county. Notwithstanding great tracts of bog, the climate is not unhealthy. Two members are returned to the imperial parliament for the county. In the north-west of the county are the ruins of the abbey Clonmacnoise, founded in 543, exceedingly rich in ancient monumental remains, and forming one of the most interesting of those ruined ecclesiastical structures in which Ireland is so rich. The county contains also many other religious foundations, as well as numerous feudal castles, chiefly of the Elizabethan period, and some of them still inhabited.

KING'S EVIDENCE (or Queen's), the name given to a person, who, having been an accomplice in some crime, has confessed, and offered to give evidence, and make full confession. The usual practice of the crown, in such cases, is to pardon the person so acting, though he is not absolutely

entitled to a pardon; and an application is generally made to the judge, to admit the party as a witness, on the trial of the fellow-criminals. A similar practice exists in Scotland, the public prosecutor having the power and discretion to admit the confessing party.

KING'S EVIL. See SCROFULA.

KING'S LYNN. See LYNN.

KING'S SILVER, an ancient fine paid to the king, in the Court of Common Pleas in England, on alienation of certain lands.

KING'S YELLOW is the term applied to a pigment, which is a mixture of orpiment (tersulphide of arsenic) and arsenious acid.

KINGSLEY, REV. CHARLES, Chaplain in Ordinary to the Queen, was born at Holne Vicarage, Devonshire, 12th June 1819. He entered Magdalen College, Cambridge, in 1840, where he highly distinguished himself in classics and mathematics. In 1844, he became curate, and shortly after, rector of Eversley, in Hampshire. In the same year, he published *Village Sermons*, characterised as honest, downright wisdom, conveyed in a plain and simple style. In 1848, appeared *The Saint's Tragedy, or the True Story of Elizabeth of Hungary*, an admirable and truly catholic representation of medieval piety. The next two or three years of his life were devoted—in company with his friend Mr Maurice and others—to a series of efforts for the amelioration and christianisation of the working-classes. To these efforts may be traced the origin of those co-operative associations in which the workmen are also the masters, the results of which have proved in every way beneficial. His opinions on the social anarchy of modern times are to be found in his *Alton Locke, Tailor and Poet* (1849), a novel of extraordinary power and fascination, the hero of which is sought for in a London workshop. This was followed, in 1851, by *Yeast, a Problem*, in which K. handles, among other questions, the condition of the English agricultural labourer; and in 1853, by *Hypatia, or New Foes with an Old Face*, a most vigorous and brilliant delineation of Christianity in conflict with rude Gothic paganism and the expiring philosophy of Greece, in the early part of the 5th century. Both of these works appeared in *Fraser's Magazine*. Two years after, he published *Westward Ho!* probably the greatest of his works. Its glowing pictures of South American forests are said to have excited the admiration of Humboldt, who had himself really seen what K. only imagined. Other works of his are—*Message of the Church to Labouring Men; Sermons on National Subjects, preached in a Village Church; Phaethon, or Loose Thoughts for Loose Thinkers; Alexandria and her Schools; Sermons for the Times; Glaucus, or the Wonders of the Shore; The Heroes, or Greek Fairy Tales; Two Years Ago; Good News of God*. He published, in 1866, *Hereward, the Last of the English; The Hermits*, in 1867; *How and Why*, in 1869; and in 1871, *At Last, a Christmas in the West Indies*. He was appointed Professor of Modern History at Cambridge, in 1859; and after resigning that post, was made, in 1869, Canon of Chester.

KINGSTON, chief town of the county of Frontenac, and the fifth city of Upper Canada, lies in lat. 44° 8' 30", long. 76° 30' 1", on the north-east shore of Lake Ontario, at the mouth of the Cataragui and of the Bay of Quinté, where the waters of the Canadian lakes issue into the St Lawrence. It is distant from Montreal 198 miles; from Toronto, 165; and from New York, 274. A gathering-place of old to the neighbouring Indian tribes, occupied by a French fort from 1673 till

1758, it began to be settled by the British about 1783, was laid out in 1793, was incorporated as a town in 1838, and as a city in 1846. On the union of the two Canadas, in 1840, the seat of government was established at K., but was removed again in 1845. The city has, in consequence, grown more slowly than many others in the New World, but it numbers already among its buildings some of the finest in Canada. Its harbour, sheltered by Wolfe and Garden Islands, which lie two or three miles off, lined with a row of about twenty wharfs, furnished with a grain-elevator capable of unloading 3000 bushels per hour, is always busy, while navigation is open, especially with the transhipment of cargoes between the vessels which ply on the lakes and those of the St Lawrence and the Rideau Canal. The ship-building of K. is second in Canada only to that of Quebec. The Canadian Engine and Machinery Company manufactures railway rolling-stock on the most approved principles. Besides it, there are several large foundries for the manufacture of engines, locomotive and stationary, of agricultural implements, edge-tools, axles, nails, &c. There are also large tanneries and breweries. Besides its outlets by water, K. communicates with all parts of the country by the Grand Trunk Railway, which passes within two miles of the city, and was in 1863 connected with it by a branch-line. Next to Quebec and Halifax, K. is the most important military position in British America. Queen's University and College at K., incorporated by royal charter in 1841, for the education of a Presbyterian ministry, has since instituted the additional faculties of Law and Medicine, is now equipped with 11 professors and lecturers, and attended by an average of 150 students. There are also a Roman Catholic institution, called Regiopolis College, the county grammar-school, and the common schools, besides several private academies. In 1862, K. became the seat of the new English bishopric of Ontario. Its population in 1871 was about 15,000, who return one member to the provincial parliament. The value of the yearly exports and imports for 1872 was—exports, 1,435,400 dollars; imports, 7,923,387; duties collected, 13,638,745.

KINGSTON, a township and village of New York, U.S., situated on the west bank of the Hudson River, at the terminus of the Delaware and Hudson Canal, 57 miles below Albany. The township contains 3 villages, 18 churches, 3 banks, 4 newspaper offices, and has a large commerce in coal, stone, ice, lime, and cement. The village was burned in 1777 by Sir Henry Clinton. Its population in 1871 was 6315.

KINGSTON, the commercial capital of Jamaica (q. v.), stands on the north side of a landlocked harbour, the best in the island, and, for its size, one of the best in the world. It was founded in 1693, after the neighbouring town of Port Royal had been destroyed by an earthquake. From this place, afterwards rebuilt, it is separated by its noble haven; while, with Spanish Town, towards the interior, it has, since 1846, been connected by a railway of about 10 miles in length. An irrigation canal is in progress, which will fertilise the plain lying between these two towns. K. contains about 32,000 inhabitants. Though the city, as a whole, is like the generality of mere seaports, filthy and disorderly, it yet presents several handsome features. A large square, called the Parade, contains spacious barracks, a Wesleyan chapel, a theatre, and some tolerable dwelling-houses. The negro market for fruits and vegetables is described as a lively and interesting scene. The temperature, which is generally oppressive on the immediate margin of the

bay, becomes gradually mitigated towards the head of the sloping streets, which rise into the region of the sea-breezes. Most of the trade of Jamaica passes through Kingston.

KINGSTON, or KINGSTOWN, capital of the British island of St Vincent, in the West Indies, stands on the south-west coast, with a population of about 5000.

KINGSTON-ON-HULL. See **HULL**.

KINGSTON-UPON-THAMES, a municipal borough and market-town of England, in the county of Surrey, is situated 10 miles south-west of London, on the right bank of the Thames, here crossed by two handsome bridges, one of stone, and the other an iron viaduct on the London and South-western branch railway connecting Twickenham with Wimbledon. The county spring assizes are held in K., alternately with Croydon and Guildford. Educational and benevolent institutions are numerous; there are flour, cocoa-nut fibre, and oil mills, and brick and tile works. Pop. (1871) 25,155. Around the Surbiton Station, on the main line of the London and South-western Railway, distant about a mile and a half from Kingston market-place, has grown up, since 1838, the elegant suburb of Surbiton, now joined to the town. In the neighbourhood are Hampton Court Palace, and Bushy and Richmond Parks. Numerous Roman remains have been discovered in the vicinity of K., and during the Saxon period it had already risen into importance. Here, in 838, a great council was held under Egbert of Wessex and Ethelwolf of Kent, and a treaty agreed to; and here also seven of the Anglo-Saxon kings were crowned. The name is said to be derived from the stone on which the ceremony was performed, which stands in one of the streets, enclosed by a railing. Hampton Wick (pop. 2207) is really part of K., being connected by the bridge, though situated across the Thames, and in Middlesex.

KINGSTOWN, a thriving and important seaport of Ireland, on the S. shore of Dublin Bay, six miles S.E. of the city of that name. Previous to 1817, when the harbour-works were commenced, it was merely a fishing-village. At the visit of George IV. in September 1821, its former name *Dunleary*, was changed to Kingstown. The area of the harbour is 250 acres, with a depth of from 13 to 27 feet. The situation of the town, and the invigorating air, have made K. an important watering-place. The mail-packets sail from K. to Holyhead twice a day, and there is regular communication by steamer between it and the principal Irish and British seaports. Coal, iron, and timber are imported, and cattle, corn, lead ore, and granite are exported. About 1450 vessels of 220,000 tons on an average anchor in the harbour yearly. Pop., which, in 1861, had been 11,584, had risen in 1871 to 16,378. The houses numbered 2964.

KINIC or QUINIC ACID ($2\text{H}_3\text{O}_2\text{C}_2\text{H}_2\text{O}_2$) is an acid existing in combination with quinia in the bark of the cinchonas.

KINK, a twist in a rope or cord, caused by the tightness of the coil, and a relaxation of pressure in the direction of its length. The best rope, however, rarely kinks.

KINKAJOU (*Cercopithecus cancrivorus*), a quadruped of the family *Ursidae*, and allied to the racoons and coatis. By some naturalists it is referred to *Viverridae*. It has six incisors, one canine tooth, and five molars in each jaw, the three hinder molars tuberculous. The K. is larger than a pole-cat, has a yellowish woolly fur, climbs trees, feeds on fruits, honey, &c., as well as on small animals, and from its ravages among the nests of wild-bees, is in

some countries called *Honey Bear*. It is a native of the warm parts of America. The negroes have

Kinkajou (*Cercopithecus cancrivorus*).

transferred to it the name **POTTO**, from a lemurine animal of Africa. It is easily tamed.

KINKEL, **JOHANN GOTTFRIED**, a German author, born at Oberkassel, 11th August 1815. He studied theology at Bonn, and was for some time a distinguished Protestant preacher; but becoming involved in the revolutionary movements of 1848, he was imprisoned in the fortress of Spandau, whence, however, he escaped. K. then went to America, but soon after returned to London, where he has since resided as a public teacher. Both as a poet and as a writer on art, K. holds a distinguished rank. His principal works are—*Predigten über ausgewählte Gleichnisse und Bildreden Christi* (Cologne, 1842); *Gedichte* (Stutt. 1843); *Otto der Schütz, eine Rhein. Geschichte in zwölf Abenteuern* (Stutt. 1843, 9th edit. 1852), a very beautiful narrative poem; *Die Altchristliche Kunst* (Bonn, 1845), which forms the first part of a still unfinished *Geschichte der bildenden Künste bei den Christlichen Völkern*; *Die Ahr, Landschaft, Geschichte und Volksleben* (Bonn, 1846); *Nimrod, ein Trauerspiel* (Hamb. 1857).—K.'s wife, **JOHANNA K.**, a distinguished musician, has written *Acht Briefe über den Clavierunterricht* (Stutt. 1849); and together with her husband, *Erzählungen* (Stutt. 1849). After her death (in 1859) appeared her novel, *Hans Ibeles in London* (Stutt. 1860).

KINNAIRD'S HEAD, a promontory with a light-house, on the north-east coast of Aberdeenshire, Scotland, near Fraserburgh, in lat. 57° 42' N., long. 2° W.

KI'NO, an astringent substance, resembling **CATECHU** (q. v.) and **GAMBER** (q. v.), the concrete exudation of certain tropical trees, especially of *Pterocarpus marsupium*, a native of the mountains of Coromandel, which yields **EAST INDIAN K.**, and of *P. erinaceus*, a native of Gambia, which yields **AFRICAN KINO**. The genus *Pterocarpus* belongs to the natural order *Leguminosae*, sub-order *Papilionaceae*, and has a 5-toothed calyx, and an irregular, nearly orbicular one-seeded pod, surrounded with a wing.

EAST INDIAN K. is the kind which now chiefly occurs in commerce, and is the ordinary **K.** or **gum kino** of the shops. It is in small angular glistening fragments, the smaller reddish, the larger almost black. Thin pieces are ruby red. It is brittle and easily powdered, has no smell, but has

a very astringent taste. **BENGAL K.** is a similar astringent substance, produced by *Butea frondosa*. See **BUTEA**. It has been found capable of the medicinal uses of true kino. **BOTANY BAY K.** is the produce of *Eucalyptus resinifera*. See **EUCALYPTUS**.

The astringency of kino is mainly due to its containing tannic and catechuic acid, and in consequence of this property, it is employed in medicine in certain forms of diarrhoea (especially when a flux seems to be kept up by want of tone in the intestinal capillaries), the best mode of prescribing it being as *compound kino powder*, which is a mixture of kino, cinnamon, and opium, and the dose for an adult ranging from ten grains to a scruple. There is also a *tincture of kino*, which, when properly diluted with water, forms an excellent gargle for relaxation of the uvula.

Kino is employed to a considerable extent in the East Indies as a cotton dye, giving to the cotton the yellowish-brown colour known as nankeen.

KINROSS-SHIRE, after Clackmannanshire, the smallest county of Scotland, lies between the counties of Perth and Fife. Area, 49,812 acres. Pop. (1871) 7198. It is 12 miles in length from east to west, and about 10 miles in breadth. Of its entire area, 30,000 acres are arable, 3000 in wood, and 4500 under water. See **LOCH LEVEN**. Its surface is elevated and gently undulating; its boundaries are hilly, with occasional level openings. On the north and north-west are the Ochil Hills; on the north-east, the Lomonds; and on the south-east and south, Benarty and the Cleish Hills. The streams flow into Loch Leven (q. v.), and issue by the river Leven. The soil inclines to gravel, but is clayey in the districts north and west of the loch. Excellent pasture occurs on the moorlands. For the year 1872, the total acreage under all kinds of crops, bare and fallow grass, was 34,424; under corn crops, 9262; under green crops, 4885; the number of cattle returned was 7082; sheep, 26,627; pigs, 722. This county unites with that of Clackmannan, and with portions of Perthshire, in sending a member to parliament. The capital of the county is the town of Kinross, with a population (1871) of 1926, who are employed chiefly in the weaving of tartan shawls, and in spinning, scouring, and dyeing.

KINSALE, a municipal and parliamentary borough and seaport of Ireland, in the county of Cork, is at the head of Kinsale harbour, which is formed by the estuary of the river Bandon, fourteen miles south-south-west of Cork. A railway to Cork was opened here on the 16th May 1863, and the foundation-stone of a large marine hotel, with floating baths attached, was laid on the same day. The harbour, which is landlocked, is about two miles long, half a mile in average breadth, and is capable of containing 300 ships. K. exports agricultural produce, and imports coal, iron, and timber; its trade, however, owing to the neighbourhood of Cork, is small. Valuable fisheries, estimated at £500 per week in value, are carried on in the district. On the Old Head of Kinsale, a promontory stretching southward into the Atlantic, is a light-house, seen from a distance of twenty-three nautical miles. Pop. (1871) 5248.

KINTYRE. See **CANTIRE**.

KIO'LEN, or **KJOLEN**, an extensive plateau in Scandinavia (q. v.).

KIO'SK, a small ornamental pavilion, much used in India in the decoration of the tombs, ghâts, dams, and other works. It consists of a dome, supported on four or more detached columns, the space under the dome being left open, like the open niches under canopies in Gothic architecture.

KIPTCHA'K, or **KEPTCHAK**, a term which, in the middle ages, designated that vast territory stretching, north of the Caspian Sea, from the Don to Turkestan, and occupied by the Kumans and Polovises. This tract formed one of the four empires into which the huge dominion of Genghis Khan was divided, and was the portion of his eldest son Jüjy, under whose son and successor, Batü Khan, it became the terror of Western Europe, and held Russia in iron subjection from 1236 till 1362. Batü also conquered Bulgaria, and invaded Hungary, Austria, and Eastern Germany, but made no permanent conquests in this direction. This extensive empire was dismembered towards the end of the 15th c., and gave rise to the khanates of Kazan, Astrakhan, and Krim-Tartary. The Mongols of K. were also known as the 'Golden Horde.' Ruins of villages are to be seen in many places, especially near the Volga, and have been visited and described by Pallas, Klaproth, Göbel, &c. They no doubt partly belong to the era of the K. empire, but many are of more ancient date.

KIRĀTĀRJUNĪYA, the name of one of the celebrated poems of Sanscrit literature. Its author is Bhāravi, and its principal subject is the conflict of *Arjuna* with the god *Siva* in his disguise of a *Kirāta*, or mountaineer.

KIRBY, **REV. WILLIAM**, an eminent English naturalist, was born at Winesham Hall, Suffolk, 19th September 1759. He was educated at Caius College, Cambridge, and was afterwards appointed to the curacy of Barham, which he held for fourteen years, when he was preferred to the rectory. This office he held until his death, which happened on the 4th of July 1850, when he had nearly reached the great age of 91. His principal works are *Monographia Apum Angliæ* (Ipswich, 1802), and *Introduction to Entomology* (4 vols. 1817—1826), published conjointly with Mr Spence. The first was very favourably received both at home and abroad, and at once secured for K. a distinguished place among European savants. The second work is written in the form of letters, and was and still is remarkably popular. K. also contributed a variety of very important entomological papers to the *Linnean Transactions*. His greatest discovery in this department of science is that of the genus *Stylops*—the type of a new order of insects, living for a time parasitically in the bodies of bees. He also wrote one of the Bridgewater Treatises, entitled *Habits and Instincts of Animals*. K. was one of the first members of the *Linnean Society* (founded in 1788), honorary president of the *Entomological Society* (founded in 1833), and Fellow of the *Royal and Geological Societies*.

KIRCHENTAG, an association of ministers and laymen of the Lutheran, German Reformed, United Evangelical, and Moravian Churches in Germany, for the promotion of the interests of religion, without reference to their denominational differences. It holds an annual meeting; the place of which is changed from year to year. The first meeting took place in 1848, at Wittenberg, in the church to which Luther affixed his theses. Its discussions and resolutions have exercised a considerable influence in Germany.

KIRGHIS'S, or **KIRGHIS-KAISAKI**, or **COSSACKS OF THE STEPPES**, a people spread over the immense territory bounded by the Volga, desert of Obsh-tchei (in 55° N. lat.), the Irtysh, Chinese Turkestan, Ala-Tau Mountains, the Sir-Daria, and Aral, and Caspian Seas. A few tribes of Kalmycks also live within these boundaries. Over this vast tract reigns a dismal monotony; the country has scarcely any important elevation or depression, no river of

consequence runs through it, no great forest breaks the uniformity of the scene; it is a vast steppe, containing 850,000 English square miles, sterile, stony, and streamless, and covered with rank herbage of five feet high. It abounds in lakes and marshes, the water of which is generally brackish and unserviceable, and in the southern portion lies the Kara-Kum, an extensive salt desert.—The K. are a Turkish race, and speak the dialect of the Uzbeks, from whom they profess to be descended. They have, from time immemorial, been divided into the *Great, Middle, and Little Hordes*. The first of these wanders in the south-west portion of the Russian steppe, partly in the Russian provinces north of the Ala-Tau, and partly in the territories of China and Khokan. They are subject to the rulers within whose bounds they dwell. The Middle Horde possesses the territory (called the *country of the Siberian Kirghises*) between the Ishim, Irtysh, Lake Balkhash, Khokan, and the territory of the Little Horde; and also a great portion of the Russian province of Semipolatsinsk. They are quite independent (though Russia arrogates sovereignty over their territory), with the exception of a small number in Semipolatsinsk. The Little Horde (now more numerous than the other two together) ranges over the country bounded by the Ural, Tobol Siberian K., and Turkestan. Like the Middle Horde, they are claimed as subjects of the czar, though completely independent. This horde is partly agricultural, partly nomad. A small offshoot of the Little Horde has, since 1801, wandered between the Volga and the Ural river, and is under rule of the governor of Astrakhan. South of Lake Issikul, is a wild mountain tribe called the *Diko-Kamennaja*, the only tribe which calls itself Kirghis. They are called by their neighbours Kara-K. or Black K., and are of Mandshûr stock. A portion of them are subject to Russia. Their collective numbers are estimated at upwards of $1\frac{1}{2}$ million of souls, more than half of whom belong to the Little Horde.

KIRKCALDY, a royal and parliamentary burgh, seaport, and market-town in the county of Fife, Scotland, a place of growing commercial importance. Including the suburbs of Linktown and Newtown of Abbotshall on the west, and Pathhead, St Clairtown, and Gallatown on the north-east, it is fully three miles in length; hence the name of the 'Lang Town.' Its harbour is commodious, and there is wet-dock accommodation for ships of considerable burden. There is regular communication by steamers with London, Newcastle, Leith, and Glasgow. Its manufactures are spinning flax, tow, and jute, and bleaching and weaving linen yarns, which are extensively carried on, the products being the usual varieties of linen cloth; mechanical (including marine) engineering on a great scale; iron-founding; brewing; and tanning. There are also several potteries. The manufacture of floor-cloth and wax-cloth has been recently developed into a great trade, and K. is the chief seat of this growing and important manufacture. There is a very ample supply of water by gravitation. In 1872, 651 vessels of 38,923 tons entered and cleared the port. Pop. of parl. burgh in 1871, 12,422. K. is the birthplace of the author of the *Wealth of Nations*; and more recently, Edward Irving and Thomas Carlyle were teachers here.

KIRKCUDBRIGHTSHIRE, more properly the Stewartry of Kirkcudbright, a county in Scotland, comprehending the eastern district of Galloway, is bounded on the N. and N.E. by the counties of Ayr and Dumfries, on the E. and S. by the Solway Firth and the Irish Sea, and on the W. by the

county of Wigton. Its length from east to west is from 45 to 50 miles, and its breadth is about 40 miles. Its area is 954 square miles, or 610,734 acres, of which there are 184,761 acres under rotation of crops and grass. The rest is composed of hilly and mossy ground, and lakes, of which there is one in almost every parish. Some of the hills, one-fourth of which are of granite, are of considerable altitude; among which are Cairnsmore, 2597 feet; Criffel, 1831 feet; and Cairnharrow, 1110 feet. There are several considerable rivers, the principal of which are the Cree and the Dee; the latter of which is navigable for two miles above Kirkcudbright.

There are upwards of 400 landowners, many of whom possess small bounds, and farm their own land. One-half of the land is under entail. The occupants number 1377. The valued rent for 1674 was £9549. The valuation for 1872–1873 (exclusive of royal burghs) was £322,752; that of railways was £29,460. In the year 1872 the total acreage under all kinds of crops, bare and fallow grass, was 168,735; under corn crops, 34,223; under green crops, 18,850. The total number of cattle returned was 40,030; sheep, 390,510; pigs, 8954; horses used solely for agriculture, 5114. The condition of the rural inhabitants, and the state of agriculture of this county, up to almost the end of last century, was very primitive; the principal food of the people in the early part of the century, was kail, and oats ground in querns turned by the hand, and dried in a pot; but arable husbandry has been improved of late, while great attention is being paid to the rearing of cattle. The principal towns are Kirkcudbright, the county-town, with a population of 2464; New Galloway, Creetown, Gatehouse, Castle-Douglas, &c. Before the Reformation, the stewartry possessed more monasteries than any other county of Scotland. There have been a few eminent men of letters connected with this county, of whom the most celebrated were Dr Alexander Murray, the linguist, and Dr Thomas Brown. The population in 1871 was 41,859. The constituency number 2014, who return one member to parliament.

KIRKDALE CAVE, near Kirkdale Church, in the vale of Pickering, Yorkshire, is famous for the numerous remains of Tertiary mammals which have been found in it. It was discovered in 1821, in the cutting back of an oolitic limestone rock in which it is situated. It was examined by Buckland, and fully described by him in his *Reliquiæ Diluvianæ*. Its greatest length is stated at 245 feet, and its height generally to be so inconsiderable, that there are only two or three places where a man can stand erect. The fossil bones are contained in a deposit of mud that lies on the floor of the cave: this is covered by stalagmite formed by the water, highly charged with carbonate of lime, dropping from the roof. The remains of the following animals have been discovered: hyæna, tiger, bear, wolf, weasel, elephant, rhinoceros, hippopotamus, horse, ox, deer, hare, rabbit, water-rat, raven, pigeon, lark, and duck.

KIRKHAM, a market-town of England, in the county of Lancaster, is situated on a small tributary of the estuary of the Ribble, $8\frac{1}{2}$ miles west-north-west of Preston. Sail-cloth, sacking, cordage, and cotton fabrics are manufactured. Pop. (1871) 3593.

KIRKINTILLOCH, a burgh of barony and market-town in Dumbartonshire, Scotland, is situated on the Forth and Clyde Canal, about six miles north-north-east of Glasgow. It had its origin in a fort on Antoninus' Wall, and is said to have been called at first *Caerpentulach* (the fort at the end of the ridge), of which its present name is supposed to be a corruption. It became a burgh of barony in the time of William the Lion. Hats and cotton cloths

are manufactured here, and there are bleaching and printing works, collieries, iron-stone mines, and quarries. Pop. (1871) 6139.

KIRK-ROAD, in the Law of Scotland, means a road used by the inhabitants of a district (generally a short cut) for the purpose of going to church. Such a right to a road, if ancient, is recognised as valid in Scotland, and also in England and Ireland.

KIRK-SESSION, in Scotland, &c., the lowest court in Presbyterian churches; being the governing body of a particular congregation, and composed of the 'minister' and 'elders' of the congregation. An appeal may be taken from the kirk-session to the presbytery, and thence to the higher courts of the church. Subject to this appeal, the kirk-session exercises discipline in regard to all members of the congregation, suspending from or restoring to the *privileges* of the church; and questions of this kind must originate in the kirk-session, and be primarily determined there. The functions of the kirk-session were, in former times, too often inquisitorially exercised; but this is now less frequently attempted, and the danger of it is continually diminishing through the growth of an enlightened public opinion. In former times, also, the kirk-session in Scotland often imposed fines, chiefly for offences against the seventh commandment; but this practice had no recognition in civil nor even in ecclesiastical law, and is now wholly relinquished. The kirk-session of the Established Church in each parish is fully recognised in Scottish law as having certain rights and duties with respect to the poor, but recent legislation has very much deprived it of its former importance in this relation.

KIRKWALL, a royal and municipal burgh, seaport, and market-town of Scotland, capital of the county of Orkney, is situated on the north-east coast of Mainland, about 26 miles north-north-east of John O'Groats House. Its chief building is the cathedral of St Magnus, a fine cruciform structure, in mixed Norman and Gothic, dating from about the year 1138. In the choir of this cathedral, service is still held. Around it are the ruins of the King's Castle, the Earl's Palace, and the Bishop's Palace. The town has been greatly improved within recent years. Numerous shops have been established, so that the commercial transactions are now not confined to the annual fair in August, as they were formerly. The export-trade, chiefly in agricultural produce, is increasing rapidly. K. unites with the Wick burghs in sending a member to parliament. Its parliamentary and municipal constituency numbers 434, and the annual value of real property at the valuation 1872-1873 was £7011. Pop. (1871) of parliamentary burgh, 3434.

KIRSANOFF, a town of Great Russia, in the government of Tambov, in lat. 52° 39' N., long. 44° 44' E. Horses and fine fleeced sheep are reared here, common cloth is manufactured, and there are two annual fairs. Pop. 5665.

KIRSCHWASSER (Ger. cherry-water) is a liqueur made from cherries, and highly esteemed in Germany. The cherries, gathered when quite ripe, and freed from their stalks, are pounded in a wooden vessel, but so that the stones are not broken. They are then left to ferment, and when fermentation has begun, the mass is stirred two or three times a day. The stones are afterwards broken, and the kernels broken and thrown in. By distillation, kirschwasser is obtained. Kirschwasser is sometimes called *Cherry Brandy*, but the common cherry brandy is made by mixing brandy with the juice of cherries.

KISFALUDY, SANDOR (ALEXANDER), a Hungarian poet, who exercised a great influence on the development of the language and literature of his native country, was born at Sümegh (county of Szalad), 22d September 1772. He studied at Raab and Presburg, and after serving for several years in the Austrian army, retired to his paternal estate, to devote himself to literature and farming. The first part of his lyrical master-piece, *Himfy's Szerelmei* (Himfy's Love), which appeared anonymously in 1800, was received with unbounded applause. K. was spoken of as the 'Great Unknown.' On the publication of the second part in 1807, the author threw aside his mask. In the same year, he published his *Regék a Magyar Előidőből* (Legends of the Olden Time in Hungary), which are marked by depth of feeling, and by elegance and simplicity of style. K. now attempted tragedy, and took Schiller as his model. Some of his historical dramas are worthy of mention, for example, his *János Hunyadi*, and *Ladislaus the Cumanian*. Some of his pieces, illustrating the family life of his countrymen, are among the best on the Hungarian stage. A complete edition of his writings appeared at Pesth, in 8 vols., 1833-1838. He died at Sümegh, 30th October 1844.

KISFALUDY, KAROLY (CHARLES), younger brother of the preceding, was born 19th March 1790. He is of greater importance in connection with the development of the Hungarian theatre than his brother, being regarded as the founder of the national drama. In 1817, he took up his residence in Pesth, and published in rapid succession a series of poems, tales, dramas, and comedies, which secured for him the highest popularity as an author. Of these, his comedies are by far the most valuable. The best of them were translated into German by Gaal (*Theater der Magyaren*, Bonn, 1820). K. died at Pesth, 21st November 1830.—The *Kisfaludy Society*, so named in honour of the brothers, was established in 1817, and has rendered important services to Hungarian literature.

KISHM (the ancient *Oaracta*), an island of Persia, belonging to the Imam of Muscat, is situated at the mouth of the Persian Gulf, and is about 70 miles in length by 12 in average breadth. It is separated from the mainland by a deep and dangerous strait, in which are several small wooded islets. K. yields in abundance grain, timber, dates, and vegetables, and supports numerous cattle. At its eastern extremity is a town of the same name, the capital of the island. Entire pop. estimated at 5000.

KISS, AUGUST, a distinguished German sculptor, was born at Plesz, in Upper Silesia, 11th October 1802. He studied under Rauch at Berlin, and gradually acquired a high reputation, which was greatly increased on the completion, in 1839, of the model of his celebrated colossal group of the 'Amazon attacked by a Panther,' for the execution of which in bronze, now the ornament of the Museum Stairs in Berlin, the sum of 40,000 thalers was subscribed with the greatest enthusiasm on the part of the public. A bronzed zinc model of this group was regarded with the highest admiration at the Great Exhibition in London (1851). His 'St George and the Dragon,' which occupied a prominent place at the Paris Exhibition (1855), was much less favourably criticised. Among his other important works are a 'St Michael overthrowing the Dragon,' 'A Tiger destroying a Serpent,' and a statue of Frederick the Great.

KISSINGEN, a town of Bavaria, in Lower Franconia, celebrated for its mineral waters, is situated in the valley of the Saale, 30 miles

north-north-east of Würzburg. Of its three mineral springs, the *Rakoczy* and the *Pandur* furnish saline and chalybeate waters, the *Maxbrunnen* are acidulous and alkaline. A spring called the *Soolen-Sprudal* is remarkable for the periodical ebb and flow of its waters, caused apparently by the accumulation and discharge of carbonic acid gas. The waters are both drunk and used as baths by the patients, and are considered specially efficacious in cases of chronic disease, gout, &c. From 400,000 to 500,000 bottles are exported from K. annually. Since 1848, gaming-tables have been forbidden here by the Bavarian government. Pop. 1926.

KI'STNAH, or KRI'SHNA, a river of the peninsula of Hindustan, rises within 40 miles of the Arabian Sea, at a height of 4500 feet, in lat. 18° 1' N., and flowing eastward, falls into the Bay of Bengal, after a course of 800 miles. It forms a considerable delta at its mouth. Within the lower or level basin of the stream, artificial means have extended irrigation at an expense of £150,000, the principal work being an annicut or embankment across the stream at the head of the delta. The principal tributaries are the Bimah, the Tungabhadro, and the Musi.

KIT, in military language, the equipment in necessities, such as shirts, boots, brushes, &c., of a soldier, but not applicable to his uniform, arms, or accoutrements. Formerly, a high bounty was given, and then severely encroached upon, by making the recruit pay for his kit. As this system led soldiers often to allege that they had been enlisted on a false understanding, the system was changed in 1855, the fairer principle adopted of issuing a free kit to each recruit, with a smaller bounty. The soldier has still to replace necessities, worn out or lost, at his own expense, but he obtains the articles at wholesale, and very low prices. As these necessities are so cheaply procured, it is held a very heavy military offence to make away with them, and is ordinarily punished with great severity.

KIT, a small narrow-bodied violin, about 16 inches long, capable of being carried in the coat-pocket, and used chiefly by teachers of dancing.

KITCHEN-GARDEN, a garden devoted to the cultivation of culinary vegetables, or that part of a large garden which is specially appropriated to this use. As the crops of the kitchen-garden are not generally very pleasing to the eye, care is taken, if possible, that it may not be within view of the principal windows of a mansion-house, or otherwise obtruded on notice. But regard must also be had, in the selection of a situation for the kitchen-garden, to exposure, shelter, &c., in which it needs and deserves every advantage that can be obtained. Nor, in order to hide it from view, ought it to be so surrounded with trees as to deprive it either of sunshine or of free access of air.

The general remarks made in the article GARDENING as to soil and the preparation of it, manuring, water, gardening operations, &c., are all applicable to the kitchen-garden; a part of which, or a place close beside it, is always allotted to compost heaps and the processes connected with them. The successful cultivation of a kitchen-garden requires constant care and labour. Many crops require frequent digging and hoeing during the period of their growth, and the ground must be kept free of weeds as perfectly as in the flower-garden itself. A rotation of crops is of as much importance in the kitchen-garden as in the farm; cabbages and their congeners, potatoes, leguminous crops, &c., must not from year to year be grown on the same ground. But there are some perennial plants which occupy the same ground for years, as artichoke, asparagus, and

sea-kale, and attention must be paid to this in laying out the garden.

The crops cultivated depend, of course, on climate. It will be enough to enumerate here the most important kitchen-garden crops of Britain, referring for further information to each as a separate head. The capitals indicate those most generally cultivated. The varieties of *Brassica oleracea*; KALE, CABBAGE, COLEWORTS, SAVOYS, BRUSSELS SPROUTS, CAULIFLOWER, BROCCOLI, Kohl-rabi, &c. POTATO, JERUSALEM ARTICHOKE, TURNIP, CARROT, PARSNIP, RADISH, RED BEET, SKIPIRET, SALSIFY, SCORZONERA, BEAN, PEA, KIDNEY-BEAN, SCARLET-RUNNER, ONION, LEEK, GARLIC, SHALLOT, Rocambole, Welsh Onion, SPINACH, White Beet, ASPARAGUS, SEA-KALE, ARTICHOKE, LETTUCE, CRESS, MUSTARD, Sorrel, Corn-salad, Endive, CELERY, PARSLEY, HORSE-RADISH, RHUBARB.

Sweet herbs are to be found in almost all gardens, as Thyme, Lavender, Sage, Spearmint, Balm, Marjoram, Savory, &c. The cultivation of the pumpkin, vegetable marrow, and all kinds of gourds, and of the melon and cucumber, is regarded as belonging to the kitchen-garden; which also contains the houses or pits employed for forcing both vegetables and fruits. And the hothouses in which fruits are grown for culinary use, are very generally placed in the kitchen-garden. The cultivation of mushrooms, whether in beds or otherwise, belongs to the kitchen-garden.

KITE (*Milvus*), a genus of *Falconidae*, or a sub-family including *Elanets*, &c., of which only one species is a common native of Britain, and another is amongst its rarest visitants. The kites have much weaker bill and talons than the falcons and

Kite (*Milvus vulgaris*).

hawks, but the wings are much longer, and the tail is rather long and forked. Their legs are short. They are remarkable for their gracefulness of flight, and power of sailing and wheeling about, or gliding in the air. A Scotch and local English name of the COMMON KITE (*M. vulgaris*), GLEAD or GLED, is believed to be from the same root with *glide*. The common K. is found in almost all parts of Europe, the north and centre of Asia, and the north of Africa. It is fully two feet in length, from the tip of the bill to the tip of the tail, the plumage mostly brown, of various shades, in some parts mixed with gray. It feeds on reptiles, mice, moles, and other small quadrupeds, and the young of gallinaceous birds, searching for its prey on the

ground, and often from no small elevation in the air. It sometimes catches fish. In former times, when it was much more plentiful in Britain than now, it was the scourge of poultry-yards, pouncing on young chickens. It was also the scavenger of London and other English towns, devouring the offal, as it still does in some of the towns of Eastern Europe, and performing its office fearlessly even in the midst of the people. This continued to be the case in London to the time of Henry VIII. The K.'s nest is usually in the fork of a tree in a thick wood. It is easily tamed.—A very rare British bird is the Swallow-tailed K. (*Nauclerus furcatus*), a smaller bird than the common K., abundant in many parts of North America.—The GOVINDA K. (*M. Govinda*) is common in India.—Other species are found in different parts of the world.

KITTIWAKE (*Larus tridactylus*, or *L. rissa*), a species of GULL (q. v.), interesting on account of its abundance in very northern regions, and its importance to their inhabitants. In addition to what is stated in the article GULL, it may be mentioned that the young of the K. has dark markings in its plumage which disappear in the adult, is known on

Kittiwake (*Larus tridactylus*).

some parts of the British coasts as the TARROCK, and was for some time regarded by naturalists as a distinct species; also that the flesh of the K. is much more pleasant than that of most gulls, and its eggs very good; that it lays usually three eggs, which are fully two inches in length. It is found plentifully in all the northern parts of the world, wherever the coast is high and rocky, migrating southwards in winter, and extending its range as far south as the Mediterranean and Madeira. It is found on the Caspian Sea.

KITTO, DR JOHN, a most industrious and respectable writer on biblical subjects, was born at Plymouth, December 4, 1804. In his 12th year, he lost his power of hearing, in consequence of a fall from a height of 35 feet. His father's circumstances were at this time so wretched, that young K. was soon after sent to the workhouse. Here he learned the trade of shoemaking, and was also enabled to indulge that taste for reading which had marked him from his earliest years. In 1824, he went to Exeter to learn dentistry with a Mr Grove, who had known him in Plymouth, and who took a warm interest in the unfortunate youth. Mr Grove encouraged K. in his literary aspirations, and in 1825 he published *Essays and Letters by John Kitto*. In the same year, he was sent, by the kindness of various friends, to the Missionary College at

Islington, to be trained for some useful employment abroad. In May 1829, he accompanied Mr Grove and family on a tour to the East, visiting in the course of his travels St Petersburg, Astrakhan, the Kalmuck Tartars, the Caucasus, Armenia, Persia, and Bagdad. He returned to England in 1833. The rest of his life was spent in the service of the booksellers, chiefly in that of Mr Charles Knight, by whom he was liberally treated. He died at Cannstadt, in Würtemberg, whither he had gone for the benefit of his health, November 23, 1854. His principal works are—*The Pictorial Bible* (1838; new edition by W. and R. Chambers, 1855), *Pictorial History of Palestine* (1839—1840), *History of Palestine* (1843), *The Lost Senses—Deafness and Blindness* (1845), *Journal of Sacred Literature* (1848—1853), and *Daily Bible Illustrations* (1849—1853). He also edited the *Cyclopædia of Biblical Literature* (published by A. and C. Black). K.'s biography has been written by Dr J. E. Ryland (1856); a later and better biography is that by Professor Eadie of Glasgow. In 1844, the university of Giessen conferred on him the title of D.D.

KIUNG-CHAU', chief city of the island of Hainan (q. v.).

KI'ZIL-KUM (Red Sand), a sandy desert in the north of Turkestan, lying between the Amu-Daria and Sir-Daria, and stretching from the Sea of Aral to Khokan, in lat. 41°—46° 30' N., and long. 60°—69° E. A continuation of this desert northwards across the Sir-Daria is called KARA-KUM (Black Sand) and forms portion of the Kirghis Steppe.

KIZLIA'R, a town in the south of Russia, in the government of Stavropol, is situated about 40 miles from the mouth of the river Terek, in lat. 43° 53' N., long. 46° 43' E. It contains a fortress, many vineyards, tanneries, and silk-worm nurseries, and carries on an extensive trade in wine, brandy, and fish. A model vineyard and a school for instruction in wine-making have been established here. The climate is unhealthy. Pop. 8245.

KLA'GENFURT, a town of Austria, capital of the crownland of Carinthia, is situated on the river Glau, two miles east of the *Wörthsee*, with which it is connected by means of a canal, and about 80 miles north-north-east of Trieste. It is the seat of the Prince-bishop of Gurk, and has a library of 50,000 vols. K. has a white-lead factory—the largest in Austria—and manufactures woollen, silk, and cotton fabrics. An active transit trade is here carried on. Pop. 15,000. Here the Hungarian general Görgei has been confined since his surrender to the Russians at Világos in 1849.

KLAPKA, GYORGY (GEORGE), one of the most heroic and skilful generals of the Hungarian war, is the son of the burgomaster of Temesvar, and was born 7th April 1820. In 1838, he entered the Austrian army, and had attained the rank of lieutenant-colonel when the revolution of 1848 burst out. K. instantly placed himself at the service of the Hungarian government, and took a prominent part throughout the struggle. The plan of the Hungarian campaign in the opening of 1849, which was carried out with such great success, was K.'s work. In several of the battles, the fortune of the day was decided by the troops under his command. But the crowning glory of his patriotic career was his defence of Comorn (q. v.), at the close of the revolution. His famous sally on the 5th of August was perhaps the most splendid deed of arms in the whole war. The Austrian army besieging the fortress was utterly routed, losing 30 pieces of artillery, 3000 muskets, vast quantities of provisions, and about 2000 head of cattle. K. was

prepared to carry the war into Austria or Styria, but the news of the surrender of Görgei, and the flight of Kossuth, paralysed his action. He held out, however, until the 27th September, when he capitulated to General Haynau, on condition that the garrison should retain their lives and liberties. K. then proceeded to England, but afterwards to Genoa. In 1859, he was requested by the Sardinian government to form a Hungarian Legion, to be used in the war against Austria, but the peace of Villafranca destroyed his hopes of active service. K. has written, among other works, *The National War in Hungary and Transylvania* (2 vols. Leip. 1851), one of the best and most authentic works on the subject; and *The War in the East*, &c. (Lond. 1855).

KLAPROTH, HEINRICH JULIUS VON, one of the greatest oriental linguists that ever lived, was the son of Martin Heinrich Klaproth, an eminent chemist, and was born at Berlin, October 11, 1783. He betook himself to the study (secretly) of the Chinese language, when only a boy of fourteen, having previously found out that there was a small collection of Chinese books in the public library of Berlin. In 1801, he entered the university of Halle, where he continued for several years. Here he published his *Asiatischer Magazin*, which gave him a high reputation. Having gone to Russia in 1805, in company with his friend, Count Potocki, he was appointed interpreter to the Russian embassy to China. The embassy proceeding nearly 200 miles into Mongolia, was ordered by the Chinese emperor to return, as 'he did not want to see them;' but K. took the opportunity of exploring Siberia. He was soon after despatched on a scientific mission to the Caucasus: the results of his valuable explorations are contained in his *Reise in den Kaukasus und Georgien in den J. 1807 und 1808* (2 vols. Halle, 1812—1814; French, with numerous additions, Paris, 1823). While in Russia, he received many honours. In 1812, he left the Russian service, and returned to Germany; but finally settled at Paris in 1815, where he died, 20th August 1835. K.'s literary activity, especially after 1815, was something prodigious; yet, strange to say, it was accompanied by an excessive love of pleasure, for the gratification of which Paris afforded him only too many facilities. His writings relate to the languages and history of the East, more particularly of China, and to the geography of the Russian empire; they are marked by immense learning and extraordinary acuteness, but unfortunately they also contain the most virulent attacks on other scholars. Among his works, we may mention *Geographisch-historische Beschreibung des Oestlichen Kaukasus* (Weim. 1814); *Beschreibung der Russ. Provinzen zwischen dem Kaspisee und Schwarzen Meere* (Berl. 1814); *Verzeichniss der Chines. und Mandchuischen Bücher und Manuscripte der Königl. Bibliothek in Berlin* (Paris, 1822); *Asia Polyglotta* (with tables, 1823; 2d edit., Paris, 1829, with a life of Buddha according to the Mongolian legends), a work in which the various Asiatic nations are classified according to the affinities of their languages, and the beginning of their authentic history determined; *Tableaux historiques de l'Asie depuis la Monarchie de Cyrus jusqu'à nos jours* (4 vols. Paris, 1824—1826, with 24 maps); *Mémoires relatifs à l'Asie* (Paris, 1834); *Collections d'Antiquités Egyptiennes* (Paris, 1829); *Examen Critique des Travaux de M. Champollion jeune sur les Hiéroglyphes* (Paris, 1832); *Notice d'une Mappede monde et d'une Cosmographie Chinoises publiées en Chine, l'une en 1730, l'autre en 1793* (Paris, 1833).

KLATTAU, a town of Bohemia, in a fertile district, 63 miles south-west of Prague. It contains

a castle and gymnasium, and carries on manufactures of woollen cloth and leather. Pop. 6300.

KLAUSENBURG, a town of Austria, capital of the crownland of Transylvania, is situated on the Little Szamos, 80 miles east-south-east of Grosswardein. It is surrounded by old walls, and is divided into the old and the new town. Among its public buildings are a lyceum, a gymnasium, several hospitals and other institutions, benevolent and educational. Woollens, earthenware, and paper are manufactured. The trade of K. is not important. Pop. 19,346.

KLAUSTHAL, a celebrated mining-town of Hanover, on a bleak plateau of the Upper Harz, 25 miles north-east of Göttingen. Situated 1792 feet above sea-level, so that the potato is the chief crop that can be cultivated with success, the inhabitants find their principal employment in the mines and foundries. The ores raised are silver, lead, zinc, copper, and iron. 2000 workmen are employed in the mines, and 1000 in the foundries. In the mint, 14,000 thalers (equal to £2027) are coined weekly. Although the arrangements and appointments of the mines are very complete, yet their produce has greatly declined, and scarcely repays the management of government, into whose hands they have almost all fallen. Pop. with suburbs 14,000.

KLEBER, JEAN BAPTISTE, a distinguished general of the French Republic, born 6th March 1753, at Strasburg, where his father was a garden-labourer. Having received a good education, he entered the Austrian army, but returned to France, and embracing the cause of the Revolution, rapidly rose to high military rank. He accompanied Bonaparte to Egypt as a general of division, was dangerously wounded at the capture of Alexandria, but recovered so as to take part in the expedition to Syria, and won the battle of Mount Tabor. When Bonaparte left Egypt, he intrusted the chief command there to K., who concluded a convention with Commodore Sidney Smith for its evacuation; but on Admiral Keith's refusal to ratify this convention, K. adopted the bold resolution of reconquering it, and destroyed the Turkish army at Heliopolis. During an attempt to conclude a treaty with the Turks, K. was assassinated by a Turkish fanatic at Cairo, 14th June 1800.

KLENZE, LEO CHEVALIER VON, a distinguished German architect, was born in 1784, in the principality of Hildesheim, and having studied architecture in Berlin and Paris, was appointed architect to King Jerome of Westphalia in 1808; held a similar position at the court of Bavaria from 1815 to 1839, and in 1833 was raised to the rank of hereditary nobility in that kingdom. In 1834, he was sent to Athens, to superintend the reconstruction of that capital, and in 1839 went to St Petersburg, to execute some works for the Emperor of Russia. Many of the finest buildings recently erected on the continent of Europe are monuments of K.'s genius, such as the Glyptothek, the Pinakothek, the Walhalla, and many other structures in Munich, the Imperial Museum at St Petersburg, and several buildings in Athens. He is the author of several works, chiefly on the subject of architecture.

KLEPTOMANIA (Gr. *klept*, to steal). Among the ordinary phenomena of minds that are not regarded as insane or criminal are observed inordinate tendencies to acquire, to collect, to hoard. So long as such an impulse does not interfere with the rights and property of others, or involve a flagrant breach of law, it is readily admitted as an indication of disease, or as an absurdity and eccentricity which may fairly consign the individual to an asylum or

to contempt, but concerns no one else. But whenever the amount of the object appropriated, or the circumstances under which it is purloined, bring the matter into a court of law, the act is treated as a theft, and punished. In many cases, however, such conduct is the obvious result of disease. The inclination to steal is a premonitory indication of many forms of mental disorder: it is a characteristic symptom of many others, where violence, or delusions, or incoherence, leave no doubt as to the source from which it springs. But there are other cases in which the morbid origin cannot be so clearly demonstrated—where the mind is clear and cogent, the morals pure, and where theft is the only proof of insanity. There is evidence, however, in favour of the opinion, that the propensity to acquire may become so irresistible, and the will so impotent, that the appropriation is involuntary, and the perpetrator irresponsible. The gratification of the impulse is found associated with physical changes and conditions which may be regarded as incompatible with the healthy discharge of the functions of the nervous system; but the connection is not invariable, and the best mode of establishing the reality of such a disease is to consider marked cases in relation to the character, interests, and previous deportment of the individual—to the nature of the articles taken—and to the motives which seem to have determined the action. A baronet of large fortune stole, while on the continent, pieces of old iron and of broken crockery, and in such quantities, that tons of these collections were presented to the custom-house officers. A clergyman of respectable bearing and great usefulness abstracted from book-shops and stalls hundreds of copies of the Bible, perhaps with the intention of distribution. A physician pocketed some small object whenever he entered the apartment of a patient; another member of this profession stole nothing but table-cloths. The incongruities in such narratives point to the existence of deep-seated unhealth. Although each case must be tested on its own merits, there are various features, common to a number of even doubtful cases, which should be embraced wherever a judgment is formed. The objects are often stolen ostentatiously, or without any adequate precautions to conceal the attempt; they are of no value in themselves, or useless to the thief; the act is solitary, independent, without motive, and promptly and spontaneously avowed, and, if overlooked, repeated. The article acquired is restored, or altogether disregarded; and although money is rarely taken, bright and coloured objects most generally excite cupidity. It is observed in extreme youth; it is associated with pregnancy; it is hereditary; and often follows affections of the brain, and those critical and crucial changes in disposition which are only explicable on the supposition of corresponding alterations in the organisation.—*A Manual of Psychological Medicine*, by Drs Bucknell and Tuke, pp. 224 *et seq.*; *Ann. Med. Psychol.*, t. v. p. 666 (1853).

KLIAZMA, a river of Russia, an affluent of the Oka, rises in the government of Moscow, and flows east through those of Vladimir and Nijni-Novgorod, joining the main stream near the town of Gorbatof, after a course of 327 miles, for the last 150 of which it is navigable. Passing through the most industrial governments of Russia, it is one of the principal commercial arteries of the empire.

KLINKET, a term in Fortification, signifying a small postern or gate in a palisade.

KLOPSTOCK, FRIEDRICH GOTTLIEB, a German poet, was born 2d July 1724, at Quedlinburg, and went to Jena in 1745, to study theology. He had

already formed the resolution to write a great epic poem, and thought of Henry the Fowler as a good subject for one; and at Jena he composed the first cantos of his *Messiah*. In 1746, he passed to Leipsic, and there became acquainted with the editors of the *Bremische Beiträge*, in which the first three cantos of the *Messiah* appeared in 1748. They attracted great attention: the author was pronounced a religious poet of the highest order. He was now invited to Copenhagen, upon the recommendation of the minister Bernstorff, and introduced to the king, whom he accompanied on his travels. In 1771, K. settled in Hamburg, with a sinecure appointment and a pension from the Danish government, and subsequently received an honorary title and a pension from the Markgraf, afterwards Grand Duke, of Baden. In 1773, the last five cantos of his *Messiah* were published at Halle. He died 14th March 1803. K.'s name has (or rather perhaps *had*) a very high place in German literature. Whatever may be thought of the intrinsic value of his poetry, it cannot be denied that he exercised a very important and beneficial influence on the national taste. The greatest of his successors, Goethe, acknowledged this, though he also expressed the opinion, that K. had become rather obsolete, or at least that his conception of poetry had become so. When K. first began to write, the literature and social life of Germany were penetrated by French influences. A cold, correct, unimaginative spirit tyrannised over the thought and habits of the people. K. broke loose at once from this shallow despotism, and breathed the air of Freedom into German poetry. Odes, tragedies—in which he introduces Hermann (q. v.) the Cherusian as a national hero—and biblical dramas, with some hymns, which still find a place in collections, constitute the remainder of K.'s poetry. His works were collected and published in 12 vols. (Leip. 1799—1817), in 18 vols. (1823—1829), in 9 vols. (1839). The *Messiah* has been translated both into verse and prose in English.

KNAPP, ALBERT, a German poet, author of many of the best modern German hymns, is a native of Würtemberg, and was born in 1798. He studied for the church, and is now the principal clergyman in Stuttgart. K. has breathed a new life into that long-neglected branch of poetry—the religious hymn. Many of his effusions are to be found in the *Christoterpe*, a periodical edited by him since 1833. His *Christliche Gedichte*, in 2 vols. (Stuttg. 1829; 3d edit., Basel, 1843), to which a third was added under the title of *Neuere Gedichte* (Stuttg. 1834), were published by his friends. His later hymns are contained in his *Gedichte* (Stuttg. 1843). K. is equally distinguished as a hymnologist. His *Evang. Liederschatz für Kirche und Haus* (2 vols. Stuttg. and Tüb. 1837; 2d edit. 1850) is one of the most valuable collections of Christian hymns of all ages, to which his *Christenlieder* (Stuttg. 1841) forms a splendid supplement. His *Hohenstaufen* (Stuttg. 1839) is a cycle of religious songs and poems.

KNAPSACK, a bag of canvas or skin, containing a soldier's necessities, and worn suspended by straps between his shoulders. Those used in the British army are ordinarily of black painted canvas; but some other nations, as the Swiss, make them of thick goat-skin, dressed with the hair on. The knapsack affords by far the easiest way of carrying light personal luggage during a march or walking-tour.

KNAPWEED. See CENTAUREA.

KNARESBOROUGH, a parliamentary borough and market-town of England, in the West Riding of Yorkshire, on the left bank of the Nidd, 18 miles

west-north-west of York. St Robert's Cave, in the vicinity, is well known for the murder committed there by Eugene Aram in 1745. Manufactures of linen and cotton goods are carried on here. K. has returned two members to the House of Commons since 1553. Pop. of parliamentary borough, 5205.

KNAVESHIP, in the Law of Scotland, is a proportion of the grain given to the miller's servant who performs the work of the mill, such mill being an ancient mill to which a right of thirlage is attached. See **THIRLAGE**, **INSUCKEN MILTURES**.

KNEE, in Ship-building, an angular piece of wood or iron used to connect the deck-beams with the ribs of the vessel's sides. The knees are fastened on both vertically, above and below, and horizontally, whereby great stability is imparted to the whole framework of the ship.

KNEE-JOINT, **THE**, is the articulation between the femur or thigh-bone, above, and the tibia or shin-bone, below. A third bone, the patella, or kneecap—one of the Sesamoid Bones (q. v.), and not a true bone of the skeleton—also enters into the structure of this joint anteriorly. The articular surfaces of these bones are covered with cartilage, lined by a synovial membrane or sac, which is the largest and most extensive in the body, and connected together by ligaments, some of which lie external to the joint, while others occupy its interior.

The most important of the external ligaments are the anterior or *Ligamentum Patellæ*, which is in reality that portion of the *Quadriceps Extensor Cruris* which is continued from the knee-cap to the tubercle of the tibia (see figure); one internal, and two external lateral ligaments; a posterior

Internal view of the Right Knee-joint.

(From Gray's *Human Anatomy*.)

a, the femur; b and c, the internal and the external condyles; d and e, the two crucial ligaments; f and g, the external and internal semilunar cartilages; h and i, the upper part of the fibula; j, the upper part of the tibia.

ligament; and a capsular ligament, which surrounds the joint in the intervals left by the preceding ligaments. The positions of these ligaments are sufficiently indicated by their names. Of the internal ligaments, the two crucial, so called because they cross one another, are the most important. Their position is shewn in the figure. The external and internal semilunar cartilages are usually placed amongst the internal ligaments; they are two crescentic plates of cartilage. The outer part of each cartilage is thick; the inner free border thin. Each

cartilage covers nearly the outer two-thirds of the corresponding articular surface of the tibia, and by its form deepens these surfaces for firmer articulation with the condyles of the femur.

The chief movements of this joint are those of a hinge-joint—namely, flexion and extension, but it is also capable of slight rotatory motion when the knee is half-flexed. During flexion, the articular surfaces of the tibia glide backwards upon the condyles of the femur; while in extension, they glide forwards. The whole range of motion of this joint, from extreme flexion to extreme extension, is about 150°. Judging from its articular surfaces, which have comparatively little adaptation for each other, it might be inferred that this was a weak and insecure joint; and yet it is very rarely dislocated. Its real strength depends on the large size of the articular ends of the bones, on the number and strength of the ligaments, and on the powerful muscles and fasciæ by which it is invested.

KNELLER, **SIR GODFREY**, an eminent portrait-painter, was born at Lübeck in 1648, and studied painting under Rembrandt and Ferdinand Bol. He at first chose historical subjects, but afterwards gave himself entirely to portrait-painting. In 1674, he went to London, and, on the death of Sir Peter Lely in 1680, was appointed court-painter to Charles II. In 1684, he visited Paris, at the invitation of Louis XIV., and painted portraits of the king and royal family. He retained his office at the English court during the reign of James II., and continued to fill it after the Revolution. In 1692, William III. bestowed on him the honour of knighthood, which he afterwards received also from the Emperor Joseph I.; and in 1715, George I. made him a baronet. He died in 1725, or, according to others, in 1726, and a monument was erected to him in Westminster Abbey, with a highly laudatory inscription by Pope. K.'s best-known productions are the 'Beauties of Hampton Court' (painted by order of William III.), and his portraits of the 'Kit-Cat Club.' He painted avowedly for the love of money, and hence never did justice to the talent he possessed, so that it is difficult for posterity to understand his reputation.

KNIGHT, **CHARLES**, an eminent English publisher and author, was born in 1791, at Windsor, where his father carried on the business of a bookseller. K. was brought up to the same profession, but early turned his attention to publishing. Among his first attempts in this department was *The Etonian*, a periodical supported by the Eton boys, and which—in spite of its juvenility—obtained a considerable reputation. He next started (1823) *Knight's Quarterly Magazine*, and continued it for some time in London, to which he removed in the following year. The whole of his honourable career was devoted to popular literature, of which he was one of the earliest and most accomplished advocates. He died March 9, 1873. Among the works which K. published or edited are the *Penny Magazine* (1832—1845), which was started only a month or two after *Chambers's Edinburgh Journal*, and at one time enjoyed a circulation of nearly 200,000 copies weekly; the *British Almanac*, and *Companion to the Almanac*; *Penny Cyclopædia* (30 vols. 1833—1856); *Library of Entertaining Knowledge*—the volume on the Elephant (1831) being written by himself; *Pictorial History of England*; *Pictorial Bible* (1838), now the property of Messrs Chambers; *Pictorial Book of Common Prayer* (1838); *London Pictorially Illustrated* (6 vols. 1841—1844); *Old England, a Pictorial Museum of National Antiquities* (2 vols. 1845); *Half-hours with the Best Authors* (4 vols. 1847—1848); *The*

Land we Live in (4 vols. 1848); *Cyclopædia of the Industry of all Nations* (1851); and *The English Cyclopædia* (22 vols. 1854—1861), which is based on the *Penny Cyclopædia*, but is a great advance even on that admirable work, and, in fact, forms one of the most complete and accurate cyclopædias in the world. K. has, in addition, won a highly respectable position as an author by his *Pictorial Shakspeare*, which is accompanied by a 'Biography' and a 'History of Opinion, with Doubtful Plays,' &c. (8 vols. 1839—1841); library edition (12 vols. 1842—1844); national edition, with 'Biography' and 'Studies' (8 vols. 1851—1853), *Life of Caxton* (1844); *Plays and Poems, with Glossarial Notes* (7th ed. 1857); *Knowledge is Power* (1855); and above all, by his *Popular History of England, an Illustrated History of Society and Government from the Earliest Period to our own Times* (1856—1862). This work is probably the very best history of England that we possess—'the history,' according to the *Times*, 'for English youth.'

KNIGHTS (Saxon, *Cniht*, a servant or attendant), originally men-at-arms bound to the performance of certain duties, among others to attend their sovereign or feudal superior on horseback in time of war. The institution of knighthood, as conferred by investiture, and with certain oaths and ceremonies, arose gradually throughout Europe as an adjunct of the feudal system (see **FEDERAL SYSTEM**; **CHIVALRY**). The character of the knight was at once military and religious. The defence and recovery of the Holy Sepulchre, and the protection of pilgrims, were the objects to which, in the early times of the institution, he especially devoted himself. The system of knight-service, introduced into England by William the Conqueror, empowered the king, or even a superior lord who was a subject, to compel every holder of a certain extent of land, called a knight's fee, to become a member of the knightly order; his investiture being accounted proof that he possessed the requisite knightly arms, and was sufficiently trained in their use. The 'Statute of Knights,' of the first year of Edward II., regulating the causes that were to be held valid to excuse a man from knightly service, shews that in the 14th c. the knightly office was not always eagerly coveted; yet its social dignity was very considerable, for even dukes, if not admitted into the order, were obliged to yield precedence in any royal pageant or public ceremony. In time of war, each knight was bound to attend the king for forty days, computed from the day when the enemy arrived in the country. After the long war between France and England, it became the practice for the sovereign to receive money compensations from subjects who were unwilling to receive knighthood, a system out of which grew a series of grievances, leading eventually to the total abolition of knight-service in the reign of Charles II.

Knighthood, originally a military distinction, came, in the 16th c., to be occasionally conferred on civilians, as a reward for valuable services rendered to the crown or community. The first civil knight in England was Sir William Walworth, lord mayor of London, who won that distinction by slaying the rebel Wat Tyler in presence of the king. Since the abolition of knight-service, knighthood has been conferred without any regard to property, as a mark of the sovereign's esteem, or a reward for services of any kind, civil or military. In recent times, it has been bestowed at least as often on scholars, lawyers, artists, or citizens, as on soldiers, and in many cases for no weightier service than carrying a congratulatory address to court.

The ceremonies practised in conferring knighthood have varied at different periods. In general,

fasting and bathing were in early times necessary preparatives. In the 11th c., the creation of a knight was preceded by solemn confession, and a midnight vigil in the church, and followed by the reception of the eucharist. The new knight offered his sword on the altar, to signify his devotion to the church, and determination to lead a holy life. The sword was redeemed in a sum of money, had a benediction pronounced over it, and was girded on by the highest ecclesiastic present. The title was conferred by binding the sword and spurs on the candidate, after which a blow was dealt him on the cheek or shoulder, as the last affront which he was to receive unrequited. He then took an oath to protect the distressed, maintain right against might, and never by word or deed to stain his character as a knight or a Christian. A knight might be degraded for the infringement of any part of his oath (an event of very rare occurrence), in which case his spurs were chopped off with a hatchet, his sword broken, his escutcheon reversed, and some religious observances were added, during which each piece of armour was taken off in succession, and cast from the recreant knight.

It has been said that knighthood could originally be conferred by any person of knightly condition, but if so, the right to bestow it was early restricted to persons of rank, and afterwards to the sovereign or his representative, as the commander of an army. In England, the sovereign now bestows knighthood by a verbal declaration, accompanied with a simple ceremony of imposition of the sword, and without any patent or written instrument. In some few instances, knighthood has been conferred by patent, when the persons knighted could not conveniently come into the presence of royalty, as in the case of governors of colonies, or other persons occupying prominent situations abroad. The lord-lieutenant of Ireland also occasionally but rarely exercises a delegated power of conferring knighthood. The monosyllable 'Sir' is prefixed to the Christian names of knights and baronets, and their wives have the legal designation of 'Dame,' which in common intercourse becomes 'Lady.'

Persons who are simply knights without belonging to any order, are called in England **Knights Bachelors**, a name probably corrupted from *bas chevalier*. Knighthood of this kind is now only conferred in Great Britain. A degree of knighthood called **Banneret** formerly existed in England and France, which was given on the field of battle in reward for the performance of some heroic act. For the mode in which that dignity was conferred, see **BANNERET**. No knight-banneret has been created in the field since the time of Charles I., when that honour was bestowed on one Sir John Smith, for rescuing the royal standard from the hands of the rebels. George III. twice conferred the title on occasion of a review, but the proceeding was considered irregular, and the rank of the knights not generally recognised.

The form of helmet which the requirements of the later heraldry have appropriated to knights, entitling them to place it over their arms, is full-faced, of steel, decorated with bars, and with the visor a little open. It is represented under the article **HELMET**.

KNIGHT'S FEE. See **KNIGHTS**.

KNIGHTS OF THE SHIRE, otherwise called in England **Knights of Parliament**. They were knights formerly chosen by the freeholders of every county to represent the county in parliament, and were originally inhabitants of the places for which they were chosen. See **PARLIAMENT**.

KNIGHT'S SERVICE, one of the ancient tenures in England (see **KNIGHTS**), which was

abolished in the time of Charles II., and converted into Freehold (q. v.).

KNIGHTS TEMPLARS. See **TEMPLARS**.

KNIPPERDOLLING, BERNARD, a noted leader of the fanatical Anabaptists of the 16th century. See **ANABAPTISTS**.

KNITTING, an art allied to weaving, but of comparatively modern date. The time and place of its invention are disputed. Some historians insist upon Scotland having the honour, at a date somewhat before the year 1500; others assert that it came from Spain, in the time of Henry VIII.; but there is no proof that the silk stockings which were worn by that monarch were knitted, and in the absence of such proof, the weight of evidence remains in favour of Scotland. Knitting consists in using a single thread, and with it forming a continual series of loops across the whole fabric; the next row passes through these, and they in their turn receive another set, until the whole is completed. Knitting is only employed to make small articles, such as stockings, gloves, &c.; and as it furnishes an easy and amusing employment for the hands, without engaging the attention much, it forms a useful and desirable occupation for ladies and others who do not require knitted articles as necessities, for the knitting-machines have now rendered it impossible for hand-work to compete with them in point of economy or beauty of workmanship. See **HOSIERY**.

KNOT, an expression used in speaking of a ship's way through the water, and, as such, representing miles. The log-line is divided by knots into lengths, each of which is to a geographical mile as half a minute is to an hour—i. e., as 1 to 120. The log being cast overboard, note is carefully taken of how many of these knots run out in a half minute, and it follows that the vessel is passing through the water at the same number of geographical miles per hour. The proportion of a geographical to a statute mile being nearly that of 7 to 6 (see **MILE**), a vessel making 12 knots an hour, is in reality travelling at the rate of 14 statute miles.

KNOT, a twist or loop in a rope or cord, so made that the motion of one piece of the line over the other shall be stopped. The knot owes its power of passive resistance to the friction of the rope. The uses of knots are infinite; in the commonest occasions of life, one or two simple knots are indispensable; in building, mining, and almost every land occupation, knots of curious form are employed; while on shipboard, knots may be almost numbered by the dozen, and each is appropriated to a specific duty. The accompanying diagrams of some of the simpler knots may be generally useful. In these, the position of the rope or cord is shewn before tightening, so that the mode of formation may be more readily understood.

The simplest knot is the 'overhand' (fig. 1). Its

or slip knot (fig. 2), is obtained, always in the middle of the rope. More complicated, but still more useful, is the 'double sling' (fig. 3), for suspending a beam or bar horizontally. The bowline knot (fig. 4) serves to give a tight grasp round a pole or beam, which would occupy the loop *a*, or, drawn close on the rope, it forms a large knob, to prevent the rope passing a hole. The sheepshank (fig. 5)

Fig. 4.

Fig. 5.

Fig. 6.

affords a means of shortening a rope temporarily, without diminishing its power of rectilinear tension. All the foregoing have been at the double or middle parts of the rope: for the end of the cordage, fig. 6 shews an admirable slip-knot, which maintains its gripe until loosened by hand; *a* is a common overhand knot at the end of the string, to prevent it slipping through the loop *b*, when tightened.

For modes of joining two ropes, the weaver's or fisherman's knot (fig. 7) may be adduced as strong

Fig. 7.

Fig. 8.

and neat. The sailor's knot (fig. 8) has the advantage, when properly made, of resisting all separating strain on the two ropes, and at the same time of being loosened immediately by a pull at one of the short ends. For an interlacing of two doubled ropes, the 'Carrick bend' (fig. 9) has no superior; the point of junction cannot slip, and the moment the tension ceases, the two ropes are again free from each other. Knots have many technical names, such as bight, hitch, &c.

Fig. 9.

KNOT-GRASS. See **POLYGONUM**.

KNOTS of different kinds are borne by different

Fig. 1.

Fig. 2.

Fig. 3.

Knots:

- 1, Wake and Ormonde knot; 2, Lacy knot; 3, Bowen knot; 4, Henneage's knot; 5, Daere's badge.

use is to form a knob in a rope to stay it from slipping. By a slight alteration, the 'single sling,'

families as heraldic badges, and are occasionally introduced as charges in shields. The forms of

some of them appear to be suggested by the initial letter of the name or title of the bearer. In the Wake and Ormonde knot (fig. 1), it is not difficult to trace a *W* and two *Os*. The Bouchier knot, as seen on the tomb of Archbishop Bourchier, at Canterbury, bears a resemblance to two *Bs*, and the Stafford knot to two *Ss*. The Lacy knot (fig. 2) contains within it a rebus on the four letters of the name Lacy.

KNOUT, a scourge composed of many thongs of skin, plaited, and interwoven with wire, which was till lately the favourite instrument of punishment in Russia for all classes and degrees of criminals. The offender was tied to two stakes, stripped, and received on the back the specified number of lashes; 100 or 120 were equivalent to sentence of death, but in many cases the victim died under the operation long before this number was completed. This punishment is at the present time inflicted only upon ordinary criminals, such as incendiaries or assassins. It is no longer in use in the army, except when a soldier is dismissed for ill conduct, in which case three to ten lashes are given, in order to disgrace the soldier, rather than punish him. The whipping is inflicted by a criminal, who prefers this office to exile to Siberia, and who is constantly kept in prison, except when his services are required. The nobility are legally exempt from the knout, but this privilege has not always been respected.

KNOWLEDGE. This term of common use is associated with the greatest problems and controversies of philosophy. The Perception of the External or Material World (see COMMON SENSE, PERCEPTION), the nature of Belief (see BELIEF), the ultimate analysis of a Proposition or Judgment (see JUDGMENT), are all involved in the discussion of what is meant by knowledge. Moreover, we may, in connection with this word, take up the consideration of Thought or Intelligence on the whole, in contrast to the feelings and volitions (see INTELLECT). In a still different phase of meaning, we may be led to consider the nature of Science or Philosophy, which is a species of knowledge distinguished by the two features of being *generalised*, as distinct from individual or particular facts, and being *verified* or attested by careful evidence, in contrast to the loose assertions that satisfy the ordinary run of mankind.

A distinction, considered by Sir W. Hamilton and others to be of great importance in metaphysical philosophy, is that of Immediate or Presentative, and Mediate or Representative Knowledge. The one is the knowledge or cognizance that we have of the modifications of our own minds, so to speak, without inferring anything beyond, as in our various sensations and emotions. When we are affected by cold or heat, hunger, thirst, odour, or sound, we are conscious of a something, which may be said to be wholly contained in our own minds; but when a present modification of the mind is looked upon not for its own sake, but as bodying forth something more than itself, as in memory, our knowledge is then said to be mediate. Thus, an actual sensation is immediate, but a recollection, or idea, or imagination is mediate and representative. Mr Mansel makes this distinction the basis of his division of the mind. 'Consciousness,' he says, 'in its relation to the person conscious, is of two kinds; or rather, is composed of two elements—the presentative, or intuitive; and the representative, or reflective. The phenomena of the former class may be distinguished by the general name of *Intuitions*; those of the latter, by that of *Thoughts*.'

It will appear from the above remarks that there

is no question connected with knowledge that does not fall to be discussed under some other head; and as a general rule, it is best to take up the difficult problems of the philosophy of mind under those names that severally suggest each in its singleness, instead of confusing a multitude together.

KNOWLES, JAMES SHERIDAN, an English dramatist, was the son of James Knowles, an eminent teacher of elocution, and author of a *Dictionary of the English Language*. He was born at Cork in 1784. The family removed to London in 1792, and here young K. received his education. After holding for some time a commission in the army, he became an actor, and made his first appearance at the Crow Street Theatre, Dublin; but he never attained much eminence in this profession. Subsequently, he lived for several years in Belfast and Glasgow, as a teacher of elocution, and it was at this time he laid the foundation of his fame as a dramatist. His *Caius Gracchus* was first performed at Belfast in 1815. It was followed by *Virginus*, his most effective piece, afterwards recast for the London stage, where Macready took the principal part. He wrote thirteen other plays, but none of his productions exhibit great genius; they are, however, unquestionably the best 'acting plays' produced by an Englishman in modern times. About the year 1845, he relinquished the stage from religious scruples, and in 1852 joined the Baptist body. He latterly distinguished himself by his religious zeal. In 1851, he published a little controversial work, displaying considerable acuteness and ability, *The Idol Demolished by its own Priest*, in answer to Cardinal Wiseman's Lectures on Transubstantiation. K. died at Torquay, in Devonshire, in December 1862.

KNOWLTONIA, a genus of South African plants, of the natural order *Ranunculaceæ*, with flowers resembling those of *Adonis*, and succulent fruit. *K. vesicatoria*, which has bi-ternate leathery leaves, and flowers in few-flowered umbels, is remarkable for its acridity and blistering power. The bruised leaves are used at the Cape of Good Hope instead of cantharides; they raise a blister in half an hour, and it keeps open a long time. The sliced root seems to be still more powerful.

KNOX, JOHN, the great Scottish reformer, was born in the year 1505, in a suburb of Haddington called Gifford Gate, where a small field still goes by the name of 'Knox's Croft.' The social position of his parents is not very clearly ascertained. His own statement is, that 'his great-grandfather, gude-sehir, and father served under the Earls of Bothwell.' He is supposed to have come of an old and respectable family, the Knoxes of Ranfurly, in Renfrewshire. He received his early education at the grammar-school of Haddington, and in the year 1521 went to the university of Glasgow. He was there a pupil under Major, and soon proved himself an apt and distinguished disputant in the scholastic theology. He was considered as likely to rival his master in the subtleties of the dialectic art. From the same teacher, he no doubt derived his first impulse to that freedom of political opinion and independence of thought that afterwards characterised him. He is said to have been ordained before the year 1530, about which time, or shortly afterwards, he went to St Andrews, and began to teach there. There is, however, at this stage of his life a gap of twelve years, or nearly so, which the most careful research has hitherto failed to fill up. His attachment to the Romish Church is supposed to have been shaken chiefly by the study of the Fathers, about 1535; but he did not openly profess himself a Protestant till about 1543. He

was degraded from his orders, and being even in danger of assassination, took refuge with Douglas of Longniddry, and there remained till the end of 1545.

Cardinal Beaton was at this time in the height of his power: after seizing George Wishart at Ormiston, he had him brought to St Andrews, and burned there, in front of his castle, March 1546. K. first clearly appears upon the scene of the Reformation as the companion of Wishart. While the latter prosecuted his career as a preacher in Lothian, K. waited upon him, bearing before him, he tells us, a 'two-handed sword.' He already coveted the post of danger, and full of enthusiasm, was ready to defend his zealous friend at the peril of his own life. After Wishart's seizure and death, he withdrew for a while again into retirement. He would fain have clung to the martyr, and shared his fate, but the latter would not have it so. 'Nay,' he said; 'return to your bairnes, and God bless you: ane is sufficient for a sacrifice.' Knox's 'bairnes' were his pupils, the sons of the Lairds of Longniddry and Ormiston. He continued in charge of them for some years, till the great event which ere long followed the martyrdom of Wishart opened up a more prominent career for him. On the morning of the 29th May 1546, Cardinal Beaton was murdered in his castle, from the windows of which he had contemplated the sufferings of the martyr. Taken possession of by the band of nobles and others who had successfully accomplished so audacious a design, the castle at St Andrews became the temporary stronghold of the Reforming interest. K. took refuge in it with his two pupils. Here his great gifts as a preacher were first discovered; and having found the secret of his influence, the parish church of St Andrews soon resounded with his indignant voice, denouncing the errors of popery. His career at this time, however, was soon cut short by the surrender of the fortress, and his imprisonment in the French galleys.

For two years he remained a prisoner, and underwent, in the course of this time, many privations. He was then liberated, and allowed to depart to England, where he resided for four years, from 1549 to the beginning of 1554, a time of great and fruitful activity to him. He was appointed one of Edward VI.'s chaplains, and lived on terms of intimate intercourse with Cranmer and others of the English reformers. He is supposed to have had considerable influence on the course of the English Reformation, especially in regard to the liberal changes introduced into the Service and Prayer Book of the Church of England, in the close of Edward's reign. He was much engaged in preaching, especially in the north, in Newcastle and Berwick; and at the latter place he fell in love, and married.

The accession of Mary drove him and others to the continent. He was reluctant to flee, but 'partly by advice and partly by tears,' he was compelled to consult his safety. He settled temporarily at Dieppe, whence we hear of him writing an *Admonition to the Professors of God's Faith in England*. He then went into Switzerland, and returning, settled for some time at Frankfurt-on-the-Maine, where he is notable in connection with what are known as the 'Frankfurt Troubles,' certain disputes as to the use of King Edward's Service-Book in the congregation of English Protestants there. Towards the end of 1555, he made a rapid visit to Scotland, where he did much to encourage the cause of the Reformation. Convinced, however, that the 'time of deliverance' was not yet come for his country, he retired once more to Geneva, where he settled as pastor of a congregation for nearly three years,

which were among the quietest, and probably the happiest years of his life.

Recalled to Scotland in May 1559, he then entered upon his triumphant course as a reformer. Political necessities had driven the Queen-regent to temporise with the 'Lords of the Congregation,' or the reforming nobles. Having somewhat re-established her power, she wished to withdraw her concessions; but the reforming impulse had gathered a strength that could no longer be resisted. The heads of the party assembling at Dundee, under Erskine of Dun, proceeded to Perth. There the pent-up enthusiasm which had been long collecting was roused into furious action by a sermon of K. on the idolatry of the mass and of image-worship. A riot ensued. The 'rascal multitude,' as K. himself called them, broke all bounds, and destroyed the churches and monasteries. Similar disturbances followed at Stirling, Lindores, St Andrews, and elsewhere. The flame of religious revolution was kindled throughout the country, aggravating the civil war already raging. At length the assistance of Elizabeth and the death of the Queen-regent brought matters to a crisis; a truce was proclaimed, and a free parliament summoned to settle differences. The result of the parliament, which met in August 1560, was the overthrow of the old religion, and the establishment of the Reformed kirk in Scotland. In all this, K. was not only an active agent, but the agent above all others. The original *Confession of Faith* of the Reformed Kirk and the *First Book of Discipline* bear the impress of his mind. He was far from attaining all his wishes, especially as to the provision for the support of the church and of education throughout the country; he soon found that many of the nobles were far more zealous for destruction than for reformation; still, he accomplished a great and radical work, which was only destined to be consolidated after many years.

The arrival of the youthful Queen Mary, in the course of 1561, brought many forebodings to the Reformer; he apprehended great dangers to the Reformed cause from her character and her well-known devotion to the Romish Church. The Reformer's apprehensions scarcely permitted him to be a fair, certainly not a tolerant judge of Mary's conduct. Misunderstandings very soon sprung up between them, and he relates, with a somewhat harsh bitterness, his several interviews with her. At length he came to an open rupture with the queen's party, including Murray and Maitland, and many of his former friends. He took up an attitude of unyielding opposition to the court, and in his sermons and prayers, indulged freely in the expression of his feelings. The result was his temporary alienation from the more moderate Protestant party, who tried to govern the country in the queen's name. For a while, from 1563 to 1565, he retired into comparative privacy.

The rapid series of events which followed Mary's marriage with Darnley—the revolt of the dissatisfied nobles, with Murray at their head, the murder of Rizzio, and then the murder of Darnley (1567), the queen's marriage with Bothwell, her defeat and imprisonment, served once more to bring Knox into the field. He was reconciled with Murray, and strongly abetted him in all his schemes of policy during his regency. Further reforms were effected by the parliament which convened under his sway in the close of 1567. The sovereign was taken bound to be a Protestant, and some provision, although still an imperfect one, was made for the support of the Protestant clergy. K. seemed at length to see his great work accomplished, and is said to have entertained the idea of retiring to Geneva. But the bright prospect on which he gazed

for a little was soon overcast—Murray's assassination, and the confusion and discord which sprung out of it, plunged the Reformer into profound grief. He once more became an object of suspicion and hostility to the dominant nobles, and misunderstandings even sprung up between him and some of his brethren in the General Assembly. He retired to St Andrews, for a while, to escape the danger of assassination with which he had been threatened. There, although suffering from extreme debility, he roused himself to preach once more, and in the parish church where he had begun his ministry, made his voice to be heard again with something of its old power. Assisted by his servant, the 'good, godly Richard Ballenden,' into the pulpit, 'he behoved to lean upon it at his first entry; but ere he was done with his sermon, he was so active and vigorous, that he was lyke to ding the pulpit in blades and flie out of it.'

In the end of 1572, he returned to Edinburgh to die; his strength was exhausted; he was 'weary of the world,' he said; and on the 24th of November he quietly fell asleep.

K.'s character is distinguished by firmness and decision, and a plain, somewhat harsh sense of reality. He was a man of strong, and even stern convictions, and he felt no scruples, and recognised no dangers in carrying out his convictions. He was shrewd, penetrating, inevitable in his perceptions and purposes. No outward show, or conventional pretence, deceived him; he went straight to the heart of everything; and consistently with this clear and rough shrewdness of perception, his language is always plain, homely, and many will say harsh. He had learned, he himself says, 'to call wickedness by its own terms—a fig, a fig; a spade, a spade.' Above all, he was fearless; nothing daunted him; his spirit rose high in the midst of danger. The Earl of Morton said of him truly, as they laid him in the old churchyard of St Giles: 'He never feared the face of man.' In Scotland, K., no doubt, accomplished a great work. Whether the work would not have been better if it had been less violently done, if the spirit of love and moderation, as well as the spirit of power, had presided over it, is a question regarding which there may be much division. But even if we should take exception to some things he did or encouraged, we may admire the consistent boldness, the deep earnestness, and the self-denying, unflinching zeal of the great Reformer.

KNOXVILLE, a city of Tennessee, United States of America, on the north bank of the Holston River, at the head of steam-boat navigation, 185 miles east of Nashville. It is the principal and central town of East Tennessee, on the East Tennessee, Georgia, and Virginia Railway. It is the site of the university of East Tennessee, the state Deaf and Dumb Asylum, and has 3 academies, 8 churches, 4 newspapers, and several flouring-mills and glass factories. Pop. about 6000.

KNUTSFORD, a small market-town of Cheshire, 23 miles east-north-east of the city of Chester. Pop. 3597. The name is said to be derived from King Canute, or Knut, having with his army forded the Bollin here.

KO'ALA (*Phascolarctos cinereus*), a marsupial quadruped, commonly referred to the family *Phalangistidae*, and pretty nearly resembling the phalangers in dentition, but having the molar teeth much larger. The toes of the fore-feet are in two opposable groups, of two and three, a character not found in any other quadruped, but well adapted to grasping the branches of trees, on which the K. often hangs with its back undermost, like the sloth. There is

scarcely any rudiment of a tail. The general form is not unlike that of a young bear. The female

Koala (*Phascolarctos cinereus*).

carries her young on her back, for a long time after it is capable of leaving her pouch.

KO'BEE, a town of Central Africa. See DARFUR.

KOBOLDS. See GOBLINS AND BOGLES.

KOCH, KARL HEINRICH EMMANUEL, a celebrated traveller and naturalist, was born at Weimar in 1809. He studied at the universities of Würzburg and Jena, and in 1836, undertook a scientific journey to Southern Russia, completing his researches in a second journey, which he performed in 1843, this time visiting also Turkey, Armenia, Pontus, the Caspian Sea, and the range of the Caucasus. In 1839, he was appointed Professor of Botany in the university of Jena. The most important of his works are—*Monographia generis Veronice* (Würzburg, 1833); *Reise durch Russland nach dem Kaukasischen Isthmus* (Journey through Russia as far as the Isthmus of the Caucasus, Stuttgart, 1842–1843). His second journey supplied the materials for *Wanderungen im Oriente* (Wanderings in the East, Weimar, 1846–1847); and in 1854 appeared his work on the *Crimea and Odessa*. Besides these, he has written about nine other works on geography, botany, and topography.

KOCK, CHARLES PAUL DE, a French novelist, dramatist, and poet, born at Plassy, near Paris, in 1794, is the son of a Dutch banker, who perished on the scaffold during the French Revolution. Originally intended for a mercantile career, he devoted himself to literature against the wishes of his relatives. His novels, though displaying no trace of real genius, have acquired an unenviable notoriety by the licentious freedom of their representations. K. has composed upwards of 50 novels, besides a great number of vaudevilles and stories in verse. His earlier works are considered superior to his later ones. Among others, we may mention *Georgette, ou la Niece du Tabellion*; *Gustave, ou le mauvais Sujet*; *Le Barbier de Paris*; *La Femme, le Mari et l'Amant*; *Mœurs Parisiennes*. He died in August 1871.—HENRI DE KOCK, son of the preceding, like Dumas fils, has unhappily followed his father's footsteps, if we may judge from the titles of some of his novels: *Le Roi des Etudiants et la Reine des Grisettes*, *Les Amants de ma Maîtresse*, *Lorettes et Gentilshommes*, &c.

KO'DIAK, an island to the south-east of the peninsula of Alaska (q.v.), contains the oldest settlement in Russian America, as distinguished at least from the Aleutian Archipelago. It is little better than an irregularly shaped mass of mountains, measuring 75 miles by 50. The chief value of K. consists in the tolerable harbour of St Paul, on its north coast.

KOHAT, a town of the Punjab, stands in lat. 33° 32' N., and long. 71° 27' E., in a small but fertile and populous mountain-valley of the same name, which forms an administrative district. A few miles to the east of it are springs of naphtha, and rich and extensive deposits of sulphur. K. is traversed by two important routes—the route from Peshawur to Kala Bagh, and another by Bungush to Khorassan.

KOH-I-NÜR (Mountain of Light), the name of a large diamond now in the possession of Her Majesty Queen Victoria. According to Hindu legend, it was found in a Golconda mine, and its possessors have, with few exceptions, been the rulers of Hindustan. After belonging successively to the Bahmani, Khilji, Lodi, and Mogul kings, it came, in 1739, into the hands of Nadir Shah, who gave it its present designation. From him it went to the Abdali monarchs of Afghanistan, the last of whom, Shah Sujah, gave it to Runjeet Singh, the ruler of the Punjab. On the abdication of the Maharajah Dhuleep Singh, and the annexation of the Punjab in 1849, it was surrendered to the sovereign of Great Britain. It is said to have weighed originally 900 carats, but, after being cut, was reduced to 279 carats. It was reduced by recutting to 186 carats, and in this state was shewn at the Great Exhibition of 1851; since which time it has been again recut (1852), and now weighs about 123 carats, and has been valued at £120,664. The Koh-i-nür is rose-cut.

KOHL, JOHANN GEORG, an eminent German traveller and author, was born at Bremen, April 23, 1808; studied at Göttingen, Heidelberg, and Munich; and settled in Dresden, in 1833, from which place as a starting-point, he made excursions in all directions, visiting every important district of Europe, and on his return from each expedition, published his experience in a series of works. In 1854, he went to America, where he travelled for four years, and returned to Germany. His works on Europe are so numerous and well known that a full detail of them is unnecessary; suffice it to say, that he has described the countries of Austria (1842), Bavaria (1842), England (1842 and 1844), Russia (1846—1847), Denmark (1846 and 1847), Istria, Dalmatia, and Montenegro (1851), &c. The results of his American experience were published in *Travels in Canada* (1855), *Travels in the United States* (1857), and *Kitahi-Gami, or Tales from Lake Superior* (1860). Another work of K. is the *History of and Commentary on two Maps of the New World made in Spain at the Commencement of the Reign of Charles V.* (1861), which cost him two years' intense labour. K. published in 1862 a learned and carefully prepared *Geographical History of America*.

KOHL-RABI, or, more properly, KOHL-RÜBÉ (Germ. Kale-turnip, similarly called *Chou Rave* by the French), a cultivated variety of the Kale or Cabbage (*Brassica oleracea*), distinguished by the swelling of the stem just above the ground, in a globular form, to the size of a man's fist, or larger, leaf-stalks springing from the swollen part, and adding to the peculiarity of its appearance. This is the part which is used, and its uses are similar to those of the turnip. In quality, it more nearly resembles the Swedish than the common turnip, and the use of it for feeding cows does not give their milk a disagreeable flavour, as when they are fed on turnips. K. is very hardy, its leaves, as well as its stem and root, enduring the most severe winters, although in Britain its cultivation has hitherto been chiefly in the south of England. It is a common

field-crop in Sweden. In the cultivation of K., it is usual to sow it on seed-beds, and to transplant by dibbling into fields; but this is perhaps not the best mode. It ought, however, to be sown earlier than even Swedish turnip; and raised drills are unsuitable for it, owing to the effect of winds. It is more solid and more nutritious than any kind of turnip of the same size. There are numerous sub-varieties. K., like all the varieties of *Brassica oleracea*, delights in a strong rich soil and abundant manure.

KOKRA WOOD, or COCUS WOOD, the wood of an Indian tree, *Lepidostachys Roxburghii*, which belongs to a very small natural order, *Scapaceæ*, remarkably allied at once to *Euphorbiaceæ* and to *Amentaceæ*. K. W. is imported into Britain in logs of six or eight inches in diameter, having the heart-wood of a rich deep brown colour and very hard. It is much used in the manufacture of flutes and other musical instruments. The Kokra-tree has leathery, alternate leaves.

KOLA, a place of scarcely 800 inhabitants, but worthy of notice as the most northern town of European Russia, and except Wardöe, in Norway, the most northern in Europe. It is situated between the Kola and its tributary, the Tuloma, not far from the Icy Sea, and has a secure and capacious harbour. The inhabitants are Russians, Lapps, and Finns, and are chiefly occupied with walrus, whale, and cod fishery.

KOLA NUT. See COLA NUT.

KOLAPUR, the chief, or rather the only town of a protected state of the same name within the presidency of Bombay, 130 miles to the south of Poona. The population has not even been estimated. The raj, or state, is estimated to contain 3445 square miles and 500,000 inhabitants, composed of Maharrattas and Ramusis. Since 1844, when the East India Company virtually took possession, K. has considerably advanced in prosperity.

KOLIAZIN, a town in the government of Tver, European Russia, situated on the right of the Volga, carries on an extensive trade in corn, tallow, and linen. Pop. 7558.

KOLLÁR, JOHN, one of the most conspicuous Slavic poets and scholars, was born, in 1793, at Moschowitz, in the north-west of Hungary, studied at Presburg and Jena, and in 1819 became pastor of a Protestant congregation at Pesth. His first work was a volume of songs and poems entitled *Basne* (Poems, Prague, 1821); this was followed by his *Slawy Deera* (The Daughter of Glory, Buda, 1824; 3d ed., Pesth, 1832), regarded by his countrymen as his greatest work; and *Rozprawy e Imenach* (Treatises on the Name and Antiquities of the Slavic People and their Ramifications, Buda, 1830). K.'s fame, however, rests more on his being one of the earliest and most zealous advocates of Panslavism (q. v.). The work in which this tendency first appears was written in German, and is entitled *Ueber die literarische Wechselseitigkeit zwischen den Stämmen und Mundarten der Slav. Nation* (Pesth, 1831). The revolution in Hungary compelled him to abandon his country. He withdrew to Vienna, where he was made Professor of Archæology in 1849. He died January 29, 1852.

KÖLLIKER, ALBRECHT, a German physiologist, was born in 1817, and is at present Professor of Anatomy and Physiology in the university of Würzburg. He is principally distinguished by his labours in the department of microscopic anatomy, and on the development of the embryo; but his contributions to natural history generally are by no means unimportant. Among his principal works must be named his *Mikroskopische Anatomie; Handbuch der*

Gewebelehre des Menschen (which has been translated for the Sydenham Society by Busk and Huxley, under the title of *A Manual of Human Histology*, in two volumes); *Die Siphonophora oder Schwimmpolypen von Messina*; and *Entwicklungsgeschichte des Menschen u. d. höheren Thiere*. In association with Von Siebold, he is also the editor of *Zeitschrift für wissenschaftliche Zoologie*, the most important scientific natural-history journal of Germany.

KOLLIN, or NEU-KOLIN, a town of Bohemia, on the Elbe, about 35 miles east of Prague, with a population of 6200, is noted for the great battle fought, June 18, 1757, in its vicinity, between 60,000 Austrians under Marshal Daun, and 32,000 Prussians under Frederick II. The latter were defeated in spite of the obstinate valour of their monarch, who charged at the head of his cavalry seven times in succession.

KOLOME'A, a town of Austrian Galicia, is situated on the Pruth, at the base of the Carpathian Mountains, 112 miles south-south-east of Lemberg. It is a very old town, and formerly carried on an extensive trade. Pottery is still largely manufactured. Pop. 13,400, half of whom are Jews.

KOLOMNA, a district town of Great Russia, in the government of Moscow, is situated 62 miles south-east of the city of that name, on the river Moskva. It contains 13,703 inhabitants. The communications by water between it and Nijni-Novgorod and Moscow, and the railway already completed from Moscow to this town, and to be carried on to Riazan, have already increased the trade of the district. Weaving, silk-spinning, and cotton-printing are carried on, with manufactures of cotton and leather.

KOLYMA, a river in Eastern Siberia, flowing from the Stanovoy Mountains, among which it takes its rise in lat. 61° 5' N. After a north-east course of 1000 miles, it falls into the Arctic Ocean in lat. 69° 40' N.

KOLYVA'N, a town in the government of Tomsk, in Siberia, situated on the river Ob, lat. 55° 21' N., and long. 82° 46' E., is remarkable for the extensive quarries of jasper in its neighbourhood. There is also a large manufactory of jasper ornaments, which belongs to the Russian government. Pop. 2172.

KOLZOW, ALEXEI VASSILEVICH, a Russian poet, prematurely cut off in the early bloom of his genius, most of whose songs are among the choicest pearls of Russian poetry, was the son of a cattle-dealer, and was born in Voronezh in 1809. After a merely rudimentary education, he was employed by his father in feeding cattle on the steppes in summer, and in winter in attending the markets. His familiarity with the scenes of the steppes appears in all his poetry. His love of poetry was early developed, and the talent displayed in some of his earlier effusions, obtained for him the patronage of some of the most zealous cultivators of Russian literature. He was just about to settle in St Petersburg, and to devote himself exclusively to literary pursuits, when he suddenly died, in 1842. A complete edition of his poems, with a biography of the author, was published by Belinsky in 1846.

KONG, a name applied to a mountain-range, a district, and a town, all of which are situated northward from the coast district, in the west of Northern Africa.—The mountains extend from west to east at the distance of about 200 miles from the shore of the Gulf of Guinea, and are said to be an offset from the high table-land of Senegambia. Little is known regarding them. The highest known summits reach an elevation of only 2500 feet.—Regarding the K. district, all we know is, that it is remarkable

for the industry of its inhabitants, and for the gold-trade which is there carried on.—The town of K., in lat. 8° 53' N., and long. 3° 30' W., is situated among hills 540 miles south of Timbuktú. It is a large town, consisting entirely of clay-houses, and is the centre of numerous converging caravan routes. The inhabitants, who are chiefly Mandingoes, and of the Mohammedan religion, manufacture cotton-cloths extensively.

KONIEH, a large town of Asiatic Turkey, capital of the province of Karaman, situated in a rich, well-watered plain, in lat. 37° 54' N., and long. 32° 40' E. It is surrounded by walls from two to three miles in circuit, built from the ruins of ancient Seljuk edifices, and surmounted by square towers. Its numerous minarets, and its mosques and other public buildings, give it an imposing appearance, but like most of the towns of Asia Minor, it is now in a sadly ruinous condition. Many interesting remains of Saracenic architecture, however, are still to be met with. K. is the chief emporium for the products of the interior. Carpets and coloured morocco leather are manufactured, and cotton, wool, and skins are exported to Smyrna. Pop., including the suburbs, 50,000.

K., the ancient *Iconium*, was famous in ancient times as the capital of Lycaonia. From 1087 to 1299, it was the seat of a Seljuk sultanate. On December 20, 1832, a battle was fought here, in which Ibrahim Pasha completely defeated the Turkish army.

KÖNIG, FRIEDRICH, the inventor of the steam-press, was the son of a respectable citizen of Eisleben, and was born there, 17th April 1775. He became a printer, and was also for a short time a bookseller, but was unsuccessful in this business. He eagerly prosecuted literary and scientific studies. Having devoted himself to the invention of means of printing by machinery, he applied in vain for the necessary pecuniary assistance in various quarters, his schemes being rejected as impracticable; but at last Thomas Bensley, a printer in London, came forward to his support, a company was formed, and a patent was obtained on 29th March 1810, for a press which printed like the hand-press by two flat plates, and in 1811 it was first used to print part of the *Annual Register*. A second patent was obtained on 30th October 1811 for a cylinder-press, a third in 1813 for improvements upon it. This improved machine was soon adopted by the proprietors of the *Times*, and on 29th November 1814, that newspaper appeared for the first time printed by machinery which was moved by a steam-engine. In the latter part of his life, K. was a partner in a company for making steam printing-presses at Oberzell, near Würzburg, in Bavaria. He died 17th January 1833.

KÖNIGGRÄTZ, a town and fortress of Bohemia, on the left bank of the Elbe, at the confluence of the Adler with that river, 64 miles east-north-east of Prague. It is the seat of a bishop, and has a beautiful cathedral. The immediate neighbourhood can in any emergency be covered with water. Cloth, musical instruments, shoes, and wax-candles are the staple articles of manufacture. Pop. 5300.

KÖNIGINHOF, a small manufacturing town of Bohemia, on the left bank of the Elbe, 16 miles north of Königgrätz. Linen-weaving, tanning, and manufactures of hats and sugar, are the principal branches of industry. Pop. 5000.

KÖNIGSBURG, a small town of Prussia, in the province of Brandenburg, on the Rörke, 45 miles north of Frankfurt-on-the-Oder. Tanning and distilling are the chief branches of industry. Pop.

5000. Numerous other places in Germany bear this name.

KÖNIGSBERG, an important town and fortress of Prussia, in the province of East Prussia, is situated on both banks of the Pregel, and on an island in that river, four miles from its entrance into the Frisches Haff. It consists of the Old Town and the Löbenicht on the north bank (the latter of which, in its seven-storied and gabled houses, and steep side-lanes, still presents a completely Hanseatic appearance), the Kneiphof on the island (also one of the oldest parts), and numerous suburbs. The Pregel is here crossed by seven bridges. The origin of the town dates from the erection of a castle by Ottokar, king of Bohemia, in 1257. K. became a member of the Hanseatic League in 1365, and was the residence of the grand-master of the Teutonic Order from 1457 to 1528. In 1701, Frederick, Elector of Brandenburg, was crowned here, with the title of Frederick I., King of Prussia. Its chief buildings are the cathedral, containing the tomb of Kant; the university, founded in 1544, and attended now by about 350 students; the united Royal and University Library, with 160,000 volumes; and the observatory. There are also three gymnasia, with numerous other educational and benevolent institutions. Important manufactures of woollens, silk, leather, and tobacco are carried on. Wine, fruits, coal, salt, and sugar are imported; grain is the chief article of export. K. occupies the fourth rank among Prussian towns in respect of population. Pop. (1871) 112,123.

KONRAD or **CONRAD I.**, king of the Germans (a title identical with the subsequent one of 'Emperor of Germany'), was the son of Konrad of Fritzlär, Count of Franconia, and the nephew of the Emperor Arnulf. On the extinction of the direct line of the Carolingians, the Germans resolved to make the sovereign dignity elective, and preferring to choose one who was related to the late imperial family, offered the crown to Otho the Illustrious, Duke of Saxony, who refused it, but recommended K., who was accordingly elected in 911. The new monarch gradually re-established the imperial authority over most of the German princes, carried on an unsuccessful war with France, and at last fell mortally wounded at Quedlinburg (918), in a battle with the Hungarians, who had repeatedly invaded his dominions. He lies buried at Fulda. On his deathbed, he enjoined his brother Eberhard to carry the imperial insignia to his mortal enemy, Duke Henry of Saxony, son of Otho the Illustrious, with whom he had been continually at war since 912 A. D., and accompanied the gift with the chivalrous message, 'that he wished to render to the son what he had received from the father.' K.'s reign was a remarkable epoch in the history of Germany; sovereignty by hereditary right was introduced into the German duchies and markgrafdoms; the minor lords of the soil became vassals, not to the king, as formerly, but to their dukes; and finally, the crown-lands in each duchy were taken possession of by the dukes themselves, who thus totally destroyed the sovereign's local jurisdiction.

KONRAD II., king of the Germans, and Roman emperor, was elected after the extinction of the Saxon imperial family in 1024. He was the son of Henry Duke of Franconia, and is by many considered as the founder of the Franconian dynasty. Immediately after his election, he commenced a tour through Germany, to administer justice and acquaint himself with, and, if necessary, to ameliorate, the condition of his subjects. With a view to this last, he instituted the *God's Truce* (q. v.). In 1026, he crossed the Alps, chastised the rebellious Italians, was crowned at Milan as king of Italy, and he and

his wife Gisela were anointed emperor and empress of the Romans by the pope. He was soon recalled to Germany to put down four formidable revolts, in which he succeeded so well, that by 1033 peace was restored. In 1032, he had succeeded to the kingdom of Burgundy, which he annexed to the empire. In 1036, a rebellion in Italy again compelled him to cross the Alps; but his efforts to restore his authority were this time unsuccessful, and he was forced to grant various privileges to his Italian subjects. Shortly after his return, he died at Utrecht, 4th June 1039. K. was one of the most remarkable of the earlier monarchs of Germany. He repressed the more obnoxious features of the feudal system, and by conferring the great duchies of Bavaria, Swabia, and Carinthia on his son, reduced the dangerous power of the great dukes of the empire.

KONRAD III., king of the Germans, the founder of the Hohenstaufen (q. v.) dynasty, was the son of Frederick of Swabia, and was born in 1093. While under 20 years of age, K., with his elder brother Frederick, had bravely supported Henry V. against his numerous enemies, and in return, that monarch granted K. the investiture of the duchy of Franconia. He subsequently contested the crown of Italy with the Emperor Lothaire of Saxony, but was compelled to resign his pretensions. On the death of Lothaire, the princes of Germany, fearing the increasing preponderance of the Guelph party, and attracted by his brilliant courage, moderation, and goodness, offered K. the crown, and he was accordingly formally elected at Aix-la-Chapelle, 21st February 1138. He was immediately involved in a quarrel with Henry the Proud, Duke of Bavaria and Saxony, and head of the Guelph party in Germany; and the struggle was continued under Henry's son and successor, Henry the Lion (q. v.). While Germany was thus convulsed, the state of Italy was not a whit more peaceable. The several belligerents besought K.'s assistance, but he well knew the natural inconstancy of the Italians, and determined to stand aloof. Soon after this, St Bernard of Clairvaux commenced to preach a new crusade, and K., seized with the general infatuation, set out for Palestine at the head of a large army (see *CRUSADES*) in company with his old enemy, Guelph of Bavaria. Guelph returned to Germany before K., and with his nephew, Henry the Lion, immediately renewed the attempt to gain possession of Bavaria, but their army being defeated at Flochberg, they were compelled to sue for peace. K. was now called upon to aid the Duke of Poland against his rebellious subjects, and the pope and the northern Italians against Roger of Sicily; but while preparing for this latter expedition, he was poisoned, 15th February 1152, at Bamberg. K. was largely endowed with the virtues necessary for a great monarch, and though himself unlearned, was a warm patron of science and letters. His marriage with a Greek princess was symbolised by the two-headed eagle which figured on the arms of the Emperor of Germany, and now appears on the arms of the sovereign of Austria, as heir to the German emperors.

KONRAD VON WÜRZBURG, one of the most celebrated poets of the middle ages, died at Basel in 1287. K. is fertile in imagination, learned, and—although marking the decline of mediæval High-German poetry by his prolix and artificial style—probably the most perfect master of German versification that had appeared up to his own day. His last poem, which he left in an unfinished condition, has for its subject *The Trojan War*, and is printed (in part) in Müller's *Sammlung altdeutscher Gedichte*. But K. appears to most advantage in his smaller narrative poems, of which the best is *Engelhard*

(reprinted by Haupt at Leipsic in 1844, from an old and scarce impression). Next to this may be ranked his *Otto mit dem Bart* (reprinted by Hahn at Quedlinb. and Leip. 1838); *Der Welt Lohn* (by Roth, Fkr. 1843); *The Legends of Sylvester* (by W. Grimm, Gött. 1841) and of *Alexius* (by Massmann, Quedlinb. and Leip. 1843); *Die Goldene Schmiede* (by W. Grimm, Berl. 1840). His songs and proverbs are to be found in Hagen's *Minnesinger*.

KONRADIN OF SWABIA, the last descendant of the imperial House of Hohenstaufen (q. v.), was the son of Konrad IV., and was born in 1252, two years before his father's death. Innocent IV. immediately seized upon the young prince's Italian possessions, on the plea that the son of a prince who dies *excommunicated* has no hereditary rights; and the other enemies of the House of Hohenstaufen rejoiced to follow the pope's example. K. was not left, however, totally friendless. His uncle Manfred took up arms in his behalf, drove the pope from Naples and Sicily, and in order to consolidate his nephew's authority, declared himself king till the young prince came of age. The pope's inveterate hatred of the Hohenstaufens induced him to offer the crown of the Two Sicilies to Charles of Anjou, a consummate warrior and able politician. Charles immediately invaded Italy, met his antagonist in the plain of Grandella, where the defeat and death of Manfred, in 1266, gave him undisturbed possession of the kingdom. But the Neapolitans, detesting their new master, sent deputies to Bavaria to invite K., then in his 16th year, to come and assert his hereditary rights. K. accordingly made his appearance in Italy at the head of 10,000 men, and being joined by the Neapolitans in large numbers, gained several victories over the French, but was finally defeated, and along with his relative, Frederick of Austria, taken prisoner near Tagliacozzo, 22d August 1268. The two unfortunate princes were, with the consent of the pope, executed in the market-place of Naples on the 20th October. A few minutes before his execution, K., on the scaffold, took off his glove, and threw it into the midst of the crowd, as a gage of vengeance, requesting that it might be carried to his heir, Peter of Aragon. This duty was undertaken by the Chevalier de Waldburg, who, after many hair-breadth escapes, succeeded in fulfilling his prince's last command. See **SICILIAN VESPERS**.

Koodoo (*Antelope strepsiceros*).

KOO'DOO (*Antelope strepsiceros*, or *Strepsiceros koodoo*), one of the largest species of antelope. The

general form is not so light and elegant as that of many of the antelopes. The height is about four feet, and the length fully eight feet, exclusive of the tail, which is moderately long, and terminates in a tuft like that of an ox. The male is furnished with great horns, nearly four feet long, and beautifully twisted in a wide spiral of two turns and a half, very thick at the base, and there wrinkled and ringed. The female is smaller than the male, and hornless. The general colour is grayish brown, with a narrow white stripe along the middle of the back, and eight or ten similar stripes proceeding from it down the sides. The K. lives in small families of four or five, inhabiting chiefly the wooded parts of South Africa. It is easily domesticated, and is one of the animals which, probably, man has not yet done enough to reduce to his service.

KOO'MRAH (*Equus hippagrus*), an alleged distinct species of the family *Equidae*, a native of North Africa, and inhabiting mountain woods. It is ten or ten and a half hands high; with a broad deep head; no forelock, but long woolly hair down to the eyes; long black mane; tail more like that of a horse than of an ass; the colour a uniform reddish bay, without mark or streak. Colonel Hamilton Smith supposes that it may be the *Boryes* of Herodotus, and *Hippagrus* of Oppian.

KOO'RIA MOO'RIA ISLANDS, a group of six islands, on the south coast of Arabia, are situated about 21 miles from the coast, about lat. 17° 33' N., and long. 56° 6' E. The surface of these islands is sterile, and the only one which is inhabited supports only from 20 to 30 fishermen. They were ceded to England in 1854. Guano of an inferior quality is obtained from them.

KO'PEK, a Russian money of account, the $\frac{1}{100}$ th part of a Rouble (q. v.), and equivalent to $1\frac{1}{2}$ farthings of sterling money.

KORÂN (Arab. from *karaa*, to read), [= Hebr. *Mikra*, the written Book, or that which can and ought to be read:—the Old Testament, in contradistinction to *Mishnah*, or the Code of the Oral Law], *The Reading*, by way of eminence; a term first applied to every single portion of Mohammed's 'Revelations;' at a later period, used for a greater number of these; and finally for their whole body, gathered together into the one book, which forms the religious, social, civil, commercial, military, and legal code of Islam. The Koran is also known under the name of *Forkan* (Chald. Salvation, not from Hebr. *Perek*, Division, as erroneously supposed); further, of *Al-Moshaf* (*The Volume*), or *Al-Kitab* (*The Book*, in the sense of 'Bible'), or *Al-Dhikr* ('the Reminder,' or 'the Admonition'). The Koran is, according to the Moslem creed, coeval with God, uncreated, eternal. Its first transcript was written from the beginning in rays of light upon a gigantic tablet resting by the throne of the Almighty; and upon this tablet are also found the divine decrees relating to things past and future. A copy of it, in a book bound in white silk, jewels, and gold, was brought down to the lowest heaven by the angel Gabriel, in the blissful and mysterious night of Al-Khadr, in the month of Ramadân. Portions of it were, during a space of twenty-three years, communicated to Mohammed, both at Mecca and Medina, either by Gabriel in human shape, 'with the sound of bells,' or through inspirations from the Holy Ghost 'in the Prophet's breast,' or by God himself, 'veiled and unveiled, in waking or in the dreams of night.' Traditions vary with respect to the length of the individual portions revealed at a time, between single letters, verses, and entire chapters or Surahs (from Hebr. *shurah*,

line). The first revelation forms, in the present arrangement of the book, verses 1—5 of surah xcvi., and begins with the words: 'Read [preach], in the name of thy Lord, who has created all things!'

Mohammed dictated his inspirations to a scribe, not, indeed, in broken verses, but in finished chapters, and from this copy the followers of the Prophet procured other copies—unless they preferred learning the oracles by heart from the master's own mouth. The original fragments were, without any attempt at a chronological or other arrangement, promiscuously thrown into a box, and a certain number were entirely lost. A year after the death of Mohammed, the scattered portions were, at the instance of Abu Bekr, collected by Zaid Ibn Thâbit of Medina, 'from date-leaves and tablets of white stone, bones, and parchment-leaves, and the breasts of men,' and faithfully copied, without the slightest attempt at moulding them into shape or sequence, together with all the variants, the repetitions, and the gaps. This volume was intrusted to the keeping of Hafsa, one of the Prophet's wives, the daughter of Omar. A second redaction was instituted in the thirtieth year of the Hedjah, by Calif Othman, not for the sake of arranging and correcting the text, but in order to restore its unity: many different readings being current among the believers. He ordered new copies to be made from the original fragments, in which all the variants were to be expunged, without, however, any further alteration, such as the suppression of certain passages, &c., being introduced; and the old copies were all consigned to the flames. With respect to the succession of the single chapters—114 in number—no attempt was made at establishing continuity, but they were placed side by side according to their respective lengths; so that, immediately after the introductory fathah or exordium, follows the longest chapter, and the others are ranged after it in decreasing size. They are not numbered in the manuscripts, but bear distinctive, often strange-sounding headings, as: the Cow, Congealed Blood, the Fig, the Star, the Towers, Saba, the Poets, &c., taken from a particular matter or person treated of in the respective chapters. Every chapter or surah begins with the introductory formula: 'In the name of God, the Merciful, the Compassionate.' It is further stated at the beginning whether the surah was revealed at Mecca or at Medina. Every chapter is subdivided into smaller portions (*Ayahs*, Hebr. *Oth*, sign, letter), varying in the ancient 'seven editions' or primitive copies [of Medina (two), Mecca, Kufa, Basra, Syria, and the 'Vulgar Edition']—reduced by Nöldeke to four editions—between 6000 and 6036. The number of words in the whole book is 77,639, and an enumeration of the letters shews an amount of 323,015 of these. Other—encyclical—divisions of the book are: into thirty *ajzâ* and into sixty *abzâb*, for the use of devotional readings in and out of the mosque. Twenty-nine Surahs commence with certain letters of the alphabet, supposed to be of mystical purport.

The contents of the Koran as the basis of Mohammedanism will be considered under that head, while for questions more closely connected with authorship and chronology, we must refer to MOHAMMED. Briefly, it may be stated here, that the chief doctrine laid down in it is the unity of God, and the existence of but one true religion, with changeable ceremonies. When mankind turned from it at different times, God sent prophets to lead them back to truth: Moses, Christ, and Mohammed being the most distinguished. Both punishments for the sinner and rewards for the pious are depicted with great diffuseness, and exemplified chiefly by stories taken from the Bible, the Apocryphal writings, and

the Midrash. Special laws and directions, admonitions to moral and divine virtues, more particularly to a complete and unconditional resignation to God's will (see ISLAM), legends, principally relating to the patriarchs, and, almost without exception, borrowed from the Jewish writings (known to Mohammed by oral communication only, a circumstance which accounts for their often odd confusion), form the bulk of the book, which throughout bears the most palpable traces of Jewish influence. Thus, of ideas and notions taken bodily, with their Arabicised designations, from Judaism, we may mention—Koran = Mikrah (Reading); Forkan (Salvation); the introductory formula, Bismillah (in the name of God); Torah (Book of Law); Gan Eden (Paradise); Gehinnom (Hell); Haber (Master); Darash (to search the Scriptures); Rabbi (Teacher); Sabbath (Day of Rest); Shechinah (Majesty of God); Mishnah (Repetition, or Oral Law), &c. The general tendency and aim of the Koran is found pretty clearly indicated in the beginning of the second chapter: 'This is the book in which there is no doubt; a guidance for the pious, who believe in the *mysteries of faith*, who perform their *prayers*, give *alms* from what we have bestowed upon them, who believe in the *revelation* which we made unto thee, which was sent down to the *prophets before thee*, and who believe in the *future life*, &c.' To unite the three principal religious forms which he found in his time and country—viz., Judaism, Christianity, and Heathenism—into one, was Mohammed's ideal, and the Koran, properly read, discloses constantly the alternate flatteries and threats aimed at each of the three parties. No less are certain abrogations on the part of the Prophet himself, of special passages in the Koran, due to the vacillating relation in which he at first stood to the different creeds, and the concessions first made, and then revoked. Witness the 'Kiblah,' or the place where the believer was to turn in his prayer, first being Jerusalem; fasting, being at first instituted in the ancient manner; forbearance to idolaters forming one of the original precepts, &c.

The language of the Koran is of surpassing elegance and purity, so much so, that it has become the ideal of Arabic classicality, and no human pen is supposed to be capable of producing anything similar:—a circumstance adduced by Mohammed himself as a clear proof of his mission. The style varies considerably; sometimes concise and bold, sublime and majestic, impassionate, fluent, and harmonious; it at other times becomes verbose, sententious, obscure, tame, and prosy; and on this difference modern investigators have endeavoured to form a chronological arrangement of the Koran, wherever other dates fail. But none of these attempts can ever be successful. Full manhood, approaching age, and declining vigour, are not things so easily traced in the writings of a man like Mohammed. The Koran is written in prose, yet the two or more links of which generally a sentence is composed, rhyme with each other, a peculiarity of speech used by the ancient soothsayers (*Kuhân* = Cohen) of Arabia:—only that Mohammed used his own discretion in remodelling its form, and freeing it from conventional fetters; and thus the rhyme of the Koran became an entirely distinctive rhyme. Refrains are introduced in some surahs; and plays upon words are not disdained.

The outward reverence in which the Koran is held throughout Mohammedanism, is exceedingly great. It is never held below the girdle, never touched without previous purification; and an injunction to that effect is generally found on the cover which overlaps the boards, according to Eastern binding. It is consulted on weighty matters;

sentences from it are inscribed on banners, doors, &c. Great lavishness is also displayed upon the material and the binding of the sacred volume. The copies for the wealthy are sometimes written in gold, and the covers blaze with gold and precious stones. Nothing also is more hateful in the eyes of a Moslem than to see the book in the hands of an unbeliever.

The Koran has been commented upon so often that the names of the commentators alone would fill volumes. Thus, the library of Tripoli, in Syria, is reported to have once contained no less than 20,000 different commentaries. The most renowned are those of Samachshari (died 539 H.), Beidhavi (died 685 or 716 H.), Mahalli (died 870 H.), and Soyuti (died 911 H.). The principal editions are those of Hinkelmann (Hamburg, 1694), Maracci (Padua, 1698), Flügel (3d ed. 1838), besides many editions (of small critical value) printed in St Petersburg, Kasan, Teheran, Calcutta, Cawnpore, Serampore, and the many newly-erected Indian presses. The first, but very imperfect, Latin version of the Koran was made by Robertus Retensis, an Englishman, in 1143 (ed. Basle, 1543). The principal translations are those of Maracci, into Latin (1698); Sale (first ed. 1734) and Rodwell (1862), into English; Savary (1783), Garcin de Tassy (1829), Kasimirski (1840), into French; Megerlin (1772), Wahl (1828), Ullmann (1840), into German; besides the great number of Persian, Turkish, Malay, Hindustanee, and other translations made for the benefit of the various eastern Moslems. Of concordances to the Koran may be mentioned that of Flügel (Leip. 1842), and the Noojoom-ool-Foorkan (Calcutta, 1811). Of authorities whose works may be consulted on the Koran, we will chiefly name Maracci, Sale, Savary, Wahl, Geiger, Amari, Sprenger, Muir, Weil, Nöldeke.

KORDOFAN, or the White Land, a province of the Egyptian territories in the Sudan, is bounded on the E. by the White Nile, which separates it from Sennaar, and is separated on the W. from Darfur by a strip of desert. It extends in lat. from 10° to 15° 20' N., and the area of its more or less cultivated portion has been estimated at 12,000 square miles, and its population at 500,000. The province is traversed by no rivers; wells, however, abound, water being found almost everywhere, at a comparatively small depth. In the south, the surface is undulating, and the soil argillaceous and productive; and here dourra and maize are grown. In the north and west, the surface is an elevated plateau, and the soil sandy, but peculiarly fitted for the cultivation of millet, which is the staple article of food. The employments of the people are chiefly agricultural. In the south, horned cattle and horses are extensively reared, but in the north and west, the nomad inhabitants depend for support entirely upon their large herds of camels, which are hired out for the transport of produce and merchandise. The chief trees are acacias, yielding gum-arabic. Iron ore is obtained and wrought in the country. Slavery, which had formerly been general, and had formed an important branch of trade in K., was abolished in 1857 by Saïd Pasha, the Egyptian viceroy. The people are Mohammedans.

The inhabitants are partly Arabs, partly a mixed Arab and negro race. The capital is Il-Obeid or Lobeid (q. v.). In 1770, Adlân, king of Sennaar, made a conquest of K., and about six years after, the Sultan of Darfur overran the province, and annexed it to his territories. Under the sultan, the inhabitants were but lightly taxed; trade was opened up with the Sudan and Arabia; and the markets of Il-Obeid and Bara, the chief towns,

were stored with the produce of Arabia, India, and Abyssinia. This period of prosperity, however, was brought to a close by the invasion of K., in 1821, by an Egyptian army. Since then K. has remained a province of the Turkish empire, under the viceroy of Egypt.

KÖRNER, THEODOR, a patriotic German poet, was born at Dresden, 23d September 1791, and after the publication of a collection of immature verses in 1810, betook himself to the university of Leipsic. Here the young author, who had no aptitude for serious and solid studies, was led into several irregularities, which necessitated his leaving the university. After a short residence in Berlin, he went to Vienna, and began to write for the stage. His *Der Grüne Domino* (The Green Domino), *Die Braut* (The Bride), and *Der Nachtwächter* (The Night-watchman), are among the best German comedies. His two most important dramas, *Zriny* and *Rosamunde*, though destitute of that sagacity of thought and knowledge of mankind which are essential to the permanent success of such works, are full of noble enthusiasm. The uprising of the German nation against the despotism of Napoleon, inspired K. with patriotic ardour. He joined the army of liberation, and displayed heroic courage in many encounters. The songs which he now wrote—several of them in the camp—and published under the title of *Leier und Schwert* (Lyre and Sword), stirred his countrymen mightily. Their chief power, however, probably lies in their impassioned nationality; foreigners at least fail to recognise in them much more, yet the Germans regard them with a kind of sacred admiration that forbids criticism. The most famous of these pieces is his *Schwert-Lied* (Sword-Song). K. was killed in battle near Rosenberg, 26th August 1813. A collected edition of his works (*Sämmtliche Werke*, 1 vol. Berl. 1834; 4 vols. 1842, 4th edit. 1853) was published by Streckfuss. A biography of the poet, written by his father, has been translated into English, 'with selections from his poems, tales, and dramas,' by G. F. Richardson (Lond. 2 vols. 1845).

KÖRÖS, NAGY, or GREAT KÖRÖS, an important market-town of Hungary, in the county of Pesth, is situated in a sandy district, 49 miles south-east of the city of that name. Black cattle and sheep are here extensively reared, and an excellent red wine is grown. Pop. 16,100.—KISS KÖRÖS, or Little Körös, is a small town, situated 38 miles south-west of the foregoing, and also engaged in the production of wine. Pop. 6000.

KOSCIUSKO, TADEUSZ, a great Polish general and patriot, born about the middle of last century, in the province of Minsk, Western Russia, was descended from an ancient and noble, but not wealthy Lithuanian family. He became a captain in the Polish army, went to America, and served in the War of Independence. He returned to Poland in 1786, with the rank of general of brigade. In the campaign of 1792, he held a position at Dubjenka for five days with 4000 men against 16,000 Russians, although he had had only twenty-four hours to fortify it, and finally withdrew his troops without much loss. This brilliant feat of arms laid the foundation of his military reputation. When King Stanislaus submitted to the will of the Empress Catharine, K. resigned his command, and retired to Leipsic; but returned in 1794, and put himself at the head of the national movement in Cracow, and afterwards in Warsaw. With 20,000 regular troops, and 40,000 ill-armed peasants, he resisted for months the united Russian and Prussian army of 150,000 men. He was proof also against the most tempting proposals on the

part of the Prussian king. He was at last overpowered by superior numbers in the battle of Maciejowice, 10th October 1794, and fell from his horse, covered with wounds, and uttering the words '*Finis Polonia!*' He was kept a prisoner till after the accession of the Emperor Paul, who restored him to liberty, gave him an estate with 1500 peasants, and handed to him his sword, which K. declined to receive, saying: 'I have no more need of a sword, as I have no longer a country.' He afterwards resigned the estate, and sent back from London the money which he had received from the emperor. He spent the remainder of his life chiefly in France, and his chief enjoyment was in agricultural pursuits. When Napoleon, in 1806, formed a plan for the restoration of Poland, K. felt himself restrained from taking an active part in it by his promise to the Emperor Paul. The address to the Poles, published in his name in the *Moniteur*, was a fabrication. In 1814, he wrote to the Emperor Alexander, entreating him to grant an amnesty to the Poles in foreign countries, and to make himself constitutional king of Poland. He released from servitude, in 1817, the peasants on his own estate in Poland. His death took place on 15th October 1817, in consequence of his horse falling over a precipice. His remains were removed to Cracow by the Emperor Alexander, and were laid side by side with those of John Sobieski. See Falkenstein's *K. nach seinen häuslichen und öffentlichen Leben* (2d edit. Leip. 1834).

KÖSLIN, a manufacturing town of Prussia, in the province of Pomerania, on the Mühlenbach, 7 miles from the Baltic Sea, and 85 miles north-east from Stettin. There are iron-foundries, and manufactures of tobacco, paper, &c. Pop. 10,059.

KOSSUTH, LAJOS (LOUIS), the leader of the Hungarian revolution, was born in 1802 at Monok, in the county of Zemplin, in Hungary. His family is of noble rank, but his parents were poor. He studied law at the Protestant college of Sarospatak, and practised first in his native county, and afterwards in Pesth. In 1832, he commenced his political career at the diet of Presburg as editor of a liberal paper, which, owing to the state of the law, was not printed, but transcribed and circulated. The subsequent publication of a lithographed paper led, in May 1837, to K.'s imprisonment. He was liberated in 1840, and became again the editor of a paper, in which he advocated views too extreme for many of the liberal party amongst the nobles, but which took strong hold of the people in general, especially of the youth of the country. In November 1847, he was sent by the county of Pesth as deputy to the diet, and soon distinguished himself as a speaker, and became the leader of the opposition. He advocated the emancipation of the peasants, the elevation of the citizen class, the freedom of the press, &c., and after the French revolution of 1848, openly demanded an independent government for Hungary, and constitutional government in the Austrian hereditary territories. To his speeches must in great part be ascribed not only the Hungarian revolution, but the insurrection in Vienna in March 1848. On the dissolution of the ministry in September 1848, he found himself at the head of the Committee of National Defence, and now prosecuted with extraordinary energy the measures necessary for carrying on the war. To put an end to all the hopes and schemes of the moderate party, he induced the National Assembly at Debreczin, in April 1849, to declare the independence of Hungary, and that the Hapsburg dynasty had forfeited the throne. He was now appointed provisional governor of Hungary; but being disappointed in his hopes for

the intervention of the Western Powers, and finding the national cause jeopardised by the arrival of Russia on the scene of action, he endeavoured to arouse the people to a more desperate effort. The attempt was vain. Finding that the dissensions between himself and Görgei (q. v.) were damaging the national cause, he resigned his dictatorship in favour of the latter. After the defeat at Temesvar on 9th August 1849, he found himself compelled to abandon his position, and to flee into Turkey, where, however, he was made a prisoner; but though his extradition was demanded both by Austria and Russia, the Porte, true to the principle of hospitality, resisted all their demands. In September 1851 he was liberated, and the government of France refusing him a passage through their territory, he sailed in an American frigate to England, where he was received with every demonstration of public respect and sympathy. In December of the same year he landed in the United States, where he met with a most enthusiastic reception. He returned in June 1852 to England, and there he chiefly resided, until the Italian war broke out against Austria, when almost the whole of the Hungarian emigrants left for Italy with Kossuth. He now (1873) resides in Turin.

KOSTROMA, capital of the government of that name, in European Russia, is situated near the junction of the Kostroma with the Volga, and 564 miles from St Petersburg. It was founded in the middle of the 12th c., and suffered much from the invasions, first of the Tartars, afterwards of the Poles. K. has considerable manufactures, chiefly of linen, and trades in corn, tallow, timber, linseed oil, and leather. Pop. 20,630.

KOSTROMA, a government of Great Russia, is bounded on the W. by the government of Jaroslav, and on the E. by the district of Kazan. Area, 30,834 square miles; pop. (1858) 1,075,988. The surface is generally flat, marshy, interspersed with lakes, and, especially in the north and east, with extensive and dense forests. The greater part of the soil is uncultivated. The chief rivers are the Volga, with its tributaries the Kostroma, the Unja, and the Vetluga. The climate is severe. Agriculture is the principal occupation of the inhabitants, and grain is produced in sufficient quantity for local consumption. Flax and hemp are extensively cultivated; mats, pitch, tar, and potash are largely manufactured and exported; and there is a flourishing trade in timber.

KOTAH, the chief town of a protected state of the same name, is situated in Rajpootana, in lat. 25° 10' N., and long. 75° 52' E. It is on the right bank of the Chumbul, and is fortified with a rampart and a ditch. The town is tolerably wealthy, being, moreover, of considerable size, and of some architectural pretensions. In 1857, notwithstanding the fidelity of the rajah to the British government, K. fell under the power of the mutineers, remaining in their possession until 30th March 1858, when it was stormed by General Roberts. The principality contains 4400 square miles, with an estimated population of 440,000.

KOTZEBUE, AUGUST FRIEDRICH FERDINAND VON, a most prolific German dramatist, was born at Weimar on 3d May 1761, and after a checkered life, spent first in Russia, and afterwards in Austria and Germany, was assassinated at Mannheim, 23d March 1819, on account of his hostility to the liberal movement. Among his dramatic performances (the chief merit of which consists in their superior knowledge of stage-effect), may be mentioned *Die Indianer in England* (The Indians in England), *Menschenhass und Reue* (Misanthropy and Repentance)

—the latter, under the title of *The Stranger*, being well known on the English boards—*Die beiden Klingsberg* (The Two Klingsbergs), *Die Spanier in Peru*, &c. K. wrote no fewer than ninety-eight dramas, which have been collected in editions of 28 (Leip. 1797—1823) and of 44 vols. (1827—1829). Several of them have been translated into English.

KOUBA, a town in the south of Russia, on the eastern slope of the Caucasus, in the government of Derbend, 55 miles south-south-east of the town of that name, lat. 41° 22' N., long. 48° 31' E. Agriculture, fishing, the rearing of silkworms, and trade with Astrakhan and Persia, chiefly employ the inhabitants. Pop. 9405. It was annexed to Russia in 1806.

KOUBA'N, a river in the south of Russia, rises on the declivity of Mount Elburz, and flows first north, then west, separating the governments of Stavropol and the Cossacks of the Black Sea from Circassia. It is about 400 miles in length, exclusive of its windings, and it falls partly into the Black Sea, partly into the Sea of Azof.

KOUSNE'TZK, a town of Russia, on the northern border of the government of Saratov, 110 miles north-north-east of the town of that name. Pop. 13,107, who are employed chiefly in bee-keeping and in woollen manufactures.

KO'VNO, capital of the government of the same name, in European Russia, near the confluence of the Vilia and the Niemen, was founded in the 10th c., and was the scene of many bloody conflicts between the Teutonic Knights and the Poles during the 14th and 15th centuries. Its commerce, notwithstanding its advantages of situation—being not only near the confluence of two navigable rivers, but also on the great railway from St Petersburg to Berlin—is very insignificant. Pop. 24,632.

KOVNO, a government of West Russia, lies immediately south of the province of Courland, and is bounded on the south-west by Prussia and Poland. Area, 16,115 square miles, not more than one-third of which is cultivated, and about one-third under wood. Flax and honey are important products. Pop. (1858) 988,287. The surface is flat and marshy, and there are numerous lakes. The chief rivers are the Niemen, with its tributaries the Vilia, Neveja, and Doubissa. *Plica Polonica* (q. v.) is common among the peasantry. Previously to 1843, this government formed a part of that of Wilna.

KOZE'LSK, a district town of Great Russia, in the government of Kalouga, and 40 miles south-west of the town of that name, stands on the right bank of the river Jisdra. Pop. 7420. It carries on a great trade in hemp, and an extensive manufacture of sailcloth. K. is famous in history for the brave but unsuccessful resistance made here to Batu-Khan of Kiptchak.

KOZLO'F, a town of Russia, in the government of Tambov, is advantageously situated on the Voronetz, in lat. 52° 53' N., long. 40° 31' E. It was founded by the Czar Michael Fedorovitch as a stronghold against the Tartars. It is a flourishing town, has numerous woollen, linen, and other factories, and a pop. of 23,000, who are employed largely in agriculture, and in horse and sheep breeding.

KRAJO'VA, a town of Wallachia, in Little Wallachia, near the eastern bank of the Schyl, 120 miles west of Bucharest. It is the residence of many rich bojars (nobles), carries on considerable commerce, and has a pop. of 25,000.

KRAKEN, a fabulous animal, first described by Pontoppidan in his *Natural History of Norway*, and from time to time said to have been seen in the Norwegian seas. Enormous magnitude is ascribed

to it; it is said to rise from the sea like an island, to stretch out mast-like arms, by which ships are readily drawn down, and, when it sinks again into the deep, to cause a whirlpool, in which large vessels are involved to their destruction. The fable of the K. has considerable analogy to the more recent stories of the Great Sea Serpent (q. v.). It is not, however, to be summarily rejected as mere unmingled fable. There may, perhaps, be some foundation for it in the occasional appearance of huge cephalopods, to the general characters of which the description given of its form and monstrous arms sufficiently agrees, great exaggeration as to size being of course allowed for. Large as are some of the cephalopods known to exist in some seas, there are reasons for supposing that creatures of this kind do exist much larger than any that have been accurately described; and stories, similar to the Norwegian ones recorded by Pontoppidan and others, are current in different parts of the world. Such is the story told by Pliny concerning a vast animal with prodigious arms which impeded the navigation of the Strait of Gibraltar. See *Chambers's Edinburgh Journal*, first series, xi. 226.

KRAMERIA. See RATTANY ROOT.

KRASNOIA'RSK, chief town of the Siberian government of Yeniseisk, is situated on the great road from Europe to East Siberia, at a distance of 3197 miles from St Petersburg. It contains 7628 inhabitants, chiefly Cossacks, some of whom possess numerous herds of cattle and horses. There is a considerable trade in furs, and there are about thirty tan-yards and other factories.

KRAZINSKI, COUNT VALERIAN, a scion of an illustrious Polish family that had early adopted the Protestant religion, was born about 1780. Being possessed of great natural abilities, which were improved and matured by a thorough education, he was appointed one of the chief officials in the bureau of Public Instruction for Poland. He strenuously exerted himself to promote education among the various classes of dissenters, and, with a view to this, introduced, at great expense to himself, the process of stereotyping. When the Poles rebelled in 1830, and set up an independent government, K. was sent as their representative to London, where, from 1831, he remained as an exile for twenty years, and then removed to Edinburgh, where he died, 22d December 1855. Being a man of extensive learning, and possessing a profound knowledge of the history and literature of the Slavonic nations, his works are of considerable authority. The chief are—*The Rise, Progress, and Decline of the Reformation in Poland* (Lond. 2 vols. 1839—1840), *Lectures on the Religious History of the Slavonic Nations* (Lond. 1849), *Montenegro and the Slavonians in Turkey* (Edin. 1853), together with some translations, religious works, and political pamphlets on the subject of Poland.

KREASOTE. See CREASOTE.

KREATINE. See CREATINE.

KRE'FELD, an important manufacturing town of Rhenish Prussia, twelve miles north-west of Düsseldorf. It owes its importance to the settlement here, in the 17th and 18th centuries, of numerous refugees, who were driven from the neighbouring countries by religious persecution, and who established here the silk and velvet manufactures for which K. is now the most noted town in Prussia. The town itself and the immediate vicinity employ upwards of 20,000 hands in these manufactures, and the value of the goods produced annually is estimated at upwards of a million sterling. K. also carries on manufactures of woollen cloth and

yarn, cotton goods, machinery, and chemicals. Pop. 45,219.

KREMENCHUG, a district town of Little Russia, in the government of Poltava, on the left bank of the Dnieper, ninety miles above Ekaterinoslav. It was founded in the 16th c. by Segismundus-Augustus, king of Poland, as a barrier against the Tartars. During the reign of Catharine II., it was the chief town of New Russia, and it is now the seat of great industrial and commercial enterprise, containing 34 factories, chiefly for melting tallow and for rope-making. Pop. 19,517.

KREMENETZ, a district town of West Russia, in the government of Volyn (Volhynia), is situated 130 miles west of Jitomir, and about 20 miles from the frontier of Austrian Galicia. It has 10,486 inhabitants, and seven annual fairs are held here, but, owing to the want of river-communication, the commerce is limited.

KREM'NITZ, a town of Hungary, in the county of Bars, in a deep gloomy valley, twelve miles west-south-west of Neusohl. It is famous for its gold and silver mines, which, however, are less productive now than formerly. Pop. 5400, who are almost entirely of German origin.

KREMS, a town of Lower Austria, in a picturesque district on the Danube, at the confluence of the Krems with that river, 38 miles west-north-west of Vienna. It manufactures mustard and powder, and trades in wine. Pop. 5300.

KREU'ZER—from the cross (*kreuz*) formerly conspicuous upon it—a small copper coin current in Southern Germany, the 60th part of the gulden or Florin (q. v.).

KREU'ZNACH, a town in the province of Rhenish Prussia, on the Nahe, a few miles from its junction with the Rhine, and 38 miles south-south-east of Coblenz. It has crooked narrow streets, old-fashioned houses, and about 10,000 inhabitants. It dates its existence from about the 9th century. It is chiefly notable, however, for its salt springs, which were discovered in 1478, and which, containing iodine and bromine, are serviceable in many diseases. It is therefore much frequented. The springs are of various temperatures, from 45½° to 84° F.

KRIMMITSCHAU, a town of Saxony, about 37 miles south of Leipsic, on the railway between that place and Hof. It is a busy manufacturing town, the industrial products being woollen yarn, woollen and cotton fabrics, buttons, needles, &c. Pop. 9576.

KRI'SHNA, the eighth Avatāra or incarnation of the Hindu god Vishnu. See **VISHNU**.

KROLOWE'Z, a town of Little Russia, in the government of Tchernigov, is situated 100 miles east of the town of that name. A famous annual market is held here. Pop. upwards of 6000.

KRO'SSEN, a walled town of Prussia, on the left bank of the Oder, 32 miles south-east of Frankfurt. There are manufactures of woollen, linen, leather, and earthenware. Pop. 7000.

KRÜDENER, JULIANA VON, a religious visionary and enthusiast, daughter of Baron von Vietinghoff, was born at Riga in 1766. When she was but 14, she married the Baron von Krüdener, a Livonian nobleman, who held the post of Russian ambassador at Venice. Her married life, however, was unhappy, and after the birth of a son and daughter, she was divorced from her husband. The succeeding incidents of her stormy career are supposed to form the groundwork of the novel of *Valerie*, which she published in 1803. After many adventures, M. von K.

came to Berlin, where she was admitted to the close intimacy of the queen, Louisa, of all whose projects M. von K. was the confidante and sharer. The shock occasioned by the death of this princess is said to have disturbed the balance of M. von K.'s mind; and from that date she became a zealous disciple of the celebrated pietist, Jung Stelling, and ultimately gave herself up to religious mysticism in its most exaggerated form. From Berlin she moved to Paris, where she appeared as a prophetess, and the herald of a new religious era; and she attracted such notice by the fulfilment of certain of her predictions of public events, as of the fall of Napoleon, his return from Elba, and the final crisis of Waterloo, as to obtain access to the Emperor Alexander, and eventually to acquire much influence over him. Her gigantic schemes for the elevation of the social and moral condition of the world, caused her to appear a dangerous character in the eyes of persons in authority, and she was obliged to withdraw from France and other countries in succession. In consequence, she retired to one of her paternal estates near Riga, where she entered into relations with the Herrnhüter or Moravian Brethren; but her restless disposition soon carried her into fresh enterprises, the latest of which was the formation of a great correctional establishment in the Crimea for the reformation of criminals and persons of evil life. In the midst of her efforts for this object, she died at Kara-su-bazar, December 13, 1824. Besides the novel already named, her only other work was a pamphlet entitled *Le Camp des Vertus* (Paris, 1815); but many curious details of her conversation and opinions are preserved in Krug's *Conversations with Madame von Krüdener*, published at Leipsic in 1818.

KRU'MAU, a small town of Bohemia, on the Moldau, 14 miles south-south-west of Budweis. Its castle, a fine structure placed on a rock, contains five separate courts, and is surmounted by numerous towers and pinnacles. There is some manufacturing industry. Pop. 6600.

KRUMMACHER, FRIEDRICH WILHELM, the son of F. A. Krummacher, a clergyman who has distinguished himself by his zeal for old Lutheranism, and also as an opponent of the Rationalists. Some of his works, particularly his discourses on the history of *Elijah the Tishbite*, have not only acquired a great popularity in Germany, but, by means of translations, in Britain and America. Along with this may be named his discourses on the Life of Elisha. In 1843, he was called as preacher to a German Reformed congregation in New York, but returned to Bremen in 1847, and now holds the office of chaplain of the Prussian court at Potsdam. K. is regarded as one of the most eloquent preachers in Germany. (He died December 10, 1868.)

KRU'MMHORN (Ital. *cormorne*) is the name of a very old wind-instrument made of wood, the under part of which is bent outwards in a circular arc.—Krummhorn is also the name of an organ-stop, found in almost all German organs, and generally of eight feet pitch. The pipes are made of tin, the body or sounding part being cylindrical, and partly shut at the upper end. The Italian name of *cormorne* has been corrupted by English organ-builders into *cremona*, which is the same stop in English organs. The sound of the krummhorn as an organ-stop is soft and quiet; but it is defective in not keeping in tune so well as other reed-stops.

KSHATRIYA, the second or military caste in the social system of the Brahmanical Hindus. See **CASTE**.

KÜBLAI KHAN (called by the Chinese **CHI-TSU**), more properly **KHÜBLAI KHAN**, the Khagan,

or Grand Khan of the Mongols, and Emperor of China, was the grandson of Genghis Khan through his fourth son, Tuly Khan. Being ordered by his brother Mangh, then Khagan of the Mongols, to subjugate the Corea and China, K., availing himself of an application made by Si-Tsong of the Song dynasty to aid him in expelling the Mantchus, entered China (1260) with an immense army, drove out these Tartars (or *Kin* dynasty), and took possession of North China. K., who was an able and energetic prince, adopted the Chinese mode of civilization, and endeared himself to his subjects by his attention to men of letters, and the honours which he bestowed on the memory of their former renowned monarchs. In 1279, he completed the ruin of the Song dynasty by invading and subduing Southern China, and founding a new dynasty—that of the Yuen (the first foreign race of kings that ever ruled in China). From 1259, K. had been the Khagan of the Mongols, so that his dominions now extended from the Frozen Ocean to the Strait of Malacca, and from the Corea to Asia Minor—an extent of territory the like of which had never before, and has never since, been governed by any one monarch. He was also the last grand khan whose right of suzerainty was recognised over all the countries conquered by the Mongol arms. His court was attended by the learned men of India, Persia, Transoxiana, and some even from Europe, among whom is found the celebrated Marco Polo. Towards the close of his life, he sent an expedition against Japan, but it totally failed. Irritated by this disaster, he indemnified himself by the conquest of Manchuria and other neighbouring districts; but soon after died at Pekin in 1294. The grand dukes of Russia were among his tributaries.

KUENLU'N, the name of a mountain-range in Central Asia. See TURKESTAN.

KUFIC COINS is the name of the earliest Mohammedan coins, inscribed with the Kufic or ancient Arabic character (see the following article). According to Makrizi, the first were struck in the 18th year of the Hedjrah (638 A.D.), under Calif Omar, who, wishing to make Islam entirely independent of foreign, chiefly Byzantine and Persian, influence, even in the province of money, caused 'Mohammedan' coins to be struck, in the shape of those Persian and Byzantine ones which had been circulating among his subjects till then, and he caused them to be inscribed with Koranic passages. According to other Arabic writers, however (Al-Makin, Soyuti, Ibn Koteiba, &c.), the earliest Kufic money dates from the time of Calif Abd Al-Malek (76 H. = 695 A.D.), a period much more probable, considering that no Kufic coins have hitherto been discovered anterior to 77 H. They were first of gold and silver, the former being *dinars* (corrupted from denarius—a name, moreover, wrongly applied), of the value of about 10s. 8d.; the latter, *dirhems* (drachma), worth about 5½d. Not before 116 H. were copper coins, *fels* (follis? obolus?), introduced, and the material for them was taken by the order of Calif Walid from a colossal bronze statue of an idol. Figures, human or otherwise, are rarely met with on these coins. The legend generally runs either around the margin, or is enclosed by a ring. The oldest dinar—of 77 H.—is preserved in the Milan Museum (formerly Cav. Millingen's collection). Next comes the Stockholm Academy, with a dinar of 79 H. The oldest dirhem found as yet, dated 82 H., is likewise in Milan, in the Museo di Stefano di Mainoni. One of the richest collections of Kufic coins is in the Stockholm Academy: owing chiefly to the great numbers found on the shores of the Baltic, brought thither probably by Mohammedan traders

in the middle ages. Not before the 7th c. H. were the Kufic characters superseded by the modern Neshki, upon coins; while for books, &c., they had long fallen into disuse. The best authorities on this subject are Makrizi, Adler, the Tychsens, Reiske, De Sacy, Castilioni, Cataneo, Frähn, Lindberg, Pietraszewski.

KUFIC WRITING, an ancient form of Arabic characters, which came into use shortly before Mohammed, and was chiefly current among the inhabitants of Northern Arabia, while those of the south-western parts employed the Himjaritic or Mosnad (clipped) character. The Kufic is taken from the old Syriac character (Estrangelo), and is said to have been first introduced by Moramer or Morar ben Morra of Anbar. The first copies of the Koran were written in it, and Ku'fa, a city in Irak-Arabi (Pashalic of Bagdad), being the one which contained the most expert and numerous copyists, the writing itself was called after it. The alphabet was arranged like the Hebrew and Syriac (whence its designation, *ABGaD HeVeS*), and this order, although now superseded by another, is still used for numerical purposes. The Kufic character, of a somewhat clumsy and ungainly shape, began to fall into disuse after about 1000 A.D.; Ebn Morla of Bagdad (d. 938 A.D.) having invented the current or so-called Neshki (*nashak*, to copy) character, which was still further improved by Ebn Bawwab (d. 1031), and which now—deservedly, as one of the prettiest and easiest—reigns supreme in East and West. It is only in MSS. of the Koran, and in title-pages, that the Kufic is still employed. A peculiar kind of the Kufic is the so-called Karmatian—of a somewhat more slender shape—in which several inscriptions have been met with both in Arabia, and in Dauphny, Sicily, &c., and which is also found on a coronation-mantle preserved in Nuremberg. The Kufic is written with a style, while for the Neshki, slit reeds are employed. Different kinds of the latter character (in which the alphabet is arranged according to the outward similarity of the letters) are the Moresque or Maghreb (Western), the Diváni (Royal—only employed for decrees, &c.), the Tálík (chiefly used in Persian), the Thsoletik (threefold or very large character), Jakuthi, Riháni, &c.

KUGLER, FRANZ THEODOR, a German historian of art, was born at Stettin, January 19, 1808, and studied at the university of Berlin. After the completion of a very diversified course of study, he devoted himself to the study of the fine arts. In 1833, he became a professor in Berlin, where he died, March 16, 1858. His most valuable works are a *Handbuch der Geschichte der Malerei*, &c. (Manual of the History of Painting from the Time of Constantine the Great to the Present Day, 1837), which has been translated into English—the part relating to Italian art by Sir Charles and Lady Eastlake, and that relating to the German, Spanish, French, Dutch, and Flemish schools, under the editorship of Sir Edmund Head; and a *Handbuch der Kunstgeschichte* (Manual of the History of Art, &c., 1842). He is also favourably known as a poet and as the author of several dramas.

KUH-HORN, sometimes called ALPHORN, is a wind-instrument much used by the herdsmen in the mountainous countries of Germany. It consists of a tube about three feet long, and a little bent, and gradually widening out into a kind of bell, like a bassoon. It is made of wood, or of the bark of the willow, wrought together, and bound by a pitched cord. The sound of the kuh-horn is produced by a mouth-piece like that of a trombone. It has generally only five notes, but extending over nearly

two octaves—viz, C, G, C, E, G. With these five notes, the herdsmen often play most interesting

melodies, which, among the mountains, have an indescribable charm. The following is a specimen :

KUILENBURG. See CUTLENBURG.

KUKAWA, an important town of Central Africa, capital of Bornu, is situated in a level district on the western shore of Lake Tsad, in lat. 12° 55' N., and long. 13° 26' W. It consists of two distinct towns, each surrounded by its own wall, and separated by a space of about half a mile. A great fair or market is held here weekly. The principal articles offered for sale are corn, dried fish, oxen, horses, camels, slaves, cloth, beads, earthenware. Upwards of 100 camels are sometimes sold here in one day. From 12,000 to 15,000 people are often crowded together in the market-place.

KU'LA, a town of Austria, in the Servian Woiwodschafft, on the Franzens or Bacs Canal, 26 miles north-west of Neusatz. Pop. 7,000.

KU'LDJA, also called ILI, or EELÉE, an important town in the Chinese frontier territory of Djungaria, in lat. 43° 55' N., and in long. 80° 58' E., on the right bank of the Ili, a considerable river, which, rising in the Tian-Shan Mountains, flows westward into Lake Balkhash, after a course of about 300 miles. A large market is held at K., and it is the residence of a dignitary called the Kee Roy, or Tsian-Tiung. Pop. 70,000.

KULM, a small village of Bohemia, 16 miles north-north-west of Leitmeritz, was the scene of two bloody conflicts between the French and allies on the 29th and 30th August 1813. The French, numbering 30,000 men, were commanded by General Vandamme; the Russians, during the first day's conflict, were 17,000, and were commanded by General Ostermann-Tolstoi. During the night, the latter were heavily reinforced, and on the second day Barclay de Tolly assumed the command with 60,000 troops. The result was the complete wreck of the French army, which lost in these two days little short of 20,000 men, while the allies did not lose half of that number.

KUMAO'N, including *Eastern Gurhwal*, is a British territory within the North-west Provinces of India, in lat. 29°—31° N., and long. 78°—81° E. It lies chiefly on the south slope of the Himalaya, comprising upwards of thirty summits in that range, which vary in altitude from about 18,000 feet to nearly 26,000. With the exception of a belt on its southern frontier, which is from 2 miles to 15 miles broad, the whole country is one mass of mountains and forests. It contains mines of gold, copper, and lead, which, however, have never yet been profitably worked. Throughout the southern belt above mentioned, it produces, generally in two crops a year, wheat, barley, oats, millet, pease, beans, &c., with rice, cotton, indigo, sugar, ginger, turmeric, &c. More lately, too, K. has become the rival in India of Assam for the cultivation of the tea-plant. The climate is unhealthy. The area is about 7000 square miles, and the population about 170,000. The principal towns are Almorah, Mandi, and Kasipoor.

KUMARASAMBHAVA is the name of one of the most celebrated poems of the Hindus. Its reputed author is Kālidāsa (see KĀLIDĀSA), and its subject is the legendary history connected with the birth of Kumāra, or Kārttikeya, the Hindu god of war. See KĀRTTIKEYA. It consists of 22 cantos,

but only 8 have hitherto been published in the original Sanscrit. The first 7 have been elegantly rendered in English verse by Mr R. T. H. Griffith, at present Principal of the Benares Government College.

KUMBUK (*Pentaplera tomentosa*), a tree of the natural order *Combretaceæ*, a native of the East Indies. It is a noble tree, and produces durable timber. Sir James E. Tennent describes a K. tree in Ceylon, 45 feet in circumference close to the ground, and 21 feet at 12 feet above the ground, which serves as a landmark for boatmen, towering high above forests of cocoa-palm, and discernible at a distance of 20 miles. The bark of the K. yields a black dye, and contains so much lime, that its ashes are commonly used as lime for chewing with betel.

KU'MISS, an intoxicating beverage much esteemed by the Kalmucks. It is made from the soured and fermented milk of mares. It has an acidulous taste. A spirit is obtained from it by distillation.

KÜMMEI. See LIQUEUR.

KUMQUAT (*Citrus Japonica*), a small species of orange, a native of China and Japan, and much cultivated in these countries. It has been introduced into Australia. It endures more frost than any other of the genus, and will probably prove a valuable acquisition to many parts of Europe and America. The plant is a shrub sometimes six feet high, but in cultivation it is not allowed to exceed the height of a gooseberry-bush. The fruit is oval, and about the size of a large gooseberry; the rind is sweet, and the juice acid. It is very delicious and refreshing. The Chinese make an excellent sweetmeat by preserving it in sugar.

KU'NERSDORF, a village of Brandenburg, in Prussia, nearly ten miles north-east of Frankfurt-on-the-Oder, was the scene of one of the most remarkable battles of the Seven Years' War, fought on the 12th August 1759, in which Frederick the Great was completely defeated by a combined attack of Russians under Soltikof, and Austrians under Laudon. The loss on the Prussian side was 26,000 men, with almost all their artillery and baggage, while their opponents lost 24,000 men.

KUNG'U'R, a town in the south of the government of Perm, European Russia, and 1416 miles from St Petersburg, is renowned for its tanneries, in which the best quality of Russia leather is produced. In the neighbouring district are several large ironworks. Pop. (1859) 8298.

KUNIGU'NDÉ, Sr, wife of the Emperor Henry II., was the daughter of Count Siegfried of Luxemburg. Her husband, Duke Henry of Bavaria, was crowned king of the Germans in 1002, and emperor in 1014. Her reputation having been unjustly assailed, she vindicated herself by walking barefooted over hot ploughshares. After the death of her husband in 1024, she retired into the convent of Kaufungen, near Cassel, which she had founded, spent the remainder of her days in pious works, and died on 3d March 1040. Pope Innocent III. gave her a place amongst the saints in 1200.

KUPFERSCHIEFER, one of the series of strata which make up the Permian rocks. It

consists of beds of dark shale with copper ore (hence the name), and containing beautifully preserved fish, of species nearly allied to those of the Coal Measures.

KU'RA, or KUR (anc. Cyrus), the principal river of the Caucasus, rises in the Sahanhü chain, and after a south-eastern course of 535 miles, falls into the Caspian Sea by several shallow channels, about 60 miles north of the Persian boundary. Its chief tributaries are the Aras (anc. *Arazes*), the Alazan, and the Yora. The K. has so rapid a course, and changes its channel so frequently, that to bridge it is almost impossible.

KURDISTAN ('the Country of the Kurds'), an extensive region of Western Asia, running north-west and south-east, between lat. 34°–40° N. and long. 36°–48° E., bounded on the N.E. side by Armenia, Azerbaijan, and Irak-Ajemi, and on the S.W. by the Tigris and Aljezira, belongs to the Turkish and Persian monarchies, chiefly to the former, and contains about 100,000 square miles, with a population amounting, according to Chesney's estimate, to 3,000,000—doubtless a very great exaggeration, though we have no means of disproving it. The country, with the exception of the tract bordering on the Tigris, is very mountainous, some of the peaks being nearly 13,000 feet above the sea-level; these mountain-ranges divide the surface of the country into fertile valleys and extensive table-lands. The southern part is for the most part low and flat, parched in summer, and verdant during the wet season. The country is traversed by the Euphrates, Tigris, Zab-Ala, Zab-Asfal, and Diyala or Shirvan, and contains several lakes, the chief of which are Van and Urumiah. Four-fifths of the inhabitants are Kurds (anc. *Carduchi* and *Gordyaei*), a race partly nomad and partly agricultural, who occupy themselves chiefly, however, with the breeding of cattle, sheep, goats, and horses. A great trade is carried on with Turkey and Persia, especially in horses, the Kurdish breed being so famed for its spirit and endurance, as to be almost exclusively employed by the Turkish and Persian cavalry. The settled portion of the population consists of Kurds, Turks, and Persians, who are engaged in agricultural employments. A remarkable product of this country is a substance found on the leaves of the tamarisk and other shrubs, which closely corresponds to the description given of 'manna' in the Old Testament, and is supposed to result, like oak-galls, from the puncture of the leaf by an insect. The country is deficient in mineral wealth. The inhabitants, with the exception of the Nestorians (q. v.), who inhabit the valley of the Tigris, profess a debased form of Mohammedanism. The chief towns in Turkish K. are Bitlis (q. v.), Van, Urumia, Mardin (anc. *Mardein*), Mush, Korkuk, Diarbekir, Malatia, and Marsh. The Persian portion of K. does not form a distinct province, but is included in Azerbaijan, Ardelan, and Irak-Ajemi.

KU'RILE ISLANDS, a line of islands in the North Pacific Ocean, extend between the south extremity of Kamchatka and the Japanese island of Yesso. They are under the government of the Russo-American Company, and are 22 in number, 19 of them belonging to Russia. Area of the islands possessed by Russia, 3343 square miles; pop. between 200 and 300. Since 1781, no tribute has been collected here. The K. I. are all volcanic. The vegetation is poor; the principal productions being the furs of foxes, wolves, seals, and beavers. Navigation near the islands is difficult.

KURISCHÉS HAF, an extensive lagoon, separated from the Baltic Sea by a ridge of sand from one to two miles in width. It extends nearly sixty

miles along the coast of East Prussia from Labiau to Memel, where it enters the Baltic by the 'Memel Deep,' a channel about 1000 feet wide, and 12 feet deep. Its greatest breadth at the southern extremity is about 23 miles, but its average breadth is not above 14 miles. The waters of the K. H. are fresh. Its depth is very variable, and hence its navigation, accomplished by means of large flat boats, is both difficult and dangerous. The belt of land is called the 'Kurische Neerung,' and has a few villages upon it.

KURNU'L, the chief town of a district of the same name, in the presidency of Madras, in lat. 15° 50' N., and long. 78° 5' E. Pop. estimated at 20,000. The district itself—separated on the north by the Krishna from the Nizam's dominions—contains about 2700 square miles, and about 270,000 inhabitants. The country possesses considerable works for the purposes of irrigation.

KURRACHI', the only port in Sind for sea-going ships, lies about twelve miles north-west of the most westerly mouth of the Indus, in lat. 24° 51' N., and long. 67° 2' E. It was taken by the British in 1839, and has since advanced with rapid strides in the path of improvement, the population having in three years (from 1850 to 1853) increased from under 17,000 to more than 22,000. As the mouth of the Indus is barred by sand-banks, K. is virtually the terminus for the traffic on that river. It is connected by the Sind Railway with Hyderabad, thence, by means of the Indus Steam Flotilla Company's vessels, with Sakar and Multan, and from the latter place by the Punjab Railway, with Lahore, Amritsar, Peshawur, &c. Since January 1860, it has had direct communication, by submarine telegraph, with Muscat and Alexandria. The exports of K. are camels, fish, hides, tallow, ghee, oil, bark, salt, indigo, cotton, and grain; and the imports, metals, hardware, silk, cotton, and woollen goods. K. has an active inland trade with Cashmere, Turkestan, Afghanistan, and Tibet. It contains an English church and school.

KURSK, one of the governments in the south of Great Russia, lying south of Orel, contains 17,973 square miles, the most of which is arable. The province is watered by feeders of the Dnieper and of the Don. The soil being very fertile, large crops of corn are raised, and even in scanty years, K. can supply the neighbouring provinces. The pop. in 1858 was 1,811,972, of whom the greater part are employed in farm-tillage, though a large number devote themselves to cattle-breeding and orchard-gardening. The principal manufactures are spirits, leather, soap, and saltpetre, and the products are largely exported. Hemp and horses also form important items in the export trade of the province.

KURSK, the chief town of the government of that name, on the right bank of the Seim, a branch of the Dezna, dates from the 9th century. It suffered considerably from the ravages of the Tartars and Poles, but is still a flourishing town, numbering 27,056 inhabitants, and carrying on a considerable trade in tallow-melting, rope-making, and tanning. K. is also celebrated for its orchards, the fruit of which is in great request. Near the town, a fair is held in July, when more than £1,000,000 worth of commodities are disposed of, the chief being manufactured silk and woollen fabrics, sugar, tea, horses, &c.

KURU, a name of great celebrity in the ancient or legendary history of India. See MAHABHARATA.

KÜSTENLAND (i. e., *Coast Districts*, Ital. *Litorale*), a crown-land of Austria, consisting of the county of Görz and Gradiska, markgratdom of

Istria, and the town of Trieste with its territory. It lies between the crown-land of Carniola on the north-east and the Gulf of Venice on the south-west. Area, 3048 square miles; pop. 589,900. Together with the crown-lands of Carinthia and Carniola, it constituted in former times the kingdom of Illyria. The surface is mountainous. The chief rivers are the Isonzo and the Quieto. The soil in general is fruitful; figs ripen without almost any cultivation, and wine is extensively made. In the mountainous districts in the north and north-east the breeding of cattle is the chief branch of industry. Commerce is extensively carried on at the various seaports.

KÜSTRIN, a town of Prussia, and a fortress of the third rank, is situated in the midst of extensive morasses, at the confluence of the Warthe with the Oder, twenty miles north of Frankfurt. Pop. 9202.

KUTAI'EH, KUTAHIA, or KUTAYA (the ancient *Cotiaeum*), an important town of Asiatic Turkey, in Anatolia, capital of the eyalet in which it is situated, stands seventy miles south-east of Brusa, on the Pursuk, a tributary of the Sakaria—the ancient Sangarius. It is said to have a good trade, and a population of about 50,000.

KUTAI'S. See TRANSCAUCASIA.

KUTTENBERG, a mining town of Bohemia, about forty miles east-south-east of Prague. Here, in 1237, silver was found, and the silver-mines were first worked. The first silver *groschen* were struck here in 1300. The silver-mines have not been worked for about 300 years, the chief mineral products of the district being now copper and lead. Cotton-spinning, cotton-printing, and bleaching, are also carried on. Pop. 10,500.

KUTUSOW, MICHAEL LAURIONOWITSCH GOLENITSCHEW, Prince of Smolenskoi, a Russian field-marshal, born in 1745, early entered the Russian army, and in 1787 was appointed governor-general of the Crimea. He distinguished himself in the Turkish war, and after various other services, was appointed in 1805 to the command of the first *corps d'armée* against the French. On 18th and 19th November of that year, he was victorious over Marshal Mortier at Dürenstein. He was second in command of the allied army, of which the Emperor Alexander himself was commander-in-chief, at Austerlitz. In 1811—1812, he commanded the Russian army in the war against the Turks, and notwithstanding his advanced age, he succeeded Barclay de Tolly in 1812, as commander-in-chief of the army against the French, and obtained a great victory over Davout and Ney at Smolensk. He carried on

the campaign to its successful termination; but his strength was exhausted, and he died at Bunzlau, 28th April 1813.

KUVERA, the Hindu Plutus, or god of wealth. He owes his name—which literally means 'having a wretched (*ku*) body (*vera*)'—to the deformities with which he is invested by Hindu mythology. He is represented as having three heads, three legs, and but eight teeth; his eyes are green, and in the place of one he has a yellow mark; he wears an earring, but only in one ear; and though he is properly of a black colour, his belly is whitened by a leprous taint. He is seated in a car (*pushpaka*), which is drawn by hobgoblins. His residence, *Alaká*, is situated in the mines of Mount Kailása, and he is attended by the Yakshas, Máyus, Kinnaras, and other imps, anxiously guarding the entrance to his garden, Chaitraratha, the abode of all riches. Nine treasures—apparently precious gems—are especially intrusted to his care.—His wife is a hobgoblin, *Yakshi*, or *Yakshini*, and their children are two sons and a daughter. As one of the divinities that preside over the regions, he is considered also to be the protector of the north.

KYANISING, the most efficacious method of preserving ships from Dry Rot (q. v.), by injecting into the pores of the wood a solution of corrosive sublimate, was invented by John H. Kyan, who was born in Dublin, November 27, 1774, and died in 1850.

KYLE, a district of Ayrshire (q. v.).

KYRIÉ ELEÏSON (Gr. *Kyrie eleëson*, Lord have mercy), a form of prayer which occurs in all the ancient Greek liturgies, and is retained in the Roman Catholic mass. It follows immediately after the Introit, and forms the introduction to the hymn of praise, 'Gloria in excelsis Deo' (Glory to God on high). The retention of the Greek language in this prayer, is one of many evidences of the predominance of the Greek element in the early Roman Church (Milman's *Latin Christianity*, i. 10). The same peculiarity occurs in a few others of the Roman services, especially those of the Holy Week.

KYTHU'L, the chief town of the Indian district of the same name, about 1000 miles to the north-west of Calcutta, in lat. 29° 49' N., and long. 76° 28' E. It is substantially built of brick, having a lofty palace, which looks down from a beautiful grove on a spacious sheet of water. It was only in 1843 that the territory fell to the English East India Company, having lapsed through the failure of heirs. It then comprised more than 500 villages, with a revenue of £44,000.

L

THE twelfth letter of our alphabet, was called *Lamed*, i. e., 'ox-goad,' by the Hebrews, doubtless from its resemblance to that implement—a resemblance still traceable in the Phœnician. L belongs to the order of consonants called Liquids, and has the closest affinity to R. In some languages, there is only one sign for both, as in Pehlwi; and in others, the one or the other sound is altogether wanting. Hence the numerous substitutions of the one sound for the other in the Aryan languages. Thus, Eng. *plum*, Ger. *pflaume*, from Lat. *prunus*; Eng. *pilgrim*, Lat. *peregrinus*; Gr. or Lat. *epistola*, Fr. *épître*; the Swiss peasants pronounce *Kirche*, *Kilche*; and the Lat. termination *-alis* becomes, after *l*, *-aris*—as, *materi-alis*, *famili-aris*. L is also interchangeable with *n*—as, Gr. *pneumon*, Lat. *pulmo*; and, rather strangely, with *D* (q. v.). In certain combinations, the *l* of Latin words has become *i* in Italian—as, *planus*, *piano*; *Florentia*, *Firenze*. In Eng. *l* is often mute, as in *calm*, *yolk*, *should*. In the Scottish dialect, it is mostly mute in the end of words—as, *fa', fu', a',* for *fall, full, all*. Similar to this is the frequent melting of *l* into *u* in modern French—thus, *à le* has become *au*; *chevals*, *chevaux*.

LA. See SOLMISATION.

LAA'LAND, or **LOLLAND** (i. e., *low land*), a Danish island in the Baltic, at the southern entrance to the Great Belt. Area, 452 square miles; population about 56,000. The surface is remarkably flat, and the soil exceedingly fruitful. Forests of beech and oak cover upwards of 50 square miles. The chief town is Nakskov, with a pop. of 3375, a good harbour, and considerable trade. At Aatholm, near the Nysted Fiord, there is the largest, and in exotic plants the richest, private garden in the whole of Denmark.

LA'BARUM (derivation uncertain), the famous standard of the Roman emperor Constantine, designed to commemorate the miraculous vision of the cross in the sky, which is said to have appeared to him on his way to attack Maxentius, and to have been the moving cause of his conversion to Christianity. It was a long pike or lance, with a short transverse bar of wood attached near its extremity, so as to form something like a cross. On the point of the lance was a golden crown sparkling with gems, and in its centre the mysterious monogram of the cross and the initial letters of the name of Christ, with the occasional addition of the Greek letters A and Ω. From the cross-beam depended a square purple banner, decorated with precious stones, and surrounded by a rich border of gold embroidery. The cross was substituted for the eagle, which had formerly been depicted on the Roman standards, and there were sometimes other emblems of the Saviour. In the space between the crown and the cross were heads

of the emperor and his family, and sometimes a figure of Christ woven in gold.

LABEL. See DRIPSTONE.

LABEL (Fr. *lambeau*, a strip or shred), the ribbon pendent at the sides of a mitre or coronet.

LABEL, LAMBEL, or **FILE**, in Heraldry, the mark of cadency which distinguishes the eldest son in his father's lifetime, familiar to us from its entering into the composition of the arms of the Prince of Wales and other members of the royal family. It consists of a horizontal stripe or fillet, with three points depending from it (fig. 1). When the mark of cadency itself is designated a *file*, its points are called

Fig. 1.

labels. It is said that the eldest son's eldest son should wear a label of five points in his grandfather's lifetime, and, similarly, the great-grandson a label of seven points, two points being added for each generation. The label extended originally quite across the shield, and sometimes occupied the upper, though now it is always placed in the lower part of the chief: the points, at first rectangular, assumed in later times the form called *patée*, dove-tailed, or wedge-shaped; and more recently, the label ceased to be connected with the edges of the shield. Edward I., in his father's lifetime, bore the arms of England within a label not of three, but of five points azure, joined to the head of the shield, and interlaced with the tail of the uppermost lion (fig. 2); Edward II., when Prince of Wales, used indifferently the label of three or of five points, as also did Edward III.; but from the time of the Black Prince downwards, the eldest son of the king of England has invariably differenced his arms with a label of three points argent, and the practice has been for the younger sons also to bear labels, which are sometimes of other colours and more points, and differenced by being charged with fleurs-de-lis, castles, torteaux, hearts, crosses, &c., as directed by the sovereign by sign-manual registered in the College of Arms. The practice of differencing by the label which is thus *in viridi observantia* in our own and other royal families, is less used by subjects. Like other marks of cadency, labels are sometimes borne as permanent distinctions by a particular branch of a family.

Fig. 2.

LABIA'TÆ (*Lamiaceæ* of Lindley), a natural order of exogenous plants, containing almost 2500 known species, mostly natives of temperate climates. They are herbaceous, or more rarely half-shrubby, and have 4-cornered stems and opposite branches; and opposite leaves, without stipules, abounding in receptacles of volatile oil. The flowers are often in cymes or heads, or in whorls; sometimes solitary. The calyx is inferior, with five or ten teeth, or

2-lipped. The corolla is hypogynous, 2-lipped, the lower lip 3-lobed. The stamens are four, two long and two short, or by abortion only two, inserted into the corolla. The ovary is deeply 4-lobed, seated in a fleshy disk, each lobe containing a single ovule; there is a single style with a bifid stigma. The fruit consists of 1—4 *achenia*, enclosed within the persistent calyx.—A general characteristic of this order is an aromatic fragrance, which in many species is very agreeable, and makes them favourites in our gardens. Some are weeds with an unpleasant odour. Many are natives of Britain. Some are used in medicine, and others in cookery for flavouring. Mint, Marjoram, Rosemary, Lavender, Sage, Basil, Savory, Thyme, Horehound, Balm, Patchouli, Germander, and Dead Nettle, are examples of this order.

LABORATORY, ROYAL, an extensive military manufacturing department in Woolwich Arsenal. Although it has existed for many years, it was only in 1855 that the present very large establishment was organised. Here are foundries for the casting of shot, shell, grape, &c.; apparatus for the manufacture of percussion-caps, which are formed—hundreds at a time—out of the copper sheet; presses where rifle-bullets are squeezed into shape; fuses in all stages of manufacture; and a thousand other instances of combined ingenuity and power. Conspicuous among the mechanism may be mentioned the making of paper for cartridges, and subsequently the making and filling of the cartridges themselves. Government liberally grants permission (through the War Office) to inspect the factory. The cost of the Laboratory varies according to the accumulation of stores, from £503,935 in 1861—1862 to £195,743 in 1863—1864. There are laboratories—though on a comparatively small scale—at Portsmouth and Devonport.

LABOUR, in Political Economy, a term so dependent for its meaning on the circumstances in which it is used, that any scientific definition of it would lead to misunderstanding. The best service, in fact, towards rendering it intelligible, is to clear away some attempts that have been made to subject it to scientific analysis and definition. It has been separated into productive and unproductive, but no such division can be fixed. A turner who puts a piece of wood on his lathe and makes a top is of

course a productive labourer. The same quality cannot be denied to the man who beams a web for the loom; but if he shares in the production of the cloth, so does the overseer who walks about and adjusts the industrial arrangements of the manufactory. Having included him, we cannot well say that the policeman, who keeps order in the district, and enables its manufactures to go on, should be excluded. Again, the man who contributes to make a book, of course appears as a productive labourer; but what the author contributes is not matter, but intellect; and it would be difficult to maintain that he ceases to be productive if he deliver such matter in an oration or a sermon. We can hardly count the distiller, who makes a glass of whisky, a productive labourer, and exclude the musician, who produces another and less dangerous excitement. It is equally impossible to draw the line between bodily and intellectual labour, since there is scarcely a work to which man can put his hand which does not require some amount of thought. A distinction between capital and labour has often been attempted to be established with very fallacious and dangerous results. Capital in active operation infers that its owner labours. If the capital is not laboured, the owner must be content to let it lie at ordinary interest. If he want profit from it, he must labour, and often severely. In a large manufactory, where the proprietor is supposed to be a gentleman at large, drawing his fortune from the sweat of the brow of his fellow-men, he is often the most anxious and the hardest-worked man in the whole establishment.

LABOURERS. The only peculiar laws affecting labourers are where they come within the description of 'servants in husbandry, artificers, calico-printers, handicraftsmen, miners, colliers, keelmen, pitmen, glassmen, potters, labourers, or other persons'—the word 'labourer' applying to a description of employment which, though comprehensive, is difficult to be defined. There must be a contract of service of some kind. The peculiarity consists in a summary remedy being provided for and against them before justices of the peace, who may compel them to serve out the time they contracted for, under a penalty of fine or imprisonment, and on the other hand, may order the masters to pay the wages. See **SERVANTS**. Labourers' wages are prohibited from being paid in kind or with goods, by the Truck Act (q. v.).
